**The Rod of Seven Parts:** It is said that the Wind Dukes of Aaqa were the creators of this legendary artifact. Manifesting themselves upon the world at the battle of Pesh, where the powers of Chaos and Law arrayed themselves, the Dukes presented the Rod to the Captains of Law. In the battle, the Rod was supposedly sundered in the slaying of Miska, the Wolf-Spider, consort of the Queen of Chaos.

The Dukes, to prevent the Rod's capture, snatched up the seven parts and scattered them throughout the world. Ever since, agents of the Queen have sought out the Rod. It is rumored that if she regains all the parts, she can return Miska to the realms of men.

The original rod was said to be about 5 feet long, but the pieces are irregular in length. The parts go together in a specific order, the first being narrowest and each later piece increasing in diameter. Assembling the Rod is difficult, however, because the item is still protected by the Wind Dukes. Each section conveys a sense of the direction to the next piece. Pieces assembled to each other in the correct order will bond together; however, if any piece is placed out of sequence, it will instantly disappear, to appear randomly somewhere else in the world. Upon assembling the first three pieces, the owner will refuse to part with the item at any time, even when sleeping, eating, bathing, or engaging in other personal activities.

Because it was once shattered, the Rod is fragile. There is a 5% chance that it will

break apart (and be scattered by the Wind Dukes) each time its major power is used.

Each piece of the Rod has a minor power. Suggested powers are: *immunity* to one attack form, *fly at will, cure light wounds* (1/day), *true seeing* (1/day), *hold monster* (1/day), *double character's movement, slow* (1/day). When completely assembled, the Rod can have major powers. Suggested powers are: *restoration* (1/day) and *shape change* (2/day).

Created to the service of order, the Rod changes its user to an absolute follower of law, even more so than the most rigid lawful good. The character will feel compelled to intervene in all things to maintain the primacy of law over chaos, heedless of the effects for good or ill. Those not adhering to the Rod-holder's strict views are perceived as enemies. Once all the parts are assembled, the Rod also radiates an aura of fearsome, icy law affecting all within a 20-foot radius. When its major powers are used, those who fail to save must flee in panic.

**Heward's Mystical Organ:** In the Fables of Burdock readers find mention of a musical instrument, an organ of large size and mystical enchantment. It was said to have been fashioned by Heward, Patron of Bards, to teach mankind the art of song and to bring wonder and joy into the world. Through its keys and music, the Patron was able to spread the gifts of harmony, composing, grace, and beauty. Through his songs, Heward watched over and protected the lands, guiding the weather to glorious sunsets, rain to fall on parched soil, bread to rise firm and fresh, children to be happy, and indeed protecting all that mankind now loves.

Unfortunately, the Fables say, mice among the frets gnawed at the workings, causing sour notes to escape, giving voice to the harpies, sirens, and other evil creatures that entice and trap by song. Enraged, the Patron cursed the mice to remain forever lowly and meek of voice. Believing the Organ ruined, the Patron abandoned it (and took up the harp).

The location of the Mystical Organ is unknown, but the legends of several great and powerful bards relate its discovery and subsequent loss. Oldenburg the Blind supposedly discovered it and from its keys learned the 9 Enchanting Lays whereby he won the heart of Princess Leir, daughter of the evil Fairie-Lord Marrad. Mad Ossam was supposedly stricken upon trying to compose a tune at the Organ. Cursed with the power of blight and despair, he brought baronies to their knees in his travels. Many a bard has claimed to have studied at the Organ, but these are certainly nothing more than the exaggerations of showmen.

The Organ is a massive, immovable object. The pipes easily extended the height of a cathedral chapel. The keyboard has three different sets, and there are 27 ivory stops. Nine great pedals control the bass notes. Each pipe is sounded by a bound elemental of appropriate size. The stops, when arranged in different settings, alter the pitch and voice of each pipe, while the keys strike the notes. Age, disuse (for even an artifact of such delicacy must be tended), and the ravages of the spiteful mice have rendered many of the pipes, keys, and stops inoperable.

To use the Organ one must play a tune upon it. However, this is a tremendously dangerous business since there are so many possible combinations of settings and notes. Prior research and faith in the gods must serve as a guide. (As an option, players can compose or at least hum a little ditty of their own when their characters attempt to use the organ.)

When a tune is played, the magic takes effect. Just what magical result occurs is left to the DM. He should base this upon the quality of the playing, the tastefulness and mastery of the music, and the desires of the player.

Theoretically, Heward's Mystical Organ can have as many powers as there are settings and tunes to be played. With such a broad range, the DM can create virtually any result. The press of a key may cause flowers or straw to rain over a small village 100 miles away, while a fugue may result in the sinking of several islands off the coast or the reshaping of the organist into a newt (especially if he hits a bad note).

Unlike other artifacts (which possess powers the character must discover), users of the Organ should decide upon the effect they wish to create and then research the notes and stops needed to create it. The DM can, of course, alter the end result (mortals playing with the toys of gods seldom get what they really want) and a check should be made to see if any errors (a missed note or beat) occur in the playing.

If an error is made, the DM can have drawbacks and unfortunate results prepared. Some of these can include: permanently *polymorphing* the player into a small lizard or insect, permanent deafness or madness, or immediate alignment change. The character could be endowed with a voice equal to a *horn of blasting* (so he can't speak without causing harm), or he might be forever compelled to speak in rhyme or in song. One or more levels might be drained by the Organ. All magical items within 100 feet could be permanently negated. The organist could be teleported to another planet, etc.

In addition, the tones of the Organ, no matter how badly set or played, are of unearthly beauty. Whenever it is played, all hearing it (including the organist) must roll a successful saving throw vs. spell or be enchanted forever.

Those so stricken cannot abide any other sound. Deprived of its tones, they despair and see no wonder or greatness (in either good or evil) in the world. Gradually, those enchanted take less and less interest in life until they finally reach the point where even the finest food is an anathema to them. These slowly wasting creatures are truly piteous sights.

The location of the Organ is constantly changing. All the legends agree that it exists nowhere in the world, but in some misty other realm. Noteworthy too is the fact that those who leave its hall are never able to find it again.

# Chapter 11:
# Encounters

If the imagination of players and DMs are fuel of the AD&D game, encounters are the engine that makes it go. Without encounters, nothing happens. Without encounters, player can't slay fearsome trolls, rescue the villagers from a band of orcs, chase down a petty thief, outwit an evil wizard, or humble a mighty tyrant. Encounters make up the plot of the adventure, each in some way furthering the tale or building the background of your campaign world. Without encounters, without the opportunity to meet and deal with others, your campaign world is just going nowhere.

To use encounters, it is important to understand what they are. An encounter is a

meeting with an NPC or monster, or an event that might affect the player characters. As DM, you:

- Create in advance the thing, person, event, or monster encountered
- Describe the scene of the encounter to the players
- Role-play the reaction of all the creatures involved, except the player characters
- Describe the results of player character actions during the encounter.

These are a big part of the DM's duties in a role-playing game (in addition to the task of interpreting the rules and handling the mechanics of play).

## What is an Encounter?

An encounter is best defined by two broad criteria. If the described event lacks either of these, it isn't a true encounter. It may be a described scene, an event, or a bit of mundane business, but it is not a role-playing encounter.

First, an encounter must involve a thing, an event, NPCs (characters or monsters), or a DM-controlled player character. A meeting of two player characters (handled by the player alone) is not an encounter. It is an action between the players themselves.

Second, an encounter must present the possibility of a meaningful change in a player character's abilities, possessions, or knowledge, depending upon the player's decisions. The keys here are meaningful change and player decision. For each character with 500 gp in his pocket, going into a tavern and spending three gp on drinks is not meaningful change. If the character had to spend the same 500 gp in the same tavern to get information about the Black Tower across the river, the character has experienced a meaningful change-he's now broke.

If the player doesn't make a decision, then he's just coasting along, letting the DM do everything. Going to the tavern and spending three gold pieces on food and drink isn't much of a decision. Choosing to go bankrupt to learn what may or may not be useful information is fairly significant. The player is going to have to think about the choice. How badly does he want this information? How reliable is this informant? Does he need the money for something else-like new equipment? Can he get a better price?

The presence of an active force and the possibility for change based on player decision are what make a true role-playing encounter. Take, for example, the situations given below. Try to figure out which of the four is a true encounter, as defined above.

1. Rupert and Algorond, a gnome, are exploring a cave. Algorond is in the lead. Without any warning the ceiling directly over him collapses, crushing the little gnome instantly. He is dead, and all Rupert can do is dig out the body.

2. Rupert, a 10th-level fighter, meets three lowly orcs. They charge and, not surprisingly Rupert slices them to ribbons. He isn't even harmed. Searching the chamber, he finds a *sword +1*. Rupert already has a *sword +3* and is not particularly interested in this weapon.

3. Rupert reaches into his pocket only to discover that the gem he pried from a heathen idol is gone! Thinking about it, he decides the only person who could have taken it was his fellow party member (and player character) Rangnar the Thief. Unhesitatingly, he whips out his sword and holds it at Rangnar's throat. Rangnar reaches for his hidden dagger.

4. Rupert and Taras Bloodheart are riding across the plain. Just as they crest a low ridge, they see a cloud of smoke and dust in the distance. They halt and watch for a little while. The dust cloud slowly moves on their direction, while the smoke dwindles. Moving their horses to a hollow, the watch the approach of the mysterious cloud from a thicket.

So, which of these four is a true encounter? Only the last one. The first didn't involve any player choice. The gnome is crushed, and there wasn't anything either player character could do about it. Not only is this not an encounter, it isn't fair. It could have been an encounter (with a trapped ceiling), if there had been signs beforehand (clattering stones, previous deadfalls, groaning stones) and if the gnome had been given the opportunity to act before the rock squashed him. The player choice could have been to heed or ignore the warnings and leap forward, back, or stand confused when the rock fell.

The second had player choice, but it wasn't particularly meaningful or balanced. The player knew his character could win the combat so his choice to fight was insignificant. He knew the sword was less potent than the one he already had, so his choice not to keep it was, likewise, not a choice at all. The situation could have been an encounter if the orcs had actually been ogres concealed by an illusion or if the sword had special unrevealed powers. Either of these would have made the character's actions meaningful.

The third situation has all the trappings of an encounter. There is meaningful choice and anything could happen next. However, this is a squabble between player characters, not something the DM has control over. It does not further the plot or develop campaign background. Indeed, such disharmony will only hurt the game in the long run. It could have become an encounter if an invisible NPC thief had done the deed instead of Ragnar. Rupert and Ragnar, eventually realizing the confusion, would have suddenly found themselves united in a new purpose—to find the culprit. Of course, there would also be role-playing opportunity as Rupert tried to make amends while Ragnar remembered the insult!

The fourth example is a true encounter, even though it doesn't seem like much is happening. The players have made significant decisions, particularly to stay and investigate, and they are faced by an unknown creature. They do not know what they face and they do not know if it will be for good or ill. The dust cloud could be a djinni or a hostile air elemental. It could be a war-band of 100 orcs or giant lizards. The players don't know but have decided to take the risk of finding out.

In role-playing games, encounters fall into one of two general categories—planned (or placed) encounters and random (or wandering) encounters. Each contributes to the overall excitement and adventure of the game.

## Planned Encounters

A planned encounter is one of the DM has prepared in advance, one tied to a specific place, event, or condition. These can be divided into keys and triggers.

### Keys

The simplest of planned encounters is called a key—a listing of who lives where, what

they have, and what they might do if a character enters their room, visits their farm, or explores their cave. This key can also contain colorful details about otherwise boring or empty rooms, creating detail for the player characters to explore. Here's how a sample key for an ogre's den, a three-chambered cave, might be written.

1. **Main Chamber:** One passage of this chamber leads to the outside, a narrow cleft in the rock hidden behind some bushes. Following this, the passage widens after 10 feet. The walls are coated with soot and there is a large pit in the center of the floor filled with ashes and charred bits of bone. The ashes are warm and the rocks of the pit are still hot to the touch. The chamber stinks of burned meat and leather. There is a lot of rubbish on the floor but there is nothing of value here. At the far end, the cleft once again narrows to a passage.
2. **Sleeping Chamber:** Here the air is thick with smells of animal sweat and worse. There is a loud rumbling from the far side of the chamber. There, sleeping under a mound of crudely skinned furs, is a large ogre. Next to him is a large wooden club. Hanging from the walls are bits of bright cloth, shiny buckles, and tarnished badges. A few simple torches, now unlit, are wedged in the cracks.

If the characters don't move slowly in this room, one will kick a metal helmet across the floor, waking the ogre. Groggy for one round, he then attacks the group. Just beyond the nest is another passage.

3. **Treasure Room:** The entrance to this chamber is blocked by a large boulder that must be rolled into the room to get it out of the way. Characters must get it out of the way. Characters must roll a successful bend bar/lift gates check to move it. (Several characters can work together, totaling their chances into a single roll.) Inside the room are the treasures of the ogre. These include 500 gp, 3 gems (worth 10, 500, and 100 gp), a suit of *chain mail +1* the beast cannot use, and a mound of horse trappings, bridles, and saddles. Aside from the bats, there are no creatures in the chamber.

When you write a key, describe the way the scene looks as accurately as possible. Also think what sounds the player characters might hear, what they'd smell, what the place feels like, and so on. Writing a good key is like writing a good story. At the very least, include the following information for every location:

- Any monsters or NPCs found there.
- What equipment and magical items the monsters will use.
- Any treasure (and its location).
- Any other unusual items of interest. This can include colorful details to help you describe the area or clues to warn characters of danger ahead.

The key can also include special conditions that must be met while in the area. In the example above, there were penalties for not being alert and cautious (kicking the helmet) and requirements for Strength (moving the boulder).

However, keys are static—things don't change that much. No matter whether the characters enter at noon or midnight, the ogre will be sleeping. He won't be cooking his dinner, out hunting, or picking his teeth with his toes.

For fairly simple scenes this is fine, but the situation gets ridiculous for more complicated situations. Imagine a farm where the farmer was always in the field or a castle where dinner was continually being served!

Static also means that events in one place don't affect things in another. If the characters heave the boulder out of the way, won't the noise awaken the ogre? Not according to the description as it is given, although a good DM would certainly consider the possibility. Writing a key that takes all these potential inconsistencies into account isn't easy. To be complete, you would have to design the key in your head, figuring out all the interconnections, before you wrote anything down.

There are two solutions to this problem: You can try to be complete and thorough, preparing answers for every possible situation, or you can reduce the amount of detail you give about creature behaviors and improvise answers as you play. To describe a farmhouse, you could simply note the occupants (their ages and the like) and the significant possessions at the farm. The activity of the NPCs can be adjusted to the moment—working in fields, sleeping, eating, etc.

Trying to pre-plan for every eventuality is time-consuming—there is a fair amount of planning and writing you must do. Improvising cuts down on preparation, but forces you to work harder during the game. The best solution is to compromise: Carefully detail the most important planned encounters and simply sketch out and improvise the small encounters. This way you are not overwhelmed in preparation or play.

## Triggers

Another type of planned encounter is the trigger. It can be used with a key or by itself. A trigger is a simple either/or or if/then type of statement. It is used for more interactive types of encounters, where the action of the event is what is important, such as the kidnapping described below.

The next episode occurs at 1 o'clock in the morning: If any character is still awake, he hears a muffled scream coming from the balcony of the room next door. If the characters investigate, they will discover two hooded men (6th-level thieves) attempting to drag a struggling young woman over the railing. One man has her firmly gripped from behind, his hand clamped over her mouth. The other is hoisting her legs over the side. A confederate waits with the horses on the ground below. If the characters do nothing, there will be a crash as she kicks over a flower urn, followed by a muttered curse and then the galloping of horses.

If the characters are noticed, the unburdened man wheels to face them, drawing two swords, one in each hand. The woman attempts to break free, only to be struck unconscious by the other man. The man on the ground quietly cocks a crossbow and aims it at the party, keeping an eye out for spellcasters.

Here everything is dependent upon previous and current choices of action. Is a character awake? Will the characters investigate? How will they react to the kidnappers? Each decision molds subsequent events. The characters might leap to the young woman's rescue or they might rouse themselves only in time to see the kidnappers gallop off with her tied to the saddle. Their actions could alter planned events. Coming to her aid, the characters rescue the lady. As DM you must be ready to tell her story. Why was she attacked? Who were they? Are there any clues the characters can find?

To write this type of encounter, first outline the basic sequence of events that would

happen if the characters did not interfere. Next, think like a player and try to anticipate what the characters might do. Would they aid the lady? If so, you will need combat information—how the attackers will fight and what weapons and tactics they will use. What happens if the characters try to sound the alarm or talk to the kidnappers? What will the lady say if rescued? At least a brief note should be made to account for the probable reactions of the player characters.

As complete as you make them, triggers are not without their weaknesses. While very good at describing a scene, a trigger does not provide much background information. In the event above, there is no description of the room, the attackers, the lady's history, etc. There could be, but including it would be extra work, and description would also get in the way of the action.

A less critical problem is that DMs can't anticipate every action of the player characters. No matter how carefully a trigger is constructed, there is always something the characters can do to upset the situation. In the example above, what if the characters panic and a mage launches a *fireball* at the attackers? In a flash of flame, they and their victim are killed and the building is on fire. Prescient is the DM who can anticipate this event!

There is no simple solution for unpredictable players (nor would you want one!). As a DM you are never going to be able to predict every player decision. Experience, both as a player and a DM, teaches you what the most likely actions are. Beyond these you must improvise, relying on your skill as a DM.

## Combining Keys and Triggers

Many DMs make use of a dual arrangement for preparing encounters. First they prepare a key, describing the appearance of the encounter locations, items in them, and other things that are relatively non-changing. Then they write triggers focusing on the characters and the actions.

When they need to describe a room, they rely on the key, while the trigger describes the plot of the adventure. Although this requires a little more set-up, this allows different events to happen in the same place or area, giving a feeling of continuity to the adventure and campaign.

## Random Encounters

In addition to planned encounters, the DM also runs random encounters. These aren't tied to a specific place or event. They are based on chance.

During the course of an adventure, the DM makes encounter checks, rolling a die to determine if a random encounter occurs. If one does, the DM chooses or randomly rolls for an encounter using a random encounter table he has prepared or one provided with a published adventure. Complete random encounter tables are provided in the *Monstrous Compendium.* These can be updated and replaced as new creatures are added to the 2nd Edition AD&D game.

When a check indicates an encounter is imminent, a creature or NPC determined by

the encounter tables will arrive in the area in the next few minutes to investigate. Many encounters end in combat, but this isn't necessary—it is possible to talk to intelligent creatures, whether in the dungeon, out in the wilderness, or on the streets of a town or city.

## Should You Use Random Encounters?

Some argue that random encounters are foolish and should not be used. These people maintain that everything should be under the control of the DM, that there should be no surprises for him while playing the game.

Certainly, random encounters can be abused through overuse, and they can create illogical encounters. (The word foolish would certainly apply to the DM who allowed the characters to be attacked by an orc war-band in the middle of a peaceful human city!) However, when used judiciously, random encounters add to everyone's fun in a couple of ways.

**Variety:** Random encounters introduce variety the player characters didn't expect. The characters, exploring a dungeon, become overconfident if they only encounter monsters in chambers and rooms. Random encounters reminds them that any second could be dangerous, no matter where they are.

**DM Challenge:** Random encounters make the game more exciting for the DM. The game has to be fun and challenging for him as well as the players. Part of the challenge for the DM is to improvise an encounter on the spot. The DM gets involved and excited, improving the play of the game.

To use a random encounter, the DM doesn't just open his rulebook and blindly pick a monster (although there is nothing that says he can't do this). Instead, he uses or creates specific tables that are tailored to the needs of the adventure and adventuring area, by including only those monsters or NPCs that are appropriate to the setting.

## Characteristics of Random Encounter Tables

All encounter tables share certain concepts. Before you begin creating your own tables, some understanding of these basics is necessary.

**Uniqueness:** Although one could create a single encounter table and use it for every situation, this is a grievous limitation on the wealth and detail possible in a campaign world. Encounter tables add distinction and differentiation to areas. Encounter tables can reflect conditions as basic as terrain or as complicated as entire social structures.

This in mind, the DM should decide where in the campaign world each encounter table applies. A single table could be made for all deserts; a separate table could be made for the Desert of Shaar, which is noted for its fabulous beasts; a further table could be made for the ten-mile area around the Palace of Yasath in the Desert of Shaar, where the Emir of Yasath maintains patrols to keep the beasts at bay. Within the palace an entirely different encounter table would be needed, since the patrols don't tramp through the hallways and harems.

Each table says something about the conditions in a particular area—the level of civilization, the degree of danger, even the magical weirdness of the area. Although the

players never see the entire table, such tables help the DM define for himself the nature of his campaign world.

**Frequency:** All monsters have a frequency of appearance, whether given in the monster's description or assumed by the DM. Orcs are more common than minotaurs, which are seen more often than dragons, which, in turn, are seen more often than Tiamat, Evil Queen of the Dragons. Frequency of appearance is normally listed as common, uncommon, rare, very rare, and unique.

*Common* creatures normally account for 70% of the local population. They may be more prolific or just more outgoing, more likely to show themselves to strangers.

*Uncommon* monsters fill the next 20%. They are fewer in number and tend to be more wary of outsiders.

*Rare* creatures account for another 7%. Such creatures are normally solitary, exceptionally powerful, or very retiring.

*Very rare* creatures constitute only 3% of the population. They are truly exotic and almost always extremely powerful. They may be creatures who have wandered far from their normal range or whose magical nature is such that not many can possibly exist at any one time in any one place.

*Unique* monsters are just that. They are individuals, specific and named. Such creatures should never be used on random encounter tables. They are reserved for planned encounters.

The chance of encounter is not determined solely by the frequency listing, however. The DM should also take into account a location's terrain or deadliness. A polar bear can be considered unique only in the tropics and is very rare at best even in the northernmost reaches of temperate lands. An orc living in the deadliest area of an ancient ruin, an area populated by a dragon, mind flayers, and medusae, would be very rare indeed (and very lucky to be alive). Frequency must be modified to suit conditions.

Frequency must also be subservient to the conditions the DM desires to create. If the DM wants a valley filled with magical creatures of incredible deadliness, then rare and very rare creatures are going to be more frequent. A lost valley filled with dinosaurs defies the normal chances of encountering such beasts. Indeed, they could only be considered unique elsewhere.

Furthermore, frequency does not mean characters will encounter a creature 70% or 20% of the time, only that it falls into a group that composes that percentage of the population. The percentages and ratings given are not demographic data; they are only guidelines.

Several common creatures will compose the bulk of the population, so that the chance of meeting any particular type is less than 70%. The same is true for all the other categories. In the end, the chance of meeting a particular type of common creature is still greater than that of meeting an uncommon or very rare creature.

**Logic:** The other significant factor restricting encounter tables is rationality. Everything on the encounter table should be justifiable for one reason or another. By requiring justification, the DM can quickly narrow his range of creature choices down to a reasonable number, in essence winnowing the chaff from the wheat.

The first and easiest criteria are terrain and temperature. Camels aren't found in jungles: kraken don't crawl across deserts. Glaring contradictions of logic must be justified. Produce a woodland dryad in the middle of a barren waste and the players are

going to demand some explanation. Worse yet, they may assume the encounter is significant to the adventure because it is so illogical, which may in turn throw your entire adventure off track.

Even if the creature fits a given terrain, it may not be appropriate to the setting. Just because an orc can appear on the plains doesn't mean it should, not if those plains are at the heart of a fiercely guarded human empire. Out on the fringes where raiding bands could slip across the border would be a far more appropriate place.

As important as terrain and temperature in assessing the logic of a random encounter is the character of the society the table is supposed to reflect. Balance what the players expect to meet with what would make a good adventure. At the heart of an empire, the characters would expect to find farmers, merchants, nobles, priests, and the like. The task for the DM is to find ways to make these seemingly ordinary encounters interesting.

In wilderness areas and abandoned ruins, there may not be a particular culture to consider. However, there is a society of sorts or, more accurately, an ecosystem. This is often overlooked in dungeon settings. Just which creatures feed on which? What relationships exist that allow all manner of diverse creatures to live in the same place without annihilating each other? Does a creature's random appearance make sense with what the characters know about the place? Medusae make poor wandering monsters, since logic says there should be statues of their victims in areas where they live. To round a corner and run into a medusa who just happens to be strolling the caverns grates against logic.

**Effect:** Finally, as DM, consider the role of the random encounter. Such an encounter is not a part of the adventure being told; it hasn't been worked into the plot and doesn't advance the conflicts. A random encounter should not be the most exciting event of an adventure. You don't want the players remembering only the random encounter and forgetting the story you worked to create!

Random encounters provide breaks in the action and can build or release tension. The characters are galloping after the desperately fleeing kidnappers. Suddenly a flight of griffins, attracted by the clamor of the chase, swoop down, aiming to make a meal of the player characters' horses. The kidnappers may escape unless the characters can extricate themselves from the attack in mere moments! The tension level goes up.

Random encounters can also wear the player characters down in preparation for a larger, planned encounter. The uncertainty of the encounters adds an element of risk for the players. Will the characters be strong enough? A random encounter should rarely cripple a party (unless they are in a sorry state to begin with), but each one should weaken them a little.

It doesn't matter if the player characters win every random encounter, especially not if they are down a few more hit points, spells, and magical items after each. Just knowing they are not at peak form and that they have expended their abilities on wandering monsters makes the players nervous.

For these reasons, you don't want to use the most powerful and significant creatures when creating random encounter tables. You certainly don't want to use creatures that are more powerful than those in the rest of your adventure! Random monsters should be less significant than those you have planned.

# Creating Encounter Tables

There are a multitude of ways a DM can create encounter tables (as many ways as there are different ranges of die rolls). The choices range from very simple (roll 1d6 for one of six possible choices) to very complicated (roll percentile dice, modify for time of day and weather and cross-index the result with the terrain). With this, and the common characteristics described above, in mind, you can create random encounter tables for virtually any situation.

As already noted, an encounter table can be constructed around virtually any type of die or dice roll. Two of the best, however, are the 2-20 table and the percentile table. Both provide a wide enough range of results to account for the varying frequency of appearance of the monsters the DM wants to use.

# The 2-20 Table

This table has nineteen openings (although, by doubling up on some entries, more or less than nineteen different encounters can appear on the table). The 2-20 number is generated by adding the roll of 1d8 to that of 1d12. Thus, 2s and 20s are very rare, while there is an equal chance for results from 9 through 13. Monsters are assigned specific positions on the table according to their frequency, as shown on Table 54.

**Table 54:**

## 2-20 Encounter Table

| Dice Roll | Frequency |
|---|---|
| 2 | Very rare |
| 3 | Very rare |
| 4 | Very rare or rare (DM's choice) |
| 5 | Rare |
| 6 | Rare |
| 7 | Uncommon* |
| 8 | Uncommon* |
| 9 | Common** |
| 10 | Common** |
| 11 | Common** |
| 12 | Common** |
| 13 | Common** |
| 14 | Uncommon* |
| 15 | Uncommon* |
| 16 | Rare |
| 17 | Rare |
| 18 | Very rare or rare (DM's choice) |
| 19 | Very rare |

| | |
|---|---|
| 20 | Very rare |

* Or choice of two very rare creatures, 50% chance of each.
** Or choice of two rare creatures, 50% chance of each.

To fill the table, the DM first selects those monsters he wishes to use on the table and counts how many of each type he has. If he has fewer of a given type than the chart provides for, he can repeat entries. If he has more, he either drops some creatures or doubles up some entries.

For example, say the DM is creating an encounter chart for the Desert of Shaar. First he chooses his possible encounters:

| **Common** | **Uncommon** |
|---|---|
| Camel | Basilisk |
| Giant centipede | Brass dragon |
| Herd animal | Caravan |
| Ogre | Hobgoblin |
| Orc | Nomads |
| Huge spider | Giant scorpion |

| **Rare** | **Very rare** |
|---|---|
| Chimera | Djinni |
| Pilgrims | Efreeti |
| Harpy | Lamia |
| Dervishes | |
| Salamander | |

The table has six common entries, six uncommon entries, five rare, and three very rare entries. There are also two spots that could be rare or very rare. The DM chooses to arrange his encounters as shown:

| **Dice Roll** | **Frequency** |
|---|---|
| 2 | Lamia |
| 3 | Djinni |
| 4 | Harpy |
| 5 | Pilgrims |
| 6 | Dervishes |
| 7 | Basilisk |
| 8 | Caravan/Hobgoblins |
| 9 | Huge spider |
| 10 | Ogre |
| 11 | Camel/Herd animal |
| 12 | Giant centipede |
| 13 | Orc |

| | |
|---|---|
| 14 | Nomads |
| 15 | Giant scorpion |
| 16 | Dervishes |
| 17 | Chimera |
| 18 | Salamander |
| 19 | Lamia |
| 20 | Djinni |

The DM chose not to use the brass dragon or the efreeti, saving these powerful creatures for a special, planned encounter in his adventure. He justifies the presence of the djinni on the table by deciding that it will be helpful to the party, giving them a useful clue about the adventure (unless, of course, they foolishly attack it). To fill the spots of the creatures he set aside, the DM repeated a few entries, meaning they may show up slightly more frequently than might be expected.

## The Percentile Table

This is another simple form of encounter table. Here, the creature frequency percentages can be used directly. To create a percentile table, the DM repeats the steps given above for selecting and grouping his encounters, again opting not to use the efreeti or the brass dragon. Then the number of creatures at each frequency is divided into the percentage for that frequency (70%, 20%, 7%, and 3%, respectively, for common, uncommon, rare, and very rare). In the earlier example, the list includes six common monsters. (70%), resulting in an 11% spread per monster (66% total). This is repeated for the monsters in each category. The resulting number is the dice range for each creature. Using these values as a guide, he arranges the creatures into a table.

| **D100 Roll** | **Creature** |
|---|---|
| *Common* | |
| 01-11 | Camel |
| 12-22 | Giant centipede |
| 23-33 | Herd animal |
| 34-44 | Ogre |
| 45-55 | Orc |
| 56-66 | Huge spider |
| *Uncommon* | |
| 67-70 | Basilisk |
| 71-74 | Caravan |
| 75-78 | Hobgoblins |
| 79-82 | Nomads |
| 83-86 | Giant scorpion |
| *Rare* | |

| | |
|---|---|
| 87-88 | Chimera |
| 89-90 | Pilgrims |
| 91-92 | Harpy |
| 93-95 | Dervishes |
| 96-97 | Salamander |

*Very Rare*

| | |
|---|---|
| 98-99 | Lamia |
| 100 | Djinni |

Using this method the DM was able to remain reasonably faithful to the frequency percentages for different creatures: 66% as opposed to 70% for common; 20% exactly for uncommon; 11% as opposed to 7% for rare; and 3% for very rare. In creating this table, the DM had to make adjustments here and there to account for all percentage numbers, but doing so allowed him to increase the emphasis on certain monsters.

## Dungeon Encounter Tables

Dungeon encounter tables are normally set up according to levels—1st, 2nd, 3rd, etc. Each level is a relative measure of the power of those creatures on it. In general, the level of the table corresponds to character level, although characters may also encounter and defeat (or be challenged by) creatures from higher or lower level tables. Generally, when adventuring in a dungeon, characters should meet random encounters that are equal to or no more than two levels higher or lower than their own.

Sometimes dungeons themselves are arranged in levels (although this is by no means required). In this case, the dungeon level and the encounter table correspond. Characters on the 1st-level of the dungeon would encounter creatures from the first level encounter table. This not only keeps the power of the monsters in line with the strength of a typical party, it also maintains the logical structure of the dungeon level. It doesn't make much sense for extremely powerful monsters to mingle freely (and without consequence) among the weaker creatures that inhabit the level.

**Determining dungeon level:** Figuring the appropriate level for a particular creature is simple. Look up or calculate the experience points of the creature and check this number on Table 55, below. This will tell you where to place the creature.

**Table 55:**

### Dungeon Level

| XP | Creature Level |
|---|---|
| 1-20 | 1 |
| 21-50 | 2 |
| 51-150 | 3 |
| 151-250 | 4 |
| 251-500 | 5 |
| 501-1,000 | 6 |

| | |
|---|---|
| 1,001-3,000 | 7 |
| 3,001-5,500 | 8 |
| 5,501-10,000 | 9 |
| 10,001 + | 10 |

When constructing the encounter table, creatures with a greater or lesser power than the table being designed can be used. However, each level of difference between creature and table decreases the frequency of appearance by one (a common creature becomes uncommon, a rare creature would be very rare, and so on). Creatures less powerful than the given level seldom venture into such dangerous territory. Creatures more powerful are seldom met to ensure the player characters have a decent chance of survival. After adjustment, these creatures can be added to the table.

In addition, there is a chance that an encountered creature will be more powerful than expected: When designing a 2-20 table, the 20 result could be "Use next highest table"; if a percentile table is used, 98-100 could bump the DM to the next table. Thus, players would never be assured of safety or good odds.

## Wilderness Encounter Tables

Unlike the dungeon tables, those used for the wilderness are not so neatly organized according to deadliness or power. One principle of wilderness adventuring (which makes it more dangerous for low-level characters) is that virtually any creature can be met—and often in sizeable numbers. This is a risk the players should be aware of before they take their characters out into the untracked forest.

This does not mean that wilderness adventuring should be impossible for low-level characters. It shouldn't be so deadly that they can't walk three steps before a flight of red dragons appears and turns them to ash with one fiery breath! That's just bad refereeing. Low-level characters should have the opportunity to go on wilderness adventures that they can survive.

Perhaps an area of the nearby forest is regularly patrolled by the King's Wardens who drive off the greater threats to the safety of the population. Lone monsters often escape their notice and sometimes raid the outlying farms. Special encounter tables can be created to reflect the lower levels of monsters that do manage to lurk in these woods, providing low-level characters with a decent but not overpowering challenge.

The greatest consideration in creating wilderness encounter tables is to have a separate table for each type of terrain. These need not be created all at once, although tables must exist for the terrain types the characters have to enter during the course of an adventure. Different terrain types that can be used include the following:

Aerial
Arctic
Bush
Coatal
Desert, hot or cold
Farmland
Glacier

Grasslands
Jungle, subtropical
Jungle, tropical
Lake
Mountains, high
Mountains, low
Ocean, deep
Ocean, shallows
Parkland
Plains
Prehistoric
Rain forest
Salt marsh
Steppe
Swamp, tropical
Swamp, temperate
Temperate forest
Tundra

Wilderness encounter tables can reflect more than just terrain. There are differences between the jungles of Africa and those of Asia or South America. Different areas of jungle (or plains or whatever) can have different properties in a fantasy world, too.

Furthermore, an area's level of civilization should be taken into account. There might be tables for settled farmlands, border areas, and barely explored plains. All cover the same type of terrain, but there are vast differences in the types of encounters.

## Special Encounter Tables

In addition to tables for dungeons and wilderness areas, the DM can create others for any type of special situation he creates. The most common of these are encounter tables for towns and cities. These are not properly wilderness and certainly aren't dungeons. The players shouldn't expect to meet bands of ravening beasts intent on death and destruction (unless it's a very peculiar city!).

Town and city encounters will be with people, mostly player character races, of different social classes and occupations. Guardsmen, merchants, beggars, urchins, teamsters, and craftsmen plying their trade are all likely encounters for a city.

A single encounter table will do for most small villages and towns. Such places have a great deal in common, although the DM can certainly create distinctions between villages on the coast and those well inland.

Cities, however, tend to have unique characters. Just as Los Angeles is different from New York or Paris from Marseilles, different cities in a fantasy world should feel different to the characters. Each major city should have a unique encounter table to reflect these differences.

Indeed, even within a city there may be different encounter tables to reflect the character of the city's districts. The villas on the hillside are no less dangerous than the waterfront, but these dangers take more subtle and insidious forms.

In the end, there is no limit to the degree of subdivision that can be applied to encounter tables. Cities, individual districts, specific complexes within those districts, and buildings within those complexes could all have separate encounter tables. However, they do not need to. The DM should only concern himself with those areas he knows or thinks the players are going to frequent! There is no reason to do pointless work—the DM has enough responsibility already.

For example, suppose the DM decides to create tables for the Empire of Orrim. Orrim stretches from the Harr Mountains to the Sea of Faldor. North of it lies the Forest of Bane, a place noted for its evil denizens. Most of the empire is agricultural, but the mountain district is heavily devoted to mining. Several large, underground complexes have been built.

There are two major cities—Sulidam, the capital, located on the coast, and Coralport, a pirate stronghold on an island offshore. To limit his work, the DM decides to start the characters in a small village of the mining district, close to an abandoned mine (his dungeon).

First, the DM creates the following tables:

- Dungeon levels 1-4 (for the abandoned mine)
- Village encounters
- Black Opal Inn (the residence of the player characters)

After a while, the characters want to go exploring. Now the DM adds some new encounter tables to his collection. These include:

- Settled mountains (for low-level wilderness)
- High mountains (for more dangerous adventures)
- Settled plains (for when the characters travel to the capital)

Working in this manner, the DM gradually creates a complete set of encounter tables. When he is finished, his collection might look like this, in addition to those already mentioned.

Farmland
Forest of Bane
Forest borderlands
Mountain borderlands
Settled seacoast
Shallow ocean
Waterfront district, Sulidam
Nobles' district, Sulidam
Artisan's district, Sulidam
Slums, Sulidam
Temple of Martens (a powerful cult of Sulidam)
Sewers of Sulidam
Emperor's Palace
City of Crypts (a cemetery outside Sulidam)
Dungeon of Theos (under an evil wizard's villa in Sulidam)
Coralport
Coralport jungles
The Harpooned Whale, an inn of Coralport

Hargast Mine (an opening to the Underdark)

By creating the tables gradually, the campaign world slowly begins to define itself and take shape before players' eyes.

## Spicing Up Encounter Tables

There are several things that can be done to make encounter tables both easier and more exciting to use. Some of these are strictly for the convenience of the DM, making the job of running the game easier. Others are different ways to pose exciting challenges for players, keeping everyone from being bored.

The first trick is to include basic monster statistics along with each entry on an encounter table. While this means taking a little longer to set up an encounter table, it also means the DM doesn't have to stop and look up information as often in the middle of the game. A shorthand notation similar to the one given below can be used.

Creature—APP #, AT #, THACO #, D #, AC #, HD #, MV #, special notes on attacks and defenses.

**APP** lists the number of creatures likely to appear. This is given as a die range.
**AT** is the number of attacks the creature can make.
**THAC0** is the combat value of the creature (see Chapter 9: Combat).
**D** is the damage caused by a successful hit; more than one entry may be needed here.
**AC** is the creature's Armor Class.
**HD** tells how many Hit Dice the creature has; hit points aren't given since this should vary from encounter to encounter.
**MV** is the creature's movement rate.
**Special notes** should remind the DM of any special abilities, magical items, or defenses the creature might possess.

For DMs willing to devote more time to advance preparation, another good trick is to slowly build a collection of file cards describing special encounters. Each card could have a more detailed description of a person, creature, group, or thing on it.

Once the DM has this collection, "Special Encounter" entries can be added to random encounter tables. When a special encounter occurs, the DM chooses a card from his collection and uses the detailed information there to role-play the encounter. Some possible special encounters include:

**The den or lair** of a creature, complete with a small map, short key, tactics, and special treasure. (For example, "The nest of a female wyvern and her brood located in an aerie on the side of a cliff. Woven into the nest are two suits of *chain mail +1.*")

**A detailed description** of an NPC, including weapons, magical items, spells (if any), goods, physical appearance, attitudes, companions, and perhaps even a mission or story. (For example, "The friar seeking companionship along a lonely trail who is really a bandit leading the party into a trap.")

**A cunning trap** describing detailed workings and effects. (For example, "A kobold deadfall meant to gather fresh meat rigged in an old mine corridor.")

**A vignette** complete with characters, actions, and motives. (For example, "A near riot

breaks out on a city street after a band of Voorish outlanders, squabbling with a merchant, overturn his melon cart.")

The great advantage of these special encounters is that there is no requirement to use them at any given time. The DM can prepare such cards in his spare time and produce them whenever he needs them. Players will become convinced that the DM is a genius, and his game will never be dull.

Random encounters need not be limited to NPCs and monsters. All manner of things can be included, dangerous or just mysterious. Other possibilities for encounter tables include:

Shrieks in the distance
Traps
Changes in the weather
Rustling of nearby bushes
Lights in the distance
Celestial wonders
Sudden gusts of wind
The clatter of a rock falling from the ceiling

All of these help build atmosphere. Furthermore, if these are cleverly mixed with real encounters that begin in similar ways, players become attentive and involved. Exploring a dark, dank cave where hideous beasts may live, with only a guttering torch, should be a nervous and scary event. Adding "fake" random encounters will give players some idea of the uncertainty their characters experience. If nothing else, this kind of encounter will give players some respect for the risks their imaginary characters are taking!

## DMing Encounters

Encounter tables are created before play begins. During a game session, the DM has to take the information he has put into the encounter tables and bring it to life.

To use an encounter table and run an encounter, the DM needs to know several things: How often should he check for encounters? What is encountered? How many creatures are there? How far away are they? Did they surprise, or were they surprised by, the characters? What will the encountered group do? The rules below tell you how to answer these questions.

## Encounter Checks

The DM knows when a planned encounter is to occur, based on the conditions or location he has prepared. The same is not true of random encounters. For these, the DM must make encounter checks.

**Frequency of Encounter Checks:** How often the DM makes encounter checks depends on the situation. Different types of terrain (or dungeons) may make checks more or less frequent. Furthermore, the type of terrain and population density will affect the chance the characters have a meaningful encounter. Table 56 lists both the frequency of checks and the chance that an encounter will occur for the most common wilderness

situations. If characters are adventuring in other types of terrain, the DM can use a comparable entry from the table or can determine frequency and chance of encounter himself.

**Encounter Chance:** This lists the number or less that must be rolled on 1d10 for an encounter to occur.

**Time of Day:** If an x appears under a specific time of day, an encounter check should be made. This does not ensure an encounter, it only requires the check for one.

The chance of having an encounter can be modified by several factors. Foremost of these is population density. The chances of an encounter listed on Table 56 assume an unpopulated wilderness area.

**Wilderness Checks:** If the region is patrolled or sparsely settled, the chance of an encounter increases by one. In heavily populated areas, the chance of an encounter increases by two. These modifiers should not be used unless the DM has specially prepared encounter tables to reflect the differences between settled lands and wilderness, however.

The DM can also choose to modify the chance of an encounter for any other reason he feels is justified. If the characters have been making excessive noise or if the village alarm has been sounded, the DM can increase the chance of an encounter. The DM can even decide arbitrarily that an encounter will occur, although it can hardly be considered random any more.

**Dungeon Checks:** Encounter checks in the dungeon are not affected by terrain (since there isn't really any terrain to consider). Normally, one encounter check is made every hour, with an encounter occurring on a roll of 1 on 1d10.

If the DM deems part of a dungeon particularly dangerous, the number of checks can be increased to once per turn (10 minutes of game time). The DM can also increase the chance of an encounter occurring. If the characters engage in an activity that makes excessive noise (hammering spikes or taking part in a loud battle), an encounter check should be made immediately.

**Table 56:**

## Frequency & Chance of Wilderness Encounters

| Terrain | Encounter | Time of Day | | | | | |
|---|---|---|---|---|---|---|---|
| **Type** | **Chance** | **7-10 a.m.** | **11 a.m.-2 p.m.** | **3-6 p.m.** | **7-10 p.m.** | **11 p.m.-2 a.m.** | **3-6 a.m.** |
| Plain | 1 | x | — | x | — | x | — |
| Scrub/brush | 1 | x | — | x | x | — | x |
| Forest | 2 | x | x | x | x | x | x |
| Desert | 1 | x | — | — | x | — | x |
| Hills | 2 | — | x | — | x | — | x |
| Mountains | 3 | x | — | — | x | x | — |
| Swamp | 4 | x | x | x | x | x | x |
| Jungle | 3 | x | x | x | x | x | — |
| Ocean | 1 | — | x | — | — | x | — |
| Arctic | 1 | — | — | x | x | — | — |

## Is This Encounter Necessary?

Any time the DM feels his adventure is dragging along or that characters are getting over-confident, he can declare a random encounter. Likewise if he feels that a random encounter would hurt the adventure, he can ignore one that's called for. Good judgment and story considerations are more important than slavish devotion to procedure.

## Encounter Size

If the DM decides that yes, this encounter should happen, he determines how many creatures or NPCs appear. There is no quick and easy formula for this. Experience is the best guide. The *Monstrous Compendium* lists a typical encounter size for each monster. Use this as a guideline, especially when you're first starting out as a DM, but don't follow this inflexibly.

When uncertain, use a small encounter. It is far better for a random encounter to be easily defeated by the player characters than it is for the monster to overwhelm them. An easy PC victory gives the DM information and experience (so he'll know to increase the difficulty of the next encounter) without harming the player characters and his campaign. A crushing PC defeat is almost impossible to correct without obvious manipulation once the encounter has begun.

As always, use common sense when determining how big an encounter is. Nature provides some guidelines. Bear these in mind when figuring encounter size.

Many predators, especially those that hunt by night, are solitary creatures. A nocturnal fantasy creature might show up alone, as well.

Of the predators that hunt by daylight, some work alone while others cooperate in groups of two or three. One or two will attack the prey from one direction while the others wait for it to be flushed toward them. Such hunters are usually stronger and faster than their prey. Again, fantasy creatures can follow this pattern.

Smaller predators sometimes hunt in packs of 5 to 12, attempting to surround and harry a chosen victim. Herbivorous animals tend to flavor herds and the company of others. Omnivores live in smaller groups and often have older members that act as guards. All of these factors can play a part in the size of a given encounter.

**Table 57:**

## Surprise Modifiers

| **Other Party is:** | **Group's Modifier** |
|---|---|
| Silenced | -2 |
| Invisible | -2 |
| Distinctive odor (smoke, powerful stench, etc.) | +2 |
| Every 10 members | +1 |
| Camouflaged | -1 to -3 |
| **PC Party is:** | |
| Fleeing | -2 |
| In poor light | -1 |

| | |
|---|---|
| In darkness | -4 |
| Panicked | -2 |
| Anticipating attack* | +2 |
| Suspicious* | +2 |
| **Conditions are:** | |
| Rainy | -1 |
| Heavy fog | -2 |
| Extremely still | +2 |

* A party anticipates attack when they have good cause to suspect immediate danger and know the likely general direction of an attack. A suspicious party is one that has grounds to believe another group might try to make a hostile move against them.

## Surprise

Before an encounter begins, a check for surprise may be necessary. Given the right conditions, it is possible for either side in an encounter to surprise the other. In essence, the encounter is just as random for the monsters as it is for the player characters.

As noted in the *Player's Handbook*, surprise is not always assured nor is the check always necessary. Light, excessive noise, and other types of prior warning can cancel the need for the check. Surprise isn't usually possible when no form of concealment is possible (as in the case of two ships at sea), though darkness, storms, fog, and the like do act as concealment.

In some cases, one side may be able to surprise the other without the other group having the same opportunity. This is particularly true when the player characters are using lanterns or torches and the monsters are not. Seeing the light, the monsters can try to sneak closer and get the jump on the player characters.

When making a surprise roll, there are many factors that can increase or decrease the chance of surprise. Some of these are very exotic or very particular to a situation, but others can be anticipated. The more common modifiers are listed on Table 57. By comparing other situations to these modifiers, the DM has a guideline for making appropriate adjustments.

## Encounter Distance

Once an encounter occurs, it is necessary to know the range at which the creatures might first be noticed. This distance is dependent first on whether or not either group is surprised or, if no surprise occurs, on the type of terrain the encounter occurs in. Encounter distances for different conditions and terrains are listed on Table 58.

**Table 58:**
### Encounter Distance

| Situation or Terrain | Range in Feet |
|---|---|
| Both groups surprised | 3d6 |
| One group surprised | 4d6 |
| No surprise: | |
| Smoke or heavy fog | 6d6 |
| Jungle or dense forest | 1d10 x 10 |
| Light forest | 2d6 x 10 |
| Scrub, brush or bush | 2d12 x 10 |
| Grassland, little cover | 5d10 x 10 |
| Nighttime or dungeon | Limit of sight |

In situations where no cover is possible, encounters will occur at the limit of vision unless special circumstances dictate otherwise.

While it is possible to spot another group at quite a distance, the characters or creatures may not be able to identify them immediately. The observation ranges given in the *Player's Handbook* may require creatures to close in order to make a positive identification.

## Encounter Reactions

Once the encounter is set and the DM is ready to role-play the situation, he needs to know how the NPCs or monsters will react. The creatures should react in the manner the DM thinks is most appropriate to the situation.

If the player characters charge a band of randomly encountered orcs with weapons drawn, the DM can easily say, "They snarl and leap to the defense!" Selection of the reaction based on the situation ensures rational behavior and avoids the illogical results that random die rolls can often give.

However, there are times when the DM doesn't have a clue about what the monsters will do. This is not a disaster—it's not even all that unusual. When this happens, the DM can randomly determine an encounter reaction by rolling for a result on Table 59. To use the table, roll 2d10 and add the numbers on the two dice. Increase or decrease this number by any modifiers in the creature description or the morale modifiers (see Table 50 in Chapter 9: Combat).

Using the column that most closely matches the behavior of the player characters, find the entry listed for modified die roll. The result is a general indication of how the creatures will react. This reaction must be interpreted by the DM to fit the situation.

**Table 59:**

### ENCOUNTER REACTIONS

| Modified | Player Characters are: | | | |
|---|---|---|---|---|
| Die Roll | Friendly | Indifferent | Threatening | Hostile |
| 2 or less | Friendly | Friendly | Friendly | Flight |

| | | | | |
|---|---|---|---|---|
| 3 | Friendly | Friendly | Friendly | Flight |
| 4 | Friendly | Friendly | Cautious | Flight |
| 5 | Friendly | Friendly | Cautious | Flight |
| 6 | Friendly | Friendly | Cautious | Cautious |
| 7 | Friendly | Indifferent | Cautious | Cautious |
| 8 | Indifferent | Indifferent | Cautious | Cautious |
| 9 | Indifferent | Indifferent | Cautious | Threatening |
| 10 | Indifferent | Indifferent | Threatening | Threatening |
| 11 | Indifferent | Indifferent | Threatening | Threatening |
| 12 | Cautious | Cautious | Threatening | Threatening |
| 13 | Cautious | Cautious | Threatening | Hostile |
| 14 | Cautious | Cautious | Threatening | Hostile |
| 15 | Cautious | Threatening | Threatening | Hostile |
| 16 | Threatening | Threatening | Hostile | Hostile |
| 17 | Threatening | Threatening | Hostile | Hostile |
| 18 | Threatening | Threatening | Hostile | Hostile |
| 19 | Hostile | Hostile | Hostile | Hostile |
| 20 | Hostile | Hostile | Hostile | Hostile |

Within these broad guidelines, a large number of specific reactions are possible.

**Flight:** Avoidance, panic, terror, or surrender.

**Friendly:** Kind, helpful, conciliatory, or simply non-aggressive.

**Indifferent:** Neutral, bored, businesslike, unconcerned, unimpressed, or simply oblivious.

**Cautious:** Suspicious, wary, dubious, paranoid, guarded, untrusting, or mildly conciliatory.

**Threatening:** Boastful, bravado, blustering, intimidating, short-tempered, or bluffing.

**Hostile:** Irritable, hot-tempered, aggressive, or violent.

Of course, a DM should never use a reaction he can't justify. If the DM can't see any reason for an evil efreeti to surrender to the charging player characters, it shouldn't. The table is meant to be an aid to the DM, not an absolute decision-maker.

## Fixing Things in Play

Sometimes, for all the good intentions of the DM, encounters don't work out right. Correcting problems in play can be difficult, but there are times when it's unavoidable. Here are some tricks you can use.

## The Encounter is Too Difficult

The DM has accidentally pitted his player characters against a group of creatures too powerful for them, so much so that the player characters are doomed. To fix things, the DM can have the monsters flee in inexplicable panic; secretly lower their hit points; allow the player characters to hit or inflict more damage than they really should; have the

monsters miss on attacks when they actually hit; have the creatures make grievous mistakes in strategy (like ignoring the thief moving in to strike from behind).

## The Encounter Gave Away Too Much Treasure

Sometimes the DM discovers his random encounters gave away too much treasure. In this case, he can have more monsters of the same or more powerful type appear on the scene. (The first group stole the treasure and these fellows want it back; or the first was carrying the tribe's treasury to safe-keeping; or the new group has been trailing the first to rob them, and now takes a very dim view of the characters getting all the loot.) In many ways this is like those westerns where everyone winds up fighting over the gold. In this case, the monsters don't want to annihilate the player characters so much as get the loot and run.

## The Encounter Was Too Easy

As long as the treasure the characters earned was not excessive, this is not a problem. The DM can always make things tougher for them in the next encounter.

# Chapter 12:
# NPCs

Of all the things the DM does—judging combats, interpreting the actions of the player characters, creating adventures, assigning experience—of all the things he can possibly do, nothing is more important to the AD&D game than the creation and handling of nonplayer characters (NPCs). Without nonplayer characters, the AD&D game is nothing, an empty limbo. The AD&D game is a role-playing game, and for the players to role-play, they must have something or someone to interact with. That's what NPCs are for, to provide the player characters with friends, allies, and villains. Without these, role-playing would be very dull.

An NPC is any person or creature the player characters must deal with and that the DM has to role-play. The player characters must deal with a trap, but the DM doesn't role-play a trap. It's not an NPC. A charging dragon *is* an NPC—the DM acts out the part of the dragon and the players decide how their characters are going to react to it. There are times when the DM's role-playing choices are simple (run away or charge), but often the DM's roles are quite challenging.

For convenience, NPC encounters are generally divided into two broad categories: monsters (those living things that aren't player character races) and full NPCs (races the player characters commonly deal with). The range of reactions in a monster encounter is generally less than in a full NPC encounter.

The DM has to think of himself as a master actor, quick-change artist, and impressionist. Each NPC is a different role or part the DM must quickly assume. While

this may be difficult at first, practice makes the task much easier. Each DM develops certain stock characters and learns the personalities of frequently used NPCs.

There are many different categories of NPCs, but the most frequently encountered are common, everyday folk. Player characters deal with innkeepers, stablers, blacksmiths, minstrels, watchmen, petty nobles, and others, many of whom can be employed by player characters. These NPCs are grouped together as hirelings.

## Hirelings

There are three types of hirelings: common, experts, and soldiers. Common hirelings form the vast majority of any population, particularly in an agricultural community.

**Common hirelings** are farmers, millers, innkeepers, porters, and the like. While some of these professions require special knowledge, they don't, as a rule, require highly specialized training. These are the men and women whose work forms the base upon which civilized life is built.

**Expert hirelings** are those whose training is specialized. This group includes craftsmen, sages, spies, assassins, alchemists, animal trainers, and the like. Since not everyone is trained in these skills, few experts are available for hire, and these few earn more than the common hireling. Indeed, truly exotic experts (such as spies) are very rare and extremely expensive.

The skills and abilities of expert hirelings can be determined by using the optional proficiency system given in the *Player's Handbook.* These define the limits of an expert's ability and, in general, the time needed to exercise many crafts.

## Medieval Occupations

Common and expert hirelings are listed on Table 60. This table, organized alphabetically, lists and describes common medieval occupations. Explanations are provided for the more obscure or unusual professions below. This list provides colorful titles and unusual occupations to make your ordinary hirelings more interesting.

**Table 60:**

## NPC Professions

Apothecary: A chemist, druggist, or pharmacist
Architect
Armorer
Arrowsmith: A maker of arrowheads
Assassin: A killer for hire
Astrologer: A reader of stars and fates
Baker
Barber: A surgeon, bloodletter, dentist, and haircutter
Barrister: A lawyer or one who pleads the case of another before a noble's court

Beggar
Bellfounder: A caster of bells
Blacksmith
Bloomer: A man who work an iron smelting forge
Bladesmith: A smith who specializes in sword blades
Bookbinder: A maker of books
Bowyer: A maker of bows
Brazier: A smith who works in brass, sometimes a traveling workman
Brewer: A maker of ales, bitters, stouts, and beer
Bricklayer: A laborer who builds walls and buildings
Butcher
Carpenter
Carrier: One who hauls messages or small goods
Carter: A teamster, a hauler of goods
Cartwright: A builder of wagons and carts
Carver: A sculptor in wood
Chandler: A maker of candles
Chapman: A traveling peddler who normally frequents small villages
Churl: A freedom farmer of some wealth
Clerk: A scribe who generally handles business accounts
Clockmaker
Cobbler: A mender of old shoes
Collier: A burner of charcoal for smelting
Coppersmith: A copper worker
Cook
Cooper: A barrelmaker
Cordwainer: A shoemaker
Cutler: A maker of knives and silverware
Dragoman: An official interpreter or guide
Draper: A cloth merchant
Dyer: One who dyes clothing
Embroiderer: A needleworker who decorates fabric with intricate designs of thread
Enameler: A jeweler specializing in enamel work.
Engraver: A jeweler specializing in decorative engraving
Farrier: A maker of horseshoes
Fisherman
Fishmonger: A fish dealer
Fletcher: An arrowmaker
Forester: An official responsible for the lord's woodlands
Fuller: A felt-maker
Furrier: A tailor of fur garments
Gardener
Gem-cutter: A jeweler specializing in gemstones
Gilder: A craftsman of gilt gold and silver
Girdler: A maker of belts and girdles

Glassblower: A maker of items made of glass
Glazier: One who cuts and sets glass
Glover: A maker of gloves
Goldbeater: A maker of gold foil
Goldsmith: A jeweler who works with gold
Grocer: A wholesaler, particularly of everyday items
Groom: A man who tends horses
Haberdasher: A merchant of small notions, thread, and needles
Harpmaker
Hatter: One who makes hats
Herald: A courtier skilled in etiquette and heraldry
Herbalist: A practitioner of herbal cures
Hewer: One who digs coal or other minerals
Horner: A worker of horn
Hosier: A maker of hose and garters
Hosteler: An innkeeper
Interpreter: A translator
Ironmonger: A dealer, not maker, of ironwork
Joiner: A cabinet or furniture-maker
Knife-grinder: A sharpener of knives
Laundress
Laborer
Latoner: A brass-worker
Leech: A nonclerical doctor
Limeburner: A maker of lime for mortar
Limner: A painter
Linkboy: A lantern- or torch-bearer
Locksmith
Lutemaker
Marbler: A cutter and carver of marble
Mason: A worker in building stone, brick, and plaster
Mercer: A cloth dealer
Messenger
Miller: One who operates a grain mill
Miner
Minstrel
Minter: A maker of coins
Nailsmith: A smith specializing in nails
Navigator: One skilled in the arts of direction-finding and navigation
Organmaker
Painter
Parchment-maker
Paviour: A mason specialized in paving streets
Pewterer: One who works pewter
Plasterer: A specialist in plastering
Ploughman: A worker of the field

Porter: A hauler of goods
Potter: A maker of metal or, alternatively, clay pots
Poulterer: A dealer of chickens or other forms of poultry
Pursemaker
Quarrier: One who digs and cuts stone
Saddler: A maker of saddles
Sage: A scholar
Sailor
Saucemaker: A cook who specializes in preparing sauces
Scribe: A secretary or one who can write
Scrivener: A copyist
Seamstress: One whose occupation is sewing
Shearman: A man who trims the loose wool from the cloth to finish it
Sheather: A maker of scabbards and knife sheaths
Shepherd
Shipwright: A builder of ships and boats
Skinner: A butcher who prepares hides for tanning
Soapmaker
Spurrier: A maker of spurs
Spy
Swineherd: A keeper of pigs
Tailor
Tanner: A leather-maker
Teamster: A hauler of goods by wagon or cart
Tilemaker
Tinker: A traveling craftsman who repairs tin pots and similar items
Tinner: A tin miner
Trapper
Vintner: A maker of wines
Waller: A mason who sets stones and brick for walls
Waterleader: A water hauler
Weaver: One who makes fabric
Wheelwright: One who makes and repairs wheels
Wiredrawer: A maker of wire
Woodturner: A lathe-worker

The list above is by no means complete. Medieval occupations were highly specialized. A man might spend all his life working as a miner of iron and be considered to have a very different occupation from a miner of tin. Research in a local library will probably yield more such distinctions and even more occupations.

### The Assassin, the Spy, and the Sage

Three experts, the assassin, spy, and sage, require special treatment. Each of these, unlike other hirelings, can affect the direction and content of an on-going adventure. Used carefully and sparingly, these three are valuable DM tools to create and shape stories in a role-playing campaign.

# Assassins

Assassination is not a discreet occupation per se, but a reprehensible mind-set. The assassin requires no special skills, though fighting, stealth, and even magic are useful. All that is really needed to be an assassin is the desire and the opportunity.

**Hiring an Assassin:** When a player character hires an assassin (which is *not* a good or lawful act), he is taking a chance. There is virtually no way to assure oneself of the reliability and dependability of such a person. Anyone willing to make a business out of murder is not likely to have a high degree of morals of any type. Clearly, this is a case of "let the buyer beware!"

Once a character has hired an assassin, it is up to the DM to determine the success of the deed. There are no simple tables or formulae to be followed.

**Consider the intended victim:** Assassination attempts by one player character against another should not be allowed. This type of behavior only leads to bitterness, bickering, and anger among the players. NPC-sponsored assassination attempts against player characters should be used sparingly, and then only as plot motivators, not as punishment or player controls. Any time a player character is targeted, role-play the encounter fairly—give the PC a chance.

If the intended victim is an NPC, the DM should decide the effect of the assassination on his game. Sometimes, player characters do these things out of spite. At other times the deed may be motivated by simple greed. Neither of these is a particularly good motive to encourage in a campaign.

If the death of the NPC would result in a major reworking of the campaign for no good reason, consider seriously the idea of making the attempt fail. If the death of the NPC would allow the player characters to by-pass or breeze through an adventure you have planned, then it's not a good idea. Don't just tell the players, "Oh, that'd be bad for the game so you can't even try to knock that guy off." Work the attempt—and its failure—into the storyline.

**Precautions:** If you decide the attempt is legitimate, consider the precautions the intended NPC victim normally takes. These may make the job particularly difficult or easy. Kings, emperors, high priests, and other important officials tend to be very cautious and well-protected. Wizards, with wise magical precautions, can be virtually impossible to assassinate! Devise specific NPC precautions before you know the assassin's plans.

Wizards make use of *magic mouth, alarm, explosive runes,* and other trap spells. Priests often rely on divination-oriented items to foresee the intentions of others. Both could have extra-dimensional or other-planar servants and guards. They may also have precautions to foil common spells such as *ESP, clairvoyance,* and *detect magic.* Kings, princes, and other nobles have the benefit of both magical and clerical protection in addition to a host of possibly fanatically loyal bodyguards. If the victim has advance warning or suspects an attempt, further precautions may be taken, and the job can become even more difficult.

**The Plan:** After you have decided (secretly) what precautions are reasonable, have the player describe the plan he thinks would work best. This can be simple or involved, depending on the cunning of the player. This is the plan the assassin, not the player character, will use, therefore the player can presume some resources not available to the player character. However, you must decide if these resources are reasonable and truly

exist.

For example, if the player says the assassin has a map of the castle, you must tell him if this is reasonable (and, unless the victim is extremely secretive and paranoid, it is). A plan involving a thousand men or an 18th-level thief is not reasonable. The player character hasn't hired an entire arsenal!

Finally, compare what you know of the precautions to the plan and the success or failure will usually become clear. Ultimately, the DM should not allow assassinations to succeed if he doesn't want them to succeed!

In general, allowing player characters to hire assassins should not be encouraged. Hiring an NPC to kill even a horrible villain defeats the purpose of heroic role-playing. If the player characters can't accomplish the deed, why should they be allowed to hire NPCs to do the same thing?

Overuse of assassins can often result in bitter feelings and outright feuding—player vs. player or player vs DM. Neither of these is fun or healthy for a game. Finally, it is a very risky business. Assassins do get caught and generally have no compunctions about confessing who their employer is. Once the target learns this, the player character will have a very dangerous life. Then the player character can discover the joy and excitement of having assassins looking for him!

## Spies

While less reprehensible (perhaps) than assassins, spies involve many of the same risks and problems. First and foremost, a spy, even more than an assassin, is inherently untrustworthy. Spying involves breaking a trust.

A spy, unlike a scout, actively joins a group in order to betray it. A person who can so glibly betray one group could quite easily betray another, his employer perhaps. While some spies may be nobly motivated, these fellows are few and far between. Furthermore, there is no way to be sure of the trustworthiness of the spy. It is a paradox that the better the spy is, the less he can be trusted. Good spies are master liars and deceivers even less trustworthy than bad spies (who tend to get caught any way).

In role-playing, spies create many of the same problems as assassins. First, in allowing player characters to hire spies, the DM is throwing away a perfectly good role-playing adventure! Having the characters do their own spying can lead to all manner of interesting possibilities.

Even if NPC spies are allowed, there is still the problem of success. Many variables should be considered: What precautions against spies have been taken? How rare or secret is the information the character is trying to learn? How talented is the NPC spy? How formidable is the NPC being spied upon?

In the end, the rule to use when judging a spy's success is that of dramatic effect. If the spy's information will create an exciting adventure for the player characters without destroying the work the DM has put into the campaign world, it is best for the spy to succeed.

If the spy's information will short-circuit a well-prepared adventure or force the DM to rework vast sections of the campaign world, the spy should not succeed. Finally, the spy can appear to succeed while, actually, failing—even if he does return with information, it may not be wholly accurate. It may be slightly off or wildly inaccurate. The final decision

about the accuracy of a spy's information should be based on what will make for the best adventure for the player characters.

## Sages

Unlike other expert hirelings, sages are experts in a single field of academic study. They are most useful to player characters in answering specific questions, solving riddles, or deciphering ancient lore. They are normally hired on a one-shot basis, to answer a single question or provide guidance for a specific problem. A sage's knowledge can be in any area that fits within the limits of the campaign. Typical sage areas are listed on Table 61.

**Table 61:**
### Fields of Study

| Study | Frequency | Abilities and Limitations |
|---|---|---|
| Alchemy | 10% | Can attempt to brew poisons and acids |
| Architecture | 5% | Specific race only (human, elf, etc.) |
| Art | 20% | Specific race only (human, elf, etc.) |
| Astrology | 10% | Navigation, astrology proficiencies |
| Astronomy | 20% | Navigation, astronomy proficiencies |
| Botany | 25% | |
| Cartography | 10% | |
| Chemistry | 5% | Can attempt to brew poisons and acids |
| Cryptography | 5% | |
| Engineering | 30% | |
| Folklore | 25% | One race/region only |
| Genealogy | 25% | One race/region only |
| Geography | 10% | |
| Geology | 15% | Mining proficiency |
| Heraldry | 30% | |
| History | 30% | One race/region only |
| Languages | 40% | One language group only |
| Law | 35% | |
| Mathematics | 20% | |
| Medicine | 10% | |
| Metaphysics | 5% | One plane (inner or outer) only |
| Meteorology | 20% | |
| Music | 30% | One race only |
| Myconology | 20% | Knowledge of fungi |
| Oceanography | 15% | |
| Philosophy | 25% | One race only |
| Physics | 10% | |
| Sociology | 40% | One race or region only |

| | | |
|---|---|---|
| Theology | 25% | One region only |
| Zoology | 20% | |

**Frequency** is the chance of finding a sage with that particular skill in a large city—a university town of provincial capital, at least, Normally, sages do not reside in small villages or well away from population centers. They require contact with travelers and access to libraries in order to gain their information. Roll for frequency only when you can't decide if such a sage is present. As always, consider the dramatic effect. Will the services of a sage further the story in some exciting way?

**Abilities and limitations** define specific limitations or rules effects. If this column is blank, the sage's knowledge is generally thorough on all aspects of the topic. *One race only* means the sage can answer questions that deal with a particular race. *One region only* limits his knowledge to a specific area—a kingdom or province. The size of the area depends on the campaign. *One plane* limits the sage to the study of creatures, conditions, and workings of a single extra-dimensional plane. Where no limitations are given, the sage is only limited by the current state of that science or art in your campaign.

**What does a sage know?** A sage's ability can be handled in one of two ways. First, since the DM must answer the question any way, he can simply decide if the sage knows the answer. As usual, the consideration of what is best for the story must be borne in mind.

If the player characters simply can't proceed with the adventure without this answer, then the sage knows the answer. If the answer will reward clever players (for thinking to hire a sage, for example) and will not destroy the adventure, then the sage may know all or part of the answer. If answering the question will completely unbalance the adventure, the sage doesn't know the answer.

Of course, there are times it is impossible to tell the effect of knowing or not knowing something. In this case, the sage's answer can be determined by a proficiency check, modified by the nature of the question. The DM can decide the sage's ability or use the following standard: Sage ability is equal to 14 plus 1d6 (this factors in his proficiency and normal ability scores).

If the proficiency check is passed (the number required, or less, on 1d20), the sage provides an answer. If a die roll of 20 is made, the sage comes up with an incorrect answer. The DM should create an incorrect answer that will be believable and consistent with what the players already know about the adventure.

**Questions should be categorized** as *general* ("What types of beasts live in the Valley of Terror?"), *specific* ("Do medusae live in the Valley of Terror?"), or *exacting* ("Does the medusa Erinxyes live in the Valley of Terror?"). The precision of the question modifies the chance of receiving an accurate answer. Precision modifiers are listed on Table 62.

If a question is particularly complex, the DM can divide it into several parts, each requiring a separate roll. Thus, a sage may only know part of the information needed. This can be very good for the story, especially if some key piece of information is left out.

**The resources required** by a sage can be formidable. At the very least, a sage must have access to a library of considerable size to complete his work. He is not a walking encyclopedia, able to spout facts on command. A sage answers questions by having the

right resources at hand and knowing how to use them. The size and quality of the sage's library affect his chance of giving a correct answer.

This library can belong to the sage or can be part of an institution. Monasteries and universities typically maintained libraries in medieval times. If a personal library, it must be at least 200 square feet of rare and exotic manuscripts, generally no less than 1,000 gp per book. If the library is connected with an institution, the sage (or his employer) will be expected to make appropriate payments or tithes for its use. Expenses in the range of 1,000 gp a day could be levied against the character. Of course, a sage can attempt to answer a question with little or no library, but his chances of getting the right answer will be reduced as given on Table 62.

**Sages need time** to find answers, sometimes more time than a player character can afford. Player characters can attempt to rush a sage in his work, but only at the risk of a wrong answer. The normal length of time depends on the nature of the question and is listed on Table 63. Player characters can reduce the sage's time by one category on this table, but the chance that the sage's answer will be incorrect or not available grows. These modifiers are also listed on Table 62.

**Table 62:**

## Sage Modifiers

| Situation | Success Chance Penalty |
|---|---|
| **Question is:** | |
| General | -0 |
| Specific | -2 |
| Exacting | -4 |
| **Library is:** | |
| Complete | -0 |
| Partial | -2 |
| Nonexistent | -6 |
| **Rushed** | -4 |

**Table 63:**

## Research Times

| Type of Question | Time Required |
|---|---|
| General | 1d6 hours |
| Specific | 1d6 days |
| Exacting | 3d10 days |

# Soldiers

Soldiers are the last group of hirelings. In a sense, they are expert hirelings skilled in the science of warfare (or at least so player characters hope). However, unlike most experts, their lives are forfeit if their skills are below par. Because of this, they require special treatment. In hindsight, many a deposed tyrant wishes he'd treated his soldiers better! Some of the different types of soldier characters can hire or encounter are listed on Table 64.

**Table 64:**

## Military Occupations

| Title | Monthly Wage |
|---|---|
| Archer | 4 gp |
| Artillerist | 4 gp |
| Bowman, mounted | 4 gp |
| Cavalry, heavy | 10 gp |
| Cavalry, light | 4 gp |
| Cavalry, medium | 6 gp |
| Crossbowman, heavy | 3 gp |
| Crossbowman, light | 2 gp |
| Crossbowman, mounted | 4 gp |
| Engineer | 150 gp |
| Footman, heavy | 2 gp |
| Footman, irregular | 5 sp |
| Footman, light | 1 gp |
| Footman, militia | 5 sp |
| Handgunner (Optional) | 6 gp |
| Longbowman | 8 gp |
| Marine | 3 gp |
| Sapper | 1 gp |
| Shieldbearer | 5 sp |

## Descriptions of Troop Types

A general description of each troop type is given here. In addition, specific historical examples are also provided. More examples can be found in books obtainable at a good wargame shop or at your local library. The more specific you make your soldier descriptions, the more detail and color can be added to a fantasy campaign.

Clearly, though, this *is* a fantasy game. No mention is made in these rules of the vast numbers of strange and bizarre troops that might guard a castle or appear on a battlefield. It is assumed that all troop types described here are human. Units of dwarves, elves, and more are certainly possible, but they are not readily available as hirelings. The opportunity to employ these types is going to depend on the nature of the campaign and the DM's wishes. As a guideline, however, no commander (such as the knight of a castle)

should have more than one or two exceptional (i.e., different from his own race) units under his command.

**Archer:** This is a footsoldier, typically armed with a shortbow, arrows, short sword, and leather armor. In history, archers were known to operate as light infantry when necessary, but this was far from universal. Highland Scots carried bows, arrows, two-handed swords, and shields, but no armor. Turkish janissaries were elite troops armed with bow and scimitar, but unarmored. Byzantine psilos carried composite short bows, hand axes, and, if lucky, chain or scale armor. A Venetian stradiot archer (often found on ships) normally had a short bow, long sword, and banded armor.

**Artillerist:** These troops are more specialists than regular soldiers. Since their duty is to work and service heavy catapults and siege equipment, they don't normally enter into combat. They dress and outfit themselves as they please. Artillerists stay with their equipment, which is found in the siege train.

**Bowmen, mounted:** These are normally light cavalry. They carry short bows, a long sword or scimitar, and leather armor, although armor up to chain is sometimes worn. Historically, most mounted bowmen came from nomadic tribes or areas of vast plains.

The most famous mounted bowmen were the Mongol horsemen, who commonly armed themselves with composite short bow, scimitar, mace, axe, and dagger. Some also carried light lances. They wore studded leathers or whatever else they could find, and carried medium shields. Pecheneg horsemen used the composite short bow, hand axe, lasso, and light lance, and wore scale armor. Russian troops carried the short bow and dagger and wore padded armor.

**Cavalry, heavy:** The classic image of the heavy cavalryman is the mounted knight. Such men are typically armed with heavy lance, long sword, and mace. They wear plate mail or field plate armor. The horse is a heavy war horse and barded, although the type of barding varies.

Examples include the early Byzantine kataphractos, armed with medium lance, long sword, banded armor, and a large shield. They rode heavy war horses fitted with scale barding. The French Compagnies d'Ordonnance fitted with heavy lance, long sword, mace, and full plate on chain or plate barded horses were classic knights of the late medieval period.

In other lands, the Polish hussar was a dashing sight with his tiger-skin cloak fluttering in the charge. He wore plate mail armor and rode an unbarded horse but carried an arsenal of weapons—medium lance, long sword, scimitar, warhammer, and a brace of pistols (although the latter won't normally appear in an AD&D® game).

**Cavalry, light:** These are skirmishers whose role in combat is to gallop in quickly, make a sudden attack, and get away before they can attacked in force. They are also used as scouts and foragers, and to screen advances and retreats. They carry a wide variety of weapons, sometimes including a missile weapon. Their armor is nonexistent or very light—padded leathers and shields. Speed is their main strength. In many ways they are indistinguishable from mounted bowmen and often come from the same groups of people.

The stradiotii of the Italian Wars were unarmored and fought with javelins, saber, and shield. Hussars were armed with scimitar and lance. Byzantine trapezitos carried similar weapons, but wore padded armor and carried a medium shield. Turkish sipahis, noted light cavalrymen, carried a wide variety of weapons, usually a sword, mace, lance, short

bow, and small shield.

**Cavalry, medium:** This trooper forms the backbone of most mounted forces—it's cheaper to raise medium cavalry than heavy knights, and the medium cavalryman packs more punch than light cavalry. They normally ride unarmored horses and wear scale, chain, or banded armor. Typical arms include lance, long sword, mace, and medium shield.

A good example of medium cavalry was the Normal knight with lance, sword, chain mail, and kite shield. Others include the Burgundian coustillier (brigandine or splint, light lance, long sword, and dagger), Persian cavalry (chain mail, medium shield, mace, scimitar, and short bow), and Lithuanian boyars (scale, medium lance, long sword, and large shield).

**Crossbowmen, heavy:** Only rarely used by medieval princes, heavy crossbowmen are normally assigned to garrison and siege duties. Each normally has a heavy crossbow, short sword, and dagger, and wears chain mail. The services of a shield bearer is often supplied to each man.

Venetian crossbowmen frequently served on galleys and wore chain or brigandine armor. Genoese men in German service sometimes wore scale armor for even greater protection.

**Crossbowmen, light:** Light crossbowmen are favored by some commanders, replacing regular archers in many armies. The crossbow requires less training than the bow, and is easier to handle, making these soldiers cheaper in the long run to maintain. Each man normally has a light crossbow, short sword, and dagger. Usually they do not wear armor. Crossbowmen fight hand-to-hand only to save themselves and will fall back or flee from attackers.

Italian crossbowmen commonly wore padded armor and carried a long sword, buckler, and light crossbow. Burgundians wore a light coat of chain and carried no weapons other than their crossbows. Greek crossbowmen carried a variety of weapons including crossbow, sword, and spear or javelin.

**Crossbowmen, mounted:** When possible, crossbowmen are given horses, for extra mobility. All use light crossbows, since heavier ones cannot be cocked on horseback. The horse is unbarded, and the rider normally wears little or no armor. As with most light troops, the mounted crossbowmen relies on speed to whisk him out of danger. An unusual example of a mounted crossbowmen was the German mercenary (plate mail, light crossbow, and long sword).

**Engineer:** This profession, like that of the artillerist, is highly specialized, and those skilled in it are not common soldiers. Engineers normally supervise siege operations, both inside and outside. They are responsible for mining castle walls, filling or draining moats, repairing damage, constructing siege engines, and building bridges. Since their skills are specialized and rare, engineers command a high wage. Furthermore, engineers expect rewards for successfully storming castles and towns or for repelling such attacks.

**Footman, heavy:** Depending on the army, heavy infantry either forms its backbone or is nonexistent. Heavy footmen normally have chain mail or better armor, a large shield, and any weapons.

Examples of heavy infantry include Byzantine skutatoi (scale mail, large shield, spear, and long sword), Norman footmen (chain mail, kite shield, and long sword), Varangian Guardsmen (chain mail, large shield, battle axe, long sword, and short sword), late

German men-at-arms (plate mail, battle axe, long sword, and dagger), Flemish pikemen (plate mail, long sword, and pike), Italian mercenaries (plate mail, long sword, glaive, and dagger), Irish gallowglasses (chain mail, halberd, long sword, and darts), and Polish drabs (chain mail, scimitar, and halberd).

**Footmen, irregular:** These are typically wild tribesmen with little or no armor and virtually no discipline. They normally join an army for loot or to protect their homeland. Their weapons vary widely, although most favor some traditional item.

Examples of irregulars include Viking berserkers (no armor, but shield, and battle axe or sword), Scottish Highlanders (often stripped bare with shield and axe, voulge, sword, or spear), Zaporozian cossacks (bare-chested with a bardiche), or a Hussite cepnici (padded or no armor, flail, sling, and scimitar).

**Footman, light:** The bulk of infantry tend to be light footmen. Such units are cheap raise and train. Most come from the lower classes. They are distinguished from irregular infantry by a (barely) greater degree of discipline. Arms and armor are often the same as irregulars.

Typical of light infantry were Swiss and German pikemen (no armor, pike, and short sword), Spanish sword-and-buckler men (leather armor, short sword, and buckler), Byzantine peltastos (padded armor, medium shield, javelins, and sword), even Hindu payaks (no armor, small shield, and scimitar or club).

**Footman, militia:** These are townsfolk and peasants called up to serve. They normally fall somewhere between irregulars and light infantry in equipment and quality. However, in areas with a long-standing tradition of military service, militiamen can be quite formidable.

Some Italian militias were well-equipped with banded or plate mail armor and glaives. The Irish "rising-out" typically had no armor and fought with javelins and long swords. Byzantine militias were well-organized and often worked as archers (short bow and padded armor) in defense of city walls. The Saxons' fyrd was supposedly composed of the freemen of a district.

**Handgunner:** This troop type can be allowed only if the DM approves the use of arquebuses in the campaign. If they are forbidden, this troop type doesn't exist. Handgunners typically have an arquebus and short sword, and wear a wide variety of armors.

**Longbowman:** Highly trained and rare, these archers are valuable in battle. They are also hard to recruit and expensive to field. A long bowman typically wears padded or leather armor and carries a long bow with short sword or dirk. Historically, virtually all long bowman were English or Welsh, although they freely acted as mercenaries throughout Europe.

**Marines:** These are heavy footmen who serve aboard large ships.

**Sapper:** These men, also known as miners or pioneers, provide the labor for field work and siege operations. They are generally under the command of a master engineer. Normally they retreat before combat, but if pressed, will fight as light infantry. They wear no armor and carry tools (picks, axes, and the like) that can easily double as weapons. They are usually found with siege trains, baggage trains, and castles.

**Shieldbearer:** This is a light infantryman whose job is to carry and set up shields for archers and crossbowmen. Historically, these shields (or pavises) were even larger than a normal large shield. Some required two men to move. From behind this cover, the

bowman or gunner could reload in relative safety. If the position was attacked, the shieldbearer was expected to fight as an infantryman. For this reason, shieldbearers have the same equipment as light infantry.

## Employing Hirelings

Whether seeking everyday workers or rare experts, the methods PCs use for employing hirelings are generally the same. Basically, a player character advertises his needs and seeks out the recommendations of others. Given enough notice, hirelings will then seek out the player character.

## Who Might Be Offended?

When hiring, the first step is to figure out if the player character is going to offend anyone, particularly the ruler of the city or town. Feudal lords have very specific ideas about their land and their property (the latter of which sometimes includes the people on his land).

If the hirelings are true freedmen, they can decide to come and go as they please. More often, the case is that the hirelings are bound to the fief. They are not slaves, but they cannot leave the land without the permission of their lord.

## Depopulate at Your Own Risk

Depopulating an area will get a strong negative reaction from local officials. If the player character seeks only a few hirelings, he is not likely to run into difficulty unless he wishes to take them away (i.e., back to his own castle). This type of poaching will certainly create trouble.

If Targash, having established his paladin's castle, needs 300 peasants to work the field, he cannot go into the nearby town and recruit 300 people without causing a reaction! The lord and the town burghers are going to consider this tantamount to wholesale kidnapping.

Finally, local officials have this funny way of getting upset about strange armies. If Targash comes into town to raise 300 heavy cavalry, the local lord is sure to notice! No one likes strangers raising armies in their territory. It is, after all, a threat to their power.

## Securing Permission

Thus, in at least these three situations, player characters would do well to secure the cooperation of local officials before they do anything. Such cooperation is rarely forthcoming without some kind of conditions: A noble may require a cash bond before he will agree to release those under him; guilds may demand concessions to regulate their craft within the boundaries of the player character's lands; dukes and kings may require treaties or even diplomatic marriages; burghers could ask for protection or a free charter.

Anything the DM can imagine and negotiate with the player is a possibility.

## Finding the Right People

Once a character has secured permission, he can begin searching for the hirelings he needs. If he needs craftsmen with specific skills, it is best to work through the guild or local authorities. They can make the necessary arrangements for the player character. This also obviates the need to role-play a generally uninteresting situation. Of course, guilds generally charge a fee for their services.

If the character is seeking a large number of unskilled men or soldiers, he can hire a crier to spread the word. (Printing, being undiscovered or in an infant state, is generally not a practical solution.) Fortunately, criers are easily found and can be hired without complicated searching. Indeed, even young children can be paid for this purpose.

At the same time, the player character would be wise to do his own advertising by leaving word with innkeepers, stablers, and the owners of public houses. Gradually, the DM makes applicants arrive.

If the player character is searching for a fairly common sort of hireling—laborers, most commonly—the response is equal to approximately 10% of the population in the area (given normal circumstances).

If the position being filled is uncommon, the response will be about 5% of the population. Openings for soldiers might get one or two respondents in a village of 50. In a city of 5,000 it wouldn't be unusual to get 250 applicants, a respectable company.

If searching for a particular craft or specialist—a blacksmith or armorer, for instance—the average response is 1% of the population or less. Thus, in a village of 50, the character just isn't likely to find a smith in need of employment. In a slightly larger village, he might find the blacksmith's apprenticed son willing to go with him.

Unusual circumstances such as a plague, a famine, a despotic tyrant, or a depressed economy, can easily alter these percentages. In these cases, the DM decides what is most suitable for his campaign. Furthermore, the player character can increase the turnout by offering special inducements—higher pay, greater social status, or special rewards. These can increase the base percentage by 1% to 10% of the population.

The whole business becomes much more complicated when hiring exotic experts—sages, spies, assassins, and the like. Such talents are not found in every city. Sages live only where they can continue their studies and where men of learning are valued. Thus they tend to dwell in great cities and centers of culture, though they don't always seek fame and notoriety there. Making discreet enquiries among the learned and wealthy is an effective way to find sages. Other experts make a point not to advertise at all.

Characters who blurt out that they are seeking to hire a spy or an assassin are going to get more than just a raised eyebrow in reaction! Hiring these specialists should be an adventure in itself.

For example, Fiera the Elf has decided she needs the services of a spy to investigate the doings of her archrival. The player, Karen, tells the DM what she intends, setting the devious wheels of the DM's mind in motion. The DM plans out a rough adventure and, when he is ready, tells Karen that her character can begin the search.

Not knowing where to begin (after all, where does one hire a spy?), Fiera starts to

frequent seamy and unpleasant bars, doing her best to conceal her true identity. She leaves a little coin with the hostelers and word of her needs. The DM is ready for this. He has prepared several encounters to make Fiera's search interesting. There are drunken, over-friendly mercenaries, little ferret-faced snitches, dark mysterious strangers, and venal constables to be dealt with.

Eventually, the DM has several NPCs contact Fiera, all interested in the job. Unknown to the player (or her character) the DM has decided that one applicant is really a spy sent by her rival to act as a double agent! Thus, from a not-so-simple hiring, one adventure has been played and the potential for more has been created.

## The Weekly Wage

Once applicants have arrived (and the player has rejected any that seem unsuitable), the issue of pay must be negotiated. Fortunately, this is somewhat standardized for most occupations.

Table 65 lists the amount different trades and craftsmen expect under normal circumstances. From these, salaries for other NPCs can be decided. The wages for soldiers, because of their highly specialized work, are listed on Table 64.

**Table 65:**

## Common Wages

| Profession | Weekly Wage | Monthly Wage |
|---|---|---|
| Clerk | 2 gp | 8 gp |
| Stonemason | 1 gp | 4 gp |
| Laborer | 1 sp | 1 gp |
| Carpenter | 1 gp | 5 gp |
| Groom | 2 sp | 1 gp |
| Huntsman | 2 gp | 10 gp |
| Ambassador or official | 50-150 gp | 200-600 gp |
| Architect | 50 gp | 200 gp |

These amounts may seem low, but most employers provide other benefits to their hirelings. Appropriate room and board is expected for all but common laborers and higher officials. Those falling in the middle range expect this to be taken care of. Traveling expenses must come out of the PC's pocket, as must any exceptional items of equipment or dress.

Important hirelings will also expect gifts and perhaps offices to supplement their income. Soldiers expect to be ransomed if captured, to have their equipment replaced as needed, and to receive new mounts for those lost in combat. All of these extra benefits add up quickly. Furthermore, most activities are much more labor-intensive when compared to modern standards. More workers are needed to perform a given job. More workers means greater overall expenses and lower wages for each individual laborer.

For example, consider Targash at his castle. He has assembled the officials, craftsmen, and soldiers he feels he needs to maintain his standing and protect his small fief. These break down as follows:

| | |
|---|---|
| 250 light infantry | 250 gp |
| 50 heavy infantry | 100 gp |
| 100 longbowmen | 800 gp |
| 75 light cavalry | 300 gp |
| 25 heavy cavalry | 250 gp |
| 1 master artillerist | 50 gp |
| 10 artillerists | 40 gp |
| 1 master engineer | 150 gp |
| 1 master armorer | 100 gp |
| 5 armorers | 50 gp |
| 1 master bladesmith | 100 gp |
| 5 bladesmiths | 50 gp |
| 1 master bowyer | 50 gp |
| 1 bowyer | 10 gp |
| 1 master fletcher | 30 gp |
| 1 master of the hunt | 10 gp |
| 8 huntsmen | 40 gp |
| 10 grooms | 10 gp |
| 20 skilled servants (baker, cook, etc.) | 40 gp |
| 40 household servants | 40 gp |
| 1 herald | 200 gp |
| 1 castellan | 300 gp |
| Total | 2,970 gp per month |

These costs cover only the wages paid these nonplayer characters. It does not include the funds necessary to provide provisions, maintain equipment, or expand Targash's realm (a desire of many player characters). Over the course of a year, Targash mush bring in at least 35,640 gp just to pay his hirelings.

Considering a reasonable tax to be one gold piece for each person and one or two silver for each head of livestock, Targash must have a considerable number of people or animals within the borders of his fief or go into debt! Supplementing one's income thus becomes a good reason for adventuring. However, even powerful, adventuring lords often find themselves forced to borrow to maintain their households.

And these costs don't even begin to cover the salaries demanded by any extremely rare hirelings Targash may need. Spies and assassins normally demand exorbitant wages—5,000 to 10,000 gold pieces or more. And they are in a position to get away with it. Aside from the fact that not many can do their job, they can also force an employer to pay through blackmail. The act of hiring must be secret, not only to succeed, but to prevent the character from being embarrassed, disgraced, or worse. Woe to the employer who attempts to cheat his assassin!

Others can also resort to such blackmail. Mercenaries may refuse to go on campaign until they are properly paid (a tactic used by the condottieri in Italy). Peasants have been known to revolt. Guilds may withdraw their support. Merchants can always trade elsewhere. All of these serve as checks and balances on the uncontrolled power of any ruler from local lord to powerful emperor.

## Henchmen

Sooner or later, all players are going to discover the value of henchmen. However, knowing that henchmen are useful and playing them properly are just not the same. Misused and abused henchmen can quickly destroy much of the fun and challenge of a campaign.

As stressed in the *Player's Handbook*, a henchman is more than just a hireling the player character can boss around. A henchman is a PC's friend, confidante, and ally. If this aspect of the NPC is not stressed and played well, the henchman quickly becomes nothing more than a cardboard character, depriving the DM of a tool he can use to create a complete role-playing experience. For the DM, a henchman is just that—a tool, a way of creating an exciting story for the player characters.

## An NPC Becomes a Henchman

There is no set time at which a player character acquires a henchman. Running a player character and a henchman together is more difficult than just a player character alone. Not every player will be ready for this at the same time, so the DM should control which players get henchmen and when. Wait until the player has demonstrated the ability to role play his own character before burdening him with another. If the player does not assume at least some of the responsibility for role-playing the henchman, the value is lost.

Neither is there a set way to acquire a henchman. The DM must use his own judgment. Since a henchman is a friend, consider those things that bind friends together. Being treated as equals, helping without expecting reward, trust, kindness, sharing secrets, and standing by each other in times of trouble are all parts of it.

When a character does these things for an NPC, a bond will develop between them. The DM can allow the player to have more and more control over the NPC, deciding actions, role-playing reactions, and developing a personality. As the player does this, he begins to think of the NPC almost as another player character. When the player is as concerned about the welfare of the NPC as he would be for a normal player character, that NPC can be treated as a henchman.

## The Player Takes Over

Once the DM decides that an NPC is a henchman, he should make two copies of the NPC's character sheet, one for himself and one for the player. Not everything need be revealed on the player's copy—the DM may choose to conceal alignment, experience point totals, special magical items, or character background. However, the player should

have enough information to role-play the henchman adequately. It is hard to run a character properly without such basic information as Strength, Intelligence, race, or level. Ideally, the player should not have to ask the DM, "Can my henchman do this?"

Naturally, the DM's character sheet should have complete information on the henchman. Moreover, the DM should also include a short description of the henchman in appearance, habits, peculiarities, personality, and background. The last two are particularly important.

Establishing the personality of the henchman allows the DM to say, "No, your henchman refuses to do that," with reason. The astute player will pick up on this and begin playing the henchman appropriately.

A little background allows the DM to build adventures that grow out of the henchman's past. An evil stranger may come hunting for him; his father may leave him a mysterious inheritance; his wife (or husband) may arrive on the doorstep. Even a little history is better than nothing.

A henchman should always be of lower level than the player character. This keeps the henchman from stealing the spotlight. If the henchman is equal or greater in level, he could become as, or more, important than the player character. The player might neglect his own character, an undesirable result. Thus, if a henchman should reach an equal level, he will depart the service of the player character and set out on his own adventures. This doesn't mean he disappears forever. He is still present in the campaign, can still show up periodically as a DM-controlled NPC, and can still be considered a friend of the player character.

## Role-Playing Henchmen

The player is responsible for deciding a henchman's actions, provided they are in character for the NPC. This is one of the advantages of the henchman over the hireling. The DM should only step in when the player is abusing or ignoring the personality of the NPC.

For example, Fenris, a henchman known for his sarcastic and somewhat self-centered view, has been captured along with his master, Drelb the Halfling, by a band of twisted trolls.

DM (playing the trolls): "Ha! My brothers and I are going to roast one of you and let the other one go! So, who's going to hang from the spit?"

Player: "Well, uh...Fenris remembers how many times Drelb has saved his life. He volunteers."

DM: "Is Drelb telling the trolls this? Fenris is going to be real upset if he is."

Player: "No, no! It's just what Fenris would do."

DM: "Sure. He thinks about it and, you know, it doesn't seem like a real viable solution to the problem. He leans over to Drelb and says, "You always wanted to sweat off a few pounds, Drelb."

Clearly, there are times when the DM can step in and overrule a player decision regarding henchmen. There are things a henchman simply will not do. The relationship is supposed to be that of friendship. Therefore, anything that damages a friendship sours a henchman. The DM should think about those things he would never ask of a friend or have a so-called friend ask of him. If it would ruin one of his own friendships, it will do

the same in the game.

For example, henchmen don't give useful magical items to player characters, don't stand by quietly while others take all the credit, don't take the blame for things they didn't do, and don't let themselves be cheated. Anyone who tries to do this sort of thing is clearly not a friend.

Henchmen don't, as a rule, go on adventures without their player character friend unless the purpose of the adventure is to rescue the PC from danger. They don't appreciate being given orders by strangers (or even other player characters), unless their PC friend is also taking orders.

## Henchman Bookkeeping

As the henchman is played, it is the player's responsibility to keep track of any information about the henchman that isn't kept secret. Not only does this make running the game a small bit easier for the DM, it forces the player to pay attention to his henchman.

Among the things a player should keep track of is a henchman's experience point total. Henchmen do earn experience points from adventures and can advance in level. However, since they are not full player characters, they only earn half the experience a character would normally get.

They also expect their fair share of treasure and magical items discovered—more, if they took a significant risk. They expect the same care and attention the player character receives when they are injured or killed. Indeed it is possible for a forsaken henchman to return as a vengeful spirit to wreak havoc on those who abandoned him!

## Officials and Social Rank

Some NPCs are available for hire; others, because of social rank or profession, can be hired only under special circumstances; still others can only be encountered and, maybe, befriended, but never hired. Indeed characters are not defined by profession only. Just as important (and sometimes more important) is the NPC's social status.

A serf carpenter is lower than a churl ploughman, even if his skills are more complicated. Some titles prevent an NPC from pursuing a particular career. A king is not a tinner or a wealthy draper—he is a king.

The tables below list some of the different types of NPCs that can be encountered based on social organizations. Each grouping is arranged from the greatest to the least, the mightiest to the lowest. The DM should not feel bound only to the hirelings and soldiers given in Tables 60 and 64. Imagination, history, and fantasy should all contribute to the game.

The tables show social and political ranks for different types of historical cultures, arranged in descending order of importance. Each column describes a different culture.

**Table 66:**

### European Titles

| General | Saxon | Germanic |
|---|---|---|
| Emperor/Empress | King | Pfalzgraf |
| King/Queen | King's Thegn | Herzog |
| Royal Prince/Princess | Ealdorman | Margrave |
| Duke/Duchess | Shire-reeve | Graf |
| Prince/Princess | Thegn | Waldgraf |
| Marquis/Marquise | Geneatas | Freiherr |
| Count/Countess | Cottar | Ritter |
| Viscount/Viscountess | Gebur | |
| Baron/Baroness | Bondman | |
| Baronet | | |
| Knight | | |
| Serf | | |

**Table 67:**

## Oriental Titles

| Russian | Turkish | Persian | Japanese | Mongol | Indian |
|---|---|---|---|---|---|
| Tsar | Sultan | Padishah | Emperor | Kha-Khan | Maharaja |
| Veliky kniaz | Dey | Shah | Shikken | Ilkhan | Rajah |
| Kniazh muzh | Bey | Caliph | Shogun | Orkhan | Nawab |
| Boyar | Bashaw | Wizer | Daimyo | Khan | |
| Sluga | Pasha | Amir | Samurai | | |
| Muzh | Emir | Sheikh | | | |
| Dvorianin | Malik | | | | |
| Smerd | | | | | |
| Kholop | | | | | |

**Table 68:**

## Religious Titles

| Church Hierarchy | Knights-Militant | Monastic |
|---|---|---|
| Pope | Master of the Temple | Abbot |
| Cardinal | Seneschal | Sacristan |
| Archbishop | Marshal | Cantor |
| Bishop | Commander | Librarian |
| Abbot | Drapier | Refectorian |
| Prior | Commander of a House | Almoner |
| Friar | Commander of Knights | Hospitaler |
| Knight Brothers | Kitchener | |
| | Sergeants of the Covenant | Cellarer |
| | Turcoplier | Infirmarian |

Under-Marshal
Standard Bearer
Sergeant-brother
Rural brother
Hospital attendant
Servant brother

Master of Novices

## Titles, Offices, and Positions

Alderman: A town or city official
Ale-conner: Official who tests and approves all ales and ciders
Anchorite: A religious hermit
Bailiff: A sergeant or commander of the guard
Beadle: A messenger of the law courts
Burgomaster: A town or city official
Catchpoll: A commander of the guard
Chamberlain: Overseer of a household, office or court
Common-weigher: Town official who checks merchants' weights and measures
Constable: A commander of the local guard
Councilor: A town or city official or an advisor of the court
Customs agent: One responsible for collecting the taxes on all imports and exports.
Magistrate: A judge
Man-at-arms: A guardsman
Page: Servant to a noble
Pardoner: A friar who sells pardons from the church
Provost: A magistrate or keeper of a prison
Provost-Marshal: Military magistrate
Purveyor: An official responsible for obtaining supplies for an army or a noble's retinue
Reeve: The headman of a village
Regent: The ruler until a prince reaches the age of majority
Sergeant: The commander of a unit of men, such as a guard
Sheriff: The king's representative for a given area
Slaughter-man: Official who enforces the regulations on butchers in a town
Steward: Custodian of an appointed duty, such as a household
Tax collector: One who collects taxes
Tronager: Supervisor of the scales at a town's port
Umpire: An official who arbitrates disputes between neighbors
Warden: The keeper of a noble's woodlands and parks
Wardman: A sergeant or watchman
Watchman: A guard

## Spellcasters

There will come a time when player characters feel in dire need of a particular spell or spells to which no one in their group has access. They may need to raise a fallen comrade, remove an evil enchantment, or provide an additional protection. The natural solution is to find an NPC willing and able to cast the spell. This can create special difficulties for both the players and the DM.

## Finding a Spellcaster

Locating a capable NPC is the first step. Not all NPCs advertise their abilities; this is especially true in the case of spellcasters. Bragging that one is the great and powerful wizard Wazoo can be bad for one's health. There is always a young hot-shot who will take the claim as a challenge. (Sort of like the Old West, where there was always someone itching to beat the fastest gun...)

For this reason, spellcasters tend to be mysterious or, at least, quiet about their abilities. Churches, temples, and other holy places tend to be the best places to look since clerics have some obligation to proclaim the powers of their deity openly.

## Convincing the NPC to Help

Assuming the player characters know of a capable spellcaster, there is still the problem of convincing the NPC to cast the desired spell. Often the NPC won't even have the spell ready when the characters need it. After all, it isn't every day a cleric needs to cast a *raise dead* spell. He will need a day just to rest and memorize the desired spell.

**Religious Differences:** The faith of the player characters and the ethos of the NPC's religion may pose an even greater problem than spell availability. It is quite possible for a cleric to refuse to cast a spell to aid an "unbeliever," "heathen," or "heretic." Some may agree, but only at the cost of a donation, service, or conversion. A rare few accept any and all without passing any judgment. In general, it is best to seek the services of a like-minded cleric than to go to a stranger.

**Money:** For some clerical spellcasters and most nonclerical types, spellcasting is more a matter of finances than philosophies. If the characters find a capable spellcaster, they must be prepared to pay (and pay dearly) for his services. For a desperately needed service, the NPC knows he has the player characters over a barrel and will bargain accordingly.

Table 69 gives some idea of the costs for different spells. These costs are not set, by any means, and can be raised (but seldom lowered) for a variety of reasons.

**Table 69:**

## NPC Spell Costs

| Spell Required | Minimum Cost |
|---|---|
| *Astral spell* | 2,000 gp per person |
| *Atonement* | * |

| | |
|---|---|
| *Augury* | 200 gp |
| *Bless* | * |
| *Charm person* | 1,000 gp |
| *Clairvoyance* | 50 gp per level of caster |
| *Commune* | * |
| *Comprehend languages* | 50 gp |
| *Contact other plane* | 5,000 gp + 1,000 per question |
| *Continual light* | 1,000 gp |
| *Control weather* | 20,000 gp |
| *Cure blindness* | 500 gp |
| *Cure disease* | 500 gp |
| *Cure light wounds* | 10 gp per point healed |
| *Cure serious wounds* | 20 gp per point healed |
| *Cure critical wounds* | 40 gp per point healed |
| *Detection spells (any)* | 100 gp |
| *Dispel magic* | 100 gp per level of the caster |
| *Divination* | 500 gp |
| *Earthquake* | * |
| *Enchant an Item* | 20,000 gp plus other spells |
| *ESP* | 500 gp |
| *Explosive runes* | 1,000 gp |
| *Find the path* | 1,000 gp |
| *Fire trap* | 500 gp |
| *Fools' gold* | 100 gp |
| *Gate* | * |
| *Glyph of warding* | 100 gp per level of the caster |
| *Heal* | 50 gp per point healed |
| *Identify* | 1,000 gp per item or function |
| *Invisible stalker* | 5,000 gp |
| *Invisibility* | 500 gp |
| *Legend Lore* | 1,000 gp |
| *Limited wish* | 20,000 gp ** |
| *Magic mouth* | 300 gp |
| *Mass charm* | 5,000 gp |
| *Neutralize poison* | 100 gp |
| *Permanency* | 20,000 gp ** |
| *Plane shift* | * |
| *Prayer* | * |
| *Protection from evil* | 20 gp per level of caster |
| *Raise dead* | * |
| *Read magic* | 200 gp |
| *Regenerate* | 20,000 gp |
| *Reincarnation* | * |
| *Remove curse* | 100 gp per level of caster |
| *Restoration* | * |
| *Slow poison* | 50 gp |

| | |
|---|---|
| *Speak with dead* | 100 gp per level of caster |
| *Suggestion* | 600 gp |
| *Symbol* | 1,000 gp per level of caster |
| *Teleport* | 2,000 gp per person |
| *Tongues* | 100 gp |
| *True seeing* | 5,000 gp |
| *Wish* | 50,000 gp ** |
| *Wizard lock* | 50 gp per level of caster |

* This spell is normally cast only for those of similar faith or belief. Even then a payment or service may be required.
** Some exceptional service will also be required of the player character.

In general, the costs of purchasing a spell are such that it is far better for someone in the party to learn the spell. In general, the mercenary use of NPC spellcasters should be discouraged whenever possible. The player characters are supposed to face challenges on their own!

## NPC Magical Items

If player characters have the nerve to ask NPCs (not hirelings or henchmen) to use up valuable magical items or charges from these, they are going to get a very cold reaction. Consider how often player characters sell or give away the magic items they find during their adventures. Nonplayer characters will have about the same likelihood of selling (or giving!) powerful magic away. Offering to buy a charge from a *staff of healing* is just plain insulting. No NPC's reaction is going to be improved by the offer.

## Personality

More than what they can do, how much they cost, or how loyal they are, NPCs live only when they have personalities. Poorly played, an NPC can easily be reduced to nothing more than a collection of numbers, spells, equipment, and automatic reactions—a role-playing automaton. Vivid NPCs are much more than this. These characters, developed and acted by the DM, are complete. They have quirks, likes, dislikes, habits, ambitions, and desires. In one way or another they fire and remain in the imagination of the players

Some DMs have the naturally ability to create such characters on the spur of the moment, improvising as they go along. This is a rare gift, not possessed by most. However, this doesn't mean any DM can't create good NPCs. All that's required is a little effort.

## Walk-On NPCs

There are several shortcut methods that can be used when role-playing NPCs who only

have brief appearances—the "walk-ons" and "cameos" of a role-playing adventure.

**Character Traits:** The DM can choose some particular character trait—cowardice, greed, optimism, precision, or whatever—and exaggerate it, take it to an extreme. This is most effective for creating comical (or frustrating) situations.

**Physical Traits:** A particular physical trait—baldness, pot-bellied, bad teeth, wheezy, and more—can be stressed. This helps fix the appearance of the NPC in the players' minds, especially useful if the characters must describe or find the NPC again.

**Habits:** Like physical traits, simple habits—scratches his head, tugs on his beard, stares at the sky when talking, or mumbles—can be used. The DM can actually act out these simple habits at the table, adding a visual element to the role-playing experience.

## Significant NPCs

For very important NPCs, hirelings, and henchmen, the DM is going to need more than just a single character feature. Saying that a hireling is greedy is not enough. It doesn't make him any different from all the other greedy NPCs the player characters have met.

Perhaps he struggles to control his natural greediness out of loyalty. He may break into cold sweats and become nervous when the player character accidentally tempts him ("Here, hold my horse while I go see what's making that noise."). Will he remain loyal or will his baser nature get the best of him? The answer to this question should come out through role-playing.

Enough little questions like this—and enough role-played answers—will bring the NPC's true character into focus. And if the DM pays attention to the personality of the NPCs, the players will also learn and study those characters.

**Creating an NPC Personality:** The best way to create a personality is to use whatever seems right and not worry about carefully constructing a background and rationale for the character. The DM has to keep careful notes about each major NPC, adding to it each play session. After several sessions, the NPC may have a complete background and personality, one that has come out little-by-little during play.

Alternatively, the DM can prepare a personality in advance. This simply means he prepares some background notes before he begins to play that character. This is useful for powerful villains and important officials. However, during play, the DM should be flexible enough to change any part of the NPC's background that just doesn't work.

To aid in the process of creating NPCs, Table 70 lists different types of attitudes, tendencies, and habits. These are organized into major traits, with similar characteristics grouped under each.

The DM can choose a major trait and any appropriate characteristics; he can randomly determine the major trait (rolling 1d20) and select appropriate characteristics; or he can randomly determine everything (1d20 for a major trait, percentile dice for characteristics).

For example, the DM randomly determines a hireling is careless, selects thoughtless from that sub-group and then rolls for an additional characteristic, getting cheerful. The end result is somewhat scatter-brained, happy-go-lucky person.

This table is provided to spur the imagination of the DM, although it can be used to create completely random personalities. However, random methods often lead to confusing and seemingly impossible combinations! If a result seems totally impossible or

unplayable, don't use it simply because that's how the dice rolls came up. Whenever possible, the DM should decide the personality of the NPC!

**Table 70:**

# General Traits

| Die Roll 1 (D20) | General Trait | Die Roll 2 (D100) | Specific Trait |
|---|---|---|---|
| 1 | Argumentative | 01 | Garrulous |
| | | 02 | Hot-tempered |
| | | 03 | Overbearing |
| | | 04 | Articulate |
| | | 05 | Antagonistic |
| 2 | Arrogant | 06 | Haughty |
| | | 07 | Elitist |
| | | 08 | Proud |
| | | 09 | Rude |

## Other NPC Characteristics

Of course, NPCs are more than just personalities and character traits. Each NPC, like each player character, has abilities and a unique physical appearance. However, considering NPCs come from the entire range of humanity (and some fantasy races, as well!), no tables are given to fill in these details. A few tables simply cannot do justice to the huge variety of an entire game world.

Furthermore, the physical appearance and abilities should be determined by the needs of the story, not random choice. If the player characters are dealing with an innkeeper, the NPC should be an ordinary person, not a powerful member of a character class. Furthermore, he should act, dress and behave like an innkeeper. Therefore, the DM could decide the innkeeper is fat and florid, over-talkative, with no exceptional ability scores.

On the other hand, say the PCs encounter a mysterious stranger, a character of great power. Here, the DM decides the stranger's mere appearance radiates a powerful charismatic appeal. The stranger's Charisma score is exceptionally high. To make the NPC even more impressive, the DM assigns him a character class and quite a high level.

In both examples above, the DM decided what effect he wanted from the NPC and built the character around that.

Every aspect of an NPC is a tool for the DM. Some are quite obvious, others may arise only in special occasions. Listed below are some of the areas a DM can use to create a distinctive character. Some descriptive words have been listed for each area to spur the imagination. A good thesaurus can provide even more adjectives useful for describing characters.

**Game Information:** Character class (if any), level (if any), race, alignment.

**Age:** ancient, child, decrepit, elderly, middle-aged, patriarchal, teen-aged, venerable, youthful.

**Height:** bean-pole, gangly, gigantic, hulking, lanky, looming, runt, short, small,

stumpy, tall, tiny, willowy.

**Weight:** broad-shouldered, fat, gaunt, obese, plump, pot-bellied, rotund, scarecrow, skinny, slender, slim, statuesque, stout, thin, trim

**Hair:** bald, braided, color (any), cropped, curly, frazzled, greasy, grizzled, leonine, limp, salt-and-pepper, sparse, straight, thick, thin, wavy, widow's peaked, wiry.

**Manner of speech:** accented, breathless, crisp, guttural, high-pitched, lisp, loud, nasal, slow, squeaky, stutter, wheezy, whiny, whispery.

**Facial characteristics:** bearded, buck-toothed, chiseled, doe-eyed, fine-featured, florid, gap-toothed, goggle-eyed, grizzled, jowled, jug-eared, pock-marked, pug nose, ruddy, scarred, squinty, thin-lipped, toothless, weather-beaten, wrinkled.

Of course, there are thousands of possible NPC aspects that could also be used: skin color, stature, bearing, gait, and eye color are only a few more. Sometimes it is useful for a DM to make a list of all the words he can think of that describe a person. Once such a list is made, the DM can keep that with his game notes, ready to use any time he needs to quickly characterize an NPC.

# Morale

Since NPCs, even henchmen, are supposed to be unique personalities, they are not slavishly obedient or bound to the player characters. Thus, NPCs associated with the player characters in any way must have a morale rating. This rating is for the DM's use only and is always kept secret from the players.

An NPC's morale rating depends on his position, his personality, the quality of his treatment, and the player character. Henchmen and hirelings each have a base morale which is then modified by a number of factors.

The base morale for henchmen is 12 and the base for a hireling is 10. The modifiers to the base morale are given on Table 71 below and on Table 50.

**Table 71:**

## Permanent Morale Modifiers

| Factor | Modifier |
|---|---|
| NPC is lawful* | +1 |
| NPC is good | +1 |
| NPC is evil | -1 |
| NPC is chaotic* | -1 |
| NPC is different race than PC | -1 |
| NPC has been with PC for one year or more | +2 |

* These modifiers also appear on Table 50. Do not apply them twice.

An NPC must roll a morale check when the combat rules call for one (see "Morale" in Chapter 9). In combat situations, the NPC who fails a morale check will retreat or flee as noted under Combat. The DM can require other checks as he feels are appropriate.

Morale checks are also appropriate when an NPC is faced with temptation. A failed

roll means the NPC gives in to the temptation. Note that temptation can take many forms other than outright bribes. The opportunity to right an injustice, strike back at a hated employer, work for one's real beliefs, or get revenge for a long-held grudge are all forms of temptation.

For such subtle forms of temptation, the NPC's reaction may not be immediately obvious to the player characters. The NPC may desert in time of need, spy on a player character, rob the character of some valuable item, attempt to assassinate the player character, or directly betray the player character to his enemies. Indeed, he may remain in the service of the player character for a long time after the check has failed, waiting for his opportunity to strike.

## Quick NPCs

Creating a full-blown NPC with a history, unique physical characteristics, personality traits, skills, a morale rating, and so on, is a time-consuming process, something the DM can't do in the middle of a game session. Fortunately, there are quick ways around this problem. By using these, the DM can create NPCs on the spot without slowing down his game sessions.

**1. Create only as much of the character as the players are going to see in the game.** First and foremost, the DM should never create more than he needs. Running a role-playing game is a big job and there is no need to create more work than is necessary.

If an NPC is just an innkeeper or a groom or a smith, the DM doesn't need ability scores, proficiencies, or detailed lists of equipment. All he really needs is a physical description and a personality.

When the player characters run into a hostile fighter, personality is not tremendously important. In this case all that is needed is level, Strength, weapons, and Armor Class.

**2. Create and use stock characters but don't let them dominate.** While it is fine to have every innkeeper and groom and smith different, this creatures a lot of work on the DM. Some DMs are quick enough and creative enough actors to do this with no problem; others are not. There is nothing wrong with having a standard or stock shopkeeper or peasant.

If an NPC is minor or unimportant, role-playing a detailed and intriguing personality can even get in the way of the story! The players may remember that character and perhaps forget more important ones. They may decide this minor character is important to the plot. In a sense, the DM's creation has stolen the scene.

Balancing major and minor characters isn't easy, however. If all the minor NPCs are stock characters, the game will eventually become dull and boring. The players will resign themselves to meeting yet another crotchety, old peasant or greedy and suspicious innkeeper.

**3. Create as you go.** The DM can start with nothing more than an idea of what he wants an NPC to be like and then ad lib the personality and description during the course of play. This allows to him to create a character that interacts with the imaginations of the players, since the DM reacts to their suggestions and actions.

However, the DM who does this has to be careful to be consistent. This can be hard since he is making it all up on the fly. He should be sure to keep notes of what each NPC

does and what he becomes as he develops. This way the NPC can remain the same from game session to game session.

**4. Do your homework before and after game sessions.** If the DM knows the characters are going to meet a particular NPC, he should at least make some basic notes about that character before the start of the game. These may be only a few scribbles about personality, but it will at least provide a starting point.

After a game session, the DM should add to those notes, expanding them with anything that came up during that session. If these notes are maintained and the NPCs filed so they can be found again, the DM will have less and less work to do each time. With time, important NPCs, stock characters, and improvised encounters will take on unique personalities and backgrounds. This enriches the game for everyone and makes that DM's game just that much better than the next guy's.

# Chapter 13:
# Vision and Light

The ability of your player characters to see something and their ability to be seen are important to the play of the AD&D® game. Characters unable to see monsters have a nasty tendency to be surprised. Characters stomping through the woods waving torches tend to give away their position, making it hard to surprise others. For these and other reasons, you should always be conscious of visibility and light sources when running an adventure.

## Effects of Light Sources

The types of lighting and their radii are given in the *Player's Handbook.* However, these represent only the most basic effects of a light source. There are other effects of carrying a light that do not lend themselves to easy quantification or simple tables.

## Being Seen

If player characters are using light to find their way, then not only can they see, but they can also be seen. Hiding one's light is impossible in this case. Characters using a light to find their way can even be watched by creatures beyond the range of their own light. Since the light source illuminates the area around the player characters, it makes them visible to people or creatures out to the watchers' normal visibility ranges. The radius of the light source isn't the issue in this situation.

For example, on a clear plain, a raiding party of orcs could easily see the light of a fire and the silhouettes cast by the characters, even at 1,500 yards. Indeed, since the brightness of the fire is so different from the surrounding darkness, the light would be

noticeable at even greater ranges, though details wouldn't be. Unless characters using a light source take special measures (posting a guard in the darkness, for example), they cannot surprise creatures who can see the light of their fire, torch, or lantern.

## Creatures and Light Sources

Light sources, particularly fires, tend either to attract or chase away creatures. Wild animals tend to avoid lights and fires, especially if hunters frequent the area. On the other hand, animals that hunt player characters (or horse meat) will be attracted to a fire. They have learned that fires signal a source of food.

Intelligent creatures always approach a light source with caution. Friendly NPCs don't know if they are approaching the camp of a friend or foe. Hostile NPCs will likewise get as close as they can without revealing themselves, in order to learn the strength and numbers of the enemy. Only a few NPCs—those wishing to avoid all danger—flee at the sight of a fire, generally heading away from it in the opposite direction.

## Light Tricks and Traps

Sometimes a fire or light source can be used by intelligent creatures as a diversion or trap. One trick is to build a fire and then set up camp away from it. The fire attracts whatever is likely to show up in the area, allowing the characters the chance to ambush the unwary. This is a favorite tactic of many evil and warlike races such as orcs, bugbears, goblins, and bandits. It is also a trick used by adventurers to lure monsters away from their real camp, although this is somewhat dangerous.

Since fires are often used to determine the size and possible strength of an enemy, dull-witted creatures and nervous player characters can be frightened away by building a large number of campfires in an area. The enemy, counting these fires, decides there is a huge force camping here for the night and becomes frightened enough to leave. In reality, each fire might have but a single man or orc tending it.

Although the radius of a light source is the limit a character can effectively see using that source, it is not the absolute limit. The light doesn't just end there as if it had hit a brick wall. Beyond the radius of the light, there will still be flickering shadows, reflected eyes, and perhaps glints of metal. Now, some of these may be nothing more than the overactive imaginations of the player characters; others may be real threats! The DM can use this unknown factor as a tool to build suspense in his game.

## Infravision

There are two definitions of infravision that can be used in the AD&D game. The first is simple but lacks detail. It is, however, a perfectly adequate definition for those who don't want to bother with the complexities of infravision. The second, optional, definition, adds another level of detail to the game. It allows the DM to create special situations in which the function of infravision becomes important, but requires the DM to

keep track of more rules and more details.

## Standard Infravision

The easiest definition of infravision is that it allows characters to see in the dark. Nothing more is said about how this works—it simply works. Characters do not see into the infared spectrum or "see" heat or anything else. They just see in the dark as clearly as they do in normal light. However, since it is a somewhat magical power, the range is not that of normal vision—infravision ability extends only 60 feet. Beyond this only normal vision is allowed.

## Optional Infravision

This definition is much more scientific and accurate to what we know of physical properties of the real world. To its advantage, this definition makes infravision very different from normal sight, with its own strengths and weaknesses. To its disadvantage, it introduces a certain amount of scientific accuracy (with all its complications) into a fantasy realm.

According to this definition, infravision is the ability to sense or "see" heat. The best comparison is to thermal imaging equipment used by the armed forces of many different nations today. This special sense is limited to a 60-foot range. Within this range, characters can see the degrees of heat radiated by an object as a glowing blob translated into colors like a thermagram.

If this definition is used, there are several things that must be considered. First, large heat sources will temporarily blind characters with infravision just as looking at a bright light blinds those with normal vision. Thus, those attempting to use infravision must make the effort to avoid looking directly at fires or torches, either their own or the enemy's. (The light from magical items does not radiate significant heat.) Second, the DM must be ready to state how hot various things are. A literal interpretation of the rule means that characters won't be able to tell the floor from the walls in most dungeons. All of it is the same temperature, after all.

The DM must also be ready to decide if dungeon doors are a different temperature (or radiate heat differently) from stone walls. Does a different color or kind of stone radiate heat differently from those around it? Does the ink of a page radiate differently enough from the paper to be noticed? Probably not. Can a character tell an orc from a hobgoblin or a human? Most creatures have similar "thermal outlines"—somewhat fuzzy blobs. They do not radiate at different temperatures and even if they did, infravision is seldom so acute as to register differences of just a few degrees.

Be sure you understand the effects this optional definition of infravision can have—there are dangers in bringing scientific accuracy to a fantasy game. By creating a specific definition of how this power works, the DM is inviting his players to apply logic to the definition. The problem is, this is a fantasy game and logic isn't always sensible or even desired! So, be aware that the optional definition may result in very strange situations, all because logic and science are applied to something that isn't logical or scientific.

## Other Forms of Sight

If the optional definition of infravision is used, the DM has set a precedent for using scientific laws to explain the ability. Some people, arguing that there are visual organs that can apparently see into the infrared spectrum (using infravision), will also argue for other forms of sight able to see into other ranges of the spectrum. These can be included, if the DM desires. However, before adding these to his game, the DM had best have a firm grasp of the rules and, maybe, of physics.

For example, just what would a character or creature with ultravision (the ability to see into the ultraviolet spectrum) see? Our eyes see objects because of visible light that is *reflected* off objects (except for a few objects, such as the sun, light bulbs, fires, etc., that emit enough visible light for us to see them). Infravision utilizes heat (infrared) energy *emitted* by objects, since almost everything emits infrared energy. The problem with infravision is that many objects, such as normal weapons and rocks, without internal heat sources, are at or very near the temperature of their surrounding and thus are nearly indistinguishable from those surroundings when using infravision. Ultravision (and vision utilizing x-rays, gamma rays, or radio waves) is useless since only stars and a few other celestial objects emit significant amounts of energy in these regions of the electromagnetic spectrum. All wold appear uniformly black with these forms of vision, except for a few objects in the sky.

## Darkness

Sooner or later characters wind up blundering around in the dark. Normally they try to avoid this, but clever DMs and foolish players generally manage to bring it about. Perhaps the kobolds captured the player characters an stripped them of all their gear; perhaps the characters forgot to bring enough torches. Whatever the reason, those without infravision suffer both physical and psychological effects in the dark.

For the purposes of this discussion, "darkness" means any time the characters suffer from limited visibility. Thus, the rules given here apply equally well when the characters are affected by a darkness spell, blundering about in pea-soup fog, out on a moonless night, or even blindfolded.

Since one can't see anything in the dark, the safe movement rate of blinded characters is immediately slowed by 1/3 the normal amount. Faster movement requires a Dexterity check (see Chapter 14: Time and Movement). Characters also suffer a -4 penalty to attack rolls and saving throws. Their Armor Class is four worse than normal (to a limit of 10). Sight-related damage bonuses (backstabbing, etc.) are negated. However, darkness is not always absolute, and those DMs who wish to make distinctions between various levels of darkness can use Table 72.

The blindfighting proficiency can lessen the effects of fighting in darkness as explained in the proficiency description in the *Player's Handbook.*

**Table 72:**

# Optional Degrees of Darkness

| Condition | Attack Roll Penalty | Damage Bonus | Saving Throw Penalty | AC Penalty |
|---|---|---|---|---|
| Moonlight (Moderate fog) | -1 | Normal | -1* | -0 |
| Starlight (No moon or dense fog) | -3 | _ Normal | -3* | -2 |
| Total darkness (Spell, unlit dungeon or cave) | -4 | Negated | -4 | -4 |

* The saving throw modifier applies only to saving throws involving dodging and evasion in these cases.

## Invisibility

Invisibility is a highly useful tool for both player characters and DMs. Handled well, it can create surprises and unexpected encounters. However, invisibility requires careful judgment on the part of the DM, lest situations occur that could unbalance a scenario or campaign.

First, an invisible creature is invisible to everyone, including itself. This is normally not a great difficulty; most creatures are aware of their own bodies and don't need to see their feet to walk, etc. However, when attempting detailed actions (for example, picking a lock or threading a needle), invisible characters have serious problems, suffering a -3 (or -15%) penalty to their chance of success. This does not apply to spellcasting.

Second, invisible characters are invisible to friend and foe. Unless care is exercised, it is easy for a visible person to blunder into an invisible companion. Imagine a fighter swinging his sword just as he realizes he doesn't know where good old invisible Merin is standing! The problem is even worse with a group of invisible characters—characters crash and tumble (invisibly) into one another, all because nobody can see anybody. It would be like having a roomful of people play pin-the-tail-on-the-donkey all at once!

## Detecting Invisible Creatures

Invisible creatures and things are not detectable by normal sight or by infravision. They do not create any significant distortion or haze pattern that can be noted. However, invisible creatures aren't completely undetectable. First, things still cling to them. Flour thrown into the air is useful for this purpose, although it can be easily covered, washed off, or brushed away. Second, they do not leave invisible footprints. Again, flour on the floor is a good way to spot the movement of invisible creatures.

The effects of specific environments are more subtle. Fog and smoke do not reveal

invisible creatures. Smoke and fog are filled with swirls and eddies, preventing the creature from being detected. Invisible creatures completely submerged in liquids are also concealed; there is no hollow space or "air bubble" to reveal the creature's presence. At the surface, an invisible swimmer may be noticed by the observant as an unusual distortion of the waves.

Invisible creatures are not automatically silent. An invisible fighter in plate mail still clanks and rattles as he moves, a dead giveaway to most creatures. They still have scent, so creatures with keen noses can smell them. Indeed, blind, or nearly blind, creatures are unaffected by invisibility.

A *detect magic* shows only the presence of something magical without pinpointing it exactly. Thus, it cannot be used as a substitute for a *detect invisible* spell. Furthermore, while an actual light source may be invisible, the light emanating from it is not. This can reveal the location of an invisible character.

When the DM thinks there is minor but sufficient cause for a creature to detect an invisible character, a saving throw vs. spell should be made (secretly if the DM is checking for a player character). A minor cause might be a strange odor, small noise, an object that disappeared when it shouldn't have, or a strange reaction from another person (who has been pushed, kicked, poked, etc., by the invisible character). Such a saving throw should be allowed for each new event. A wolf would get a save when it detected a strange scent, then shortly after when it heard a stick break, and finally a last chance when the character drew his sword from his scabbard. Furthermore, the acuity of the creature's senses and its general intelligence can increase or decrease the frequency of checks, at the DM's discretion.

If the suspicious creature or character rolls a successful saving throw, he detects some small sign of the invisible foe's presence. He knows its general location, but not its exact position. He can attack it with a -4 penalty on his chance to hit. If the check fails, the creature or character is unaware of the invisible opponent until it does something else that might reveal its presence.

Of course, a revealing action (which could range from an attack to tripping over a pile of pots) immediately negates the need for a saving throw. In such cases, the character has a pretty good idea that something is not right and can take actions to deal with the situation.

Finally, even if an invisible character is suspected, this does not mean the character will be instantly attacked. The result, especially for less intelligent creatures, may only be increased caution. Having scented the intruder, the wolf bristles and growls, protecting its cubs. The rattlesnake will give its warning rattle. Even the orcs may only circle about warily, alert for an ambush.

# Chapter 14:
# Time and Movement

The passage of time in an AD&D campaign can have relatively minor or extremely

significant effects on the play of the game. The importance of time is decided almost entirely by the DM. Some DMs care very little about strict timekeeping; others track every moment of action, using a rigid calendar. Either method is acceptable and each has its advantages and disadvantages. The two can even be combined, as appropriate to the situation.

Regardless of how time is handled, some timekeeping is unavoidable: Combats must be fought in rounds; spells have specific durations which become important as characters explore caverns and ancient ruins; days are used to measure overland travel; characters must sleep sometime.

However, most passing time occurs within a single adventure: Spells rarely carry over from adventure to adventure (unless the session is stopped with the characters lost in winding caverns or the like); rounds of combat, while taking several game minutes, don't affect or spill over into subsequent adventures; days of travel often have no effect other than healing and the consumption of supplies.

If the DM wants, this is the only sort of timekeeping required. Time passed in previous adventures has little or no effect on the current session—each session or adventure is distinct and separate. For example, in one adventure, the characters spend a few hours in the dungeon, get injured, have some success, and return wounded. The night's game session ends with them returning to their home base. Next game session, the DM announces, "A week or so has passed since you last went out. Everybody is healed and rested. People with spells can pick new ones." The DM has chosen not to worry about the passage of time in this instance. An entire campaign can be played this way.

Here's another example: In one adventure, a group of characters travels for three weeks and has several encounters, ending camped outside some ruins. The next session starts after the characters have camped for five days, so they can heal their wounds. Several hours pass as they explore the ruins, but no one is particularly hurt when they return to camp, and the game session ends.

The next session starts the morning after their previous adventure, everyone having gotten a good rest. The characters set out again. They spend a week on the road and arrive at a village. Here, the mage insists everyone wait while he researches a vital spell. Again, the game session ends. The next session begins two months later, after the mage has learned his spell and continues from there. Throughout all this, the DM is more or less winging it, estimating the time required and time spent.

There is nothing wrong with this method, nor is it particularly unrealistic. Medieval travelers often stopped at friendly or safe heavens for long periods while on their way to a final destination. There was little pressure to hurry.

Using this simple time-tracking approach frees the DM from many of the concerns of timekeeping and prevents some obstacles to the adventure from occurring. ("We can't go on an adventure! We're all hacked up and have to heal.") Most of all, it is easy.

## Detailed Timekeeping

As noted, however, there are disadvantages to such simple time-tracking. Problems become more pronounced as the characters advance in level, your campaign world becomes larger, and more players take part in your game.

At low levels, characters tend to go on short adventures. A few hours in the dungeon

followed by a speedy return is about all they can survive. Therefore, it is easy to have a week's interval within adventures, since the time passed does not impact on the characters' activities. As characters reach higher levels, however, their ambitions grow and their adventures become longer. More precise time-tracking proves useful.

More precise methods can become unworkable, however, when player characters split into small groups, undertaking separate, simultaneous adventures. If one group sets out on a long journey while the rest of the party stays in the city, their game sessions are going to be at very different time scales.

In their first session, the city dwellers may go on a short dungeon expedition. Several hours of game time (the amount of imaginary time spent on the adventure) pass. The DM then has a session with the travelers, and they spend three weeks of game time in the wilderness during their game. There is now a game time difference between the two groups of three weeks minus one day!

If the travelers return to the city at the end of their adventure, the group in town must suddenly be moved forward in time to catch up with them if both groups wish to adventure together. Fortunately, this is not a great problem. The DM can simply say, "Three weeks have passed and you are all reunited again."

The city adventurers can spend those three weeks doing background work—training, researching spells, making a minor magic item, building a house, etc. This is a good use of free time. However, if one of the city characters decides to join the travellers (perhaps using a *teleport* spell to catch up with them suddenly), the three-week difference becomes a problem. Was that character actually with the traveling group for three weeks without doing anything? Must he wait for three weeks before he can join them? What if the other characters in town want to adventure more during that time? At this point, keeping track of time (or having the players do it) becomes pretty important.

## Preparing a Calendar

One advantage of careful timekeeping is the detail and flavor it adds to the DM's campaign. If a calendar is kept, the DM has a way of recording the passing seasons, holidays, months, cycles of the moon, or other details that give a world life.

Clerics have holy days to observe, werewolves become more prevalent near full moons, snows come, and birds fly south. All of these are events that happen during the course of a year and make a world seem more real. Without some type of calendar, the DM has nothing to base his campaign on. Take, for example, the following exchange between players:

Jon (Johan the Cleric's player): "Say, you know I'm a member of this temple. Do I have to do anything, or what? Do I give a sermon every week or are there some days of fasting or anything?"

DM: "Well, uh, yeah—you've got holy days you're supposed to spend in prayer."

Jon: "Oh, when?"

DM (in desperation): "Well, uh—Thanksgiving's coming."

Jon: "Oh, but you said it's the middle of summer. Doesn't Thanksgiving come at harvest time?"

Louise (chiming in): "You know, it's been summer ever since my character started playing."

DM: "Well—it's magic!"

Not exactly a lot of color planning there. Now, if the DM had worked out a calendar, he could have answered those questions with a lot more confidence.

Preparing a calendar does take time. The easiest method is to buy a small pocket calendar for the current year. Start the campaign on the same date as the first adventure. Thus, if the first game is played on April 3rd, the campaign starts on that day. The real calendar and game calendar will get out of sync quickly, but at least there will be a record of seasons, moons, and important dates.

This is a good starting point, but a modern calendar is not the same as that used in medieval times and certainly not the same as one used for a fantasy world. You'll want to customize your calendar with details from your game world. So, what types of details should be included?

**The Basics** have to be determined. Aside from recording the length of years, months, and weeks (which can be anything the DM decides), the calendar should also name them. You can use real names or you can be quite fanciful (the Winter of the Broken Moon or the Moon of Popping Trees, and go on). Have fun.

**Physical Cycles** can be worked out. When do the seasons fall? When are the phases of the moon? When do the equinoxes and solstices occur? Strange and magical events often happen at these times.

**Religious Observances** should be added. All major player character religions should be assigned holy days, so that player character priests will have something to observe. There are normally a lot of these, and they will vary from region to region.

Medieval calendars observed over 100 different holy days for saints or special events. Create your own such calendar, being sure to add special observances particular to each kingdom, empire, or region. These might include the king's birthday, the date of a titanic victory over the infidel, the opening of a market fair in a nearby city, or the annual harvest festival.

**Fantastic Events** are clearly an important part of a fantasy world's calendar. These can be anything imaginable—the annual visitation of a ghostly castle, the bi-monthly tribute demanded by the evil wizard, the night-march of mysterious nomads, or the seasonal migration of the wyverns.

**Special Events** should be included, as well. The local princess may have an impending wedding. The army may prepare for the annual campaign against the orc hordes. The death of an important official may require a set period of mourning. All of these can be used to fill up a calendar.

Clearly, setting up a detailed calendar takes planning and time. Events must be created and assigned to specific dates. Furthermore, the DM must have some idea of what happens during each event, preferably something that makes it different from all others.

What happens when the evil wizard comes to collect his tribute? (All the townsfolk shutter their houses and hide from his vile horde.) When the king posts the bans for his daughter's nuptials? (A largess of 1 cp is granted all the poor of the city.) During the Festival of Antherra? (Shrines are paraded through the streets and there is much merriment.) The answers created by the DM supply the ultimate detail needed to make a campaign come alive.

## Time as a Game-Balancer

Finally, remember that time can be used quite effectively to balance a campaign. With it, a DM can prevent an adventuring party from achieving too wide a spread of character levels. If one character is advancing faster than the others, that person's progress can be slowed a little by carefully enforcing the rules for researching, training, and healing. If several people are outpacing the rest of the group, they can be required to go on longer adventures, ones that take more game time (but not playing time) to complete.

At the same time, characters who are lagging in level can have time restrictions relaxed a little. The day-to-day drudgeries go a little quicker for these characters, and their adventures require shorter amounts of game time. This will allow them to undertake several adventures to the other group's one or two, giving the lower level characters a chance to catch up.

Although on the surface such things look unfair, most players will realize the DM is doing this for the best of all players involved.

# Movement

The *Player's Handbook* gives rules for player character movement on foot. However, feet and walking are not the only ways a character can get around. In the AD&D game world, characters can ride horses, bounce along on camels, sail aboard ships, and even fly winged mounts. Clearly there are many different forms of conveyance, the most common of which are covered here.

In addition, there are hazards and risks that must be considered when traveling. Player characters can get lost in untracked wildernesses, capsize in cascading rapids, or run aground on hidden shoals. Getting around can be a risky business.

# Mounted Overland Movement

Mounted movement cross-country is affected by a number of factors. The two principal ones are the movement rate of the mount and the type of terrain traversed. Under normal conditions, all mounts are able to move a number of miles per day equal to their movement rate. Terrain, such as roads or mountains, can alter this rate.

### Advantages of Mounted Movement

When determining overland movement rates, remember that most riders spend as much time walking their mounts as they do riding them. The real advantage of riding is in the extra gear the mount can carry and its usefulness in combat.

Thus, while an unencumbered man can go about the same distance as a heavy warhorse across clear terrain (24 miles as opposed to 30), the man must travel with virtually no gear to move at that rate. Were he to carry an assortment of arms, a suit of chain mail armor, and his personal items, he would find it impossible to keep up with a mounted man similarly encumbered.

### Increasing Overland Speed

A mount can be pushed to double its normal daily movement rate, but only at the risk of lameness and exhaustion. Any creature moving overland at double speed (or any fraction thereof) must make a saving throw vs. death.

If the saving throw is successful, the creature is unaffected. If the saving throw is failed, the creature is lame or spent; it can't travel any farther that day. Thereafter, it can move only at its normal movement rate until it is rested for at least one day. For each successive day a horse is ridden at double movement, a -1 penalty is applied to the saving throw.

Overland movement can be increased to triple the normal rate, although the risks to the animal are even greater. When moving at triple the normal rate, a saving throw vs. death must be made with a -3 penalty applied to the die roll. If the saving throw is failed, the creature collapses from exhaustion and dies. If the saving throw succeeds, the creature is merely spent and must be rested—not ridden at all—for 1d3 days.

When a creature goes lame, exhausts itself, or is ridden too hard, there is no way of knowing just when the creature will collapse. Player characters can't be certain of traveling the full double or triple distance. The DM should determine where and when the creature collapses. This can be a random place or at some point the DM thinks is best for the adventure.

## Care of Animals

Although player characters should not be forced into the role of grooms, all animals do have some basic needs that must be provided for. However, each animal is different, so the requirements for each are listed separately.

**Horses:** While strong and fast, horses are not the hardiest creatures for traveling. Horses need around ten pounds of forage and fodder a day. Furthermore, good quality mounts should be fed grain, such as oats. A heavy war horse can't survive the rigors of travel by grazing on grass. Characters who can't provide enough food of high enough quality will watch their horses weaken and die. Horses must also have water every day. This can become particularly difficult in the desert.

During daily travel, horses must be allowed to stop and rest with regular frequency. During these stops the mount should be unsaddled or all packs removed. If this isn't done, little profit is gained from the rest. At night horses should be hobbled or tethered on a long rope so they can graze. If one or two are tied, the others will generally not wander off. Horses need not be shod, unless they walk mostly on hard-surfaced roads or rocky ground. Horseshoes should be replaced about once a month.

**Ponies, Donkeys, and Mules:** These animals have much the same needs as the horse. One of their main advantages is their ability to survive by grazing. Well accustomed to grass, there is no need to provide them with separate fodder. Their happiness is such that saving throws vs. death made for double movement gain a +2 bonus. This does not apply to triple movement.

The other great advantage of these creatures is their sure-footedness. They can travel through rugged terrain at one less than the normal movement cost. Thus, low mountains cost only three movement points.

**Camels:** Camels are either suited to sandy deserts (as in the case of the dromedary) or rocky deserts (the bactrian camel). It's worth nothing that dromedaries are ill-suited to

rocky deserts, and bactrian camels aren't appropriate mounts in sandy deserts! Dromedary camels reduce the movement cost of sandy desert by 1 point. Bactrian camels have the same effect in rocky deserts.

All camels march better by night, when it is cooler. Dromedary camels are able to withstand a few days of cold weather (the temperature drops drastically in the desert at night); and some bactrian camels actually live in freezing and mountainous deserts.

Although camels can manage for long periods of time without water, they must be fed every day. They do not need special fodder so long as grazing is possible. On the average they should have water at least every four days, although they can be trained to do without for longer periods, even up to several months if green grass or leaves are available for grazing. Like horses, camels should be hobbled or tethered to prevent them from wandering off.

**Dogs:** Particularly tough breeds can be used to pull sleds and sledges. Some are suited to cold weather and will withstand a great deal of hardship. They require at least a pound of meat a day, so characters should pack dried meat for the dogs. If necessary, one dog can be killed to feed the others, but this is not recommended. Beyond the needs of feeding, sled dogs tend to care for themselves fairly well, although the characters may have to keep certain animals separated to prevent fighting.

**Elephants:** As can be expected, elephants eat a prodigious amount of fodder every day. In thickly forested areas, this can be supplied without reducing the beasts' already slow speed. Elephants can also be found in sparsely forested plains, though. Here, if left to graze for itself, the beast will move at _ its normal movement rate. Except for the carrying capacity of the beast, the characters might as well walk at these speeds! Elephants should bathe (or be bathed) every day and will avail themselves of dust baths to keep biting flies away.

It should also come as no surprise that elephants can't negotiate cliffs. They can bound down steep slopes—indeed, it is the only time they go fast—but only at great peril to themselves and their riders. If the beast fails a saving throw vs. breath weapon (used for general tests of dexterity), it stumbles, falls, and rolls the rest of the way down the slope. The fall may kill or severely injure the elephant; the choice is left to the DM. Elephants are affected only by the deepest mud, so the movement penalty for mud is ignored.

**Yaks:** Yaks are suited to the cold regions of high mountains. While slow, they are sturdy, unaffected by the cold. Their sure footing allows them to reduce all mountain movement rates by one. They can survive by grazing on a meagre amount of grass. Yaks also provide meat and milk for travelers. They live in cool regions and cannot survive long in warmer climates since they are prone to collapse from heat exhaustion.

## Vehicles

While animals are useful for getting around in the wilderness, they are seriously limited by the size of the load they can carry. Peasants and merchants often use wagons and carts for trade in civilized areas. Chariots are favored by the wealthy and in times of war, but are not normally used for long-distance travel. Sledges and dog sleds are handy in snow and ice-bound regions. Player characters may find all these vehicles necessary during the course of their adventures.

**Carts** are small two-wheeled affairs. They can be pulled by one or two animals, but no

more than this. **Wagons** are four-wheeled and can hitch anywhere from two to 12 (or even more!).

The movement rate of a horse or other animal is automatically reduced by half when hitched. Additional animals do not increase the speed. However, the standard load the beast can carry is tripled. The weight of the cart or wagon and driver is not considered for this, only the cargo. Each additional animal adds its tripled capacity to the total load hauled. Thus, a wagon pulled by eight draft horses could carry 6,420 lbs., or slightly over three tons worth of cargo (260 x 3 x 8). Of course, traveling will be slow—only 12 miles a day on a level road.

**Chariots** are intended more for speed, comfort, and their usefulness in warfare, than for their ability to haul loads. Chariots can hitch one to four horses (or other creatures), but no more than this. A horse can pull its normal load (the weight of the chariot not included) at its normal movement rate.

Each additional horse in the hitch either increases the cargo limit by the horse's standard load or increases the movement rate by a factor of 1. The chariot can't have more movement points than the creatures pulling it would normally have. A chariot pulled by four medium war horses could have a movement rate of 15 or pull 880 lbs., enough for four large or armored men. It could also have some combination of the two (movement rate of 13 and a cargo of 660 in the above example).

### Terrain and Vehicles

The greatest limitation on all these vehicles is terrain. Wagons, carts, and chariots are restricted to level or open ground unless traveling on a road or the best trails. While a wagon can cross a mountain range by staying to the open valleys and passes, it just can't make good progress in a thick forest. This problem generally restricts wagons to travel between settlements, where roads and paths are common.

Sledges and dog sleds can be used only in snow-covered or ice-coated lands. Sledges (pulled by horses or the like) are roughly equivalent to carts. No more than two horses can be hooked to a sledge. Horse-drawn sledges are effective only on hard-packed snows and ice and can ignore the penalties for these. Deep snow merely causes the horse to flounder and the runners of the sledge to sink, so no benefit is gained in these conditions.

Dog sleds are normally pulled by seven to 11 dogs. When hitched, a sled dog's movement is reduced by _. However, each additional dog adds one movement factor to the sledge, up to the maximum of movement of the animal. Thus a dog sled with seven dogs would have a movement of 13_. Each dog can pull 80 lbs., not including the weight of the sledge. Due to their lighter weight and the sledge design, dog sleds can cross all types of snow and ice without penalty.

## Terrain Effects on Movement (Optional Rule)

Terrain, or the nature of the ground, has little effect on short-term movement. A character running pell-mell across a meadow can do about the same speed in the desert, or on a sandy beach. Only the most extreme terrain hinders short term movement.

These extreme conditions are listed given on Table 73 as reductions of movement rate. The reduction applies to all movement for a single round. When a character is in two

different types of terrain during the same round, use the worst (i.e., most difficult) adjustment.

**Table 73:**

## Terrain Effects on Movement

| Condition | Move Rate Reduced by: |
|---|---|
| Darkness | 1/3* |
| Heavy brush or forest | 2/3 |
| Ice or slippery footing | 1/3* |
| Rugged or rocky ground | 1/2 |
| Soft sand or snow, knee-deep | 1/3 |
| Water or snow, waist-deep | 1/2 |
| Water or snow, shoulder-deep | 2/3 |

* Faster movement is possible.

### Darkness and Ice

The movement adjustments given for both darkness and ice assume reasonable safety for the characters. At these speeds characters will have no more than normal chances of slipping or falling. However, characters can move at faster than safe speeds under these conditions.

If characters choose to move more quickly (up to their normal movement rate), they must roll a Dexterity check each round. If the check is passed, nothing happens. If the check is failed, the character has tripped over some unseen obstacle or sprawled out from an unexpected slide.

In perfect darkness the character can't be certain that he is walking in the right direction unless he has spells or other assistance. Assuming the character is on his own, the DM can choose what happens or he can determine randomly by rolling 1d12. On a 1-4 the character maintains the desired course. On a 5-8 he veers to the right and on a 9-12 he goes to the left. The consequences of such course changes depends entirely on the DM and his map.

## Terrain Modifiers In Overland Movement

Overland movement is much more affected by terrain than single-round movement. Thus, a wide variety of terrain types slow or, on very rare occasions, increases the character's rate of movement.

Overland movement is measured in miles. It is possible for characters to cross several different types of terrain in a single day. To say that characters must take the worst terrain modifier for all movement is ridiculous. Imagine telling players they have to travel at the mountain movement rate when they are crossing the plains just because they spent their first hour in the mountains!

Furthermore, in round movement the DM can see where a character will be at the end

of the round and what terrain he had to cross to get there. In overland movement, it is very hard to predict all the different terrain types characters will enter during the course of a day.

Table 74 lists the effects of different terrain. These are listed as points of movement spent per mile of travel through that terrain type. When a character or creature moves through the listed terrain, that number is subtracted from the total movement available to the character or creature that day.

**Table 74:**

## Terrain Costs for Overland Movement

| Terrain Type | Movement Cost |
|---|---|
| Barren, wasteland | 2 |
| Clear, farmland | _ |
| Desert, rocky | 2 |
| Desert, sand | 3 |
| Forest, heavy | 4 |
| Forest, light | 2 |
| Forest, medium | 3 |
| Glacier | 2 |
| Hills, rolling | 2 |
| Hills, steep (foothills) | 4 |
| Jungle, heavy | 8 |
| Jungle, medium | 6 |
| Marsh, swamp | 8 |
| Moor | 4 |
| Mountains, high | 8 |
| Mountains, low | 4 |
| Mountains, medium | 6 |
| Untraveled plains, grassland, heath | 1 |
| Scrub, brushland | 2 |
| Tundra | 3 |

## Roads and Trails

The main purpose of roads and trails is to provide a clear route for wagons, carts, and other forms of heavy transport. It is impossible for such vehicles to cross any terrain that has a movement point cost greater than 1 unless they are following a road or trail. In addition, roads and trails normally go somewhere, so it is hard (but not impossible) for characters to get lost while following them.

**Trails** are by far the most common cleared track found in AD&D game worlds. Often little more than narrow game trails, they are the natural result of traffic moving from one

point to another. Though not roads (in that they are not maintained), they tend to be fairly open pathways. Still, characters may have to see to the removal of fallen trees and stones or the clearing of brush—all things that can be accomplished by the occasional traveler.

Trails normally follow the path of least resistance, avoiding difficult obstacles such as chasms, cliffs, and unfordable rivers. While this may increase the distance characters must travel, it usually results in an overall saving of time and effort.

When traveling along a trail, the movement point cost is half normal for the terrain type traversed by the trail. Following a trail through the heavy forest, for example (movement cost of four), costs only 2 movement points per mile. An unencumbered man on foot would be able to march 12 miles through such terrain without exerting himself. Trails through settled farmland offer no improvement, since these areas are easy to travel through already.

**Roads** are costly to build and maintain, so they were very rare in the Middle Ages (the general time period of the AD&D game). Only the largest and best organized empires can undertake such ambitious construction programs.

In areas of level or rolling ground, such as forests and plains, roads reduce the movement cost to one-half point per mile. In areas of mountainous ground, roads are no better than trails and reduce movement costs accordingly. A road traveling through high mountains is only four movement points per mile.

## Terrain Obstacles and Hindrances

The movement point costs given above assume the best of conditions even in the worst of terrain. The mountains are assumed to be free of cliffs; the woods have no high-banked streams; rains haven't turned the plains to mud; the tundra hasn't been blanketed in snow. However, poor traveling conditions do occur, and when they do travel is slowed. Table 75 lists common obstacles and situations that slow movement. The modifiers for these are listed as either additional movement point costs or multipliers.

When additional movement costs are listed, these are added to the cost of the surrounding terrain. Thus, crossing a ridge in the high mountains costs nine movement points for that mile instead of the normal eight.

Multipliers increase the movement cost by the amount listed. Snow, for example, doubles the cost of crossing the plains. Indeed, severe weather or torrential rains—can actually bring all travel to a halt.

**Table 75:**

### Terrain Modifiers

| Situation | Modifier |
|---|---|
| Chasm* | +3 |
| Cliff* | +3 |
| Duststorm, sandstorm | x3 |
| Freezing cold** | +1 |
| Gale-force winds | +2 |

| | |
|---|---|
| Heavy fog | +1 |
| Ice storm | +2 |
| Mud | x2 |
| Rain, heavy | x2 |
| Rain, light | +1 |
| Rain, torrential | x3 |
| Ravine | +_ |
| Ridge | +1 |
| River*** | +1 |
| Scorching heat** | +1 |
| Snow, blizzard | x4 |
| Snow, normal | x2 |
| Stream*** | +_ |

*These assume the player characters find a route around the obstacle. Alternatively, the DM can require the characters to scale or span the obstacle, playing out this encounter.

**These extremes must be in excess of the norm expected of the character or creature. Thus, a camel is relatively unaffected by the scorching heat of a desert and a yak barely notices the cold of high mountains.

***This cost is negated by the presence of a bridge or ford.

## Movement on Water

One of the fastest and easiest ways to get somewhere is to travel on a river. It's hard to get lost; a large amount of equipment can be easily carried; it is faster and easier than walking; characters can even do other things (mend clothes, learn spells, cook meals) while traveling on smooth waters.

River travel is not without its risks, however. Eddies, snags, sandbars, rapids, and dangerous waterfalls can make a journey quite exciting. Fortunately, most of these hazards can be avoided by knowledgeable characters.

The rate of movement on a river is determined by two factors: the type of boat and the flow of the current. If the boat is traveling downstream (in the direction of the current), add the speed of the current to the speed of the boat. If the boat is traveling against the current, subtract this amount from the boat's speed. Table 76 lists rates in both feet/round and miles/hour for the common types of riverboats.

When sailing downstream, characters must be wary of unexpected hazards. While a good map can show the location of waterfalls and rapids, only a knowledgeable guide or pilot knows the location of hidden sandbars, snags, and dangerous eddies. While these are easy to avoid when traveling upstream (all one need do is stop paddling), unprepared boaters can quickly be swept into them going downstream.

Once characters find themselves in a dangerous situation, they must make a Wisdom check (modified for seamanship proficiency, if this is used) to prevent capsizing. Capsized boats and goods are swept downstream, although hazards like waterfalls and particularly strong rapids will smash most craft.

# Ocean Voyaging

Ocean journeys are a dangerous business, especially in a fantasy world. Sea serpents, incredible maelstroms, and other imaginary horrors that filled the maps of medieval navigators really can lurk in the deeps of the AD&D game's oceans. Not that they are really necessary—pirates, storms, hidden shoals, and primitive navigational techniques leave the typical sea captain with more than enough danger to cope with.

Deep-sea sailing is pretty much unknown in the AD&D game world. The majority of captains prefer to stay close to known coasts. Without navigation equipment only a few ships venture into open water beyond the sight of land. Ship-building skills are not fully up to the needs of deep-sea sailing. Most ships are easily swamped by the stormy waters of major oceans, while their small size prevents crews from carrying adequate supplies for long voyages. Even the skills of sail-handling are in their rudimentary stages.

However, these limitations are not serious in a fantasy world. Those with wealth can cross oceans by other, more practical, means: flying mounts, undersea dwellers, and teleportation are all available, at least to the rich and powerful. (The vast majority of the population does not have access to these forms of travel.) Also, magical transport is impractical for moving large cargoes. The need to move goods and the scarcity of magical transport make sailing a valuable and necessary art.

Table 77 lists ships that could commonly be found in a medieval world. The table lists basic game information about each ship: base speed, emergency speed, and seaworthiness. More information about each ship is given in the chapter on Money and Equipment in the *Player's Handbook.*

**Table 76:**

## Boat Movement

| Vessel | Feet/Round | MPH | Cargo | Length |
|---|---|---|---|---|
| Kayak | 200 | 2 | 250 lbs. | 8-10 ft. |
| Canoe, small | 200 | 2 | 550 lbs. | 10-15 ft. |
| Canoe, war | 180 | 2 | 800 lbs. | 25-35 ft. |
| Coracle | 60 | 1* | 600 lbs. | 8-10 ft. |
| Keelboat or raft | 60 | 1* | 2,000 lbs. | 15-20 ft. |
| Barge | 60 | 1* | 4,000 lbs. | 25-40 ft. |
| Rowboat | 160 | 1.5* | 600 lbs. | 8-12 ft. |

*These vessels can triple their hourly movement when the sail is raised (provided the wind has the right heading).

**Table 77:**

## Ship Types

| Ship | Base Move/ | Emergency |
|---|---|---|

| Type | Hour | Move | Seaworthiness |
|---|---|---|---|
| Caravel | 4 | 5 | 70% |
| Coaster | 3 | 4 | 50% |
| Cog | 3 | 4 | 65% |
| Curragh | 2/3 | 10 | 55% |
| Drakkar | 2/4 | 12 | 50% |
| Dromond | 2/9 | 12 | 40% |
| Galleon | 3 | 6 | 75% |
| Great galley | 3/6 | 11 | 45% |
| Knarr | 4/2 | 12 | 65% |
| Longship | 5/2 | 13 | 60% |

**Base move per hour** is the average speed of the vessel under good conditions. Where two numbers are separated by a slash, the first is the speed under sail and the second is the rowing speed.

To determine the movement of a ship per round (in rare occasions where this is necessary), multiply the current speed times 30. This is the yards traveled per round.

**Emergency move** is the top speed of the vessel in emergency or combat situations. For sailing ships, emergency speed is gained by putting on every yard of sail possible. Galleys and other oared ships rely on the strength of their rowers. This speed can only be maintained for short periods of time. Too long and rowers will collapse; masts, yards, and sails will break.

**Seaworthiness** rates the vessel's ability to remain afloat in dangerous situations, notably storms, hidden shoals, extended voyages, huge monster attacks, and rams. Any time the DM rules that there is a chance of sinking, he rolls percentile dice. If the roll is equal to or less than the seaworthiness rating of the ship, it remains afloat, though bailing or repairs may be necessary. If the roll is higher than the seaworthiness rating, the ship sinks.

Ports and anchorages give a seaworthiness bonus of +50%. Thus, vessels at anchor are in little or no danger from a normal storm.

## Weather and Ship Travel

More than other methods of travel, ships (especially sailing ships) are subject to the whims of wind and weather. While it can be assumed that sailing weather is normally good, there are times when storms, favorable winds, or freak currents can increase or decrease a ship's speed. The effects of different weather conditions are listed on Table 78.

**Table 78:**

## Sailing Movement Modifiers

| Weather Condition | Sailing Modifier | Rowing Modifier |
|---|---|---|
| Adverse | x_ | x1 |
| Becalmed | NA | x1 |

| | | |
|---|---|---|
| Favorable | | |
| (average) | x2 | x1 |
| (strong) | x3 | x1* |
| Gale | x4* | x_* |
| Hurricane | x5** | x_** |
| Light breeze | x1 | x1 |
| Storm | x3* | x_* |

* A seaworthiness check is required.
** A seaworthiness check with a -45% penalty is required.

Weather conditions are generally fairly consistent within a single day. (This is an obvious simplification to keep the game moving.) The exact conditions for a given day can be chosen by the DM (perhaps by using the weather outside) or it can be determined randomly. To do the latter, roll 2d6 and find the result on Table 79.

**Table 79:**

## Weather Conditions

| 2d6 Roll | Spring/Fall | Summer | Winter |
|---|---|---|---|
| 2 | Becalmed | Becalmed | Becalmed |
| 3 | Becalmed | Becalmed | Light breeze |
| 4 | Light breeze | Becalmed | Light breeze |
| 5 | Favorable | Light breeze | Favorable |
| 6 | Favorable | Light breeze | Strong winds |
| 7 | Strong winds | Favorable | Strong winds |
| 8 | Storm | Favorable | Storm |
| 9 | Storm | Strong winds | Storm |
| 10 | Gale | Storm | Gale |
| 11 | Gale | Gale | Gale |
| 12 | Hurricane* | Hurricane* | Hurricane* |

* Hurricanes occur only if the previous day's weather was gale. If not, treat the result as a gale.

**Adverse winds** are determined by rolling 1d6. On a 5 or 6, the winds are unfavorable. When adverse winds are storm strength or greater, the ship will be blown off-course by at least half its movement under those conditions, regardless of whether it is a sailing ship or galley.

## Aerial Movement

Aerial movement rates are handled according to the normal movement rules, with clear sky being treated as clear terrain. A detailed system of aerial movement during the round

can be found in Chapter 9: Combat. The only special consideration that must be given to aerial movement is the weather condition. Weather is, for al practical purposes, the terrain of the sky.

As with sea movement, the weather for any particular occasion can be chosen by the DM or determined randomly. If determined randomly, the DM should first roll a wind condition (as found on Table 79, above).

Next, the DM rolls 1d6 to determine precipitation (although storms and hurricanes have automatic precipitation). During summer and winter, a 6 on the die indicates rain or snow. In spring and fall, a 5 or 6 is rain. Clearly the DM must adjust this according to the terrain of the region. There is little need to make precipitation checks when flying over a desert, for example.

Be aware that this is only a very simple method for determining the weather, and judgment should still be used. The effects of weather on aerial movement can be found on Table 80.

**Table 80:**

## Aerial Movement Modifiers

| Condition | Modifier |
|---|---|
| Hurricane | Not possible |
| Gale | x_ |
| Storm | x_ |
| Rain or snow | x_ |
| Strong winds | x_ |

These modifiers are cumulative. Thus strong winds and rain are the equivalent of a storm, while a gale with rain is worse than a storm. Flight during a hurricane is just about impossible without some type of magical protection.

# Getting Lost

Monsters, bandits, evil wizards, and villainous knights can all make travel in the wilderness dangerous. But none of these is the greatest hazard characters will have to face. Getting lost is equally dangerous and far more common. Once characters are lost, almost anything can happen.

There are two ways of getting lost: There's just lost and then there's hopelessly lost. Each is quite different from the other.

# Just Lost

Sometimes, characters are lost because they do not know how to get to a specific place. They know where they have been (and how to get back there), but they don't know the correct route to reach their goal. This occurs most often when following a road, a trail, a map, a river, or a set of directions.

Under these circumstances, there is a reasonable certainty that the player characters will wind up somewhere. After all, roads go from place to place and rivers start and end somewhere. Whether this is where the player characters want to go is another matter entirely. No particular rules are needed to handle these situations, only some confusing forks in the road and the wit (or lack thereof) of the players.

For example, imagine the characters following a well-marked trail. Rounding the corner, they find the trail splits into two equally used trails. The directions they got in the last village said nothing about the trail branching. They must guess which way is the right way to go. In a sense, they are now lost. Once they choose a trail, they do not know if their guess was correct until they get to the end. But, they can always find their way back to the last village. So they are not hopelessly lost. This can also happen when following rivers, roads, or blaze markings.

## Hopelessly Lost

Hopelessly lost is another matter altogether. This happens when player characters have no idea where they are, how exactly to get back to where they were, or which way to go to get to where they want to be.

Although it can happen, player characters seldom get hopelessly lost when following some obvious route (a road or river). Trails do not guarantee safety since they have a maddening habit of disappearing, branching, and crossing over things that look like they should be trails (but aren't).

The chance of getting hopelessly lost can be reduced by sighting on a landmark and keeping a bearing on it, or by hiring a guide. Darkness, overcast days, thick forests, and featureless wastes or plains all increase the chance of getting lost.

Checks for getting hopelessly lost should only be made when the player characters are not following a clear road, river, or trail. Checks should be made when following a little-used trail or when a river empties into a swamp, estuary, or delta. Checks should also be made when moving cross-country without the aid of a trail, river, or road. One check should be made per day.

To make the check, find the entry on Table 81 that best matches the type of terrain the characters are in. This will give a percentage chance to become lost. From this, add or subtract any modifiers found on Table 82. Roll percentile dice. If the die roll is less than the percentage, the characters are lost.

**Table 81:**

### Chance of Getting Hopelessly Lost

| Surroundings | % Chance |
|---|---|
| Level, open ground | 10% |
| Rolling ground | 20% |
| Lightly wooded | 30% |
| Rough (wooded and hilly) | 40% |
| Swamp | 60% |
| Mountainous | 50% |

| | |
|---|---|
| Open sea | 20% |
| Thick forest | 70% |
| Jungle | 80% |

**Table 82:**

## Lost Modifiers

| **Condition** | **Modifier** |
|---|---|
| Featureless (no distinquishable landmarks)* | +50 |
| Darkness | +70 |
| Overcast | +30 |
| Navigator with group | -30 |
| Landmark sighted | -15 |
| Local guide | Variable** |
| Poor trail | -10 |
| Raining | +10 |
| Directions | Variable** |
| Fog or mist | +30 |

* This would apply, for example, when the characters are sailing out of sight of land.
** The usefulness of directions and the knowledge of a guide are entirely up to the DM. Sometimes these are very helpful but at other times only manage to make things worse.

## Dealing With Lost Characters

Once a group is lost, no further checks need be made—they're lost until they get themselves back in familiar territory (or until they get lucky and happen upon someone who can help them out.

Don't tell players when their characters are lost! Let them continue to think they are headed in the right direction. Gradually veer them away from their true direction. Player characters should realize for themselves that they're no longer heading in the right direction. This generally comes when they don't get to whatever point they hoped to reach.

For example, a group of player characters is following a poor trail through lightly wooded hills on their way to a village three days' march due west. On the first day, they sensibly set their sights on a large rock to the west as their landmark.

Their chance of getting lost is 15%—40 for being in wooded hills minus 15 because they've got a landmark minus 10 because they're on a trail (40 - 15 - 10 = 15). The DM checks to see if they become lost and rolls a 07. They're lost, but they don't know it!

The players announce that their characters are marching to the west (to follow the landmark), but, unknown to them, the path takes them somewhat southwest. As the characters get close to their landmark, they sight a new one in a straight line beyond it. They think they are still headed west, but their new course is now northwest.

The player characters are likely to realize that they are off course only when they don't find the village at the end of three days' marching. At that point, they don't know just

when they got off course and so they are hopelessly lost.

Remember that the best defense against getting lost is not to try to go anywhere in particular. There is little point in checking to see if characters get lost if they don't have a goal. It is perfectly possible for characters just to strike out "to see what can be seen." If one has no place to be and no concern about ever getting back, one cannot get lost.

# Chapter 15:
# A DM's Miscellany

The previous chapters have presented a lot of rules and covered a lot of ground, but there are always a few things that don't fit into neat little categories (or even big categories!). Some of these are situations that arise all the time during adventures. Others are situations or background facts you will need only occasionally. These "left-overs," common and uncommon, are discussed below.

## Listening

One of the useful tricks that smart adventurers learn after a few trips into deadly dungeons is to pay attention and listen for strange noises. Noise is a valuable clue, alerting characters to possible danger and even occasionally giving them a definite picture of what dangers they face. After rashly bashing down a door only to discover a barracks full of unruly orcs, the player characters may find it more prudent to stop outside and listen before trying the same stunt again.

All characters have a percentage chance to hear noises, the percentage varying by race, as listed on Table 83. This ability is equal to that of a 1st-level thief (however, thieves can choose to increase this score). This is *not* the character's chance to hear someone talking to him or the tolling of the city watch's bell at night. This percentage should be used only when hearing is difficult or there are extraordinary circumstances involved.

The percentage chance is followed by a number in parentheses. The second number is the same chance on 1d20. You can either make a percentile check or roll 1d20, whichever is most convenient. In either case, a roll equal to or less than the number on the table means the character hears something.

**Table 83:**
### Chance to Hear Noise by Race

| **Dwarf** | **Elf** | **Gnome** |
|---|---|---|
| 15% (3) | 20% (4) | 25% (5) |
| **Half-elf** | **Halfling** | **Human** |

15% (3) 20% (4) 15% (3)

Of course, the chance to hear noise given above represents more or less optimum conditions—helmet off, not moving, and all others remaining relatively still for one round while the character stands and tries to hear noises carried on the breeze or down a hallway. Under such conditions, the character will get a relatively clear idea of the nature of the noise—animal grunts, slithering, speech (including language and race), and perhaps even words.

Less than perfect conditions don't alter the chance to hear (which is low enough) but can affect the clarity. Some, like the muffling effect of doors or the echoing of stone passages, may still allow the character to hear a noise reasonably well, but may prevent precise identification.

In some situations, a character can hear muttering, growls, panting, or voices, but may be unable to identify the issuer of the sounds. The character would know there is something ahead, but wouldn't know what. In other situations, the chance to hear anything at all may be affected. Extreme cases can give you the excuse to provide misinformation. Guttural speech may sound like growls, the moaning wind could become a scream, etc.

In some cases a check is necessary even when the character is not attempting to discern some unknown noise. The character tries to hear the shouted words of a pirate captain over the raging storm. He can see the captain and can clearly tell the man is speaking. Indeed, the captain may even be speaking to him. However, a hearing check should be made to find out if the character can make out the captain's words over the fury of the storm. If the character were a little closer, the storm a little less, or the captain's lungs exceptionally strong, the character's chance of success would be increased.

In all cases, hearing a noise takes time. The amount of time spent listening to the captain is obviously the time it takes him to speak his peace. Standing and hearing noise in a corridor or at a door requires a round, with the entire party remaining still.

Furthermore, a character can make repeated checks in hopes of hearing more or gaining more information. However, once a character fails a check, he will not hear anything (even if he immediately makes a successful check on the next round) unless there is a substantial improvement in the conditions. The group will have to move closer, open the door, or take some other action to allow a new check.

If a check is successful, the character can keep listening to learn more. This requires continued checks, during which the player can attempt to discern specifies—number, race, nature of beast, direction, approaching or retreating, and perhaps even bits of conversation. The player states what he is trying to learn and a check is made.

Trying to overhear things this way is less than reliable. Thieves should not be allowed to use their hear-noise ability like super-sensitive microphones!

## Doors

When creating their characters, all players come up with a number to open doors, based on their Strength. Must the characters make checks to see if they can open inn doors, the doors to their rooms, or a carriage door? Of course not. Under most

circumstances, don't worry about the chance to open a door. Sometimes, however, there are doors the characters aren't meant to open. That's when the check becomes important.

Doors can generally be divided into different groups. First are regular normal doors. These open when pushed or pulled because that's what they are supposed to do. The DM who requires a check every time the characters try to enter a tavern is misinterpreting the rules.

The next group are those heavy, old, musty, swollen and rusted doors found in dungeons and ancient ruins. These don't open with an easy pull. The hinges may be frozen or the wood swollen in the frame. To open these the characters must make a check, yanking on the handle or giving the door a good shove.

Finally, there are locked, barred, and ensorcelled doors, ones that are closed and sealed on purpose. These take a bit of doing to open.

Every character has a chance to force open a door, but it is up to the DM to determine when it is appropriate to use this ability. The DM can legitimately allow the characters to force open a door held shut by a flimsy lock or rotted bar. An extremely heavy dungeon door, swollen in its frame may be unforceable. The characters throw their shoulders against it and just bounce. If picking a lock is particularly important to the adventure, then that might be the only way to open the door (short of stealing a key).

One important note to remember is that if a monster opened a door and fled through it, the characters should be able to open the door with equal ease. The key here is "equal ease." What is easy for a troll or hill giant may be quite a bit more than a gnome or halfling can manage! Frequent opening and closing will also affect the ease with which a door can be used.

If a door fails to open on the first attempt, a character can try again—there is no limit to the number of attempts, but each subsequent attempt will reduce the character's chance of success by one, as he grows more and more tired of yanking or banging on the door.

Another common tactic players use to deal with uncooperative doors is to put multiple characters on it. Up to two people can attempt to force open a door at the same time (more than this and the characters tend to trip over themselves). The chance of opening the door is increased by half the lesser character's chance (with fractions rounded up). Thus, if Rupert opens doors on a 1, 2, 3, or 4 (on 1d20) and Delsenora on a 1, 2, or 3, together they can open a door on a 1, 2, 3, 4, 5, or 6 (Rupert's 1-4 plus half of Delsenora's 1-3, rounded up to a +2 bonus).

Resourceful characters sometimes go after doors in a big way, improvising battering rams to bash them in. The characters need a suitable ram (a stout log will do) and some running room to gain the full advantage of this method. Such a ram will enable the characters to total their chances to open the door. Even without the running room, the characters can swing the ram into the door. This allows more than two characters to apply their muscle at one time.

Each character on the ram contributes one-half his normal chance of opening doors to the overall effort. Thus, Rupert (1-4), Delsenora (1-3), Tarus (opens doors 1-6) and Joinville (opens doors 1-2) would have a (2 + 2 + 3 + 1 =) 1-8 chance of bashing down the door swinging a ram into it. Their chance would be (4 + 3 + 6 + 2 =) 1-15 if they were able to charge the door full tilt with their ram.

Of course, bashing down doors does have its disadvantages. First, the door is ruined and can't be closed behind the group. The characters will leave a clear path, one any

pursuers can follow, and they won't be able to block their rear. Unless the site has regular maintenance, the DM should note on his key what doors have been destroyed for future references.

Forcing doors open also tends to be noisy. Unless the door bursts open on the first try, creatures on the other side cannot be surprised. Even if there isn't anything behind the door, those nearby will be alerted (and if intelligent, may take action). Finally, the noise may attract unwanted visitors. The DM should immediately make a wandering monster check (if any exist in the area) each time a door is smashed down. Silently picking locks can have its advantages.

## Concealed and Secret Doors

In addition to all other types of doors, the arcane architects of most fantasy buildings like to include a few secret and concealed doors. These can range from simple priest-holes to pivoting bookcases opening into hidden crypts. The only limit is your imagination.

Secret doors operate differently from normal doors. First and foremost, they must be found. This isn't something that happens without effort (if it did, the door wouldn't be very secret!). With the exception of elves, characters must search for secret doors to find them.

Searching a 20-foot section of wall takes about 10 minutes, during which the characters tap, thump, twist, and poke, looking for secret catches, sliding panels, hidden levers, and the like. The exact amount of time can vary according to the amount of detail on the wall. A relatively barren wall section will go fairly quickly, while one loaded with shelves, ornamentation, sconces, and other fixtures will require more time. A character can search a given wall area only once, although several characters can search the same area.

Normally, when a character discovers a secret door, he has found the means to open it. Therefore, no roll must be made to open the door. In very rare cases, the character may discover that the secret door exists (by finding its outline, for example) but not know how to open it. In this case, a separate check must be made to open the door.

Secret doors cannot be forced open by normal means although they can be bashed down with rams (at half the normal chance of success). Indeed, it is even possible for characters to see the secret door in operation and not know how it is operated. ("You burst in just in time to see Duke Marask, the vampire, disappear from sight as the sliding bookcase swings back into position.") In such cases, knowledge that the door exists will increase the chance of finding its opening mechanism by 1.

It is a good idea to note how each particular secret door works and how it is concealed. While such notes have no effect on the mechanics of the game, they will add a lot of flavor and mystery at the expense of a little effort. Which is more exciting—to say, "You find a secret door in the north wall," or "You twist the lion-headed ornament over the mantle and suddenly the flames in the fireplace die down and a panel in the back slides up?"

Furthermore, colorful descriptions of secret doors allow you to place the burden of remembering how a given door works on the player characters—"What, you forgot what to do to make that secret door open? Well, I suppose you'll have to search again." If used

in moderation, this will help keep them involved in your game, encouraging them to make maps filled with all manner of interesting notes.

A concealed door is a normal door that is purposely hidden from view. There may be a door to the throne room behind that curtain or a trap door under the rug. The door isn't disguised in any way or opened by secret catches; it is just not immediately obvious.

Any search for concealed doors will reveal them and once found they can be opened normally. Elves can sometimes sense concealed doors (if they make their die roll) without having to stop and search. No one knows how this is accomplished, although some theorize elves notice subtle temperature gradients when they pass near these doors.

## Lycanthropy

Of all the afflictions that can strike a character, one of the most feared is lycanthropy. While often considered a disease, lycanthropy can more properly be described as a natural condition, in some cases, or a curse, in others. In either case, it is immune to the effects of *cure disease* spells and powers. Freeing a character from the torments of lycanthropy is a more involved and complicated matter than just casting a single spell.

True lycanthropy is neither a curse nor a contagion, but the ability, possessed by a limited number of species, to change into an animal shape at will. As such, true lycanthropes are not affected by the phases of the moon, darkness, or any other limitations on their changing abilities indicated in the folklore of werewolves. Neither can a PC be afflicted with true lycanthropy—it is an ability limited to those species born with the power.

However, one of the characteristics of the true lycanthrope is his ability to transmit a lycanthropic contagion to his victims. This is the dreaded lycanthropy of folklore. Once stricken, the victim falls under the sway of the moon, unable to resist the powerful change into a bloodthirsty beast.

Whenever a character is wounded by a true lycanthrope, there is 1% chance per hit point of damage suffered that the character is stricken with lycanthropy. The DM makes this check secretly, since characters never learn of their fate until it is too late (although prudent characters may take immediate steps as if they had been affected). If stricken, the character suffers from this curse.

Cursed characters suffer uncontrollable change on the night of a full moon and the nights immediately preceding and following it. The change begins when the moon rises and ends when it sets. During this time the character is controlled by the DM, not the player. Often, the character discovers that he has done terrible things while changed and under the DM's control.

During the change, the character's Strength increases temporarily to 19, allowing him to break bonds, bend bars, and otherwise escape confinement. The changed character has the Armor Class, attacks, movement, and immunities identical to the type of lycanthrope that wounded him.

However, the intelligence and alignment of the character are overwhelmed by an uncontrollable bloodlust. The player character must hunt and kill and generally chooses as his victims people he knows in his daily life. The stronger the emotion toward the person (either love or hate), the greater the likelihood the character will attempt to stalk

and slay that person.

Remember that during the period of the change the player has no control over his character. Neither will he be identifiable to his friends and companions unless they are familiar with his curse or can recognize him by some personal effect.

At the end of each change, the character returns to his normal form (perhaps to his embarrassment). At the same time, he heals 10% to 60% (1d6x10) of any wounds he has suffered. While the character may know or suspect that he has done something terrible, he does not have clear memories of the preceding night. Good characters will be tormented at the thought of what they may have done, and paladins will find they have, at least temporarily, fallen from grace.

Freeing a character from the grip of lycanthropy is not the simple task of casting a spell. A *cure disease* has no effect on the character. A *remove curse* allows the character to make a saving throw to free himself from the lycanthropy, but this must be cast on one of the nights when the actual change occurs. If the character makes his saving throw vs. polymorph, the lycanthropy is broken and will not affect the character again (unless, of course he is infected by a lycanthrope once again).

## Other Magical Diseases

Lycanthropy is not the only type of weird and magical affliction that can strike a character. Filthy rats can carry disease. Mummies possess the dangerous rotting touch. In each case there are effects set out in the description in the *Monstrous Compendium.* However, it is important for the DM to distinguish between normal and magical diseases.

A normal disease is one that no matter how exotic or fantastic is caused and transmitted in ways we normally understand—germs, mosquitoes, rabid rats, etc. To that end, the disease would be treatable by normal methods in the real world.

A magical disease, like rotting touch, is one that functions by some unexplained magical property. As such it is not curable by normal means.

The DM should understand the distinction between the two types of diseases. With that knowledge, he can rule on the effects of various cures and potions.

# The Planes of Existence

Your campaign, or anybody else's, is not the only possible world-setting for the AD&D game. There are as many different campaigns as there are DMs. Yours may be a very conscientious medieval setting in western Europe. But what other kinds of campaigns could there be?

- A carefully researched campaign set in late-Medieval Italy where characters can meet famous rulers and artists of the age.
- One set in a world similar to the Far East, with oriental characters, creatures, and beliefs.
- A campaign set in lands similar to ancient Egypt at the height of the Bronze Age.
- A campaign in an underground world dominated by dwarves, locked into an endless war with the fecund orcs.
- A campaign set in gloomy, mysterious Eastern Europe, populated by sullen

peasants, crumbling castles, and monsters both urbane and bestial, in the best traditions of old horror movies.

• A truly fantastic world filled with genii-driven steam engines, elemental airships, and spell-driven telegraphs.

• A campaign set in a tropical archipelago where travel is by canoe between islands of cannibals, giant beasts, and lost civilizations.

• A campaign world set in Africa at the height of its great empires, where powerful native kingdoms fight to resist the conquest of foreign explorers.

• A campaign based on the works of a particular author, such as Sir Thomas Mallory's *Le Morte d'Arthur* or the sagas of Iceland.

Clearly, there are many possible settings for campaign worlds—all these and more. So, how can they all be accommodated? To allow such diversity and to provide unlimited adventure possibilities, the AD&D game world offers many planes of existence.

The planes are different areas of existence, each separate from the others, each bound by its own physical laws. The planes exist outside our normal understanding of space and dimensions. Each has properties and qualities unique to itself. While more complete information can be found in other AD&D rule books, the brief overview given here outlines the basic structure of the planes.

Since they are without form or dimension, it is not possible to draw a road-map of the planes and their relationships to each other. However, there is a structure and organization to them which can best be visualized as a series of spheres, one inside the other.

## The Prime Material Planes

At the very center of this series of spheres are the *Prime Material planes*. These are the planes most familiar to AD&D game players. The prime material planes include the many Earth-like alternate worlds and campaigns that operate from the more or less the same basic realities. There may be variations from prime to prime, but most features remain the same. The inhabitants of each prime always refer to their plane as *the* Prime Material Plane.

## The Ethereal Planes

Surrounding each Prime Material plane is a separate Ethereal plane. The *Ethereal planes* are misty realms of proto-matter. Nothing is solid on these planes.

In the Ethereal planes, there may be small pockets or islands of matter known as demi-planes. These demi-planes are sometimes the creations of extremely powerful wizards, technologists, or demi-gods.

## The Inner Planes

Using the sphere analogy, outside of the Primes and the Ethereal planes are the *inner planes*, the primary building forces of the multiverse. The inner planes consist of the elemental, para-elemental, and quasi-elemental planes, and the planes of energy. The

elemental planes are the building blocks of matter—Air, Water, Fire, and Earth. Where the elemental planes touch each other there arise the para-elemental planes—Smoke, Ice, Ooze, and Magma. The Energy planes are the Positive Energy plane (also called the Plane of Life) and the Negative Energy plane (the source of entropy). The quasi-elemental planes exist where the elemental planes touch the Energy planes—Lightning, Steam, Minerals, and Radiance around the Positive Energy plane, and Salt, Vacuum, Ash, and Dust around the Negative Energy plane. Many of the planes have their own creatures and rulers who are sometimes summoned to one of the primes through spells or magical items.

## The Astral Plane

Beyond the inner planes (continuing with the spheres) is the *Astral plane*. Like the Ethereal planes, this plane serves as a connector between the different realities. It links the various Primes to each other (one travels from one Prime to another by crossing the Astral plane, not the Ethereals) and connects each Prime to the outer planes.

The Astral plane is a barren place with only rare bits of solid matter. Indeed, the most common feature is the silver cords of travelers in the plane. These cords are the lifelines that keep travelers of the Plane from becoming lost, stretching all the way back to the traveler's point of origin.

## The Outer Planes

Finally, outside all else are the *Outer Planes*, also called the Planes of Power. There are 17 known Outer Planes—there may be more. These planes can be reached only by powerful spells or by crossing the Astral plane.

Each outer plane is unique. Some seem quite similar to the primes; others have terrain and physical laws wildly different from that to which the characters may be accustomed. Magic functions differently on each plane as do many other common assumptions of reality.

Powerful beings (self-proclaimed gods, goddesses, and demi-gods) inhabit these planes along with a full range of other life forms. The outer planes are the final resting place of the spirits of intelligent life forms of the Prime Material planes.

The known outer planes have been named by humans. Some of these names are:

Mechanus
Arcadia
Mount Celestia
Bytopia
Elysium
Beastlands
Olympus
Ysgard
Limbo
Pandemonium

The Abyss
Carceri
Gray Waste
Gehenna
Baator
Acheron
The Outlands

These names are not necessarily consistent from world to world or Prime Material Plane to Prime Material Plane. Indeed, since the planes are without dimension and form, it is possible for different lands in the same campaign world to have entirely different pictures of planar structure and order.

For example, an oriental-type world might see the Outer Planes not as a series of separate regions, but as a single mass throughout which are scattered different agencies of the Celestial Bureaucracy. The Celestial Emperor might reside on one plane, while his Minister of State operated from another.

A Nordic land would see the plane of Ysgard as dominant over all others, in accordance with the importance they ascribe the powers there. These things are left to your discretion, as the DM. The planes can be molded to meet the needs of your campaign.

* DM's choice

To use Table 84, first find the letter given under the monster listing. On that row each column then lists the percentage chance of a particular type of treasure appearing and the size range for that particular type. Treasures with no percentage listed are automatically

present. Either choose to have that particular treasure present (and the amount) or roll randomly to determine the result.

The first part of the table (letters A-I) lists treasures that are found in lairs only. These are sizeable treasures accumulated by social creatures (humans, orcs, hobgoblins, etc.) or by those creatures notorious for the size of their treasure hoards (especially dragons).

The second part of the table lists treasures likely to be owned by intelligent individuals or to be found in the lairs of animal intelligence or less monsters. These treasures are small. Intelligent creatures seldom carry large amounts of cash, while unintelligent ones seldom make the effort to collect it. When an individual or lair treasure warrants being larger than normal, several smaller entries can be listed to create an overall larger hoard.

## Coins

When treasure is found in the form of coins, it will normally be bagged or kept in chests unless it has been gathered by unintelligent monsters. Coins (regardless of metal) normally weigh in at 50 to the pound.

## Gems

When gems are found, determine the value of each gem (or each group of gems if there are many present) on Table 85. This table lists the base value for each gem and the general class of each stone for purposes of description. Uncut stones, if found, have their base value reduced to 10% of the amount listed.

**Table 85:**

### Gem Table

| D100 Roll | Base Value | Class |
|---|---|---|
| 01-25 | 10 gp | Ornamental |
| 26-50 | 50 gp | Semi-precious |
| 51-70 | 100 gp | Fancy |
| 71-90 | 500 gp | Precious |
| 91-99 | 1,000 gp | Gems |
| 00 | 5,000 gp | Jewels |

In addition, there is a 10% chance that any given stone will be above or below its normal value. (Assume 10% of the stones present in a large horde are automatically unusual.) These gems can be modified according to Table 86.

**Table 86:**

### Gem Variations

**D6**

| Roll | Result |
|---|---|
| 1 | Stone increases to the next higher base value. Roll again, ignoring all results but 1.* |
| 2 | Stone is double base value |
| 3 | Stone is 10-60% above the base value |
| 4 | Stone is 10-40% below the base value |
| 5 | Stone is half base value |
| 6 | Stone decreased to next lower base value. Roll again, ignoring all results but 6.** |

* Above 5,000 gp, the base value of the stone doubles each time. No stone can be greater than 100,000 gp.
** Below 10 gp, values decrease to 5 gp, 1 gp, 5 sp, 1 sp. No stone can be worth less than 1 sp and no stone can decrease more than five places from its initial value.

Although you can choose to describe gems solely by their values ("You found a 50 gp gem"), more flavor is gained by described stones by name and color. The lists below present stones of different categories and their descriptions.

## Ornamental Stones

Azurite: Opaque, mottled deep blue
Banded Agate: Brown, blue, red, and white stripes
Blue Quartz: Transparent pale blue
Eye Agate: Gray, white, brown, blue, and green circles
Hematite: Gray-black
Lapis Lazuli: Light or dark blue with yellow flecks
Malachite: Striated light and dark green
Moss Agate: Pink, yellow-white with gray-green moss-like markings
Obsidian: Jet black
Rhodochrosite: Light pink
Tiger Eye Agate: Rich golden brown with dark striping
Turquoise: Aqua with darker mottling

## Semi-Precious Stones

Bloodstone: Dark gray with red flecks
Carnelian: Orange to red-brown
Chalcedony: White
Chrysoprase: Translucent apple to emerald green
Citrine: Pale yellow brown
Jasper: Blue, black to brown
Moonstone: White with pale blue hue
Onyx: Black, white, or bands of both
Rock Crystal: Clear, transparent
Sardonyx: Bands of red and white
Smoky Quartz: light gray, yellow, brown or blue
Star Rose Quartz: Smoky rose with white star center
Zircon: Clear pale aqua

### Fancy to Precious

Amber: Transparent golden (100 gp)
Alexandrite: Dark green (100 gp)
Amethyst: Purple crystal (100 gp)
Aquamarine: pale blue green (500 gp)
Chrysoberyl: green or yellow green (100 gp)
Coral: Pink to crimson (100 gp)
Garnet: Deep red to violet crystal (100-500 gp)
Jade: Light to dark green or white (100 gp)
Jet: Deep black (100 gp)
Pearl: Pure white, rose, to black (100-500 gp)
Peridot: Olive green (500 gp)
Spinel: Red, red-brown, green, or deep blue (100-500 gp)
Topaz: Golden yellow (500 gp)
Tourmaline: Pale green, blue, brown, or red (100 gp)

### Gems and Jewels

Black Opal: Dark green with black mottling and golden flecks (1,000 gp)
Black Sapphire: Rich black with highlights (5,000 gp)
Diamond: Clear blue-white, rich blue, yellow, or pink (5,000 gp)
Emerald: Brilliant green (5,000 gp)
Fire Opal: Fiery red (1,000 gp)
Jacinth: Fiery orange (5,000 gp)
Opal: Pale blue with green and gold mottling (1,000 gp)
Oriental Amethyst: Deep purple (1,000 gp)
Oriental Emerald: Bright green (5,000 gp)
Oriental Topaz: Fiery yellow (1,000 gp)
Ruby: Clear to deep crimson red (5,000 gp)
Sapphire: Clear to medium blue (1,000 gp)
Star Ruby: Translucent ruby with white star highlights (5,000 gp)
Star Sapphire: Translucent blue with white star highlights (5,000 gp)

## Objects of Art

This category includes jewelry, ornamental drinking vessels, elaborate snuff boxes, fine crystal and glass, statuary, carvings, and all the other small embellishments that make life more pleasant and easy to bear. The value of each should be determined on Table 87.

**Table 87:**

## Objects of Art

| D100 Roll | Value |
|---|---|
| 01-10 | 10-100 gp |
| 11-25 | 30-180 gp |

| | |
|---|---|
| 26-40 | 100-600 gp |
| 41-50 | 100-1,000 gp |
| 51-60 | 200-1,200 gp |
| 61-70 | 300-1,800 gp |
| 71-80 | 400-2,400 gp |
| 81-85 | 500-3,000 gp |
| 86-90 | 1,000-4,000 gp |
| 91-95 | 1,000-6,000 gp |
| 96-99 | 2,000-8,000 gp |
| 100 | 2,000-12,000 gp |

The DM should name each item found by the player characters, since this helps them picture in their minds just what they have found.

# Appendix 2:
# Magical Item Tables

## Magical Item Tables

When possible, the DM should select the magical items he gives out in his campaign. Sometimes, however, the DM has more pressing game matters on his mind. To determine randomly what magical item has been found, roll on Table 88. This table directs you to one of the specific categories in Tables 89-108.

Items followed by a group name are usable only by characters of that group.

Note: XP Value is the number of experience points a character gets for making an item.

**Table 88:**
## Magical Items

| D20 Roll | Category |
|---|---|
| 01-20 | Potions and Oils |
| 21-35 | Scrolls |
| 36-40 | Rings |
| 41 | Rods |
| 42 | Staves |
| 43-45 | Wands |
| 46 | Miscellaneous Magic: Books and Tomes |
| 47-48 | Miscellaneous Magic: Jewels and Jewelry |
| 49-50 | Miscellaneous Magic: Cloaks and Robes |
| 51-52 | Miscellaneous Magic: Boots and Gloves |

| | |
|---|---|
| 53 | Miscellaneous Magic: Girdles and Helms |
| 54-55 | Miscellaneous Magic: Bags and Bottles |
| 56 | Miscellaneous Magic: Dusts and Stones |
| 57 | Miscellaneous Magic: Household Items and Tools |
| 58 | Miscellaneous Magic: Musical Instruments |
| 59-60 | Miscellaneous Magic: The Weird Stuff |
| 61-75 | Armor and Shields |
| 76-100 | Weapons |

Once the general category is determined, the DM can choose a specific item from the tables below. (Each item on the tables is given a die roll number so that the DM can select items randomly, if he chooses.) Some tables have several subtables. Each subtable has a range of numbers in parentheses at the top. To select the appropriate subtable, check the die listed after the table's title. Roll the listed die and find the result in the number range at the top of one of the subtables. This is the subtable you read to determine which item in the list has been found.

For example, the Potions and Oils table has "(D6)" after the title. That means you roll a 6-sided die to determine which Subtable (A, B, or C) to read. If you roll a 2, for example, you check subtable A (which has "1-2" at the top); if you roll a 6, you read subtable C (which has "5-6" at the top). Roll 1d20 on the appropriate subtable to determine the specific item found. Then turn to the descriptions following the tables to find out what each item does.

**Table 89:**

# Potions and Oils (D6)

**Subtable A (1-2)**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Animal Control* | 250 |
| 2 | Clairaudience | 250 |
| 3 | Clairvoyance | 300 |
| 4 | Climbing | 300 |
| 5-6 | Delusion** | — |
| 7 | Diminution | 300 |
| 8 | Dragon Control* | 700 |
| 9 | Elixir of Health | 350 |
| 10-11 | Elixir of Madness** | — |
| 12 | Elixir of Youth | 500 |
| 13 | ESP | 500 |
| 14-15 | Extra-healing | 400 |
| 16 | Fire Breath | 400 |
| 17 | Fire Resistance | 250 |
| 18 | Flying | 500 |
| 19 | Gaseous Form | 300 |
| 20 | DM's Choice | — |

**Subtable B (3-4)**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Giant Control* | 600 |
| 2 | Giant Strength* (Warrior) | 550 |
| 3 | Growth | 250 |
| 4-5 | Healing | 200 |
| 6 | Heroism (Warrior) | 300 |
| 7 | Human Control* | 500 |
| 8 | Invisibility | 250 |
| 9 | Invulnerability (Warrior) | 350 |
| 10 | Levitation | 250 |
| 11 | Longevity | 500 |
| 12 | Oil of Acid Resistance | 500 |
| 13 | Oil of Disenchantment | 750 |
| 14 | Oil of Elemental Invulnerability* | 500 |
| 15 | Oil of Etherealness | 600 |
| 16 | Oil of Fiery Burning | 500 |
| 17 | Oil of Fumbling** | — |
| 18 | Oil of Impact | 750 |
| 19 | Oil of Slipperiness | 400 |
| 20 | DM's Choice | — |

**Subtable C (5-6)**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Oil of Timelessness | 500 |
| 2 | Philter of Glibness | 500 |
| 3 | Philter of Love | 200 |
| 4 | Philter of Persuasiveness | 400 |
| 5 | Philter of Stammering and Stuttering** | — |
| 6 | Plant Control | 250 |
| 7-8 | Poison** | — |
| 9 | Polymorph Self | 200 |
| 10 | Rainbow Hues | 200 |
| 11 | Speed | 200 |
| 12-13 | Super-heroism (Warrior) | 450 |
| 14 | Sweet Water | 200 |
| 15 | Treasure Finding | 600 |
| 16 | Undead Control* | 700 |
| 17 | Ventriloquism | 200 |
| 18 | Vitality | 300 |
| 19 | Water Breathing | 400 |
| 20 | DM's Choice | — |

* The type of creature affected can be determined by die roll (see the specific item description for more information).

** The DM shouldn't reveal the exact nature of the potion.

**Table 90:**

# Scrolls (D6)

**Subtable A (1-4)**

| D20 Roll | Item* | Level Range |
|---|---|---|
| 1-3 | 1 spell | 1-4 |
| 4-5 | 1 spell | 1-6 |
| 6 | 1 spell | 2-9 (2-7**) |
| 7 | 2 spells | 1-4 |
| 8 | 2 spells | 2-9 (2-7**) |
| 9 | 3 spells | 1-4 |
| 10 | 3 spells | 2-9 (2-7**) |
| 11 | 4 spells | 1-6 |
| 12 | 4 spells | 1-8 (1-6**) |
| 13 | 5 spells | 1-6 |
| 14 | 5 spells | 1-8 (1-6**) |
| 15 | 6 spells | 1-6 |
| 16 | 6 spells | 3-8 (3-6**) |
| 17 | 7 spells | 1-8 |
| 18 | 7 spells | 2-9 (2-7**) |
| 19 | 7 spells | 4-9 (4-7**) |
| 20 | DM's Choice | — |

* See "Scrolls" in Appendix 3 to determine whether a priest scroll or a wizard scroll is found.
** *Level Range* lists the range of spell levels on the scroll. Ranges marked with double asterisks (**) are used to determine priest spells.

**Subtable B (5-6)**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Map | — |
| 2 | Protection—Acid | 2,500 |
| 3 | Protection—Cold | 2,000 |
| 4 | Protection—Dragon Breath | 2,000 |
| 5 | Protection—Electricity | 1,500 |
| 6-7 | Protection—Elementals | 1,500 |
| 8 | Protection—Fire | 2,000 |
| 9 | Protection—Gas | 2,000 |
| 10-11 | Protection—Lycanthropes | 1,000 |
| 12 | Protection—Magic | 1,500 |
| 13 | Protection—Petrification | 2,000 |
| 14 | Protection—Plants | 1,000 |
| 15 | Protection—Poison | 1,000 |

| | | |
|---|---|---|
| 16 | Protection—Possession | 2,000 |
| 17 | Protection—Undead | 1,500 |
| 18 | Protection—Water | 1,500 |
| 19 | Curse | — |
| 20 | DM's Choice | — |

The XP Value (experience point value) for spell scrolls is equal to the total spell levels contained on the scroll x 100.

**Table 91:**

# Rings (D6)

**Subtable A (1-4)**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Animal Friendship | 1,000 |
| 2 | Blinking | 1,000 |
| 3 | Chameleon Power | 1,000 |
| 4 | Clumsiness | — |
| 5 | Contrariness | — |
| 6-7 | Delusion | — |
| 8 | Djinni Summoning* | 3,000 |
| 9 | Elemental Command | 5,000 |
| 10 | Feather Falling | 1,000 |
| 11 | Fire Resistance | 1,000 |
| 12 | Free Action | 1,000 |
| 13 | Human Influence | 2,000 |
| 14 | Invisibility | 1,500 |
| 15-16 | Jumping | 1,000 |
| 17 | Mammal Control* | 1,000 |
| 18 | Mind Shielding | 500 |
| 19 | Protection | 1,000** |
| 20 | DM's Choice | — |

**Subtable B (5-6)**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-2 | Protection | 1,000** |
| 3 | Ram, Ring of the* | 750 |
| 4 | Regeneration | 5,000 |
| 5 | Shocking Grasp | 1,000 |
| 6 | Shooting Stars | 3,000 |
| 7 | Spell Storing | 2,500 |
| 8 | Spell Turning | 2,000 |
| 9 | Sustenance | 500 |
| 10 | Swimming | 1,000 |
| 11 | Telekinesis* | 2,000 |

| | | |
|---|---|---|
| 12 | Truth | 1,000 |
| 13 | Warmth | 1,000 |
| 14 | Water Walking | 1,000 |
| 15 | Weakness | — |
| 16 | Wishes, Multiple* | 5,000 |
| 17 | Wishes, Three* | 3,000 |
| 18 | Wizardry* (Wizard) | 4,000 |
| 19 | X-Ray Vision | 4,000 |
| 20 | DM's Choice | — |

*The power of these rings is limited by the number of charges.
** per +1 of protection

**Table 92:**

# Rods

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-2 | Absorption (Priest, Wizard) | 7,500 |
| 3-4 | Alertness | 7,000 |
| 5 | Beguiling (Priest, Wizard, Rogue) | 5,000 |
| 6-7 | Cancellation | 10,000 |
| 8 | Flailing | 2,000 |
| 9 | Lordly Might (Warrior) | 6,000 |
| 10 | Passage | 5,000 |
| 11 | Resurrection (Priest) | 10,000 |
| 12 | Rulership | 8,000 |
| 13-14 | Security | 3,000 |
| 15-16 | Smiting (Priest, Wizard) | 4,000 |
| 17 | Splendor | 2,500 |
| 18-19 | Terror | 3,000 |
| 20 | DM's Choice | — |

**Table 93:**

# Staves

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-2 | Mace | 1,500 |
| 3 | Command (Priest, Wizard) | 5,000 |
| 4-5 | Curing (Priest) | 6,000 |
| 6 | Magi (Wizard) | 15,000 |
| 7 | Power (Wizard) | 12,000 |
| 8 | Serpent (Priest) | 7,000 |
| 9-10 | Slinging (Priest) | 2,000 |
| 11-12 | Spear | 1,000* |
| 13-14 | Striking (Priest, Wizard) | 6,000 |

| | | |
|---|---|---|
| 15 | Swarming Insects (Priest, Wizard) | 100** |

## Miscellaneous Magic: Boots, Bracers, Gloves

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Boots of Dancing | — |
| 2 | Boots of Elvenkind | 1,000 |
| 3 | Boots of Levitation | 2,000 |
| 4 | Boots of Speed | 2,500 |
| 5 | Boots of Striding and Springing | 2,500 |
| 6 | Boots of the North | 1,500 |
| 7 | Boots of Varied Tracks | 1,500 |
| 8 | Boots, Winged | 2,000 |
| 9 | Bracers of Archery (Warrior) | 1,000 |
| 10 | Bracers of Brachiation | 1,000 |
| 11-12 | Bracers of Defense | 500* |
| 13 | Bracers of Defenselessness | — |
| 14 | Gauntlets of Dexterity | 1,000 |
| 15 | Gauntets of Fumbling | — |
| 16 | Gauntlets of Ogre Power (Priest, Rogue, Warrior) | 1,000 |
| 17 | Gauntlets of Swimming and Climbing (Priest, Rogue, Warrior) | 1,000 |
| 18 | Gloves of Missile Snaring | 1,500 |
| 19 | Slippers of Spider Climbing | 1,000 |
| 20 | DM's Choice | — |

* Per AC of protection less than 10

**Table 99:**

## Miscellaneous Magic: Girdles, Hats, Helms

| D20 Roll | Item | XP Value |
|---|---|---|
| 1-3 | Girdle of Dwarvenkind | 3,500 |
| 4 | Girdle of Femininity/Masculinity (Priest, Rogue, Warrior) | — |
| 5-6 | Girdle of Giant Strength (Priest, Rogue Warrior) | 2,000 |
| 7-9 | Girdle of Many Pouches | 1,000 |
| 10 | Hat of Disguise | 1,000 |
| 11 | Hat of Stupidity | — |
| 12 | Helm of Brilliance | 2,500 |
| 13-14 | Helm of Comprehending Languages and Reading Magic | 1,000 |
| 15 | Helm of Opposite Alignment | — |
| 16 | Helm of Telepathy | 3,000 |
| 17 | Helm of Teleportation | 2,500 |
| 18-19 | Helm of Underwater Action | 1,000 |
| 20 | DM's Choice | — |

**Table 100:**

## Miscellaneous Magic: Bags, Bottles, Pouches, Containers

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Alchemy Jug | 3,000 |
| 2 | Bag of Beans | 1,000 |
| 3 | Bag of Devouring | — |
| 4-7 | Bag of Holding | 5,000 |
| 8 | Bag of Transmuting | — |
| 9 | Bag of Tricks | 2,500 |
| 10 | Beaker of Plentiful Potions | 1,500 |
| 11 | Bucknard's Everfull Purse | * |
| 12 | Decanter of Endless Water | 1,000 |
| 13 | Efreeti Bottle | 9,000 |
| 14 | Eversmoking Bottle | 500 |
| 15 | Flask of Curses | — |
| 16 | Heward's Handy Haversack | 3,000 |
| 17 | Iron Flask | — |
| 18 | Portable Hole | 5,000 |
| 19 | Pouch of Accessibility | 1,500 |
| 20 | DM's Choice | — |

* See item description

**Table 101:**

## Miscellaneous Magic: Candles, Dusts, Ointments, Incense, and Stones

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Candle of Invocation (Priest) | 1,000 |
| 2 | Dust of Appearance | 1,000 |
| 3 | Dust of Disappearance | 2,000 |
| 4 | Dust of Dryness | 1,000 |
| 5 | Dust of Illusion | 1,000 |
| 6 | Dust of Tracelessness | 500 |
| 7 | Dust of Sneezing and Choking | — |
| 8 | Incense of Meditation (Priest) | 500 |
| 9 | Incense of Obsession (Priest) | — |
| 10 | Ioun Stones | 300* |
| 11 | Keoghtom's Ointment | 500 |
| 12 | Nolzur's Marvelous Pigments | 500* |
| 13 | Philosopher's Stone | 1,000 |
| 14 | Smoke Powder** | — |
| 15 | Sovereign Glue | 1,000 |
| 16 | Stone of Controlling Earth Elementals | 1,500 |

| | | |
|---|---|---|
| 17 | Stone of Good Luck (Luckstone) | 3,000 |
| 18 | Stone of Weight (Loadstone) | — |
| 19 | Universal Solvent | 1,000 |
| 20 | DM's Choice | — |

* Per stone or pot of pigment

** This item is optional and should not be given unless the arquebus is allowed in the campaign.

**Table 102:**

## Miscellaneous Magic: Household Items and Tools

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Brazier Commanding Fire Elementals (Wizard) | 4,000 |
| 2 | Brazier of Sleep Smoke (Wizard) | — |
| 3 | Broom of Animated Attack | — |
| 4 | Broom of Flying | 2,000 |
| 5 | Carpet of Flying | 7,500 |
| 6 | Mattock of the Titans (Warrior) | 3,500 |
| 7 | Maul of the Titans (Warrior) | 4,000 |
| 8 | Mirror of Life Trapping (Wizard) | 2,500 |
| 9 | Mirror of Mental Prowess | 5,000 |
| 10 | Mirror of Opposition | — |
| 11 | Murlynd's Spoon | 750 |
| 12-13 | Rope of Climbing | 1,000 |
| 14 | Rope of Constriction | — |
| 15 | Rope of Entanglement | 1,500 |
| 16 | Rug of Smothering | — |
| 17 | Rug of Welcome (Wizard) | 6,500 |
| 18 | Saw of Mighty Cutting (Warrior) | 2,000 |
| 19 | Spade of Colossal Excavation (Warrior) | 1,000 |
| 20 | DM's Choice | — |

**Table 103:**

## Miscellaneous Magic: Musical Instruments

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Chime of Interruption | 2,000 |
| 2 | Chime of Opening | 3,500 |
| 3 | Chime of Hunger | — |
| 4 | Drums of Deafening | — |
| 5 | Drums of Panic | 6,500 |
| 6 | Harp of Charming | 5,000 |
| 7 | Harp of Discord | — |
| 8 | Horn of Blasting | 1,000 |

| | | |
|---|---|---|
| 9 | Horn of Bubbles | — |
| 10 | Horn of Collapsing | 1,500 |
| 11 | Horn of Fog | 400 |
| 12 | Horn of Goodness (Evil) | 750 |
| 13 | Horn of the Tritons (Priest, Warrior) | 2,000 |
| 14 | Horn of Valhalla | 1,000* |
| 15 | Lyre of Building | 5,000 |
| 16 | Pipes of Haunting | 400 |
| 17 | Pipes of Pain | — |
| 18 | Pipes of Sounding | 1,000 |
| 19 | Pipes of the Sewers | 2,000 |
| 20 | DM's Choice | — |

* Only if used by character of appropriate class.

**Table 104:**

## Miscellaneous Magic: The Weird Stuff (D6)

**Subtable A (1-3)**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Apparatus of Kwalish | 8,000 |
| 2-3 | Boat, Folding | 10,000 |
| 4 | Bowl Commanding Water Elementals (Wizard) | 4,000 |
| 5 | Bowl of Watery Death (Wizard) | — |
| 6 | Censer Controlling Air Elementals (Wizard) | 4,000 |
| 7 | Censer of Summoning Hostile Air Elementals (Wizard) | — |
| 8-9 | Crystal Ball (Wizard) | 1,000 |
| 10 | Crystal Hypnosis Ball (Wizard) | — |
| 11 | Cube of Force | 3,000 |
| 12-13 | Cube of Frost Resistance | 2,000 |
| 14 | Cubic Gate | 5,000 |
| 15 | Daern's Instant Fortress | 7,000 |
| 16 | Deck of Illusions | 1,500 |
| 17 | Deck of Many Things | — |
| 18 | Eyes of Charming (Wizard) | 4,000 |
| 19 | Eyes of Minute Seeing | 2,000 |
| 20 | DM's Choice | — |

**Subtable B 4-6**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Eyes of Petrification | — |
| 2 | Eyes of the Eagle | 3,500 |
| 3-4 | Figurine of Wondrous Power | 100* |
| 5 | Horseshoes of a Zephyr | 1,500 |

| | | |
|---|---|---|
| 6-7 | Horseshoes of Speed | 2,000 |
| 8 | Iron Bands of Bilarro | 750 |
| 9 | Lens of Detection | 250 |
| 10 | Quaal's Feather Token | 1,000 |
| 11-12 | Quiver of Ehlonna | 1,500 |
| 13 | Sheet of Smallness | 1,500 |
| 14 | Sphere of Annihilation | 4,000 |
| 15 | Stone Horse | 2,000 |
| 16 | Well of Many Worlds | 6,000 |
| 17-18 | Wind Fan | 500 |
| 19 | Wings of Flying | 750 |
| 20 | DM's Choice | — |

* Per Hit Die of the figurine.

## Armor and Shields

To determine the magical item found, roll for the type of armor on Table 105 and then the magical adjustment on Table 106. If a Special armor is found, roll for the type on Table 107.

**Table 105:**

### Armor Type

| D20 Roll | Armor |
|---|---|
| 1 | Banded mail |
| 2 | Brigandine |
| 3-5 | Chain mail |
| 6 | Field plate |
| 7 | Full plate |
| 8 | Leather |
| 9-12 | Plate mail |
| 13 | Ring mail |
| 14 | Scale mail |
| 15-17 | Shield |
| 18 | Splint mail |
| 19 | Studded leather |
| 20 | Special |

**Table 106:**

### Armor Class Adjustment

| D20 Roll | AC Adj. | XP Value |
|---|---|---|
| 1-2 | -1 | — |

| | | |
|---|---|---|
| 3-10 | +1 | 500 |
| 11-14 | +2 | 1,000 |
| 15-17 | +3 | 1,500 |
| 18-19 | +4 | 2,000 |
| 20 | +5 | 3,000 |

**Table 107:**

## Special Armors

| D20 Roll | Armor Type | XP Value |
|---|---|---|
| 1-2 | Armor of Command | +1,000 |
| 3-4 | Armor of Blending | +500 |
| 5-6 | Armor of Missile Attraction | —* |
| 7-8 | Armor of Rage | —* |
| 9-10 | Elven Chain Mail | +1,000 |
| 11-12 | Plate Mail of Etherealness | 5,000 |
| 13-14 | Plate Mail of Fear | 4,000 |
| 15-16 | Plate Mail of Vulnerability | — |
| 17-18 | Shield, Large, +1, +4 vs. Missiles | 400 |
| 19-20 | Shield -1, Missile Attractor | — |

* No experience points are gained, regardless of the amount of additional AC protection the item provides.

# Magical Weapons

To determine the type of magical weapon found, roll once on Table 108 for a weapon type. Then roll on Table 109 to determine the plus (or minus) of the weapon. If a Special result is rolled, roll on Table 110 to determine the exact weapon found. A range of numbers in parentheses is the number of items found.

**Table 108:**

## Weapon Type (D6)

| Subtable A (1-2) | |
|---|---|
| **D20 Roll** | **Weapon** |
| 1 | Arrow (4d6) |
| 2 | Arrow (3d6) |
| 3 | Arrow (2d6) |
| 4-5 | Axe |
| 6 | Battle axe |
| 7 | Bolt (2d10) |
| 8 | Bolt (2d6) |
| 9 | Bullet, Sling (3d4) |
| 10-12 | Dagger |
| 13 | Dart (3d4) |

| Subtable B (3-6) | |
|---|---|
| **D20 Roll** | **Weapon** |
| 1 | Military Pick |
| 2 | Morning Star |
| 3 | Pole Arm |
| 4-5 | Scimitar |
| 6-8 | Spear |
| 9-17 | Sword |
| 18 | Trident |
| 19 | Warhammer |
| 20 | Special (roll on Table 110) |

| | |
|---|---|
| 14 | Flail |
| 15 | Javelin (1d2) |
| 16 | Knife |
| 17 | Lance |
| 18-19 | Mace |
| 20 | Special (roll on Table 110) |

**Table 109:**

## Attack Roll Adjustment

| D20 Roll | Sword Adj. | XP Value | Other Wpn Adj. | XP Value |
|---|---|---|---|---|
| 1-2 | -1 | — | -1 | — |
| 3-10 | +1 | 400 | +1 | 500 |
| 11-14 | +2 | 800 | +1 | 500 |
| 15-17 | +3 | 1,400 | +2 | 1,000 |
| 18-19 | +4 | 2,000 | +2 | 1,000 |
| 20 | +5 | 3,000 | +3 | 2,000 |

**Table 110:**

## Special Weapons (D10)

**Subtable A (1-3)**

| D20 Roll | Item | XP Value |
|---|---|---|
| 1 | Arrow of Direction | 2,500 |
| 2 | Arrow of Slaying | 250 |
| 3 | Axe +2, Throwing | 750 |
| 4 | Axe of Hurling | * |
| 5-6 | Bow +1 | 500 |
| 7 | Crossbow of Accuracy, +3 | 2,000 |
| 8 | Crossbow of Distance | 1,500 |
| 9 | Crossbow of Speed | 1,500 |
| 10-11 | Dagger +1, +2 vs. Tiny or Small creatures | 300 |
| 12-13 | Dagger +2, +3 vs. larger than man-sized | 300 |
| 14 | Dagger +2, Longtooth | 300 |
| 15 | Dagger of Throwing | * |
| 16 | Dagger of Venom | 350 |
| 17 | Dart of Homing | 450 |
| 18 | Hammer +3, Dwarven Thrower | 1,500 |
| 19 | Hammer of Thunderbolts | 2,500 |
| 20 | DM's Choice | — |

* See item description

**Subtable B (4-6)**

| D20 Roll | Item | XP Value |
|---|---|---|

| | | |
|---|---|---|
| 1 | Hornblade | * |
| 2 | Javelin of Lightning | 250 |
| 3 | Javelin of Piercing | 250 |
| 4-5 | Knife, Buckle | 150 |
| 6-7 | Mace of Disruption | 2,000 |
| 8 | Net of Entrapment | 1,000 |
| 9 | Net of Snaring | 1,000 |
| 10-11 | Quarterstaff, Magical | 500 |
| 12 | Scimitar of Speed | * |
| 13-14 | Sling of Seeking +2 | 700 |
| 15 | Spear, Cursed Backbiter | — |
| 16 | Trident of Fish Command | 500 |
| 17 | Trident of Submission | 1,500 |
| 18 | Trident of Warning | 1,000 |
| 19 | Trident of Yearning | — |
| 20 | DM's Choice | — |

* See item description

**Subtable C (7-9)**

| D20 Roll | Sword | XP Value |
|---|---|---|
| 1 | Sun Blade | 3,000 |
| 2-7 | Sword +1, +2 vs. magic-using & enchanted creatures | 600 |
| 8-10 | Sword +1, +3 vs. lycanthropes & shape-changers | 700 |
| 11-12 | Sword +1, +3 vs. regenerating creatures | 800 |
| 13 | Sword +1, +4 vs. reptiles | 800 |
| 14-15 | Sword +1, Cursed | — |
| 16 | Sword +1, Flame Tongue | 900 |
| 17 | Sword +1, Luck Blade | 1,000 |
| 18 | Sword +2, Dragon Slayer | 900 |
| 19 | Sword +2, Giant Slayer | 900 |
| 20 | DM's Choice | — |

**Subtable D (10)**

| D20 Roll | Swords | XP Value |
|---|---|---|
| 1 | Sword +2, Nine Lives Stealer | 1,600 |
| 2-3 | Sword +3, Frost Brand | 1,600 |
| 4 | Sword +4, Defender | 3,000 |
| 5 | Sword +5, Defender | 3,600 |
| 6 | Sword +5, Holy Avenger | 4,000 |
| 7-8 | Sword -2, Cursed | — |
| 9 | Sword of Dancing | 4,400 |
| 10 | Sword of Life Stealing | 5,000 |
| 11 | Sword of Sharpness | 7,000 |
| 12 | Sword of the Planes | 2,000 |

| | | |
|---|---|---|
| 13 | Sword of Wounding | 4,400 |
| 14-16 | Sword, Cursed Berserking | — |
| 17-18 | Sword, Short, Quickness (+2) | 1,000 |
| 19 | Sword, Vorpal Weapon | 10,000 |
| 20 | DM's Choice | — |

# Appendix 3:
# Magical Item Descriptions

## Potions

Potions are typically found in ceramic, crystal, glass, or metal flasks or vials (though you can change this, if you want). Flasks or other containers generally contain enough fluid to provide one person with one complete dose to achieve the effects described for each potion below.

Opening and drinking a potion has an initiative modifier of 1, but the potion doesn't take effect until an additional initiative modifier delay of 1d4+1 has passed. Only then do the full magical properties of the potion become evident. Magical oils are poured over the body and smeared appropriately; this imposes a speed factor delay of 1d4 + 1.

Potions can be compounded by mages at relatively low cost. However, they must have a sample of the desired potion to obtain the right formula. Furthermore, ingredients tend to be rare or hard to come by. This aspect of potions, as well as the formulation of new ones by players, is detailed in the Spell Research rules.

## Identifying Potions

As a general rule, potion containers should bear no identifying marks, so player characters must sample from each container to determine the nature of the liquid inside. However, even a small taste should suffice to identify a potion in some way. Introduce different sorts of potions, both helpful and harmful, to cause difficulties in identification. In addition, the same type of potion, when created in different labs, might smell, taste, and look differently.

## Combining Potions

The magical mixtures and compounds that make up potions are not always compatible. The compatibility of potions is tested whenever two potions are actually intermingled, or a potion is consumed by a creature while another such liquid, already consumed, is in effect.

Permanent potions have an effective duration of one turn for mixing purposes. If you

drink another potion within one turn of drinking one with Permanent duration, check on Table 111. The exact effects of combining potions can't be calculated, because of differences in formulae, fabrication methods, and component quality employed by various mages. Therefore, it is suggested that Table 111 be used, with the following exceptions:

1. A *delusion* potion will mix with anything.
2. A *treasure finding* potion will always yield a lethal poison.

Secretly roll 1d100 for potion compatibility, giving no clues until necessary. The effects of combining specific potions can be pre-set as a plot device, at your option.

**Table 111:**

## Potion Compatibility

| D100 Roll | Result |
|---|---|
| 01 | Explosion. If two or more potions are swallowed together, internal damage is 6d10 hit points. Anyone within a 5-foot radius takes 1d10 points of damage. If the potions are mixed externally (in a beaker, say), all within a 10-foot radius suffer 4d6 points of damage, no saving throw. |
| 02-03 | Lethal poison* results. Imbiber is dead. If externally mixed, a poison gas cloud of 10-foot diameter results. All within the cloud must roll successful saving throws vs. poison or die. |
| 04-08 | Mild poison causes nausea and the loss of 1 point each of Strength and Dexterity, no saving throw. One potion is cancelled and the other is at half strength and duration. (Determine randomly which potion is cancelled). |
| 09-15 | Potions can't be mixed. Both potions are totally destroyed—one cancels the other. |
| 16-25 | Potions can't be mixed. One potion is cancelled, but the other remains normal (random selection). |
| 26-35 | Potions can't be mixed. Both potions function at half normal efficacy. |
| 36-90 | Potions can be mixed** and work normally, unless their effects are contradictory (for example, *diminution* and *growth*, which will simply cancel each other). |
| 91-99 | Compatible result. One potion (randomly selected) has 150% its normal efficacy. The DM can rule that only the duration of the augmented potion is extended. |
| 00 | Discovery. The mixing of the potions creates a special effect—only one of the potions will function, but its effects upon the imbiber are permanent. (Note that some harmful side effects could well result from this, at the DM's discretion.) |

* A *treasure finding* potion always creates a lethal poison when combined with another potion.

** A *delusion* potion can be mixed with all other potions.

## Potion Duration

Unless otherwise stated, the effects of a potion last for four complete turns plus d4 additional turns (4+d4).

# List of Potions

**Animal Control:** This potion enables the imbiber to empathize with and control the emotions of animals of one type—cats, dogs, horses, etc. The number of animals controlled depends upon size: 5d4 animals of the size of giant rats; 3d4 animals of about man-size; or 1d4 animals weighing about _ ton or more. The type of animal that can be controlled depends upon the particular potion, as indicated by die roll (d20):

| D20 Roll | Animal Type |
|---|---|
| 1-4 | mammal/marsupial |
| 5-8 | avian |
| 9-12 | reptile/amphibian |
| 13-15 | fish |
| 16-17 | mammal/marsupial/avian |
| 18-19 | reptile/amphibian/fish |
| 20 | all of the above |

Animals with Intelligence of 5 (low Intelligence) or better are entitled to a saving throw vs. spell. Control is limited to emotions or drives unless some form of communication is possible. Note that many monsters can't be controlled by the use of this potion, nor can humans, demihumans, or humanoids (see *ring of mammal control*).

**Clairaudience:** This potion empowers the creature drinking it to hear as the 3rd-level wizard spell of the same name. However, the potion can be used to hear even unknown areas within 30 yards. Its effects last for two turns.

**Clairvoyance:** This potion empowers the individual to see as the 3rd-level wizard spell, *clairvoyance*. It differs from the spell in that unknown areas up to 30 yards distant can be seen. Its effects last for one turn.

**Climbing:** Imbibing this potion enables the individual to climb as a thief, up or down vertical surfaces. A *climbing potion* is effective for one turn plus 5d4 rounds.

The base chance of slipping and falling is 1%. Make a percentile check at the halfway point of the climb—01 means the character falls. For every 100 pounds carried by the character, add 1% to the chance of slipping. If the climber wears armor, add the following to the falling chance:

| Armor | Chance to Fall |
|---|---|
| studded leather | 1% |
| ring mail | 2% |
| scale mail | 4% |
| chain mail | 7% |
| banded or splinted armor | 8% |

| | |
|---|---|
| plate mail | 10% |
| field plate | 10% |
| full plate | 12% |
| magical armor, any type | 1% |

**Delusion:** This potion affects the mind of the character so that he believes the liquid is some other potion (*healing*, for example, is a good choice—damage is "restored" by drinking it, and only death or rest after an adventure will reveal that the potion only caused the imbiber to believe that he was aided). If several individuals taste this potion, it is 90% probable that they will all agree it is the same potion (or whatever type the DM announces or hints at).

**Diminution:** After drinking this potion, the individual (and everything he's carrying and wearing) diminishes in size—to as small as 5% of normal size. The percentage of the potion drunk determines the amount a character shrinks: For example, if 40% of the contents are swallowed, the person shrinks to 60% of normal size. The effects of this potion last for six turns plus 1d4+1 turns.

**Dragon Control:** This potion enables the individual drinking it to cast what is, in effect, a *charm monster* spell upon a particular dragon within 60 yards. The dragon is entitled to a saving throw vs. spell, but with a -2 penalty. Control lasts for 5-20 (5d4) rounds. There are various sorts of dragon potions, as shown below:

| D20 Roll | Dragon Type |
|---|---|
| 1-2 | White Dragon control |
| 3-4 | Black Dragon control |
| 5-7 | Green Dragon control |
| 8-9 | Blue Dragon control |
| 10 | Red Dragon control |
| 11-12 | Brass Dragon control |
| 13-14 | Copper Dragon control |
| 15 | Bronze Dragon control |
| 16 | Silver Dragon control |
| 17 | Gold Dragon control |
| 18-19 | Evil Dragon control* |
| 20 | Good Dragon control** |

* Black, blue, green, red, and white
** Brass, bronze, copper, gold, and silver

**Elixir of Health:** This potion cures blindness, deafness, disease, feeblemindedness, insanity, infection, infestation, poisoning, and rot. It will not heal wounds or restore hit points lost through any of the above causes. Imbibing the whole potion will cure all of the above afflictions suffered by the imbiber. Half a flask will cure any one or two of the listed ills (DM's choice).

**Elixir of Madness:** A single sip of this elixir causes the imbiber to go mad, as if

affected by the 4th-level wizard spell, *confusion*, until a *heal*, *restoration*, or *wish* spell is used to remove the madness. Once any creature is affected by the elixir, the remaining draught loses all magical properties, becoming merely a foul-tasting liquid.

**Elixir of Youth:** Quaffing this rare and potent elixir will reverse aging. Taking the full potion at once reduces the imbiber's age by 1d4 + 1 years. Taking just a sip first, instead of drinking it down, will reduce the potency of the liquid, and drinking the lower-potency liquid reduces age by only 1d3 years.

**ESP:** The *ESP* potion bestows an ability that is the same as the 2nd-level wizard spell of the same name, except that its effects last for 5d8 rounds, i.e., 5 to 40 minutes.

**Extra-Healing:** This potion restores 3d8 + 3 hit points of damage when wholly consumed, or 1d8 hit points of damage for each one-third that is drunk.

**Fire Breath:** This potion allows the imbiber to spew a tongue of flame any time within one hour of quaffing the liquid. Each potion contains enough liquid for four small draughts. One draught allows the imbiber to breathe a cone of fire 10 feet wide and up to 20 feet long that inflicts 1d10 + 2 points of damage (d10 + 2). A double draught doubles the range and damage. If the entire potion is taken at once, the cone is 20 feet wide, up to 80 feet long, and inflicts 5d10 points of damage. Saving throws vs. breath weapon for half damage apply in all cases. If the flame is not expelled before the hour expires, the potion fails, with a 10% chance that the flames erupt in the imbiber's system, inflicting double damage upon him, with no saving throw allowed.

**Fire Resistance:** This potion bestows upon the person drinking it magical invulnerability to all forms of normal fire (such as bonfires, burning oil, or even huge pyres of flaming wood). It also gives resistance to fires generated by molten lava, a *wall of fire*, a *fireball*, fiery dragon breath, and similar intense flame/heat. All damage from such fires is reduced by -2 from each die of damage, and if a saving throw is applicable, it is rolled with a +4 bonus. If one-half of the potion is consumed, it confers invulnerability to normal fires and half the benefits noted above (-1, +2). The potion lasts one turn, or five rounds for half doses.

**Flying:** A flying potion enables the individual drinking it to fly in the same manner as the 3rd-level wizard spell, *fly*.

**Gaseous Form:** By imbibing this magical liquid, the individual causes his body, as well as anything he's carrying or wearing, to become gaseous. The gaseous form is able to flow at a base speed of 3/round. (A *gust of wind* spell, or even normal strong air currents, will blow the gaseous form at air speed.)

The gaseous form is transparent and insubstantial. It wavers and shifts, and can't be harmed except by magical fire or lightning, which do normal damage. A whirlwind inflicts double damage upon a creature in gaseous form. When in such condition the individual is able to enter any space that is not airtight—even a small crack or hole that allows air to penetrate also allows entry by a creature in gaseous form. The entire potion

must be consumed to achieve this result, and the effects last the entire duration (4+1d4 turns).

**Giant Control:** A full potion of this draught must be consumed for its effects to be felt. It will influence one or two giants like a *charm monster* spell. Control lasts for 5d6 rounds. If only one giant is influenced, it is entitled to a saving throw vs. spell with a -4 penalty; if two are influenced, the die rolls gain a +2 bonus—you're weakening the effect of the potion. The type of giant subject to a particular potion is randomly determined.

| D20 Roll | Giant Type |
|---|---|
| 1-5 | Hill Giant |
| 6-9 | Stone Giant |
| 10-13 | Frost Giant |
| 14-17 | Fire Giant |
| 18-19 | Cloud Giant |
| 20 | Storm Giant |

**Giant Strength:** This potion can be used only by warriors. When a giant strength potion is consumed, the individual gains great strength and bonuses to damage when he scores a hit with any hand-held or thrown weapon. It is also possible for the person to hurl rocks as shown on the table below. Note that the type of giant strength gained by drinking the potion is randomly determined on the same table:

| D20 Roll | Strength Equiv. | Weight Allowance | Damage Bonus | Range | Rock Hurling Base Damage | Bend Bars/Lift Gates |
|---|---|---|---|---|---|---|
| 1-6 | Hill Giant | 485 | +7 | 80 yd. | 1-6 | 50% |
| 7-10 | Stone Giant | 535 | +8 | 160 yd. | 1-12 | 60% |
| 11-14 | Frost Giant | 635 | +9 | 100 yd. | 1-8 | 70% |
| 15-17 | Fire Giant | 785 | +10 | 120 yd. | 1-8 | 80% |
| 18-19 | Cloud Giant | 935 | +11 | 140 yd. | 1-10 | 90% |
| 20 | Storm Giant | 1235 | +12 | 160 yd. | 1-12 | 95% |

**Growth:** This potion causes the height and weight of the person consuming it to increase. Garments and other worn and carried gear also grow in size. Each fourth of the liquid consumed causes 6 feet of height growth—in other words, a full potion increases height by 24 feet. Weight increases should be proportional to the change in height. Strength is increased sufficiently to allow bearing armor and weapons commensurate with the increased size, but does not provide combat bonuses. Movement increases to that of a giant of approximately equal size.

**Healing:** An entire potion must be consumed in a single round. If this is done, the potion restores 2d4 + 2 hit points of damage (see *extra-healing* above).

**Heroism:** This gives the imbiber a temporary increase in levels (hit points, combat ability, and saves) if he has fewer than 10 levels of experience.

| Level of Imbiber | Number of Levels Bestowed | Additonal Temporary Hit Dice |
|---|---|---|
| 0 | 4 | 4d10 |
| 1st-3rd | 3 | 3d10+1 |
| 4th-6th | 2 | 2d10+2 |
| 7th-9th | 1 | 1d10+3 |

When the potion is quaffed, the individual fights as if he were at the experience level bestowed by the magic of the elixir. Damage sustained is taken first from magically gained hit dice and bonus points. This potion can only be used by warriors.

**Human Control:** A *potion of human control* allows the imbiber to control up to 32 levels or Hit Dice of humans, humanoids, and demihumans as if a *charm person* spell had been cast. All creatures are entitled to saving throws vs. spell. Any pluses on Hit Dice are rounded down to the lowest whole die (e.g., 1 + 2 = 1, 2 + 6 = 2, etc.). This potion lasts for 5d6 rounds. The type of human(s) that can be controlled is randomly determined.

| D20 Roll | Human/Humanoid Controlled |
|---|---|
| 1-2 | Dwarves |
| 3-4 | Elves/Half-Elves |
| 5-6 | Gnomes |
| 7-8 | Halflings |
| 9-10 | Half-Orcs |
| 11-16 | Humans |
| 17-19 | Humanoids (gnolls, orcs, goblins, etc.) |
| 20 | Elves, Half-Elves, and Humans |

**Invisibility:** This potion confers invisibility similar to the 2nd-level wizard spell of the same name. Actions involving combat cause termination of the invisible state. The individual possessing this potion can quaff a single gulp—equal to 1/8 of the contents of the container—to bestow invisibility for 3-6 turns.

**Invulnerability:** This potion confers immunity to nonmagical weapons. It also protects against attacks from creatures (not characters) with no magical properties or with fewer than 4 Hit Dice. Thus, an 8th-level character without a magical weapon could not harm the imbiber of an invulnerability potion.

The potion also improves Armor Class rating by 2 classes and gives a bonus of +2 to the individual on his saving throws versus all forms of attack. Its effects are realized only when the entire potion is consumed, and they last for 5d4 rounds. Only warriors can use this potion.

**Levitation:** A *levitation* potion enables the consumer to levitate in much the same manner as the 2nd-level wizard spell of the same name. The potion allows levitation of the individual only, to a maximum weight of 600 pounds. The consumer can carry

another person, as long as their total weight is within this limit.

**Longevity:** The *longevity* potion reduces the character's age by 1d12 years, restoring youth and vigor. The entire potion must be consumed to achieve the desired result. It is also useful as a counter to magical or monster-based aging attacks.

Each time one drinks a *longevity* potion, there is a 1% cumulative chance the effect will be the reverse of what the consumer wants—all age removed by previous drinks will be restored!

**Oil of Acid Resistance:** When this oil is applied to skin, cloth, or any other material, it confers virtual invulnerability against acid. The oil wears off, but slowly—one application lasts for a whole day (1440 rounds). Each time the protected material is exposed to acid, the duration of the oil is reduced by as many rounds as hit points of damage the acid would have caused to exposed flesh. Thus, if a black dragon breathes for 64 points of acid damage, a person protected by this oil would lose 1 hour and 4 minutes of protection (64 rounds—32 if a saving throw vs. breath weapon was successful).

Each flask contains sufficient oil to protect one man-sized creature (and equipment) for 24 hours; or to protect any combination of creatures and duration between these extremes.

**Oil of Disenchantment:** This oil enables the removal of all enchantments and charms placed upon living things, and the suppression of such effects on objects. If the oil is rubbed in a creature, all enchantments and charms on it are immediately removed. If rubbed onto objects bearing an enchantment, the magic will be lost for 1d10 + 20 turns. After this time, the oil loses potency and the item regains its enchantment. The oil does not radiate magic once it is applied, and masks the enchantment of whatever it coats, so that an item so coated will not show any enchantment for as long as the oil remains effective.

**Oil of Elemental Invulnerability:** This precious substance gives total invulnerability to one type of normal elemental force on the Prime Material Plane: wind storms, fires, earth slides, floods, and so forth. There is a 10% chance that each such flask will also be effective on the appropriate Elemental plane—this allows the protected individual to operate freely and without danger from elemental forces. Attacks by elemental creatures are still effective, but with a -1 penalty per die of damage. A flask contains enough oil to coat one man-sized creature for eight days or eight individuals for one day. The element protected against is determined randomly.

| D4 Roll | Element |
|---|---|
| 1 | Air |
| 2 | Earth |
| 3 | Fire |
| 4 | Water |

**Oil of Etherealness:** This potion is actually a light oil that is applied externally to clothes and exposed flesh, conferring etherealness. In the ethereal state, the individual

can pass through solid objects in any direction—sideways, upward, downward—or to different planes. The individual cannot touch non-ethereal objects.

The oil takes effect three rounds after application, and it lasts for 4 + 1d4 turns unless removed with a weak acidic solution prior to the expiration of its normal effective duration. It can be applied to objects as well as creatures. One potion is sufficient to anoint a normal human and such gear as he typically carries (two or three weapons, garments, armor, shield, and miscellaneous gear). Ethereal individuals are invisible.

**Oil of Fiery Burning:** When this oil is exposed to air, it immediately bursts into flame, inflicting 5d6 points of damage to any creature directly exposed to the substance (save vs. spell for half damage). If hurled, the flask will always break. Any creature within 10 feet of the point of impact (up to a maximum of six creatures) will be affected. The oil can, for instance, be used to consume the bodies of as many as six regenerating creatures, such as trolls. If the flask is opened, the creature holding it immediately suffers 1d4 points of damage. Unless a roll equal to or less than the creature's Dexterity is made on 2d10, the flask cannot be re-stoppered in time to prevent the oil from exploding, with effects as described above.

**Oil of Fumbling:** This oil will seem to be of a useful type—*acid resistance, slipperiness,* etc.—until the wearer is under stress in an actual melee situation. At that point, he has a 50% chance each round to fumble and drop whatever he holds—weapon, shield, spell components, and so forth. Only a thorough bath of some solvent (alcohol, etc.) will remove the oil before it wears off.

**Oil of Impact:** This oil has beneficial effects on blunt weapons and missiles, both magical and nonmagical. When applied to a blunt weapon such as a club, hammer, or mace, it bestows a +3 bonus to attack rolls and a +6 bonus to damage. The effect lasts 1d4 + 8 rounds per application. One application will treat one weapon.

When applied to a blunt missile, such as a hurled hammer, hurled club, sling stone, or bullet, it bestows a +3 bonus to attack rolls and a +3 bonus to damage. The effect last until the missile is used once. One application will treat 4-5 sling stones or two larger weapons. A flask of *oil of impact* holds 1d3+2 applications.

**Oil of Slipperiness:** Similar to the *oil of etherealness* described above, this liquid is to be applied externally. This application makes it impossible for the individual to be grabbed, grasped, or hugged by any opponent, or constricted by snakes or tentacles. (Note that a roper could still inflict weakness, but that the monster's tentacles could not entwine the opponent coated with *oil of slipperiness*.)

In addition, such obstructions as webs, magical or otherwise, will not effect an anointed individual. Bonds such an ropes, manacles, and chains can be slipped free. Magical ropes and the like are not effective against this oil. If poured on a floor or on steps, there is a 95% chance that creatures standing on the surface will slip and fall. The oil requires eight hours to wear off normally, or it can be wiped off with an alcohol solution (even wine!).

**Oil of Timelessness:** When this oil is applied to any matter that was once alive

(leather, leaves, paper, wood, dead flesh, etc.), it allows that substance to resist the passage of time. Each year of actual time affects the substance as if only a day had passed. The coated object has a +1 bonus on all saving throws. The oil never wears off, although it can be magically removed. One flask contains enough oil to coat eight man-sized objects, or an equivalent area.

**Philter of Glibness:** This potion enables the imbiber to speak fluently—even tell lies—smoothly, believably, and undetectably. Magical investigation (such as the 4th-level priest spell, *detect lie*) will not give the usual results, but will reveal that some minor "stretching of the truth" might be occurring.

**Philter of Love:** This potion causes the individual drinking it to become charmed (see *charm* spells) with the first creature seen after consuming the draught. The imbiber may actually become enamored if the creature is of similar race and of the opposite sex. Charm effects wear off in 1d4+4 turns, but the enamoring effects last until a *dispel magic* spell is cast upon the individual.

**Philter of Persuasiveness:** When this potion is imbibed the individual becomes more charismatic, gaining a bonus of +5 on reaction dice rolls. The individual is also able to *suggest* (see the 3rd-level wizard spell, *suggestion*) once per turn to all creatures within 30 yards of him.

**Philter of Stammering and Stuttering:** When this liquid is consumed, it will seem to be beneficial—*philter of glibness* or *persuasiveness,* for instance. However, whenever a meaningful utterance must be spoken (the verbal component of a spell, the text of a scroll, negotiation with a monster, etc.), the potion's true effect is revealed—nothing can be said properly, and the reactions of all creatures hearing such nonsense will be at a -5 penalty.

**Plant Control:** A *plant control* potion enables the individual who consumes it to influence the behavior of vegetable life forms. This includes normal plants, fungi, and even molds and shambling mounds—within the parameters of their normal abilities. The imbiber can cause the vegetable forms to remain still or silent, move, entwine, etc., according to their limits.

Vegetable monsters with Intelligence of 5 or higher are entitled to a saving throw vs. spell. Plants within a 20-foot by 20-foot square can be controlled, subject to the limitations set forth above, for 5d4 rounds. Self-destructive control is not directly possible if the plants are intelligent (see *charm plants* spell). Control range is 90 yards.

**Poison:** A poison potion is simply a highly toxic liquid in a potion flask. Typically, poison potions are odorless and can be of any color. Ingestion, introduction of the poison through a break in the skin, or, in some cases, just skin contact, will cause death. Poison can be *weak* (+4 to +1 bonus to the saving throw), *average,* or *deadly* (-1 to -4 penalty or greater on the saving throw). Some poison can be so toxic that a *neutralize poison* spell will simply lower the toxicity level by 40%—say, from a -4 penalty to a +4 bonus to the

saving throw vs. poison. The DM selects the strength of poison desired, although most are strength "J" (see Table 51, Poison Strength). You might wish to allow characters to hurl poison flasks (see Combat, "Grenade-Like Missiles").

**Polymorph Self:** This potion duplicates the effects of the 4th-level wizard spell of the same name.

**Rainbow Hues:** This rather syrupy potion must be stored in a metallic container. The imbiber can become any hue or combination of hues desired at will. Any color or combination of colors is possible, if the user simply holds the thought in his mind long enough for the hue to be effected. If the potion is quaffed sparingly, a flask will yield up to seven draughts of one hour duration each.

**Speed:** A *potion of speed* increases the movement and combat capabilities of the imbiber by 100%. Thus, a movement rate of 9 becomes 18, and a character normally able to attack once per round attacks twice. This does not reduce spellcasting time, however. Use of a *speed* potion ages the individual by one year. The aging is permanent, but the other effects last for 5d4 rounds.

**Super-Heroism:** This potion gives the individual a temporary increase in levels (see *heroism* potion) if he has fewer than 13 levels of experience. It is similar to the *heroism* potion, but more powerful, and its effects last just 5d6 melee rounds:

| Level of Consumer | Number of Levels Bestowed | Additonal Temporary Hit Dice |
|---|---|---|
| 0 | 6 | 5d10 |
| 1st-3rd | 5 | 4d10+1 |
| 4th-6th | 4 | 3d10+2 |
| 7th-9th | 3 | 2d10+3 |
| 10th-12th | 2 | 1d10+4 |

**Sweet Water:** This liquid is not actually a potion to be drunk (though it tastes good). *Sweet water* is added to other liquids in order to change them to pure, drinkable water. It will neutralize poison and ruin magical potions (no saving throw). The contents of a single container will change up to 100,000 cubic feet of polluted, salt, or alkaline water to fresh water. It will turn up to 1,000 cubic feet of acid into pure water. The effects of the potion are permanent, but the liquid may be contaminated after an initial period of 5d4 rounds.

**Treasure Findings:** A *potion of treasure finding* empowers the drinker with a location sense, so that he can point to the direction of the nearest mass of treasure. The treasure must be within 240 yards, and its mass must equal metal of at least 10,000 copper pieces or 100 gems or any combination.

Note that only valuable metals (copper, silver, electrum, gold, platinum, etc.) and gems (and jewelry, of course) are located. The potion won't locate worthless metals or magical

items which don't contain precious metals or gems. The imbiber of the potion can "feel" the direction in which the treasure lies, but not its distance.

Intervening substances other than special magical wards or lead-lined walls will not withstand the powers that the liquor bestows upon the individual. The effects of the potion last for 5d4 rounds. (Clever players will attempt triangulation.)

**Undead Control:** This potion in effect gives the imbiber the ability to charm certain ghasts, ghosts, ghouls, shadows, skeletons, spectres, wights, wraiths, vampires, and zombies. The charm ability is similar to the 1st-level wizard spell, *charm person.* It affects a maximum of 16 Hit Dice of undead, rounding down any hit point additions to the lowest die (e.g., 4 + 1 equals 4 Hit Dice). The undead are entitled to saving throws vs. spell only if they have intelligence. Saving throws are rolled with -2 penalties due to the power of the potion; the effects wear off in 5d4 rounds. To determine the type of undead affected by a particular potion, roll 1d10 and consult the following table:

| D10 Roll | Undead Type |
|---|---|
| 1 | Ghasts |
| 2 | Ghosts |
| 3 | Ghouls |
| 4 | Shadows |
| 5 | Skeletons |
| 6 | Spectres |
| 7 | Wights |
| 8 | Wraiths |
| 9 | Vampires |
| 10 | Zombies |

**Ventriloquism:** This allows the user to make his voice sound as if it (or someone's voice or a similar sound) were issuing from someplace other than where he is—from another creature, a statue, from behind a door, down a passage, etc. The user can speak in any language he knows, or make any sound he can normally make. To detect the ruse, listeners must roll a successful saving throw vs. spell with a penalty of -2. If cast in conjunction with other illusions, the DM may rule greater penalties or disallow an independent saving throw against this effect—the combined illusion may be perfect! The imbiber can use the *ventriloquism* ability up to six times within the duration of the potion.

**Vitality:** This potion restores the user to full vitality despite exertion, lack of sleep, and going without food and drink for up to seven days. It will nullify up to seven days of deprivation, and will continue in effect for the remainder of its seven-day duration. The potion also makes the user proof against poison and disease while it is in effect, and the user will recover lost hit points at the rate of 1 every 4 hours.

**Water Breathing:** It is 75% likely that a *water breathing* potion will contain two doses, 25% probable that there will be four in the container. The potion allows the character drinking it to breathe normally in liquids that contain suspended oxygen. This ability lasts for one full hour per dose of potion quaffed, with an additional 1d10 rounds

(minutes) variable. Thus, a character who has consumed a water breathing potion could enter the depths of a river, lake, or even the ocean and not drown while the magical effects of the potion persisted.

## Scrolls

Scrolls are generally found in cylinders—tubes of ivory, jade, leather, metal, or wood. Some tubes are inscribed with magic runes or writing PCs must read in order to open the container. This is up to the DM. Taking this approach encourages players to select and use *read magic* or *comprehend language* spells. It also makes it possible to protect power scrolls with traps (*symbols, explosive runes*) and *curses.*

Each scroll is written in its own magical cypher. To understand what type of scroll has been found, the ability to *read magic* must be available. Once a scroll is read to determine its contents, a *read magic* spell is not needed at a subsequent time to invoke its magic. Even a scroll map will appear unreadable until the proper spell (*comprehend languages*) is used.

Reading a scroll to find its contents does not invoke its magic unless it is a specially triggered *curse.* A *cursed* scroll can appear to be a scroll of any sort. It radiates no evil or special aura beyond being magical.

A *protection* scroll can be read by any class of character even without a *read magic* spell.

If a scroll isn't immediately read to determine its contents, there is a 5% to 30% chance it will fade. The DM sets the percentage or rolls 1d6 to determine it for each scroll.

When a spell scroll is examined, the following table can be used to find its nature:

| D100 Roll | Scroll Type |
|---|---|
| 01-70 | Wizard |
| 71-00 | Priest |

Other classes in the priest group can, at the DM's discretion, have unique scrolls as well. Only the indicated class of character can use the scroll, except thieves and bards, who can use any scroll, as explained in the *Player's Handbook.*

## Spell Level of Scroll Spells

All scroll spells are written to make use as quick and easy as possible for the writer. The level of the spell and its characteristics (range, duration, area of effect, etc.) are typically one level higher than that required to cast the spell, but never below 6th level of experience.

Thus, a 6th-level wizard spell is written at 13th level of ability, a 7th-level spell at 15th level, etc. The DM can make scroll spells more powerful by increasing the level at which they are written. This will, however, affect the chance of spell failure.

## Magical Spell Failure

If any spell-user acquires a scroll inscribed with a spell of a level too high for him to cast, he can still try to use the spell—the chance of failure, or other bad effect, is 5% per level difference between the character's present level and the level at which the spell could be used.

For example, a 1st-level mage finds a scroll with a *wish* spell inscribed upon it. The chance of failure is 85%, as *wish* is a 9th-level spell attained at 18th level: 18-1 = 17; 17x5% = 85%. A percentile die roll of 85 or less indicates failure of some sort, and Table 112 is consulted. In this case, the spell is 30% likely to fail without effect, while the chance for a reverse or harmful effect is 70%.

**Table 112:**
### Spell Failure

| Caster Level Difference | Total Failure | Reverse or Harmful Effect |
|---|---|---|
| 1-3 | 95% | 5% |
| 4-6 | 85% | 15% |
| 7-9 | 75% | 25% |
| 10-12 | 65% | 35% |
| 13-15 | 50% | 50% |
| 16 and up | 30% | 70% |

## Use of Scroll Spells

When a scroll is copied into a spellbook or read to release its magic, the writing completely and permanently disappears from the scroll. The magic content of the spell is bound up in the writing, and use releases and erases it. Thus, reading a spell from a scroll of seven spells makes the item a scroll of six spells. No matter what a player may try, each spell on a scroll is only usable once. Exceptions should be made very rarely and only when you have a very special magical item in mind—perhaps a scroll that can be read once per week. This would be potent magic indeed.

## Casting Scroll Effects

The initiative modifier of a scroll is its reading time. For scroll spells, this is equal to the casting time of the spell. For *protection* scrolls, the reading time is given in the explanation of the scroll effects.

The only requirements for using a scroll are sufficient light to read by and the actual verbalization of the writings. If the reading of a scroll is interrupted, the scroll effect is lost and that spell fades away and is lost. Spell components are unnecessary for the scroll reader, and no adverse effects associated with casting the spell are suffered—these

requirements or penalties have been fulfilled or suffered by the creator of the scroll.

## Protection Scroll Effects

If a player character has more than one protection scroll, the effects are cumulative, but not the duration. Scrolls that protect against creatures do not create an actual, physical globe. If the user forces the creature into a place from which further retreat is impossible—a corner, for example—and then continues forward until the creature would be within the radius of the circle, the creature is not harmed, and the protection is considered voluntarily broken and disappears. There is no way in which a protection scroll can be used as an offensive weapon.

## Who Can Use Scroll Spells?

Ability to use scroll spells does not permit a priest to use a wizard spell, or a wizard to use a priest spell. Likewise, it does not extend the ability of spell use to non-spell-using characters except with respect to protection scrolls. Anyone can use a protection scroll. Paladins and rangers cannot use priest scrolls.

Those characters able to read and employ scroll spells can do so regardless of other restrictions. Once the spell is known, it is not necessary to use a *read magic* spell in order to invoke its powers. Scrolls can be read even by mages who are unable to employ the spell copied because of an inability to learn it or because it is too high level (although, in the latter case, there is a chance of spell failure).

## Spell Level Range

The level range shown in Table 90 gives the parameters for random determination of spell level for scrolls if you choose not to set this yourself. With spell level determined, find the particular spell by consulting the appropriate Spell Tables in the *Player's Handbook.*

## Cursed Scrolls

Some scrolls bear powerful *curses*, placed intentionally or as a result of flawed scroll-making. *Cursed* scrolls take effect the instant they are first read. A *cursed* scroll can have any effect the DM desires, although a few should be outright deadly. Suggested *curses* include the following:

- Bad luck (-1 on attacks and saving throws).
- The character's beard grows 1 inch per minute.
- The character is teleported away from the rest of the party.
- Random monster appears and attacks.
- The character is polymorphed into a mouse.

- The character shrinks to half his normal size.
- The character is stricken with weakness, halving his Strength score.
- The character falls into a deep sleep from which he can't be roused.
- The character develops an uncontrollable appetite.
- The character must always talk in rhyme (preventing spellcasting).
- The character is stricken with cowardice and must make a morale check every time a monster is encountered.
- The character's alignment is changed.
- The character suffers 2-6 points of damage.
- The character suffers amnesia.
- The character feels compelled to give away all his belongings.
- The character must save vs. paralyzation or petrification.

In general, the effects of a curse can be negated or reversed by a *remove curse.* Some cases (such as *petrification*) may require the use of other spells. Overcoming a curse should be difficult for the player characters, but not impossible.

## Maps

While not magical, maps are special enough to require careful preparation and use by the DM, hence they are included in the listings of magical items. Maps should rarely be given out randomly—the DM must have a suitable map prepared in advance. There is no table to govern the nature of maps. All hint at or imply the existence of great treasures to be found while giving only a vague idea of the risks to be overcome. Some may be genuine, others fake. Because of the wide range of possibilities, the DM should use treasure maps as the springboard for new and exciting adventures.

## List of Protection Scrolls

**Protection from Acid:** (Reading time—6) The reader is protected from all forms of acid, to a maximum damage of 20 Hit Dice or a maximum duration of 1d4+8 turns, whichever occurs first.

**Protection from Cold:** (Reading time—3) Protection extends outward from the reader to a 30-foot diameter sphere. All within the area are protected from the effects of nonmagical cold to a temperature of absolute zero (-460 degrees). Against magical cold, the scroll confers a +6 bonus to saving throws and one-quarter damage (one-eighth if the saving throw is made). The duration of the scroll is 1d4+4 turns.

**Protection from Dragon Breath:** (Reading Time—variable) Only the individual reading the scroll is protected. Protection extends to all forms of dragon breath and lasts 2d4+4 rounds.

**Protection from Electricity:** (Reading time—5) Protection is provided in a 20-foot diameter sphere centered on the reader. Those protected are immune to all electrical

attacks and associated effects. The protection lasts 3d4 rounds.

**Protection from Elementals:** (Reading time—6) There are 5 varieties of this scroll. Roll percentile dice and consult the following table:

| D100 Roll | Type of Scroll |
|---|---|
| 01-15 | Protection from Air Elementals (including aerial servants, djinn, invisible stalkers, and wind walkers) |
| 16-30 | Protection from Earth Elementals (including xorn) |
| 31-45 | Protection from Fire Elementals (including efreeti and salamanders) |
| 46-60 | Protection from Water Elementals (including tritons and water weirds) |
| 61-00 | Protection from all Elementals |

The magic protects the reader and all within 10 feet of him from the type of elemental noted, as well as elemental creatures of the same plane(s). The protection affects a maximum of 24 Hit Dice of elemental creatures if the scroll is of a specific elemental type, 16 Hit Dice if it is against all sorts of elementals. The spell lasts for 5d8 rounds. Attack out of the circle is possible, as is attack into it by any elemental creature with more Hit Dice than are protected against or by several elemental creatures—those in excess of the protected number of Hit Dice are able to enter and attack.

**Protection from Fire:** (Reading time—8) Protection extends to a 30-foot diameter sphere centered on the reader. All in this area are able to withstand flame and heat of the hottest type, even of magical and elemental nature. The protection lasts 1d4+4 turns.

**Protection from Gas:** (Reading time—3) This scroll generates a 10-foot diameter sphere of protection centered on the reader. All within the area are immune to the effects of any gas—poison gas, gaseous breath weapons, spells that generate gas (such as *stinking cloud* and *cloudkill*), and all similar forms of noxious, toxic vapors. The protection lasts for 1d4+4 rounds.

**Protection from Lycanthropes:** (Reading time—4) There are seven common types of this scroll. The DM can select one from the table below or make a percentile roll to determine it randomly:

| D100 Roll | Scroll Type |
|---|---|
| 01-05 | Protection from Werebears |
| 06-10 | Protection from Wereboars |
| 11-20 | Protection from Wererats |
| 21-25 | Protection from Weretigers |
| 26-40 | Protection from Werewolves |
| 41-98 | Protection from all Lycanthropes |
| 99-00 | Protection from Shape-Changers |

The magical circle from the reading of the scroll extends in a 10-foot radius and moves with the reader. Each scroll protects against 49 Hit Dice of lycanthropes, rounding all hit

point pluses down unless they exceed +2. The protection is otherwise similar to that against elementals, above. The *protection from shape-changers* spell protects against monsters (except gods and godlike creatures) able to change their form to that of man: dopplegangers, certain dragons, druids, jackalweres, and lycanthropes, for example. The magic lasts for 5d6 rounds.

**Protection from Magic:** (Reading time—8) This scroll invokes a very powerful, invisible globe of antimagic in a 5-foot radius from the reader. No form of magic can pass into or out of it, but physical things are not restricted by the globe. As with other protections, the globe of antimagic moves with its invoker. The protection lasts for 5d6 rounds.

**Protection from Petrification:** (Reading time—5) A 10-foot radius circle of protection extends from, and moves with, the reader of this scroll. Everyone within its confines is absolutely immune to all attack forms, magical or otherwise, that turn flesh to stone. The protection lasts for 5d4 rounds.

**Protection from Plants:** (Reading time—1 round). A protective sphere 10 feet in diameter is centered on the reader. All forms of vegetable life (including fungi, slimes, molds, and the like) are unable to penetrate the sphere. If it is moved toward plant life that is capable of movement, the plant will be pushed away. If the plant is immobile (a well-rooted shrub, bush, or tree, for instance), the sphere cannot be moved through or past it unless the reader has enough strength and mass to uproot the plant under normal conditions. The protection lasts for 1d4+4 turns.

**Protection from Poison:** (Reading time—3) The protection afforded by this scroll extends only to the reader. No form of poison—ingested, contacted, breathed, etc.—will affect the protected individual, and any poison in the reader's system is permanently neutralized. The protection otherwise lasts 1d10+2 rounds.

**Protection from Possession:** (Reading time—1 round) This scroll generates a magical circle of 10-foot radius that extends from, and moves with, the reader. All creatures within its confines are protected from possession by magical spell attacks such as *magic jar* or attack forms aimed at possession or mental control. Even the dead are protected if they are within the magic circle. The protection lasts for 10d6 rounds in 90% of these scrolls; 10% have power that lasts 10d6 turns, but the spell effect is stationary.

**Protection from Undead:** (Reading time—4) When this scroll is read, a 5-foot radius circle of protection extends from, and moves with, the reader. It protects everyone within it from all physical attacks made by undead (ghasts, ghosts, ghouls, shadows, skeletons, spectres, wights, wraiths, vampires, zombies, etc.) but not magical spells or other attack forms. If a creature leaves the protected area, it is subject to physical attack. The protection restrains up to 35 Hit Dice/levels of undead; excess Hit Dice/levels can pass through the circle. It remains in effect for 10d8 rounds. Some protection scrolls of this nature protect only against certain types of undead (one or more) rather than all undead, at the DM's option. (See "Potions, Undead Control" for a die roll table.)

**Protection from Water:** (Reading time—6) This protection extends in a 10-foot diameter sphere centered on the reader. All forms of water—liquid, solid, and vapor, ice, hail, snow, sleet, steam, and so forth—are unable to penetrate the sphere of protection. If those protected come upon a form of water, the substance simply will not touch them; thus, they will not slip on ice, sink into a body of water, etc. The protection lasts for 1d4+4 turns.

## Rings

All magical rings normally radiate magic, but most are impossible to detect as magical rings without some mystic means. Furthermore, all magical rings look alike, so determination of a given ring's magical powers is difficult. The ring must be put on and various things tried in order to find what it does. No ring radiates good or evil.

No more than two magical rings can be worn by a character at the same time. If more are worn, none will function. No more than one magical ring can be worn on the same hand. A second ring worn on one hand causes both to be useless. Rings must be worn on the fingers. Rings on toes, in ear lobes, etc., do not function as magical rings.

The spell-like abilities of rings function as 12th-level magic unless the power requires a higher level. In cases where a higher level is necessary, rings function at the minimum level of magic use needed to cast the equivalent spell.

Magical rings can be worn and used by all character classes and humans/humanoids not specifically prohibited elsewhere. You might allow "monsters" with digits to wear rings, and some can actually benefit from them. For example, a troll could wear a *ring of regeneration* and gain its benefits in addition to its normal regenerative abilities.

## List of Rings

**Ring of Animal Friendship:** When the wearer of this ring approaches within 10 feet of any animals of neutral alignment and animal intelligence, the creatures must roll saving throws vs. spell. If they succeed, they move rapidly away from the ring wearer. If the saving throws fail, the creatures become docile and follow the ring wearer around. The item functions at 6th level, so up to 12 Hit Dice of animals can be affected by this ring.

Animals feeling friendship for the wearer will actually guard and protect that individual if he expends a charge from the ring to cause such behavior. A ring of this sort typically has 27 charges when discovered, and it cannot be recharged. A druid wearing this ring can influence twice the prescribed Hit Dice worth of animals (24 rather than 12), and a ranger is able to influence 18 Hit Dice worth of animals.

**Ring of Blinking:** When the wearer of this ring issues the proper verbal command, the item activates, and he is affected as if a *blink* spell were operating upon his person. The effect lasts for six rounds. The ring then ceases to function for six turns (one hour) while it replenishes itself. The command word is usually engraved somewhere on the ring. The

ring will activate whenever this word is spoken, even though the command might be given by someone other than the wearer, provided that the word is spoken within 10 feet of the ring.

**Ring of Chameleon Power:** Whenever the wearer of this ring desires, he is able to magically blend in with the surroundings. This enables 90% invisibility in foliage, against walls, and so forth.

If the wearer is associating with creatures of Intelligence 4 or greater at a distance of 60 feet or less, the ring enables the wearer to seem to be one of those creatures, but each turn of such association carries a 5% cumulative chance that the creatures will detect the ring wearer for what he is. Thus, such an association can never persist for more than 20 turns without the wearer being detected—at the end of that time, the chance of detection has risen to 100%. Creatures with 16 or greater Intelligence use their Intelligence score as an addition to the base chance of detection. For example, a creature of Intelligence 16 would have a base chance of (16+5%) = 21% at the end of turn 1, 26% at the end of turn 2, and so forth. Creatures with 3 or lower Intelligence instinctively and automatically detect the wearer if they come within a 10-foot radius of him.

**Ring of Clumsiness:** This cursed ring typically radiates an aura like another, beneficial, ring to disguise a baneful nature. The possible secondary powers are:

| D100 Roll | Secondary Power |
|---|---|
| 01-10 | *Free action* |
| 11-20 | *Feather falling* |
| 21-35 | *Invisibility* |
| 36-50 | *Jumping* |
| 51-60 | *Swimming* |
| 61-80 | *Warmth* |
| 81-100 | *Water walking* |

The secondary power works normally, except when the wearer is under stress—combat, stealth, delicate activity, and the like—at which time the *clumsiness* takes effect. Dexterity is lowered to half normal, rounded down. Chances for stealth and precise actions are also lowered by one-half, rounded down. Any attempt at spellcasting that requires the handling of a material component or the accomplishment of a somatic component will succeed only if the wearer rolls a successful saving throw vs. spell; otherwise, the spell is botched and annulled.

The ring can be taken off only by a successfully cast *dispel magic* spell (vs. 12th-level magic). Success destroys both the primary and secondary power of the ring.

**Ring of Contrariness:** This magical ring is cursed, making its wearer unable to agree with any idea, statement, or action. Once put on, the ring can be removed only after a *remove curse* spell is cast upon the individual wearing it. Because of the cure, the wearer will resist any attempts to cast such a spell. The *contrariness* ring will have one of the following additional magical properties:

| D100 Roll | Secondary Power |
|---|---|
| 01-20 | *Flying* |
| 21-40 | *Invisibility* |
| 41-60 | *Levitation* |
| 61-70 | *Shocking Grasp* (once per round) |
| 71-80 | *Spell Turning* |
| 81-00 | *Strength* (18/00) |

Note that contrariness can never be removed from the ring. The wearer will use his own powers, plus those of the ring, to retain it on his finger. The wearer of the ring will never damage himself. If, for example, other characters suggest that the wearer make certain that attacks upon him are well-defended against, or that he should not strike his own head, the ring wearer will agree—possibly attacking or striking at the speaker's head—because obviously the result must be contrary in this case. If a *ring of contrariness* turns spells, the cumulative *remove curse* cast upon the individual wearing it must equal or exceed 100%.

**Ring of Delusion:** A *delusion* ring convinces the wearer that it is some other sort of ring—whatever sort the wearer really desires. The wearer will be completely convinced that the ring is actually one with other magical properties, and he will unconsciously use his abilities of any sort (including those of other magical items available) to produce a result commensurate with the supposed properties of the *delusion* ring. The DM determines how successful the self-delusion is, as well as how observers are affected and what they will observe. The ring can be removed at any time.

**Ring of Djinni Summoning:** One of the many fabled rings of fantasy legend, the "genie" ring is most useful indeed, for it is a special "gate" by means of which a certain djinni can be summoned from the elemental plane of Air. When the ring is rubbed, the summons is served, and the djinni will appear on the next round. The djinni will faithfully obey and serve the wearer of the ring, but if the servant of the ring is ever killed, the ring becomes nonmagical and worthless. See the *Monstrous Manual* for details of a djinni's abilities.

**Ring of Elemental Command:** The four types of elemental command rings are very powerful. Each appears to be nothing more than an ordinary ring, but each has certain other powers as well as the following common properties:

1. Elementals of the plane to which the ring is attuned can't attack or even approach within 5 feet of the wearer. If the wearer desires, he may forego this protection and instead attempt to *charm* the elemental (saving throw applicable with a -2 penalty to the die). If the *charm* fails, however, total protection is lost and no further attempt at charming can be made, but the secondary properties given below will then function with respect to the elemental.
2. Creatures, other than normal elementals, from the plane to which the ring is attuned attack with -1 penalties to their attack rolls. The ring wearer takes damage at -1 on each die of damage and makes applicable saving throws from the creature's attacks at +2. All attacks are made by the wearer of the ring with a +4 bonus to the attack roll (or -4 on the

elemental creature's saving throw), and the wearer inflicts +6 damage (total, not per die) adjusted by any other applicable bonuses and penalties. Any weapon used by the ring wearer can hit elementals or elemental creatures even if it is not magical.

3. The wearer of the ring is able to converse with the elementals or elemental creatures of the plane to which the ring is attuned. These creatures will recognize that he wears the ring, and will show a healthy respect for the wearer, if alignments are similar. If alignment is opposed, creatures will fear the wearer if he is strong, hate and desire to slay him if the wearer is weak. Fear, hatred, and respect are determined by the DM.

4. The possessor of a *ring of elemental command* suffers a saving throw penalty as follows:

| | |
|---|---|
| Air | -2 vs. fire |
| Earth | -2 vs. petrification |
| Fire | -2 vs. water or cold |
| Water | -2 vs. lightning/electricity |

5. Only one of the powers of a *ring of elemental command* can be in use at any given time.

In addition to the powers described above, the ring gives characters the following abilities:

*Air*

- *Gust of wind* (once per round)
- *Fly*
- *Wall of force* (once per day)
- *Control winds* (once per week)
- *Invisibility*

The ring will appear to be an *invisibility ring* until a certain condition is met (having the ring blessed, slaying an air elemental, or whatever the DM determines as necessary to activate its full potential).

*Earth*

- *Stone tell* (once per day)
- *Passwall* (twice per day)
- *Wall of stone* (once per day)
- *Stone to flesh* (twice per week)
- *Move earth* (once per week)
- *Feather fall*

The ring will appear to be a *ring of feather falling* until the DM established condition is met.

*Fire*

- *Burning hands* (once per turn)
- *Pyrotechnics* (twice per day)

- *Wall of fire* (once per day)
- *Flame strike* (twice per week)
- *Fire resistance*

The ring will appear to be a *ring of fire resistance* until the DM-established condition is met.

*Water*
- *Purify water*
- *Create water* (once per day)
- *Water breathing* (5-foot radius)
- *Wall of ice* (once per day)
- *Airy water*
- *Lower water* (twice per week)
- *Part water* (twice per week)
- *Water walking*

The ring will appear to be a *ring of water walking* until the DM-established condition is met.

These rings operate at 12th level of experience, or the minimum level needed to perform the equivalent magical spell, if greater. The additional powers have an initiative modifier of +5.

**Ring of Feather Falling:** This ring protects its wearer by automatic activation of a *feather fall* if the individual falls 5 feet or more. (See the *feather fall* spell in the *Player's Handbook*.)

**Ring of Fire Resistance:** The wearer of this ring is totally immune to the effects of normal fires—torches, flaming oil, bonfires, etc. Very large and hot fires, molten lava, hell-hound breath, or a *wall of fire* spell will cause 10 hit points of damage per round if the wearer is directly within the conflagration.

Exceptionally hot fires such as red-dragon breath, pyrohydra breath, fireballs, flame strike, fire storm, etc., are saved against with a +4 bonus to the die roll, and all damage dice are calculated at -2 per die, but each die is never less than 1 in any event. As a rule of thumb, consider very hot fires as those that have a maximum initial exposure of up to 24 hit points, those of exceptional heat (25 or more hit points).

**Ring of Free Action:** This ring enables the wearer to move and attack freely and normally even when attacked by a *web*, *hold*, or *slow* spell, or even while under water. The spells simply have no effect. While under water, the individual moves at normal (surface) speed and does full damage even with cutting weapons (like axes and scimitars) and with smashing weapons (like flails, hammers, and maces), insofar as the weapon used is held rather than hurled. This will not, however, enable breathing under water without further appropriate magic.

**Ring of Human Influence:** This ring has the effect of raising the wearer's Charisma to 18 on encounter reactions with humans and humanoids. The wearer can make a *suggestion* to any human or humanoid (saving throw applies). The wearer can also *charm* up to 21 levels/Hit Dice of human/humanoids (saving throws apply) just as if he were using the wizard spell, *charm person.* The two latter uses of the ring are applicable but once per day. *Suggestion* or *charm* has an initiative penalty of +3.

**Ring of Invisibility:** The wearer of an *invisibility ring* is able to become invisible at will, instantly. This nonvisible state is exactly the same as the wizard *invisibility* spell, except that 10% of these rings have *inaudibility* as well, making the wearer absolutely silent. If the wearer wishes to speak, he breaks all silence features in order to do so.

**Ring of Jumping:** The wearer of this ring is able to leap 30 feet ahead or 10 feet backward or straight up, with an arc of about 2 feet for every 10 feet traveled (see the 1st-level wizard spell, *jump*). The wearer must use the ring's power carefully, for it can perform only four times per day.

**Ring of Mammal Control:** This ring enables its wearer to exercise complete control over mammals with Intelligence of 4 or less (animal or semi-intelligent mammals). Up to 30 Hit Dice of mammals can be controlled. The wearer's control over creatures is so great he can even command them to kill themselves, but complete concentration is required. (Note: The ring does not affect bird-mammal combinations, humans, semi-humans, and monsters such as lammasu, shedu, manticores, etc.). If the DM is in doubt about whether any creature can be controlled by the wearer of this ring, assume it can't be controlled.

**Ring of Mind Shielding:** This ring is usually of fine workmanship and wrought from heavy gold. The wearer is completely immune to *ESP, detect lie,* and *know alignment.*

**Ring of Protection:** A *ring of protection* improves the wearer's Armor Class value and saving throws versus all forms of attack. A *ring +1* betters AC by 1 (say, from 10 to 9) and gives a bonus of +1 on saving throw die rolls. The magical properties of a *ring of protection* are cumulative with all other magical items of protection except as follows:

1. The ring does not improve Armor Class if magical armor is worn, although it does add to saving throw die rolls.
2. Multiple *rings of protection* operating on the same person, or in the same area, do not combine protection. Only one such ring—the strongest—functions, so a pair of *protection rings +2* provides only +2 protection.

To determine the value of a *protection ring,* use the following table:

| D100 Roll | Level of Protection |
|---|---|
| 01-70 | +1 |
| 71-82 | +2 |
| 83 | +2, 5-foot radius protection |
| 84-90 | +3 |
| 91 | +3, 5-foot radius protection |

| | |
|---|---|
| 92-97 | +4 on AC, +2 to saving throws |
| 98-00 | +6 on AC, +1 to saving throws |

The radius bonus of 5 feet extends to all creatures within its circle, but applies only to their saving throws (i.e., only the ring wearer gains Armor Class additions).

**Ring of the Ram:** This ornate ring can be of any hard metal, usually a silver alloy or iron. It has the head of a ram (or a buck goat) as its device. Anyone who attempts a *detect magic* on the ring discovers an *evocation* upon it.

The wearer can cause the ring to give forth a ram-like force, manifested by a vaguely discernible shape which resembles the head of a ram or goat. This force strikes one target for 1d6 points of damage if one charge is expended, 2d6 points if two charges are used, or 3d6 points if three charges (the maximum) are used. The ring is quite useful for knocking opponents off walls or ladders, or over ledges, among other things. The force of the blow is considerable, and a victim who fails to save versus spell is knocked down. The range of this power is 30 feet. The target of the blow applies adjustments to the saving throw from the following list:

| | |
|---|---|
| Target smaller than man-sized | -1 |
| Larger than man-sized | +2 |
| Strength under 12 | -1 |
| Strength of 18-20 | +3 |
| Strength over 20 | +6 |
| 4 or more legs | +4 |
| Over 1,000 lbs. weight | +2 |
| 2 charges expended | -1 |
| 3 charges expended | -2 |

The DM can make circumstantial adjustments according to need. For instance, a fire giant balanced on a narrow ledge should *not* gain any benefit from Strength and weight unless he knows that he's about to be struck by the force of the ring. This is a case where common sense will serve best.

In addition to its attack mode, the *ring of the ram* also has the power to open doors as if a person of 18/00 Strength were doing so. If two charges are expended, the effect is as for a character of 19 Strength, and if three charges are expended, the effect is as if a 20 Strength were used. Magically *held* or *locked* portals can be opened in this manner.

Structural damage from the ramlike force is identical to an actual battering ram, with double or triple damage accruing for applications of two or three charges. Magical items struck by the ramlike force must save versus *crushing blow* if three charges are used; otherwise, the force will not affect them. Nonmagical items which are the target of the force save versus *crushing blow* from the impact.

A ring of this sort will have from 6 to 10 charges when discovered. It can be recharged by a wizard employing *enchant an item* and *Bigby's clenched fist* in combination.

**Ring of Regeneration:** The standard *ring of regeneration* restores one point of

damage per turn (and will eventually replace lost limbs or organs). It will bring its wearer back from death. (If death was caused by poison, however, a saving throw must be successfully rolled or the wearer dies again from the poison still in his system.) Only total destruction of all living tissue by fire or acid or similar means will prevent regeneration. Of course, the ring must be worn, and its removal stops the regeneration processes.

A rare kind of *ring of regeneration* is the *vampiric regeneration* ring. This bestows one-half (fractions dropped) of the value of hit points of damage the wearer inflicts upon opponents in hand-to-hand (melee, nonmissile, nonspell) combat immediately upon its wearer. It does not otherwise cause regeneration or restore life, limb, or organ. For example, if a character wearing the ring inflicts 10 points of damage, he adds five to his current hit point total. The creature struck still loses 10 points.

To determine which type of ring is discovered, roll percentile dice:

| **D100 Roll** | **Secondary Power** |
|---|---|
| 01-90 | *ring of regeneration* |
| 91-00 | *vampiric regeneration ring* |

In no case can the wearer's hit points exceed his usual maximum.

**Ring of Shocking Grasp:** This ordinary-seeming ring radiates only a faint, unidentifiable aura of magic when examined, but it contains a strong enchantment, capable of inflicting damage on an opponent. If the wearer touches an enemy with the hand upon which the ring is worn, a successful attack roll deliverers 1d8+6 points of damage to the target.

After three discharges of this nature, regardless of the time elapsed between them, the ring becomes inert for one turn. When actually functioning, this ring causes a circular, charged extrusion appear on the palm of the wearer's hand.

**Ring of Shooting Stars:** This ring has two modes of operation—at night and underground—both of which work only in relative darkness. During night hours, under the open sky, the *shooting stars* ring will perform the following functions:

- *Dancing lights* (once per hour).
- *Light*, as the spell of the same name (twice per night), 120-foot range.
- *Ball lightning*, as described below (once per night).
- *Shooting stars* (special).

The *ball lightning* function releases 1d4 balls of lightning, at the wearer's option. These glowing globes resemble dancing lights, and the ring wearer controls them as he would control *dancing lights.* These spheres have a 120-foot range and a four round duration. They can be moved at 120 feet per round. Each sphere is about 3 feet in diameter, and any creature it touches or approaches within 5 feet dissipates its charge (a successful save vs. spell halves damage—the contact was across an air gap). The charge values are:

| | |
|---|---|
| 4 lightning balls | 2d4 points damage each |
| 3 lightning balls | 2d6 points damage each |
| 2 lightning balls | 5d4 points damage each |
| 1 lightning ball | 4d12 points damage |

Release can be one at a time or all at once, during the course of one round or as needed throughout the night.

The *shooting stars* are glowing missiles with fiery trails, much like a *meteor swarm.* Three *shooting stars* can be released from the ring each week, simultaneously or one at a time. They impact for 12 points of damage and burst (as a *fireball*) in a 10-foot diameter sphere for 24 points of damage.

Any creature struck takes full damage from impact plus full damage from the shooting star burst. Creatures within the burst radius must roll a saving throw vs. spell to take only one-half damage (i.e., 12 points of damage, otherwise they, too, receive the full 24 points of damage). Range is 70 feet, at the end of which the burst will occur, unless an object or creature is struck before that. The shooting stars follow a straight line path. A creature in the path must roll a saving throw vs. spell or be hit by the missile. Saving throws suffer a -3 penalty within 20 feet of the ring wearer, -1 from 21 feet to 40 feet, normal beyond 40 feet.

Indoors at night, or underground, the *ring of shooting stars* has the following properties:

*Faerie fire* (twice per day)—as the spell

*Spark shower* (once per day)

The *spark shower* is a flying cloud of sizzling purple sparks, which fan out from the ring for a distance of 20 feet to a breadth of 10 feet. Creatures within this area take 2d8 points of damage each if no metal armor is worn and/or no metal weapon is held. Characters wearing metal armor or carrying a metal weapon receive 4d4 points of damage.

Range, duration, and are of effect of functions are the minimum for the comparable spell unless otherwise stated. Casting time is 5

**Ring of Spell Storing:** A *ring of spell storing* contains 1d4+1 spells which the wearer can employ as if he were a spellcaster of the level required to use the stored spells. The class of spells contained within the ring is determined in the same fashion as the spells on scrolls (see "Scrolls"). The level of each spell is determined by rolling 1d6 (for priests) or 1d8 (for wizards). The number rolled is the level of the spell, as follows:

Priest: 1d6, if 6 is rolled, roll 1d4 instead.

Wizard: 1d8, if 8 is rolled, roll 1d6 instead.

Which spell type of any given level is contained by the ring is also randomly determined.

The ring empathically imparts to the wearer the names of its spells. Once spell class, level, and type are determined, the properties of the ring are fixed and unchangeable. Once a spell is cast from the ring, it can be restored only by a character of appropriate class and level of experience (i.e., a 12th-level wizard is needed to restore a 6th-level magical spell to the ring). Stored spells have a casting time of five.

**Ring of Spell Turning:** This ring distorts the three normal dimensions, causing many spells cast at the wearer to rebound upon the spellcaster. Sometimes, a spell's entire effect is turned against the caster; sometimes, a portion of the effect rebounds.

Some spells are immune from the effects of a *ring of spell turning:*

1. Spells that affect an area, and which are not cast directly at the ring wearer, are not turned by the ring.

2. Spells that are delivered by touch are not turned.

3. Magic contained in devices (rods, staves, wands, rings, and other items) that are triggered without spellcasting are not turned. A scroll spell is *not* considered a device.

When a spell is cast at an individual wearing a *ring of spell turning*, 1d10 is rolled and the result is multiplied by 10. This score indicates what percentage of the spell has been turned back upon its caster.

Once the spell is turned, the effects must be determined. If the spell normally allows a saving throw, the intended target (the one wearing the ring) gains an automatic plus equal to the number rolled on the turning die. The caster receives a bonus equal to the number rolled on the turning die. The caster receives a bonus equal to the number rolled on this die subtracted from 10. For example, a *charm person* spell is cast at a character wearing a *ring of spell turning.* A 7 is rolled on the die, turning back 70% of the effect. The ring-wearer gains a +7 to his saving throw; the caster has a +3.

A saving throw is also allowed for spells which normally do not have one if 20% to 80% of the effect is turned. The saving throw adjustment is calculated as given above. No further adjustments are made for race, magical items, or any other condition including existing spells. To save, the character must have a modified die roll of 20 or greater. If the saving throw is made, the effect of the spell is negated. For example, an illusionist casts a *maze* spell at a fighter wearing a *ring of spell turning.* The spell normally allows no saving throw, but the ring turns 70% of the effect. The fighter is allowed a saving throw with a +7 modifier. The illusionist must also save, gaining only a +3. The fighter's die roll is 15, which saves (15+7 = 22); the illusionist's die roll is a 16 which, while close, fails (16+3 = 19). The illusionist becomes trapped in his own *maze* spell.

Once a spell is turned, the effects are divided proportionately between the two targets. If the spell causes damage, determine the damage normally and then assess the amount to each according to the percentage determined, rounding fractions to the nearest whole number. If a spell caused 23 points of damage, and 30% of it was turned, the intended victim would suffer 16 points of damage, while the caster would suffer 7. Durations are affected in a similar manner. In the above case, the spell duration would be 30% of its normal length for one character and 70% for the other. The effect of permanent spells for both characters remains unchanged.

Some spells affect a certain number of levels. When one of these is aimed at the ring wearer, the spell must be able to affect as many levels as the wearer and the spellcaster combined. If this condition is fulfilled, then the procedure above applies.

If the spellcaster and spell recipient both wear *spell turning rings* a resonating field is set up, and one of the following results will take place:

| | |
|---|---|
| 01-70 | Spell drains away without effect |
| 71-80 | Spell affects both at full effect |
| 81-97 | Both rings permanently lose their magic |
| 98-00 | Both individuals go through a rift into the Positive Energy plane |

A ring wearer who wants to receive a spell must remove the *ring of spell turning* to be able to do so.

**Ring of Sustenance:** This magical ring provides its wearer with life-sustaining nourishment even though he or she might go for days without food or drink. The ring also refreshes the body and mind, so that its wearer needs to sleep only two hours per day to gain the benefit of eight hours of sleep.

The ring must be worn for a full week in order to function properly. If it is removed, the wearer immediately loses its benefit and must wear it for another week to reattune it to himself. After functioning for any period of seven consecutive days, a *ring of sustenance* will cease to function for a week while it replenishes itself.

**Ring of Swimming:** The *ring of swimming* bestows upon the wearer the ability to swim at a full 21 base speed. (This assumes, of course, that the wearer is clad in garments appropriate for such activity.) The ring further enables the wearer to dive up to 50 feet into water without injury, providing the depth of the water is at least 1_ feet per 10 feet of diving elevation. The wearer can stay underwater for up to four rounds without needing a breath of air. Surface swimming can continue for four hours before a one hour (floating) rest is needed. The ring confers the ability to stay afloat under all but typhoon-like conditions.

**Ring of Telekinesis:** This ring enables the wearer to manipulate objects in the same manner as the 5th-level wizard spell, *telekinesis.* The amount of weight the wearer can move varies. Roll percentile dice to find the strength of the ring:

| | |
|---|---|
| 01-25 | 25 lbs. maximum |
| 26-50 | 50 lbs. maximum |
| 51-89 | 100 lbs. maximum |
| 90-99 | 200 lbs. maximum |
| 00 | 400 lbs. maximum |

**Ring of Truth:** There is little doubt that wearing a *ring of truth* is a mixed blessing. The wearer can detect any lie told to him, but he is unable to tell any sort of falsehood himself. If the wearer tries to tell a lie, he finds himself speaking the literal truth instead. On the plus side, the wearer is able to discern the last lie told by another—in fact, the power of the ring causes the voice of the liar to rise to a falsetto.

If the wearer of the ring encounters magic that enables falsehoods to be spoken without detection (such as an *undetectable lie* spell or a *philter of glibness*), no lie is detected. However, the ring wearer will find himself unable to hear the voice of the person so influenced, whether or not he is trying to listen. This, of course, reveals the lie indirectly.

**Ring of Warmth:** This ring provides its wearer with body heat even in conditions of extreme cold where the wearer has no clothing whatsoever. It also restores damage caused by cold at the rate of one point per turn. It provides a saving throw bonus of +2 versus cold-based attacks, and reduces damage sustained by -1 per die.

**Ring of Water Walking:** This ring enables the wearer to walk on any liquid without sinking into it—this includes mud, quicksand, oil, running water, and even snow. Up to

1,200 pounds can be supported by a *ring of water walking.* The ring wearer's feet do not actually contact the surface he is walking upon (but oval depressions about 1_ inches deep per 100 pounds of weight of the walker will be observed in hardening mud or set snow). The wearer moves at his standard movement rate.

**Ring of Weakness:** This cursed ring causes the wearer to lose 1 point of Strength and 1 point of Constitution per turn until the individual reaches three in each ability. This loss is not noticeable until the individual actually observes his weakened state through some exertion (such as combat or heavy lifting). The ring can also make the wearer invisible at will (at the cost of double the standard rate of Strength and Constitution loss). When the affected abilities reach 3, the wearer will be unable to function in his class.

Points lost from the ring are restored by rest on a one-for-one basis, with 1 point of each ability lost being restored in one day of rest. The *ring of weakness* can be removed only if a *remove curse* spell, followed by a *dispel magic,* is cast upon the ring.

There is a 5% chance that this procedure will reverse the ring's effect, changing it to a *ring of berserk strength.* This increases Strength and Constitution at a rate of 1 point per ability per turn, to a maximum of 18 each (roll percentile dice for bonus Strength if the wearer is a warrior). However, once 18 is reached in both abilities, the wearer will immediately melee with any opponent he meets, regardless of circumstances. Berserk strength is lost when the ring is removed (by casting a *remove curse*), as are Constitution points gained.

**Ring of Wishes, Multiple:** This ring contains from 2d4 *wish* spells. As with any wish, the DM should be very judicious in handling the request. If players are greedy and grasping, interpret their wording exactly, twist the wording, or simply rule the request is beyond the power of the magic. In any case, the wish is used up, whether or not the wish was granted, and regardless of the DM's interpretation of the wisher's request. No wish can cancel the decrees of god-like beings, unless it comes from another such creature.

**Ring of Wishes, Three:** This ring contains three *wish* spells instead of a variable number. It is otherwise the same as a *multiple wish* ring except that 25% (01-25) of *three wish* rings contain only *limited wish* spells.

**Ring of Wizardry:** This ring doubles the number of spells a wizard may prepare each day in one or more spell levels. Only wizards can benefit from a *ring of wizardry.* Other classes, even those with spell ability, can neither use nor understand the working of such a ring. To determine the properties of a given ring use the table below:

| | |
|---|---|
| 01-50 | doubles 1st-level spells |
| 51-75 | doubles 2nd-level spells |
| 76-82 | doubles 3rd-level spells |
| 83-88 | doubles 1st-and 2nd-level spells |
| 89-92 | doubles 4th-level spells |
| 93-95 | doubles 5th-level spells |
| 96-99 | doubles 1st- through 3rd-level spells |
| 100 | doubles 4th- and 5th-level spells |

**Ring of X-Ray Vision:** This ring gives its possessor the ability to see into and through substances that are impenetrable to normal sight. Vision range is 20 feet, with the viewer seeing as if he were looking at something in normal light. X-ray vision can penetrate 20 feet of cloth, wood, or similar animal or vegetable material, and up to 10 feet of stone or some metals (some metals can't be penetrated at all):

| Substance Scanned | Thickness Penetrated per Round of X-Raying | Maximum Thickness |
|---|---|---|
| Animal matter | 4' | 20' |
| Vegetable matter | 2_' | 20' |
| Stone | 1' | 10' |
| Iron, Steel, etc. | 1" | 10" |
| Lead, Gold, Platinum | nil | nil |

It is possible to scan up to 100 square feet of area during one round. Thus, during one round, the wearer of the ring could scan an area of stone 10 feet wide and 10 feet high. Alternatively, he could scan an area 5 feet wide and 20 feet high.

Secret compartments, drawers, recesses, and doors are 90% likely to be located by x-ray vision scanning. Even though this ring enables its wearer to scan secret doors, traps, hidden items, and the like, it also limits his use of the power, for it drains 1 point of Constitution if used more frequently than once every six turns. If it is used three turns in one hour, the user loses 2 points from his total Constitution score, 3 if used four turns, etc.

This Constitution loss is recovered at the rate of 2 points per day of rest. If Constitution reaches 2, the wearer is exhausted and must rest immediately. No activity, not even walking, can be performed until Constitution returns to 3 or better.

## Rods

Rods are about three feet long and as thick as your thumb. They are normally found in cases or similar storage places. Rods can be fashioned from metal, wood, ivory, or bone. They can be plain or decorated and carved, tipped, or not.

Rods are powered by charges, unless noted otherwise in the description of a particular rod. Each time the rod is used, one or more charge may be expended. Characters do not automatically know the number of charges possessed by an item when it is discovered, although research and spellcasting can reveal this.

A rod can sometimes be recharged according to the rules given for constructing magical items if its charges have not totally been used up. When a rod is drained of all charges, it loses all its magical properties and cannot be recharged ever again.

When discovered, a rod normally contains 41 to 50 (1d10+40) charges. However, while rods almost never have more charges than this, it is possible to find a rod with significantly fewer charges, particularly if it is captured from an enemy who has

previously used the item.

## Command Words (Optional Rule)

A rod is normally activated when the wielder utters a specific command word. This word acts like a trigger, unleashing the power stored within the item. Since control of a rod depends on knowledge of the command word, these are jealously guarded by the owner. An absent-minded wizard can etch the command word on the item or carry it on a piece of paper in his pocket, but this is only rarely done. Most often the character must use spells of the divination school or sages to discover the correct command to activate a rod.

## List of Rods

**Rod of Absorption:** This rod acts as a magnet, drawing magic spells of any nature (priest or wizard) into itself. It then nullifies their effects and stores their potential until the wielder releases this energy in the form of spells of his own casting. The magic absorbed must have been directed at the character possessing the rod. The wielder can instantly detect a spell's level as the rod absorbs the spell's energy.

A running total of absorbed (and used) spell levels should be kept. For example, a rod that absorbs a 6th-level spell and a 3rd-level spell has a total of nine absorbed levels. The wielder of the rod can use captured spell energy to cast any spell he has memorized, at a casting time of 1, without loss of spell memory. The only restriction is that the levels of spell energy stored in the rod must be equal to or greater than the level of the spell the wielder wants to cast. Continuing the example above, the rod-wielder could cast a maximum of one 9th-level spell, one 6th-level and one 3rd-level, and so on.

The *rod of absorption* can never be recharged. It absorbs 50 spell levels and can thereafter only discharge any remaining potential it might have. The wielder will know that the rod's limit has been reached upon grasping the item. Used charges indicate that it has already absorbed some of its maximum of 50 spell levels and that some of those have been used.

Here is a more specific example: A priest uses a *rod of absorption* to nullify the effect of a *hold person* spell cast at him by a mage. The rod has now absorbed three spell levels and can absorb 47 more. The cleric can cast any 1st-, 2nd-, or 3rd-level spell he has memorized, without memory loss of that spell, by using the stored potential of the rod. Assume the cleric casts a *hold person* back. This spell is only 2nd-level to him, so the rod still holds one spell level of potential, can absorb 47 more, and has disposed of two charges permanently.

**Rod of Alertness:** This magical rod is indistinguishable from a *footman's mace +1*. It has eight flanges on its macelike head. The rod bestows +1 to the possessor's die roll for being surprised, and in combat the possessor gains -1 on initiative die rolls. If it is grasped firmly, the rod enables the character to *detect alignment, evil, good,* illusions, *invisibility, lie,* or *magic.* The use of these detect powers does not expend any of the charges in the rod.

If the *rod of alertness* is planted in the ground, and the possessor wills it to alertness, the rod will "sense" any creature intends to harm the possessor. Each of the flanges on the rod's head then cast a *light* spell along one of the main directions (N, NE, E, etc.) out to a 60-foot range. At the same time, the rod creates the effect of a *prayer* spell upon all creatures friendly to the possessor in a 20-foot radius. Immediately thereafter, the rod sends forth a mental alert to these friendly creature, warning them of possible danger from the unfriendly creature(s) within the 120-foot radius.

Lastly, the rod can be used to simulate the casting of an *animate object* spell, utilizing any 16 (or fewer) objects specially designated by the possessor and placed roughly around the perimeter of a 6-foot-radius circle centered on the rod. The selected objects can be 16 shrubs, 16 specially shaped branches, or whatever.

All of the rod's protective functions require one charge. The *animate object* power require one additional charge, so, if all of the rod's protective devices are utilized at once, two charges are expended.

The rod can be recharged by a priest of 16th level or higher, as long as at least one charge remains in the rod when the recharging is attempted.

**Rod of Beguiling:** This rod enables its possessor to radiate an emotional and mental wave of fellow feeling to all creatures with any Intelligence whatsoever (1 or higher Intelligence). The rod causes all such creatures within a 20-foot radius of the device to regard the wielder as their comrade, friend, or mentor (no saving throw).

The beguiled creatures will love and respect the rod wielder. They will listen, trust, and obey him, insofar as communication is possible and instructions given don't consign the beguilded to needless injury or destruction or go against their nature or alignment. Each charge of the rod beguiles for one turn. It can be recharged.

**Rod of Cancellation:** This dreaded rod is a bane to all classes, for its touch drains items of all magical properties unless a saving throw versus the cancellation is made. Contact is made by making a normal attack roll in melee combat.

| Saving Throw | Item |
|---|---|
| 20 | Potion |
| 19 | Scroll |
| 17 | Ring |
| 14 | Rod |
| 13 | Staff |
| 15 | Wand |
| 12 | Miscellaneous magical item |
| 3 | Artifact or relic |
| 11 (8) | Armor or shield (if +5) |
| 9 (7) | Sword (holy sword) |
| 10 | Miscellaneous weapon* |

* Several small items, such as magical arrows or bolts together in one container, will be drained simultaneously.

To find out if the draining can be prevented, a d20 roll must be made for the target item. If the die roll result in a number equal to or higher than the number listed on the table above, the target is unaffected. If the roll is lower, the item is drained. Upon draining an item, the rod itself becomes brittle and cannot be used again. Drained items are not restorable, even by *wish.*

**Rod of Flailing:** This magical weapon radiates faintly of alteration magic when subjected to a *detect magic* spell. Upon the command of its possessor, the weapon activates, changing from a normal-seeming rod to a double-headed flail. In close quarters, or if the wielder is mounted, it is the small, horseman's weapon (base damage 1d4+1, S-M/L); otherwise, it is a footman's weapon (base damage 1d6+1/2d4, S-M/L).

In either form, the weapon has a +3 bonus to attack and damage rolls. Each of the weapon's two heads can be used to attack, so double hits can be scored, either on a single opponent or on two opponents who are man-sized or smaller and standing side by side.

If the holder of the rod expends one charge, he gains +4 bonuses on Armor Class and saving throws for one turn. The rod need not be in weapon-form for this protection benefit to be employed. Transforming it into a weapon (or back into a rod) does not expend any charges.

**Rod of Lordly Might:** This rod has functions that are spell-like, but it can also be used as magic weapons of various sorts. It also has several more mundane uses. The *rod of lordly might* is metal, thicker than other rods, with a flanged ball at one end and various studs along its length. It weighs 10 pounds, thus requiring 16 or greater Strength to wield properly (-1 penalty to attack rolls for each point of Strength below 16).

The spell-like functions of the rod are:

- *Paralyzation* upon touch, if the wielder so commands
- *Fear* upon all enemies viewing it, if the wielder so desires (6-foot maximum range)
- *Drain* 2d4 hit points from a touched opponent and bestow them upon the rod wielder, up to the rod wielder's normal maximum.

Each function draws off one charge from the rod. The functions entitle victims to saving throws vs. spell, with the exception of the draining function above—this requires a successful hit during melee combat.

The weapon uses of the rod do not use charges. These are:

- *mace* +2
- *sword of flame +1* when button #1 is pushed. A blade springs from the ball; the ball becomes the sword's hilt. The weapon shortens to an overall length to three feet.
- *battle axe +4* when button #2 is pushed. The sword blade springs forth, and the handle can be lengthened up to 12 feet, for an overall length of from 6 feet to 15 feet. In 15-foot length, the rod is suitable for use as a lance.

The mundane uses of the rod do not use charges. These are:

• Climbing pole. When button #4 is pushed, a spike that can anchor in granite is extruded from the ball, while the other end sprouts three sharp hooks. The rod lengthens 5 to 50 feet in a single round, stopping when button #4 is pushed. Horizontal bars three inches long fold out from the sides, one foot apart, in staggered progression. The rod is firmly held by spike and hooks and will bear up to 4,000 pounds weight. It retracts by pushing button #5.
• The ladder function can also be used to force open doors. The rod's base is planted 30 feet or less from the portal to be forced and is in line with it. The force exerted is equal to storm giant Strength.
• When button #6 is pushed, the rod will indicate magnetic north and give the possessor a knowledge of his approximate depth beneath the surface (or height above it).

The *rod of lordly might* cannot be recharged. When its charges are exhausted, spell-like functions cease, as do all weapon functions except the *mace +2*. The rod continues to work in all other ways.

**Rod of Passage:** This potent item allows its wielder to perform any of the following, one at a time, one per round: *astral travel, dimension door, passwall, phase door,* and *teleport without error.* It is necessary to expend one charge to activate the rod, but once it is activated the possessor can perform each of the listed functions one time. The rod remains charged for one day, or until each of the five functions is used. None of the functions can be used a second time unless another charge is expended, whereupon all five of the functions again become available.

With respect to *astral travel,* the wielder can elect to use the rod on as many as five creatures (one of which must be the wielder himself). Each creature then takes on astral form and can travel in that form. Any remaining functions of the rod are cancelled by this action. The rod travels into the Astral plane along with the wielder and the other affected creatures, and cannot be used or reactivated until it is returned from the Astral plane.

This five-in-one effect doesn't work with respect to the rod's other powers; only *astral travel* can be used more than once per activation, and only in the manner described above.

The rod exudes a magical aura of the alteration and evocation sort. Because the physical bodies of the travelers, and their possessions, are actually empowered to become astral, the recharging of the rod requires a wizard of 20th level or higher.

**Rod of Resurrection:** This rod enables a cleric to resurrect the dead—even elven, dwarven, gnome, or halfling—as if he were of high enough level to cast the *resurrection* spell. No rest is required, as the rod bestows the life giving effects.

The rod can be used once per day. The number of charges used to resurrect a character depends on class and race. Total the number of charges indicated for the character's class and race:

| Class | Charges | Race | Charges |
|---|---|---|---|
| Cleric | 1 | Dwarf | 3 |
| Druid | 2 | Elf | 4 |

| | | | |
|---|---|---|---|
| Fighter | 2 | Gnome | 3 |
| Paladin | 1 | Half-elf | 2 |
| Ranger | 2 | Halfling | 2 |
| Mage | 3 | Human | 1 |
| Illusionist | 3 | | |
| Thief | 3 | | |
| Bard | 2 | | |

Multi-classed characters use the least favorable category. The rod cannot be recharged.

**Rod of Rulership:** The individual who possesses this magic rod is able to command the obedience and fealty of creatures within 120 feet when he or she activates the device. From 200 to 500 Hit Dice (or levels of experience) can be ruled, but creatures with 15 or greater Intelligence and 12 or more Hit Dice/levels are entitled to a saving throw vs. spell. Ruled creatures will obey the wielder of the *rod of rulership* as if he or she were their absolute sovereign. Still if the wielder gives a command that is absolutely contrary to the nature of the creatures commanded, the magic will be broken. The rod has a casting time of 5. Each charge lasts for one turn. The rod cannot be recharged.

**Rod of Security:** Each time a charge is expended, this item creates a non-dimensional space, a "pocket paradise." There the rod's possessor and as many as 199 other creatures can stay in complete safety for a period of time, the maximum being 200 days divided by the number of creatures affected. Thus, one creature (the rod's possessor) can stay for 200 days; four creatures can stay for 50 days; a group of 60 creatures can stay for three days. All fractions are rounded down, so that a group numbering between 101 and 200 inclusive can stay for one day only.

In this "paradise," creatures don't age (except from magical causes such as the casting of a *wish* spell), and natural healing and curing take place at twice the normal rate. Fresh water and food (fruits and vegetables only) are in abundance. The climate is comfortable for all creatures involved, so that protection from the elements is not necessary.

Activation of the rod causes the wielder and as many creatures as were touched with the item at the time of use to be transported instantaneously to the paradise. (Members of large groups can hold hands or otherwise touch each other, allowing all to be "touched" by the rod at once.)

When the rod's effect is cancelled or expires, all of the affected creatures instantly reappear in the location they occupied when the rod was activated. If something else occupies the space that a traveler would be returning to, then his body is displaced a sufficient distance to provide the space required for "re-entry."

The rod can be recharged by the joint efforts of a priest of 16th or higher level and a wizard of 18th or higher level.

**Rod of Smiting:** This rod is a +3 magical weapon that inflicts 1d8+3 points of damage. Against golems, the rod causes 2d8+6 points of damage, and any score of 20 or better completely destroys the golem. Any hit upon a golem drains one charge.

The rod causes normal damage (1d8+3) versus creatures of the Outer Planes. Any score of 20 or better draws off one charge and causes triple damage: (1d8+3) x3. The rod

cannot be recharged.

**Rod of Splendor:** The possessor of this rod is automatically and continually bestowed with a Charisma of 18 for as long as the item is held or carried. Whatever garments the possessor wears (including armor) appear to be of the finest quality and condition, although no special magical benefit (such as a change in Armor Class) is enjoyed.

If the possessor already has a Charisma score of 18 or greater, the rod does not further enhance this attribute. When the possessor expends one charge, the rod actually creates and garbs him in clothing of the finest fabrics, plus adornments of furs and jewels.

Apparel created by the magic of the rod remains in existence unless the possessor attempts to sell any part of it, or if any of the garb is forcibly taken from. In either of these cases, all of the apparel immediately disappears. The garments may be freely given to other characters or creatures, however, and will remain whole and sound afterward. Characters bedecked in a magically created outfit can't replace or add garments by expending another charge—if the possessor tries this, the charge is simply wasted.

The value of any noble garb created by the wand will be from 7,000 to 10,000 gp (1d4+6). The fabric will be worth 1,000 gp, furs 5,000 gp, and jewel trim from 1,000 to 4,000 gp (i.e., 10 gems of 100 gp value each, 10 gems of 200 gp value each or 20 gems of 100 gp value, and so forth).

The second special power of the rod, also requiring one charge to bring about, is the creation of a palatial tent—a huge pavilion of silk encompassing between 1,500 and 3,000 square feet. Inside the tent are temporary furnishings and food suitable to the splendor of the pavilion and in sufficient supply to entertain as many as 100 persons.

The tent and its trappings will last for one day. At the end of that time, the pavilion may be maintained by expending another charge. If the extra charge isn't spent, the tent and all objects associated with it (including any items that were taken out of the tent) disappear.

This rod cannot be recharged.

**Rod of Terror:** This rod is a +2 magical weapon capable of inflicting 1d6 +3 points of damage per hit. Furthermore, the wielder can expend a charge to envelop himself in a terrifying aura. His clothes and appearance are transformed into an illusion of darkest horror, such that all within 30 feet who view him must roll successful saving throws vs. rods or be struck motionless with terror. Those who succeed on their save suffer a -1 penalty to their morales and must make immediate morale checks. However, each time the rod is used, there is a 20% chance the wielder will permanently lose 1 point from his Charisma score.

## Staves

Staves are about 5 feet or 6 feet long and as thick as a young sapling—about an inch and a half at the base, tapering to an inch at the tip, although they can be of nearly equal diameter throughout. Staves are typically fashioned of wood, often carved, usually metal bound, and likely to be gnarly and twisted. They can be unusual or appear to be ordinary.

Staves, like wands and rods, are powered by charges. A staff typically has 1d6+19 charges when found. Again, it is possible for a stave to have fewer charges, although almost none have more than this number. Some staves can be recharged according to the rules for making magical items. Once all the charges are used, the stave is rendered nonmagical and cannot be recharged.

Unless inapplicable or otherwise specified, staves function at the 8th level of magic use. Their spell discharge is that of an 8th-level wizard with respect to range, duration, and area of effect.

Damage is nominally 8d6 with respect to fireballs, lightning bolts, etc.

## Command Words (Optional Rule)

If the DM desires, unleashing the power of a stave can require a specific command word or phrase that must be discovered or researched separately from the item itself. This command can be as simple as a single word ("Heal") or could be as complicated as a rhyming phrase that must be adjusted to fit the circumstances ("I touch this elf; restore his health," or "In this moment of great toil, I command thee, staff—uncoil!"). Since command words are the key to great power, wise owners will memorize them and destroy all other evidence. Indeed, knowledge of command words can be used as a bargaining point in surrender negotiations.

## List of Staves

**Staff-Mace:** This clerical weapon appears to be a normal wooden staff of the type used when trekking in the wilderness. This item is typically made of bronzewood, reinforced by heavy bands and tips of iron. It gives off a very faint aura of alteration magic. Upon command, the *staff-mace* takes on one of three forms, as desired by the possessor.

Quarterstaff: *quarterstaff +3,* iron-shod
Great Mace: *footman's mace +1,* iron
Mace: *horseman's mace +2,* iron

**Staff-Spear:** When this seemingly ordinary quarterstaff is examined magically, it will have an aura of alteration. Upon proper command, a long and sharp spear blade will shoot forth from its upper end. This makes the weapon into a spear rather than a staff. Upon a second command, the length of the weapon will elongate to a full 12 feet, and the third command will recall it to its original form. The powers and value of each staff-spear are determined randomly when the item is first employed:

| To Hit D20 Roll | XP & Damage | Value |
|---|---|---|
| 1-6 | +1 | 1,000 |
| 7-10 | +2 | 1,500 |
| 11-13 | +3 | 2,000 |
| 14-16 | +4 | 2,500 |

| | | |
|---|---|---|
| 17-19 | +5 | 3,000 |
| 20 | +3* | 3,500 |

* Does damage as ranseur (2d4), but still acts as a spear if used to thrust or when set to receive a charge.

**Staff of Command:** This device has three functions, only two of which will be effective if the wielder is a wizard; all three work when the staff is in a priest's hands. The three functions are:

*Human influence:* This power duplicates that of the ring of the same name. Each *suggestion* or *charge* draws one charge from the staff.

*Mammal control/animal control:*This power functions only as *mammal control* (as the ring of that name) when the staff is used by a wizard. In the hands of a priest it is a staff of *animal control* (as the potion of that name, all types of animals listed). Either use drains one charge per turn or fraction thereof.

*Plant control:* This function duplicates that of the potion of the same name, but for each 10-square-foot ares of plants controlled for one turn or lass, one charge is used. A wizard cannot control plants at all.

The staff can be recharged.

**Staff of Curing:** This device can *cure disease, cure blindness, cure wounds* ( 3d6+3 hit points), *or cure insanity.* Each function drains one charge. The device can bi used once per day on any person (dwarf,elf,gnome,half-elf, halfling included), and no function may be employed more than twice per day(i.e., the staff can function only eight times during a 24-hour period). It can be recharged.

**Staff of the Magi:** This potent staff contains many spell powers and other functions. Some of its powers drain charges; others don't. the following powers do not drain charges:

- *detect magic*
- *enlarge*
- *hold portal*
- *light*
- *protection form evil/good*

The following powers drain one charge per usage:

- *invisibility*
- *fireball*
- *knock*
- *lightning bolt*
- *pyrotechnics*
- *ice storm*
- *web*
- *wall of fire*
- *dispel magic*
- *passwall*

These powers drain two charges per usage:

- *whirlwind**
- *conjure elemental***
- *plane travel*
- *telekinesis****

* The whirlwind is identical to that caused by a dijinni.

** The staff can be used to conjure one elemental of each type per day, each having 8 Hit Dice.

***Telekinesis is at 8th level also (i.e., 200 pounds maximum weight).

The *staff of the magi* adds a +2 bonus to all saving throw rolls vs. spell. It can be used to absorb wizard spell energy directed at its wielder, but if the staff absorbs energy beyond its charge limit, it will explode as if a "retributive strike" (see below) had been made. The spell levels of energy absorbed count only as recharging the staff, but they cannot be redirected immediately, so if absorption is desired, that is the only action possible by the staff wielder that round. Note also that the wielder has no idea how many spell levels are cast at him, for the staff does not communicate this knowledge as a *rod of absorption* does. Absorbing spells is risky, but absorption is the only way this staff can be recharged.

Retributive strike is a breaking of the staff. It must be purposeful and declared by the wizard wielding it. When this is done all levels of spell energy in the staff are released in a globe of 30-foot radius. All creatures within 10 feet of the broken staff suffer hit points of damage equal to eight times the number of spell levels of energy in the rod (1 to 25), those between 10 feet to 20 feet take 6 x levels, and those 20 feet to 30 feet distant take 4 x levels. Successful saving throws versus magic indicate only one-half damage is sustained.

The wizard breaking the staff has a 50% chance of traveling to another plane of existence, but if he does not, the explosive release of spell energy totally destroys him. This staff and the *staff of power* are the only magical items capable of a retributive strike.

**Staff of Power:** The *staff of power* is a very potent magical item, with offensive and defensive abilities. The powers below cost one charge each:

- *continual light*
- *magic missile or lightning bolt*
- *ray of enfeeblement*
- *levitation*
- *cone of cold or fireball*

The following powers drain two charges each:

- *shield, 5-foot radius*
- *globe of invulnerability*
- *paralyzation**

* Paralyzation is a ray from the end of the staff extending in a cone 40 feet long and 20 feet wide at the far end.

The DM may assign alternate powers by random die roll.

The wielder of a *staff of power* gains a +2 bonus to Armor Class and saving throws. He may use the staff to smite opponents. It strikes as a +2 magical weapon and inflicts 1d6+2 points of damage; if one charge is expended, the staff causes double damage, but two charges do not cause triple damage.

A *staff of power* can be broken for a retributive strike (see *staff of the magi*). The staff can be recharged.

**Staff of the Serpent:** There are two varieties of this staff—the "python" and the "adder."

The python strikes as a +2 magical weapon and inflicts 1d6+2 points of damage when it hits. If the priest throws the staff to the ground, it grows from its 6-foot length, becoming a constrictor snake, 25 feet long (AC 3, 49 hit points, movement rate of 9). This happens in one round. The snake will entwine if it scores a hit, the opponent being constricted for 2d4+2 points of damage per round. The victim will remain trapped by the python until he dies or the creature is destroyed. Note that the python will return to its owner upon command. If it is destroyed while in snake form, the staff is destroyed.

The adder strikes as a +1 magical weapon and does 2d2 points of damage when it hits. Upon command the head of the staff becomes that of an actual serpent (AC 5, 20 hit points). This head remains for one full turn. When a hit is scored, damage is not increased, but the victim must roll a successful saving throw vs. poison (strength E) or be slain. Only evil priests will employ an adder staff. If the snake head is killed, the staff is destroyed.

Neither staff has nor requires charges. Most of these staves—60%—are pythons.

**Staff of Slinging:** This magical quarterstaff appears to be a +1 weapon unless it is grasped by a druid, whereupon its power of slinging becomes evident. This power, which can be employed *only* by a druid, is activated when one end of the staff is touched to a heavy object of roughly spherical shape (a stone, metal ball, pottery crock, etc.) of up to nine inches in diameter and five pounds in weight. The object adheres to the end of the staff, and the wielder need then only swing the staff in an overhand arc to release the missile toward a desired target.

The missile leaves the staff on the downstroke of the overhand swing and travels in a low, rising trajectory, with the missile going one foot upward for every 10 feet traveled. Of course, the arc may be higher, or the missile aimed so as to travel nearly vertically. (In the latter case, reverse the arcing ratio so that one foot of distance laterally is covered for every 10 feet of vertical rise.) The maximum range of such a missile is 180 feet, with limits of 60 feet and 120 feet on short and medium range, respectively.

This staff also carries charges, and a druid wielding the item can expend one charge and thereby use the staff to hurl a missile of large size, as if the wielder were a stone giant (range out to 300 feet, 3d10 points of damage per hit). Whether used as a magical quarterstaff or by employing one of its slinging powers, the staff bestows +1 to the wielder's attack roll and +1 per die to damage dealt out. The weapon may be recharged by

a druid of 12th or higher level.

**Staff of Striking:** This oaken staff is the equivalent of a +3 magical weapon. (If the weapon vs. armor type adjustment is used, the *staff of striking* is treated as the most favorable weapon type vs. any armor.) It causes 1d6+3 points of damage when a hit is scored. This expends a charge. If two charges are expended, bonus damage is doubled (1d6+6); if three charges are expended, bonus damage is tripled (1d6+9). No more than three charges can be expended per strike. The staff can be recharged.

**Staff of Swarming Insects:** A staff of this sort is typically short and thick. When initially obtained or encountered, much of its length is covered with finely done carvings depicting winged biting and stinging insects (bees, deerflies, horseflies, wasps, and the like). Any priest character (cleric, druid, shaman, witch doctor, etc.) holding it can command the staff to create a swarm of such insects, at the same time expending one of the staff's charges.

Range is 60 yards+10 yards per level of the user. The number of insects produced is 60 plus 10 per level. Every 10 insects will inflict 1 point of damage upon the target victim, regardless of Armor Class, unless the victim is protected by a *force field*, engulfed in flames, etc. Note, however, that the insects will not affect creatures larger than man-sized with a natural Armor Class of 5 or better.

When a vulnerable target is attacked by the swarm of flying insects, the target will be unable to do anything other than attempt to dislodge and kill the things. The insect attack lasts for one round. Each time the staff is employed, one of the insect-shapes carved into its wooden surface will disappear, so it is easy to determine how many charges are left in the staff. Unlike others of its ilk, a staff of this sort can have as many as 50 initial charges. However, it cannot be recharged.

**Staff of Thunder & Lightning:** Casual examination of this stout quarterstaff will show it to be exceptional, and if it is magically examined, it will radiate an aura of alteration magic. Constructed of wood (ash, oak, bronzewood, or the like) and bound with iron set with silver rivets, it has the properties of a +2 magical weapon without any expenditure of its magical charges. Its other magical properties are as follows:

*Thunder:* The staff strikes as a +3 weapon, and unless the opponent struck saves successfully vs. rods, staves, and wands, he will be *stunned* from the noise of the staff's impact—unable to take any further action in the round struck, and automatically having last initiative in the following round. This power requires the expenditure of one charge.

*Lightning:* A short spark of electricity leaps forth when the opponent is struck, causing normal staff damage, plus 2d6 additional points of damage from shock. Note that the staff might not score a hit, but the electrical discharge discounts any form of metal armor (making the target effectively AC 10 for this purpose), so only such damage might apply. This power requires the expenditure of one charge.

*Thunderclap:* The staff sends forth a cone of deafening noise, 5 feet wide at the apex, 40 feet long, and 20 feet wide at a point farthest from the source. All creatures within this cone, wholly or partially, must roll a successful saving throw vs. rods, staves, and wands or be *stunned* for 1d2 rounds (unable to attack during this time) and unable to hear for 1d2 additional rounds. Those who save are unable to hear for 1d4 rounds, but suffer no

loss of attacks. This function requires the expenditure of two charges.

*Lightning Stroke:* A bolt similar to that from a *wand of lightning* is generated, but it is of 8d6 strength, causing 16-48 points of damage (rolls of 1 are counted as 2) to those who fail a saving throw. The stroke can be single or forked. This function of the rod uses two charges.

*Thunder & Lightning:* This power combines the *thunderclap,* described above, with a forked lightning bolt as in the *lightning stroke.* Damage from the lightning is a total of 8d6 with rolls of 1 or 2 counted as rolls of 3, for a range of 24-48 points. A saving throw applies, with deafness and half damage suffered by those who are successful. This power requires the expenditure of four charges.

The casting time required for any function is equal to the number of charges expended; thus, the *thunder & lightning* function costs four charges and has an initiative modifier of +4.

**Staff of Withering:** The *staff of withering* is a +1 magical weapon. A hit from it causes 1d4+1 points of damage. If two charges are expended when a hit is scored, the creature struck also ages 10 years, its abilities and lifespan adjusted for the resulting age increase. If three charges are expended when a hit is made, one of the opponent creature's limbs can be made to shrivel and become useless unless it successfully saves vs. spell (check by random number generation for which limb is struck).

Ageless creatures (undead, demons, devils, etc) cannot be aged or withered. Each effect of the staff is cumulative, so that three charges will score damage, age, and wither. Aging a dwarf is of little effect, while aging a dragon could actually aid the creature.

**Staff of the Woodlands:** This sort of staff is always made from oak, ash, or yew, finely grained, beautifully carved, and bound with bronze. It is effective only in the hands of a druid. Each such staff has the following powers, with each expending one charge per use:

- *Wall of thorns*
- *Animal friendship* plus *speak with animals*
- *Animate tree**

* This function duplicates the ability of a treant to cause a large tree to move at a movement rate of 3 and attack as if it were a largest-sized treant, and in all other respects becoming a virtual treant for eight rounds per charge expended. Note that one round is required for the tree to animate, and it will return to rooting on the eighth, so only six of the initial eight rounds are effectively available for the attack function.

In addition to these powers, each *staff of the woodlands* has a magical weapon value. Those with a lesser value have extra magical powers that do not require charges and can be employed once per day: The +4 staff has no additional powers; the +3 staff also confers the power of *pass without trace;* the +2 staff confers the powers of *pass without trace* and *barkskin;* the +1 staff confers the powers of the +2 staff plus the power of the *tree* spell. To determine which sort of staff has been discovered, assign even chances for

each of the four types.

## Wands

Wands are 1_ feet long and slender. They are made of ivory, bone, or wood and are usually tipped with something—metal, crystal, stone, etc. They are fragile and tend to break easily. Because of this, they are often kept in cases.

Wands perform at 6th level of experience with respect to the damage they cause, range, duration, area of effect, etc., unless otherwise stated.

At the DM's option, 1% of all wands can be trapped to backfire.

Wands are powered by charges, each use costing one or more charges (depending on the item). When discovered, a wand typically contains 1d20+80 charges. Captured wands taken from a defeated foe often have many fewer charges. Wands never have a greater number of charges than those listed. Most wands can be recharged according to the rules for making magical items.

When a wand runs out of charges, it can no longer be recharged. Furthermore, the DM can rule that the wand immediately crumbles into useless dust (settling the issue) or is now a useless, nonmagical stick.

## Command Words (Optional Rule)

Like rods and staves, wands can require the utterance of a command word (or phrase) to operate, and like these other items, the key is seldom found in the lock. The DM can rule that the command word is etched in magical writing on the wand (requiring a *read magic* to translate) or he can make the characters resort to such methods as *commune* spells and expensive sages. If you choose not to use this option, ignore references to command words in the item descriptions below—all items simply work.

## List of Wands

**Wand of Conjuration:** Grasping this device enables a wizard to recognize any cast or written conjuration/summoning spell (*unseen servant, monster summoning, conjure elemental, death spell, invisible stalker, limited wish, symbol, maze, gate, prismatic sphere, wish*). The wand also has the following powers, which require expenditure of one charge each:

- *unseen servant*
- *monster summoning**

* A maximum of six charges may be expended, one per level of the *monster summoning,* or *six monster summoning I,* three *monster summoning II,* two *monster summoning II,* or any combination totaling six. The wizard must be of a sufficient experience level to cast the appropriate *summoning* spell.

The *wand of conjuration* can also conjure up a *curtain of blackness*—a veil of total black that absorbs all light. The *curtain of blackness* can cover a maximum area of 600 square feet (60' x 10', 40' x 15', 30' x 20'), but it must stretch from ceiling to floor, wall to wall. The *curtain* takes two charges to conjure. The veil of total lightlessness can be penetrated only by physical means or magic.

The wand also enables its wielder to construct a *prismatic sphere* (or *wall*), one color at a time, red to violet, at a cost of one charge per color.

Each function of the wand has an initiative penalty of +5, and only one function per round is possible. The wand may be recharged.

**Wand of Earth and Stone:** A wand of this sort is typically short and tipped with some form of mineral. It is imbued with the following powers:

| | |
|---|---|
| *Dig* | _ charge/use |
| *Passwall* | one charge/use |
| *Move earth* | two charges/use |

In addition, 50% of all such wands have the following powers:

| | |
|---|---|
| *Transmute mud to rock* | one charge/use |
| *Transmute rock to mud* | one charge/use |

**Wand of Enemy Detection:** This wand pulses in the wielder's hand and points in the direction of any creature(s) hostile to the bearer of the device. The creature(s) can be invisible, ethereal, astral, out of phase, hidden, disguised, or in plain sight. Detection range is a 60-foot sphere. The function requires one charge to operate for one turn. The wand can be recharged.

**Wand of Fear:** When the *fear* wand is activated, a pale amber ray springs from the tip of the wand, forming a cone 60 feet long by 20 feet in base diameter, which flashes on and instantly disappears. Each creature touched by the ray must roll a successful saving throw vs. wand or react as per the *cause fear* spell (1st-level priest spell, *remove fear* reversal). In other words, creatures affected by the wand turn and move at fastest possible speed away from the wielder for six rounds. Each use costs one charge. It can operate just once per round. The wand can be recharged.

**Wand of Fire:** This wand can function like the following wizard spells:

- *Burning hands:* The wand emits a fan-shaped sheet of fire 10 feet wide at its end and 12 feet long. Each creature touched suffers six points of damage. The sheet of fire appears instantly, shoots forth dark red flames, and snuffs out in less than one second. It expends one charge.
- *Pyrotechnics:* This function duplicates the spell of the same name. It has an initiative modifier of +2 and expends one charge.
- *Fireball:* The wand coughs forth a pea-sized sphere that streaks out to the desired range (to a maximum of 160 feet) and bursts in a fiery, violet-red blast, just like the

*fireball* spell. The initiative modifier is +2, and this expends two charges. The fireball inflicts 6d6 points of damage, but all 1s rolled are counted as 2s (i.e., the burst causes 12-36 points). A saving throw vs. wand is applicable.

- *Wall of fire:* The wand can be used to draw a fiery curtain of purplish-red flames 1200 feet square (10' x 120', 20' x 60', 30' x 40', etc.). The flames last for six rounds and cause 2d6+6 points damage if touched (2d4 points if within 10 feet of the fire, 1d4 if within 20 feet). The flames can also be shaped into a ring around the wand user (but the circle is 25 feet in diameter). The initiative modifier is +3, and its use expends two charges.

The *wand of fire* can operate just once per round. It can be recharged.

**Wand of Flame Extinguishing:** This sort of wand has three separate functions:

Nonmagical fires of normal size can be extinguished without using any charges. Normal size includes anything up to the size of a bonfire or a fire in a regular fireplace—equal to four to six billets of wood burning hotly.

To extinguish large, nonmagical fires, flaming oil in quantity equal to a gallon or more, the fire produced by a fiend, a *flame tongue* sword, or a *burning hands* spell, one charge is expended from the wand. Continual magical flames, such as those of a sword or a creature able to ignite, will be extinguished for six rounds and will flare up again after that time.

When applied to large magical fires such as those caused by *fireball, flame strike,* or *wall of fire* spells, two charges are expended from the wand as the flames are extinguished.

If the device is used upon a creature composed of flame (a fire elemental, for instance), a successful attack roll inflicts 6d6 points of damage upon the creature.

**Wand of Frost:** A *frost* wand can perform three functions that duplicate wizard spells:

- *Ice storm:* A silvery ray springs forth from the wand and an ice (or sleet) storm occurs up to 60 feet away from the wand holder. This function requires one charge.
- *Wall of ice:* The silvery ray forms a wall of ice, six inches thick, covering a 600-square-foot area (10' x 60', 20' x 30', etc.). Its initiative modifier is +2, and it uses one charge.
- *Cone of cold:* White crystalline motes spray forth from the wand in a cone with a 60-foot length and a terminal diameter of 20 feet. The initiative modifier is +2, and the effect lasts just one second. The temperature is -100 degrees F., and damage is 6d6, treating all 1s rolled as 2s (6d6, 12-36). The cost is two charges per use. Saving throw vs. wands is applicable.

The wand can function once per round, and may be recharged.

**Wand of Illumination:** This wand has four separate functions, three of which approximate wizard spells, and one of which is unique:

- *Dancing lights:* The wand produces this effect at a cost of one charge.
- *Light:* The *illumination* wand sends forth light at an expenditure of one charge.
- *Continual light:* This function require two charges.
- *Sunburst:* When this effect is called forth, the wand delivers a sudden flash of brilliant, greenish-white light, with blazing golden rays. The range of this sunburst is 120 yards

maximum, and its duration is 1/10 of a second. Its area of effect is a globe of 40-foot diameter. Any undead within this globe suffer 6d6 points of damage, with no saving throw. Creatures within or facing the burst must roll successful saving throws vs. wands or be blinded for one round and be unable to do anything during that period. (Of course, the creatures in question must have sight organs sensitive to the visible light spectrum). The function requires three charges.
The wand can be recharged.

**Wand of Illusion:** This wand creates audible and visual illusions (see *audible glamer, phantasmal force*). The wand emits an invisible ray, with a 140-yard maximum range. The effect has an initiative modifier of +3. The wand wielder must concentrate on the illusion in order to maintain it—he may move normally but can't melee during this time. Each portion, audible and visual, cost one charge to effect and one per round to continue. The wand may be recharged.

**Wand of Lightning:** This wand has two functions that closely resemble wizard spells:

- *Shock:* This does 1-10 hit points of damage to a target struck in melee combat, with no saving throw. Characters wearing metal armor and/or shields are treated as armor class 10. Plain leather and wood work normally. Magical bonuses on metal armor do not affect Armor Class, but a *ring of protection* does. The shock uses one charge.
- *Lightning Bolt:* The possessor of the wand can discharge a bolt of lightning. The stroke can be either a forked or straight bolt (see wizard spell, *lightning bolt*). Damage is 12-36 (6d6, treating 1s as 2s), but a saving throw is applicable. This function uses two charges and has an initiate modifier of +2.

The wand may be recharged. It can perform only one function per round.

**Wand of Magic Detection:** This wand is similar in operation to the *enemy detection* wand. If any form of magic is in operation, or a magical item exists within a 30-foot radius, the *magic detection* wand will pulse and point to the strongest source. Note that it will point to a person upon whom a spell has been cast.

Operation requires one round, and successive rounds will point out successively less powerful magical radiation. The school of magic (abjuration, alteration, etc.) can be determined if one round is spent concentrating on the subject emanation. One charge is expended per turn (or fraction thereof) of use. Starting with the second round of continuous use, there is a 2% cumulative chance per round that the wand will temporarily malfunction and indicate nonmagical items as magical, or vice-versa. The wand may be recharged.

**Wand of Magic Missiles:** This wand discharges magic missiles similar to those of the 1st-level wizard spell of the same name. The missile causes 1d4+1 points of damage. It always hits its target when the wand is wielded by a wizard, otherwise an attack roll is required. The wand has an initiative modifier of +3, and each missile costs one charge. A maximum of two may be expended in one round. The wand may be recharged.

**Wand of Metal and Mineral Detection:** This wand has a 30-foot radius range. It pulses in the wielder's hand and points to the largest mass of metal within its effective

area of operation. However, the wielder can concentrate on a specific metal or mineral (gold, platinum, quartz, beryl, diamond, corundum, etc.). If the specific mineral is within range, the wand will point to any and all places it is located, and the wand possessor will know the approximate quantity as well. Each operation requires one round. Each charge powers the wand for two full turns. The wand may be recharged.

**Wand of Negation:** This device negates the spell or spell-like function(s) of rods, staves, wands, and other magical items. The individual with the *negation* wand points to the device, and a pale gray beam shoots forth to touch the target device or individual. This totally negates any wand function, and makes any other spell or spell-like function from that device 75% likely to be negated, regardless of the level or power of the spell. The wand can function once per round, and each negation drains one charge. The wand cannot be recharged.

**Wand of Paralyzation:** This wand shoots forth a thin ray of bluish color to a maximum range of 60 feet. Any creature touched by the ray must roll successful saving throw vs. wand or be rendered rigidly immobile for 5d4 rounds. A save indicates the ray missed, and there is no effect. As soon as the ray touches one creature, it stops—the wand can attack only one target per round. The wand has an initiative modifier of +3 , and each use costs one charge. The wand may operate once per round. It may be recharged.

**Wand of Polymorphing:** This wand emits a thin, green beam that darts forth a maximum distance of 60 yards. Any creature touched by this beam must make a saving throw vs. wands (success indicating a miss) or be *polymorphed* (as the *polymorph others* spell). The wielder may opt to turn the victim into a snail, frog, insect, etc., as long as the result is a small and inoffensive creature.

The possessor of the wand may elect to touch a creature with the device instead. Unwilling creatures must be hit and are also entitled to a saving throw. If the touch is successful, the recipient is surrounded by dancing motes of sparkling emerald light, and then transforms into whatever creature-shape the wielder wants. This is the same magical effect as the *polymorph self* spell.

Either function has an initiative modifier of +3. Each draws one charge. Only one function per round is possible. The wand may be recharged.

**Wand of Secret Door and Trap Location:** This wand has an effective radius of 15 feet for secret door location and 30 feet for trap location. When the wand is energized it will pulse in the wielder's hand and point to all secret doors or traps within range. Note that it locates either doors *or* traps, not both during one operation. It requires one round to function and draws one charge. The wand may be recharged.

**Wand of Size Alteration:** A wand of this sort enables the wielder to cause any single creature of virtually any size to *enlarge* or *diminish.* Either effect causes a 50% change in size.

Relative Strength and power increases or decreases proportionally, providing the weaponry employed is proportionate or usable. For humanoid creatures enlarged, Strength is roughly proportional to that of a giant of corresponding size. For example, a

humanoid enlarged to 9 feet tall is roughly equivalent to a hill giant (19 strength), and a 13-foot tall humanoid equals a fire giant (22 Strength).

The wand's power has a range of 10 feet. The target creature and all it is wearing or carrying are affected unless a saving throw succeeds. Note that a willing target need not to make a saving throw.

The effect of the wand can be removed by a *dispel magic* spell, but if this is done, the target must roll a system shock check. It can also be countered if the possessor of the wand wills the effect to be canceled before the duration of the effect expires. Each usage of the wand (but not the cancellation of an effect) expends one charge. It can be recharged by a wizard of 12th or higher level.

**Wand of Wonder:** The *wand of wonder* is a strange and unpredictable device that will generate any number of strange effects, randomly, each time it is used. The usual effects are shown on the table below, but you may alter these for any or all of these wands in your campaign as you see fit. Possible of the wand include:

| **D100 Roll** | **Effect** |
|---|---|
| 01-10 | *Slow* creature pointed at for one turn |
| 11-18 | *Deludes* wielder for one round into believing the wand functions as indicated by a second die roll |
| 19-25 | *Gust of wind*, double force of spell |
| 26-30 | *Stinking cloud* at 30-foot range |
| 31-33 | *Heavy rain* falls for one round in 60-foot radius of wand wielder |
| 34-36 | *Summon* rhino (1-25), elephant (26-50), or mouse (51-00) |
| 37-46 | *Lightning bolt* (70' x 5') as wand |
| 47-49 | Stream of 600 large butterflies pour forth and flutter around for two rounds, blinding everyone (including wielder) |
| 50-53 | *Enlarge* target if within 60 feet of wand |
| 54-58 | *Darkness* in a 30-foot diameter hemisphere at 30 feet center distance from wand |
| 59-62 | *Grass grows* in area of 160 square feet before the wand, or grass existing there grows to 10 times normal size |
| 63-65 | *Vanish* any nonliving object of up to 1,000 pounds mass and up to 30 cubic feet in size (object is ethereal) |
| 66-69 | *Diminish* wand wielder to 1/12 height |
| 70-79 | *Fireball* as wand |
| 80-84 | *Invisibility* covers wand wielder |
| 85-87 | *Leaves* grow from target if within 60 feet of wand |
| 88-90 | *10-40 gems* of 1 gp base value shoot forth in a 30-foot-long stream, each causing one point of damage to any creature in path -- roll 5d4 for number of hits |
| 91-97 | *Shimmering colors* dance and play over a 40-by 30-foot area in front of wand—creatures therein blinded for 1d6 rounds |
| 98-00 | *Flesh to stone* (or reverse if target is stone) if target is within 60 feet |

The wand uses one charge per function. It may not be recharged. Where applicable, saving throws should be made.

# Miscellaneous Magic

As the name implies, this category is a catch-all for many sorts of magical items. Some are powerful, others weak; some are highly desirable, others are deadly to the finder. The number of miscellaneous items is great enough that duplication of items in a campaign can kept to a minimum.

Reveal information about items with care. Initially, describe an item only in the most general of terms: wood, metal, cloth, leather, etc. Allow players to ask questions about the look, feel, and smell of an item. Likewise, do not simply blurt out the properties and powers of an item. Items must be held, or worn, or manipulated before revealing their secrets. Bards, sages, *identify* spells, and so on may be the best (and easiest) determiners of magical qualities, but experimentation and experience are useful and make for good role-playing.

Items are listed alphabetically. Unless a description specifically restricts item use, or a letter representing a particular class follows a listing, items are usable by any class. Class letters are (C) clerics, (F) fighters, etc., and each listing includes appropriate sub-classes.

# Categories of Magical Items

Most of the item descriptions below are complete in and of themselves. A few categories of magical items require some general comments, however:

**Artifacts and Relics:** These are not listed here. They are the DM's province. Advice on the creation and use of artifacts and relics can be found beginning in Chapter 10.

**Books:** All magical books, librams, manuals, tomes, etc. appear to be "normal" works of arcane lore. Each is indistinguishable from all others by visual examination of the outer parts or by detection for magic aura.

A *wish* spell can identify or classify a magical work. Other spells, notably *commune, contact higher planes, limited wish,* and *true seeing* are useless. A *wish* reveals the general contents of a book, telling what classes or characteristics are most affected (not necessarily benefitted) by the work. A second *wish* is required to determine the book's exact contents.

After being perused by a character, most magical works vanish forever, but one which is nonbeneficial to the reader may be attached to the character, and he will be unable to rid himself of it. If the work benefits another character alignment, the possessor is *geased* to conceal and guard it. As DM you should use your judgment and imagination as to exactly how these items will be treated, using the rules in this section as parameters.

**Boots:** All magical boots expand or shrink to fit the wearer, from halfling to giant size.

**Eyes:** Mixing eye types is certain to cause immediate insanity for 2d4 turns. Once this

time has passed the character can (and should) remove one of the magical lenses!

**Ropes:** Any magical rope which is broken or severed immediately loses its special properties.

Note that though the miscellaneous magical items are broken into categories on the tables for the purpose of random selection, all items are alphabetized together in the following descriptions.

## List of Magical Items

**Alchemy Jug:** This magical device can pour forth various liquids upon command. The quantity of each liquid is dependent upon the liquid itself. The jug can pour only one kind of liquid on any given day, seven pourings maximum. The liquids pourable and quantity per pouring are:

| | |
|---|---|
| Salt water | 16 gallons |
| Fresh water | 8 gallons |
| Beer | 4 gallons |
| Vinegar | 2 gallons |
| Wine | 1 gallon |
| Ammonia | 1 quart |
| Oil | 1 quart |
| Aqua regia | 2 gills (8 oz.) |
| Alcohol | 1 gil (4 oz.) |
| Chlorine | 8 drams (1 oz.) |
| Cyanide | 4 drams (_ oz.) |

The jug will pour forth two gallons per round, so it will require eight rounds to complete a pouring of salt water.

**Amulet of Inescapable Location:** This device is typically worn on a chain or as a brooch. It appears to be an amulet that prevents location, scrying (crystal ball viewing and the like), or detection or influence by ESP or telepathy. Actually, the amulet doubles the likelihood and/or range of these location and detection modes. Normal item identification attempts, including *detect magic*, will not reveal its true nature.

**Amulet of Life Protection:** This pendant or brooch device serves as protection for the psyche. The wearer is protected from the *magic jar* spell or any similar mental attack that would usurp control of the wearer's body. If the wearer is slain, the psyche enters the amulet and is protected for seven full days. Thereafter, it departs to the plane of its alignment. If the amulet is destroyed during the seven days, the psyche is utterly and irrevocably annihilated.

**Amulet of the Planes:** This device enables the individual possessing it to transport himself instantly to or from any one of the closest levels of the Outer Planes. This travel is absolutely safe, if not absolutely sure, but until the individual learns the device,

transport will be random. Roll 1d6. On a 4-6, add 12 to the result of a 1d12 roll (for a result between 1 and 24). On a 1-3, do not add 12 to a 1d12 roll. Figure the total and consult the following table to determine where the holder of the amulet ends up:

| | |
|---|---|
| 1-2 | Mount Celestia |
| 3 | Bytopia |
| 4 | Elysium |
| 5 | Beastlands |
| 6-7 | Arborea |
| 8 | Ysgard |
| 9 | Limbo |
| 10 | Pandemonium |
| 11-12 | The Abyss |
| 13 | Carceri |
| 14 | The Gray Waste |
| 15 | Gehenna |
| 16-17 | Baator |
| 18 | Acheron |
| 19 | Mechanus |
| 20 | Arcadia |
| 21-24 | Prime Material Plane* |

*As an alternative, you can substitute the following for totals between 22 and 24:

| | |
|---|---|
| 22 | Etheral plane |
| 23 | Astral plane |
| 24 | Prime, but alternate Earth |

**Amulet of Proof Against Detection and Location:** This device protects the wearer against all divination and magical location and detection. The wearer cannot be detected through *clairaudience, clairvoyance, ESP, crystal balls*, or any other scrying devices. No aura is discernible on the wearer, and predictions cannot be made regarding him unless a powerful being is consulted.

**Amulet Versus Undead:** This prized charm is a specially blessed symbol that enables the wearer to turn undead like a cleric. The amulet appears ordinary, but glows brightly when presented strongly (i.e., as if it were a holy symbol) in the presence of undead. The success of the attempt to turn is determined by the power of the amulet—the strength of each amulet varies, and when one is discovered, its type is ascertained by rolling on the following table:

| **D100 Roll** | **Effective Clerical Level of Amulet** |
|---|---|
| 01-30 | 5th |
| 31-55 | 6th |
| 56-75 | 7th |

| | |
|---|---|
| 76-90 | 8th |
| 91-00 | 9th |

The amulet must be worn at all times to remain effective. When it is not worn, it becomes inert, and will remain so for the first seven days after it is put on. Its value is a function of its strength: 200 XP value per effective cleric level.

**Apparatus of Kwalish:** When found, this item appears to be a large, sealed iron barrel, but it has a secret catch that opens a hatch in one end. Inside are 10 levers:

1. Extend/retract legs and tail
2. Uncover/cover forward porthole
3. Uncover/cover side portholes
4. Extend/retract pincers and feelers
5. Snap pincers
6. Forward/left or right
7. Backward/left or right
8. Open "eyes" with *continual light* inside/close "eyes"
9. Raise (levitate)/sink
10. Open/close hatch

The apparatus moves forward at a speed of three, backward at six. Two pincers extend forward four feet and snap for 2d6 points of damage each if they hit a creature—25% chance, no reduction for armor, but Dexterity reduction applies. The device can operate in water up to 900 feet deep. It can hold two man-sized characters and enough air to operate for 1d4 + 1 hours at maximum capacity. The apparatus is AC 0 and requires 100 points of damage to cause a leak, 200 to stave in a side. When the device is operating it looks something like a giant lobster.

**Bag of Beans:** This bag, constructed of heavy cloth, is about two feet wide and four feet long (the size of any other large bag or sack). A character who opens it will find several large, pebble-like objects inside. If dumped out of the bag, these objects explode for 5d4 points of damage each. All creatures within a 10 foot radius must successfully save vs. spell or suffer full damage. To be removed safely, the beans in the bag must be taken out by hand—*telekinesis* won't prevent them from exploding, nor will working them out with tools. If placed in dirt and watered, each pebble-like bean will "sprout" a creature or object. *Bags of beans* generally hold 3d4 beans, only 1 or 2 of which will be beneficial, the others sprouting monsters or useless things. For example:

| | |
|---|---|
| Bean #1 | Three shriekers spring up and begin wailing |
| Bean #2 | An *ice storm* strikes the area |
| Bean #3 | A poisonous raspberry bush with animated runners shoots up, but each of its 5d4 berries is a gem of 100 or 500 gp base value (or perhaps just worthless glass) |
| Bean #4 | A hole opens in the ground; a purple worm or a *djinni ring* can be below |
| Bean #5 | Smoke and gas cover an area of 50-foot radius for five turns; creatures in |

| | |
|---|---|
| | the smoke cloud can't see and will be blinded for 1d6 rounds when they step out of the cloud. |
| Bean #6 | A wyvern grows instantly and attacks; its sting is a *javelin of piercing* |
| Bean #7 | Poison gas seeps out slowly, forming a cloud of 20-foot radius that persists for one turn; while it lasts it might turn some dirt at its center to magical dust (*appearance, vanishing, sneezing and choking*) |

Thought, imagination, and judgment on the part of the DM are required with this item.

**Bag of Devouring:** This bag appears to be an ordinary sack—possibly appearing to be empty, possibly holding beans. The sack is, however, the lure used by an extradimensional creature—this is one of its feeding orifices.

Any substance of animal or vegetable nature is subject to "swallowing" if it is thrust within the bag. The *bag of devouring* is 90% likely to ignore any initial intrusions, but any time it senses living human flesh within, it is 60% likely to close and attempt to draw the whole victim in—base 75% chance for success, less Strength bonus for "damage," and each +1 = -5% on base chance. Thus, an 18 Strength character (with +2 damage) is only 65% likely to be drawn into the bag, while a 5 Strength character (with -1 damage) is 80% likely to be drawn in.

The bag radiates magic. It can hold up to 30 cubic feet of matter. It will act as a *bag of holding* (normal capacity), but each turn it has a 5% cumulative chance of "swallowing" the contents and then "spitting the stuff out" in some non-space. Creatures drawn within are consumed in one round, eaten, and gone forever.

**Bag of Holding:** As with other magical bags, this one appears to be a common cloth sack of about 2 feet by 4 feet size. The *bag of holding* opens into a nondimensional space, and its inside is larger than its outside dimensions. Regardless of what is put into this item, the bag always weighs a fixed amount. This weight, the bag's weight limit in contents, and its volume limit are determined by making a percentage roll and consulting the table below:

| D100 | Weight | Weight Limit | Volume Limit |
|---|---|---|---|
| 01-30 | 15 lbs. | 250 lbs. | 30 cu. ft. |
| 31-70 | 15 lbs. | 500 lbs. | 70 cu. ft. |
| 71-90 | 35 lbs. | 1,000 lbs. | 150 cu. ft. |
| 91-00 | 60 lbs. | 1,500 lbs. | 250 cu. ft. |

If overloaded, or if sharp objects pierce it (from inside or outside), the bag will rupture and be ruined. The contents will be lost forever in the vortices of nilspace.

**Bag of Transmuting:** This magical sack appears to be a *bag of holding* of one of the four sizes described above. It will perform properly for 1d4 + 1 uses (or more if the usages are made within a few days' time). At some point, however, the magical field will waver, and metals and gems stored in the bag will be turned into common metals and stones of no worth.

When emptied, the bag pours forth these transmuted metals and minerals. Any magical items (other than artifacts and relics) placed in the bag will become ordinary lead, glass, or wood as appropriate (no saving throw) once the transmuting effects have begun.

**Bag of Tricks:** A *bag of tricks* appears to be a typical sack, and visual or other examination will show it to be empty when first discovered. However, anyone who reaches inside will feel a small, fuzzy object. If this object is taken from the bag and tossed one foot to 20 feet away, it will turn into one of the animals on the following table.

These animals will obey and fight for the individual who brought them into being. The kind of animal inside a *bag of tricks* varies each time an animal is drawn from the bag.

There are three types of *bags of tricks,* each capable of producing different kinds of animals. To determine which kind of bag has been discovered, roll 1d10. On a 1-5, a type A bag has been found; on a 6-8, a type B; and on a 9 or 10, a type. Thereafter, the wielder rolls a 1d8 on the appropriate table to determine the specific animal found.

Only one creature can be drawn forth at a time. It alone exists until it is slain, until one turn has elapsed, or until it is ordered back into the *bag of tricks.* At that point, the creature vanishes. Only then can another animal be brought forth. Up to 10 creatures can be drawn from the bag each week.

# BAG OF TRICKS ANIMALS (D10)

**A (1-5)**

| D8 Roll | Animal | AC | Hit Dice | Hit Points | Damage per Attack |
|---|---|---|---|---|---|
| 1 | Weasel | 6 | _ | 2 | 1 |
| 2 | Skunk | 9 | _ | 2 | Musk |
| 3 | Badger | 4 | 1+2 | 7 | 1-2/1-2/1-3 |
| 4 | Wolf | 7 | 2+2 | 12 | 2-5 |
| 5 | Lynx, giant | 6 | 2+2 | 12 | 1-3/1-3/1-2/1 2/1-4 |
| 6 | Wolverine | 5 | 3 | 15 | 1-4/1-4/2-5 + musk |
| 7 | Boar | 7 | 3+3 | 18 | 3-12 |
| 8 | Stag, giant | 7 | 5 | 25 | 4-16 or 1-4/1-4 |

**B (6-8)**

| D8 Roll | Animal | AC | Hit Dice | Hit Points | Damage per Attack |
|---|---|---|---|---|---|
| 1 | Rat | 7 | _ | 2 | 1 |
| 2 | Owl | 7 | _ | 3 | 1-3/1-3 |
| 3 | Dog | 7 | 1+1 | 6 | 1-4 |
| 4 | Goat | 7 | 1+1 | 8 | 1-6 |
| 5 | Ram | 6 | 2 | 10 | 2-5 |
| 6 | Bull | 7 | 4 | 20 | 1-6/1-6 |

| | | | | | |
|---|---|---|---|---|---|
| 7 | Bear | 6 | 5+5 | 30 | 1-6/1-6/1-8/2-12 |
| 8 | Lion | 5/6 | 5+2 | 28 | 1-4/1-4/1 10/2-7/2-7 |

**C (9-0)**

| D8 Roll | Animal | AC | Hit Dice | Hit Points | Damage per Attack |
|---|---|---|---|---|---|
| 1 | Jackal | 7 | _ | 2 | 1-2 |
| 2 | Eagle | 7 | 1 | 5 | 1-2/1-2/1 |
| 3 | Baboon | 7 | 1+1 | 6 | 1-4 |
| 4 | Ostrich | 7 | 3 | 15 | 1-4 or 2-8 |
| 5 | Leopard | 6 | 3+2 | 17 | 1-3/1-3/1-6/1 4/1-4 |
| 6 | Jaguar | 6 | 4+2 | 21 | 1-3/1-3/1-8/2 5/2-5 |
| 7 | Buffalo | 7 | 5 | 25 | 1-8/1-8 |
| 8 | Tiger | 6 | 5+5 | 30 | 2-5/2-5/1-10/2-8/2-8 |

**Beads of Force:** These small, black spheres might be mistaken for common beads, marbles, or unusually black but lusterless pearls. From 5-8 of these beads are usually found at one time. Each is about three-quarters of an inch in diameter and quite heavy, weighing almost an ounce. One can be hurled up to 30 yards.

Upon impact, the bead sends forth a burst of force that inflicts 5d4 points of damage upon all creatures within a 10-foot radius of its center. Each victim is allowed a saving throw vs. spell. Those who save will be thrown out of the blast area, but those who fail to save will be encapsulated by a *sphere of force* after taking damage.

The sphere will form around any and all such creatures in the 10-foot-radius area, even those of large size, and will persist for 3d4 rounds. Victims will be unable to escape except by the same means and used to bring down a *wall of force* spell.

**Beaker of Plentiful Potions:** This container resembles a jug or flask. It is a magical beaker with alchemical properties allowing it to create 1d4 + 1 doses of 1d4 + 1 potions. (The kinds of potions are determined by random selection on Table 89.) Different potion sorts are layered in the container, and each pouring takes one round and results in one dose of one potion type.

Roll 1d4+1, to find the number of potions the beaker contains—*delusion* and *poison* are possible. Record each potion in order of occurrence—the potions are layered and are poured in order. Duplication is possible.

If the container holds only two potions, it will dispense them one each per day, three times per week; if three are contained, it will dispense them one each per day, two times per week; and if four or five are contained it will produce each just one time per week.

Once opened, the beaker gradually loses the ability to produce potions. This reduction in ability results in the permanent loss of one potion type per month, determined

randomly.

**Boat, Folding:** A folding boat will always be discovered as a small wooden "box"—about one foot long, one-half foot wide, and one-half foot deep. It will, of course, radiate magic if subjected to magical detection. The "box" can be used to store items like any other box. If a command word is given, however, the box will unfold itself to form a boat of 10 feet length, four feet width and two feet depth. A second (different) command word will cause it to unfold to a 24-foot long, 8-foot-wide, and 6-foot deep ship.

In its smaller form, the boat has one pair of oars, an anchor, a mast, and lateen sail. In its larger form, the boat is decked, has single rowing seats, five sets of oars, a steering oar, anchor, a deck cabin, a mast, and square sail. The first can hold three or four people comfortably, the second will carry fifteen with ease.

A third word of command causes the boat to fold itself into a box once again. The words of command may be inscribed visibly or invisibly on the box, or they may be written elsewhere—perhaps on an item within the box. The words might have been lost, making the boat useless (except as a small box) until the finder discovers the words himself (via *legend lore,* consulting a sage, physical search of a dungeon, etc.).

**Boccob's Blessed Book:** This well-made tome is always of small size. One will typically be no more than 12 inches tall, 6 inches wide, and 1 inch thick—some are a mere 6 inches in height. All such books are durable, waterproof, iron- and silver-bound, and locked. Copies of *Boccob's blessed book* gain a +3 bonus on their saving throws (as "leather or book").

The pages of such a book accept magic spells scribed upon them, and any book can contain up to 45 spells of any level. The book is thus highly prized by wizards of all sorts as a traveling spell book. It is unlikely that such a libram will ever be discovered (randomly) with spells already inscribed—inscribed or partially inscribed works of this nature are kept carefully by their owners.

**Books of Exalted Deeds:** This holy book is sacred to clerics of good alignment. Study of the work will require one week, but upon completion the good cleric will gain one point of Wisdom and experience points sufficient to place him halfway into the next level of experience. Clerics neither good nor evil lose 20,000-80,000 experience points for perusing the work (a negative xp total is possible, requiring restoration but not lowering level below 1st). Evil clerics lose one full experience level, dropping to the lowest number of experience points possible to hold the level; furthermore, they have to *atone* by magical means or by offering up 50% of everything they gain for 1d4 + 1 adventures.

Fighters who handle or read the book are unaffected, though a paladin will sense that it is good. Mages who read it lose one point of Intelligence unless they save versus spell. If they fail to save, they lose 2,000-20,000 experience points. A thief who handles or reads the work sustains 5d6 points of damage and must successfully save vs. spell or lose one point of Dexterity. A thief also has a 10%-50% chance of giving up his profession to become a good cleric if Wisdom is 15 or higher. Bards are treated as neutral priests.

Except as indicated above, the writing in a *book of exalted deeds* can't be distinguished from any other magical book, libram, tome, etc. It must be perused. (This applies also to all other works of magical writing detailed below.) Once perused, the book vanishes,

never to be seen again, nor can the same character ever benefit from perusing a similar tome a second time.

**Book of Infinite Spells:** This magical work bestows upon any character of any class the ability to use the spells within its pages. However, upon first reading the work, any character not already able to use spells suffers 5d4 points of damage and is stunned for 5d4 turns. Thereafter, he can examine the writing without further harm. The *book of infinite spells* contains d8 + 22 pages. The nature of each page is determined by random die roll. Make a percentile roll and consult the following table:

| D100 Roll | Page Contents |
|---|---|
| 01-30 | Blank page |
| 31-60 | Priest spell |
| 61-00 | Wizard spell |

If a spell is written on a page, determine the spell level by rolling 1d10 for a priest spell and 1d12 for a wizard spell. If the result is 8-10 (for priest) or 10-12 (for wizard) make a second die roll—1d6 for priests, 1d8 for wizard spells. Once the spell level is known, the DM can select particular spells or determine them randomly. Record page contents secretly, and *do not reveal this information to the holder of the book.*

Once a page is turned it can never be flipped back—paging through a *book of infinite spells* is a one-way trip. When the last page is turned, the book vanishes. The owner of the book can cast the spell to which the book is opened, once per day only. (If the spell is one that the character would normally be able to cast by reason of class and level, however, the spell can be cast up to four times per day due to the book's magical powers.)

The owner of the book need not have the book on his person in order to use its power. The book can be stored in a place of safety while the owner is adventuring and still allow its owner to cast spells by means of its power.

Each time a spell is cast there is a chance that the energy connected with its use will cause the page to magically turn (despite all precautions). The owner will know this and possibly even benefit from the turning by gaining access to a new spell. The chance of a page turning is as follows:

| | |
|---|---|
| Spellcaster employing spells usable by own class and/or level | 10% |
| Spellcaster using spells foreign to own class and/or level | 20% |
| Nonspellcaster using priest spell | 25% |
| Nonspellcaster using wizard spell | 30% |

Treat each spell use as if a scroll were being employed, including time of casting, spell failure, etc.

**Book of Vile Darkness:** This is a work of ineffable evil—meat and drink to priests of that alignment. To fully consume the contents requires one week of study, but once this has been accomplished, the evil priest gains one point of Wisdom and enough experience points to place him halfway into the next level of experience.

Priests neither good nor evil who read the book either lose 30,000-120,000 experience

points or become evil without benefit from the book; there is a 50% chance for either. Good priests perusing the pages of the unspeakable *book of vile darkness* will have to successfully save vs. poison or die; and if they do not die they must successfully save vs. spell or become permanently insane. In the latter event, even if the save is successful, the priest loses 250,000 experience points, less 10,000 for each point of Wisdom he has.

Other characters of good alignment suffer 5d6 points of damage from handling the tome, and if they look inside, there is an 80% chance a night hag will attack the character that night. Nonevil neutral characters suffer 5d4 points of damage from handling the book, and reading its pages causes them to succeed on a save vs. poison or become evil, immediately seeking out an evil priest to confirm their new alignment (see *Book of Exalted Deeds* for other details).

**Boots of Dancing:** These magical boots expand or contract to fit any foot size, from halfling to giant (just as other magical boots do). They radiate a dim magic if detection is used. They are indistinguishable from other magical boots, and until actual melee combat is engaged in they function like one of the other types of useful boots below—DM's choice.

When the wearer is in (or fleeing from) melee combat, the *boots of dancing* impede movement, begin to tap and shuffle, heel and toe, or shuffle off to Buffalo, making the wearer behave as if *Otto's irresistible dance* spell had been cast upon him (-4 penalty to Armor Class rating, saving throws with a -6, and no attacks possible). Only a *remove curse* spell will enable the boots to be removed once their true nature is revealed.

**Boots of Elvenkind:** These soft boots enable the wearer to move without sound of footfall in virtually any surroundings. Thus the wearer can walk across a patch of dry leaves or over a creaky wooden floor and make only a whisper of noise—95% chance of silence in the worst of conditions, 100% in the best.

**Boots of Levitation:** As with other magical boots, these soft boots expand or contract to fit giant to halfling-sized feet. *Boots of levitation* enable the wearer to ascend or descend vertically, at will. The speed of ascent/descent is 20 feet per round, with no limitation on duration.

The amount of weight the boots can levitate is randomly determined in 14-pound increments by rolling 1d20 and adding the result to a base of 280 pounds (i.e., a given pair of boots can levitate from 294 to 560 pounds of weight). Thus, an ogre could wear such boots, but its weight would be too great to levitate. (See the 2nd-level wizard spell, *levitation.*)

**Boots of the North:** This footgear bestows many powers upon the wearer. First, he is able to travel across snow at normal rate of movement, leaving no tracks. The boots also enable the wearer to travel at half normal movement rate across the most slippery ice (horizontal surfaces only, not vertical or sharply slanted ones) without falling or slipping. *Boots of the north* warm the wearer, so that even in a temperature as low as -50 degrees F., he is comfortable with only scant clothing—a loin of cloth and cloak, for instance. If the wearer of the boots is fully dressed in cold-weather clothing, he can withstand temperatures as low as -100 degrees F.

**Boots of Speed:** These boots enable the wearer to run at the speed of a fast hors—24 base movement speed. For every 10 pounds of weight over 200 pounds, the wearer is slowed by 1 in movement, so a 180-pound human with 60 pounds of gear would move at 20 base movement rate.

For every hour of continuous fast movement, the wearer must rest an hour. No more than eight hours of continuous fast movement are possible before the wearer must rest. Boots of speed give a +2 bonus to Armor Class in combat situations in which movement of this sort is possible.

**Boots of Striding and Springing:** The wearer of these magical boots has a base movement rate of 12, regardless of size or weight. This speed can be maintained tirelessly for up to 12 hours per day, but thereafter the boots no longer function for 12 hours—they need that long to "recharge."

In addition to the striding ability, these boots allow the wearer to make great leaps. While "normal" paces for the individual wearing this type of footgear are three feet long, the boots also enable forward jumps of up to 30 feet, backward leaps of 9 feet, and vertical springs of 15 feet.

If circumstances permit the use of such movement in combat, the wearer can effectively strike and spring away when he has the initiative during a melee round. However, such activity involves a degree of danger—there is a base 20% chance that the wearer of the boots will stumble and be stunned on the following round. Adjust the 20% chance downward by 3% for each point of Dexterity the wearer has above 12 (i.e., 17% at Dexterity, 14% at 14, 11% at 15, 8% at 16, 5% at 17, and only 2% at 18 Dexterity). In any event, the boots better Armor Class by 1 due to the quickness of movement they allow, so Armor Class 2 becomes 1, Armor Class 1 becomes 0, etc.

**Boots of Varied Tracks:** The wearer of these ordinary-looking boots is able, on command, to alter the tracks he leaves. The footprints of the wearer can be made as small as those of a halfling or as large as those of an ogre, bare or shod as desired. In addition, each pair of these boots has four additional track-making capabilities. Roll 1d6 four times to determine the subtable used, followed by 1d8 four times:

**Subtable A (1-3)**

| D8 Roll | Track Print Left |
|---|---|
| 1 | Basilisk |
| 2 | Bear |
| 3 | Boar |
| 4 | Bull |
| 5 | Camel |
| 6 | Dog |
| 7 | Giant, hill |
| 8 | Goat |

**Subtable B (4-6)**

| D8 Roll | Track Print Left |
|---|---|

| | |
|---|---|
| 1 | Horse |
| 2 | Lion (or giant lynx) |
| 3 | Mule |
| 4 | Rabbit |
| 5 | Stag |
| 6 | Tiger (or leopard) |
| 7 | Wolf |
| 8 | Wyvern |

**Boots, Winged:** These boots appear to be ordinary footgear. If magic is detected for, they radiate a faint aura of both enchantment and alteration. When they are on the possessor's feet and he or she concentrates on the desire to fly, the boots sprout wings at the heel and empower the wearer to fly, without having to maintain the concentration.

The wearer can use the boots for up to two hours per day, all at once or in several shorter flights. If the wearer tries to use them for a longer duration, the power of the boots fades rapidly, but it doesn't abruptly disappear—the wearer slowly descends to the ground.

For every twelve hours of uninterrupted non-use, the boots regain one hour of flying power. No amount of non-use allows the boots to be used for more than two hours at a time, however.

Some *winged boots* are better than others. To determine the quality of a given pair, roll 1d4 and consult the table below:

| D4 Roll | Flying Speed | Maneuverability Class |
|---|---|---|
| 1 | 15 | A |
| 2 | 18 | B |
| 3 | 21 | C |
| 4 | 24 | D |

**Bowl Commanding Water Elementals:** This large container is usually fashioned from blue or green semi-precious stone (malachite or lapis lazuli, for example, or sometimes jade). It is about one foot in diameter, half that deep, and relatively fragile. When the bowl is filled with fresh or salt water, and certain words are spoken, a water elemental of 12 Hit Dice will appear. The summoning words require one round to speak.

Note that if salt water is used, the elemental will be stronger (+2 per Hit Die, maximum 8 hp per die, however). Information about water elementals can be found in the *Monstrous Compendium.* (See also *bowl of watery death* below.)

**Bowl of Watery Death:** This device looks exactly like a *bowl commanding water elementals*, right down to the color, design, magical radiation, etc. However, when it is filled with water, the wizard must successfully save vs. spell or be shrunk to the size of a small ant and plunged into the center of the bowl. If salt water is poured into the bowl, the saving throw suffers a -2 penalty.

The victim will drown in 1d6 + 2 rounds, unless magic is used to save him, for he

cannot be physically removed from the *bowl of watery death* except by magical means: *animal growth, enlarge,* or *wish* are the only spells that will free the victim and restore normal size; a *potion of growth* poured into the water will have the same effect; a *sweet water* potion will grant the victim another saving throw (i.e., a chance that the curse magic of the bowl works only briefly). If the victim drowns, death is permanent, no resurrection is possible, and even a *wish* will not work.

**Bracers of Archery:** These magical wrist bands are indistinguishable from normal, non-magical protective wear. When worn by a character type or creature able to employ a bow, they enable the wearer to excel at archery.

The bracers empower such a wearer to use any bow (not including crossbows) as if he were proficient in its usage, if such is not already the case. If the wearer of the bracers has proficiency with any type of bow, he gains a +2 bonus to attack rolls and a +1 bonus to damage inflicted whenever that type of bow is used. These bonuses are cumulative with any others, including those already bestowed by a magical bow or magical arrows, except for a bonus due to weapon specialization.

**Bracers of Brachiation:** These wrist bands appear to be of the ordinary sort, but they enable the wearer to move by swinging from one tree limb, vine, etc., to another to get from place to place. The power can be employed only in locales where these sorts of hand-holds can be found. Movement is at a rate of 3, 6, or 9—the more jungle-like the conditions, the greater the movement rate.

The wearer is also able to climb trees, vines, poles, ropes, etc., at a rate of 6, and can swing on a rope, vine, or other dangling, flexible object as if he were an ape.

The wearer can also jump as if wearing *boots of striding and springing,* but the jump must culminate in the grasping of a rope or vine, movement through the upper portion of trees, the climbing of a tree or pole, or some other activity associated with brachiation.

**Bracers of Defense:** These items appear to be wrist or arm guards. Their magic bestows an effective Armor Class equal to someone wearing armor and employing a shield. If armor is actually worn, the bracers have no additional effect, but they do work in conjunction with other magical items of protection. The Armor Class the *bracers of defense* bestow is determined by making a percentile roll and consulting the table below:

| D100 Roll | Armor Class |
|---|---|
| 01-05 | 8 |
| 06-15 | 7 |
| 16-35 | 6 |
| 36-50 | 5 |
| 51-70 | 4 |
| 71-85 | 3 |
| 86-00 | 2 |

**Bracers of Defenselessness:** These appear to be *bracers of defense,* and will actually serve as such until the wearer is attacked in anger by a dangerous enemy. At that moment, the bracers worsen Armor Class to 10 and negate any and all other magical

protections and Dexterity bonuses. *Bracers of defenselessness* can be removed only by means of a *remove curse* spell.

**Brazier Commanding Fire Elementals:** This device appears to be a normal container for holding burning coals unless magic is detected for. It enables a mage to summon an elemental of 12-Hit-Dice strength from the Elemental Plane of Fire. A fire must be lit in the brazier—one round is required to do so. If sulphur is added, the elemental will gain +1 on each Hit Die (i.e., 2-9 hit points per Hit Die). The fire elemental will appear as soon as the fire is burning and a command word is uttered. (See *Monstrous Compendium* for other details.)

**Brazier of Sleep Smoke:** This device is exactly like the *brazier commanding fire elementals.* However, when a fire is started within it, the burning causes a great cloud of magical smoke to pour forth in a 10-foot radius from the brazier. All creatures within the cloud must successfully save vs. spell or fall into a deep sleep.

At the same moment, a fire elemental of 12 Hit Dice appears and attacks the nearest creature. Sleeping creatures can be awakened only by means of a *dispel magic* or *remove curse* spell.

**Brooch of Shielding:** This appears to be a piece of silver or gold jewelry (10% chance that there are jewels set in it). It is used to fasten a cloak or cape. In addition to this mundane task, it can absorb magic missiles of the sort generated by spell, wand, or other magical device. A brooch can absorb up to 101 points of *magic missile* damage before it melts and becomes useless. Its use can be determined only by means of a *detect magic* spell and then experimentation.

**Broom of Animated Attack:** This is indistinguishable from a normal broom, except by means of detection of its magic. It is identical to a *broom of flying* by all tests short of attempted use. Using it reveals that a *broom of animated attack* is a very nasty item:

If a command word ("fly," "soar," etc.) is spoken, the broom will do a loop-the-loop with its hopeful rider, dumping him on his head from 1d4 + 5 feet off the ground. The broom will then attack the stunned victim, swatting the face with the straw/twig end to blind and beating with the handle end.

The broom gets two attacks per round with each end (two swats with the straw, two with the handle). It attacks as if it were a 4-Hit-Dice monster. The straw end causes blindness for one round if it hits. The other end causes 1d3 points of damage when it hits. The broom is Armor Class 7 and takes 18 hit points to destroy.

**Broom of Flying:** This magical broom is able to fly through the air at up to 30 base movement speed. The broom can carry 182 pounds at this rate, but every 14 additional pounds slows movement by 1. The device can climb or dive at an angle of 30 degrees. A command word (determined by the DM) must be used. The broom will travel alone to any destination named. It will come to its owner from as far away as 300 yards when he speaks the command word.

**Bucknard's Everfall Purse:** This item appears to be a leather pouch or small bag.

Each morning it duplicates certain coins—and possibly gems as well. When found, the purse will be full of coins. If totally emptied, and left so for more than a few minutes, the magic of the purse is lost, but if one of any coin is placed within the bag, many coins of the same type will be found inside the next morning. The types of coins found is determined by consulting the table below.

Once the type of bag is determined by roll, its abilities will not change.

| D100 Roll | CP | SP | EP | GP | PP | Gems* |
|---|---|---|---|---|---|---|
| 01-50 | — | 26 | 26 | 26 | — | — |
| 51-90 | 26 | — | 26 | — | 26 | — |
| 91-00 | 26 | — | 26 | — | — | 26 |

* Base 10 gp gems that can increase to a maximum of 100 gp only.

**Candle of Invocation:** These specially blessed tapers are dedicated to the pantheon of gods of one of the nine alignments. The typical candle is not remarkable, but if a *detection* spell is cast, it will radiate magic. It also radiates good or evil, if appropriate.

Simply burning the candle generates a favorable aura for the individual so doing—if the candle's alignment matches that of the character's. If burned by a priest of the same alignment, the candle temporarily increases the priest's level of experience by 2, enabling him to cast additional spells. He can even cast spells normally unavailable to him, as if he were of the higher level, but only so long as the candle continues to burn. Any burning allows the casting of a *gate* spell, the respondent being of the alignment of the candle, but the taper is immediately consumed in the process.

Otherwise, each candle burns for four hours. It is possible to extinguish the candle as placed in a lantern or otherwise sheltered to protect it from drafts and other things which could put it out. This doesn't affect its magical properties.

**Carpet of Flying:** The size, carrying capacity, and speed of a carpet are determined by rolling percentile dice and consulting the table below. Each carpet has its own command word (if you use the optional command word rules) to activate it—if the device is within voice range, the command word will activate it. The carpet is then controlled by spoken directions.

These rugs are of oriental make and design. Each is beautiful and durable. Note, however, that tears or other rents cannot be repaired without special weaving techniques generally known only in distant, exotic lands.

| D100 Roll | Size | Capacity | Speed |
|---|---|---|---|
| 01-20 | 3' x 5' | 1 person | 42 |
| 21-55 | 4' x 6' | 2 people | 36 |
| 56-80 | 5' x 7' | 3 people | 30 |
| 81-00 | 6' x 9' | 4 people | 24 |

**Censer Controlling Air Elementals:** This 6-inch wide, 1-inch high perforated golden

vessel resembles thuribles found in places of worship. If filled with incense and lit, a command word need only be spoken to summon forth a 12 Hit Dice air elemental on the following round. If *incense of meditation* is burned within the censer, the air elemental will have a +3 bonus to each of its Hit Dice, and it will obey the commands of its summoner. If the censer is extinguished, the elemental will remain and turn on the summoner (see Elemental in the *Monstrous Compendium*).

**Censer of Summoning Hostile Air Elementals:** This thurible is indistinguishable from other magical and ordinary censers. It is cursed: any incense burned within it causes 1d4 enraged air elementals to appear, one per round. These attack any and all creatures within sight. The censer cannot be extinguished, and it will burn until either the summoner or the elementals have been killed.

**Chime of Hunger:** This device looks exactly like a *chime of opening.* In fact, it will operate as a *chime of opening* for several uses before its curse is put into operation.

When the curse takes effect, at the DM's discretion, striking the chime causes all creatures within 60 feet to be immediately struck with ravenous hunger. Characters will tear into their rations, ignoring everything else, even dropping everything they are holding in order to eat. Creatures without food immediately available will rush to where the *chime of hunger* sounded and attack any creatures there in order to kill and eat them.

All creatures must eat for at least one round. After that, they are entitled to a saving throw vs. spell on each successive round until they succeed. At that point, hunger is satisfied.

**Chime of Interruption:** This magical instrument can be struck once per turn. Its resonant tone lasts for three full rounds. While the chime is resonating, no spell requiring a verbal component can be cast within a 30-foot radius of it unless the caster is able to make a saving throw vs. breath weapon. After its effects fade, the chime must be rested for at least seven rounds. If it is struck again before this time elapses, no sound issues forth, and a full turn must elapse from that point in time before it can again be sounded.

**Chime of Opening:** A *chime of opening* is a hollow mithral tube about 1 foot long. When it is struck, it sends forth magical vibrations that cause locks, lids, doors, valves, and portals to open. The device functions against normal bars, shackles, chains, bolts, etc. The *chime of opening* also destroys the magic of a *hold portal* spell or even a *wizard lock* cast by a wizard of less than 15th level.

The chime must be pointed at the area of the item or gate which is to be loosed or opened. It is then struck, a clear chiming ring sounds (which may attract monsters), and in one round the target lock is unlocked, the shackle is loosed, the secret door is opened, or the lid of the chest is lifted. If a chest is chained, padlocked, locked, and *wizard locked*, it will take four soundings of the chime of opening to get it open. A *silence* spell negates the power of the device. The chime has 1d8 x 10 charges before it cracks and becomes useless.

**Cloak of Arachnida:** This black garment gives the wearer the ability to climb as if a *spider climb* spell had been placed upon him. When magic is detected for, the cloak

radiates a strong aura of alteration magic.

In addition to the wall-climbing ability, the cloak grants the wearer immunity to entrapment by webs of any sort—the wearer can actually move in webs at a rate equal to that of the spider that created the web, or at a base movement rate of 6 in other cases.

Once per day the wearer of this cloak can cast a double-sized *web*. This operates like the 2nd-level wizard spell.

Finally, the wearer is less subject to the poison of arachnids. He gains a +2 bonus to all saving throws vs. such poison.

**Cloak of the Bat:** Fashioned of dark brown or black cloth, a cloak of this type is not readily noticeable as unusual. It radiates both enchantment and alteration in equal proportions. The cloak bestows a 90% probability of being invisible when the wearer is stationary within a shadowy or dark place. The wearer is also able to hang upside down from the ceiling, like a bat, and to maintain this same chance of invisibility.

By holding the edges of the garment, the wearer is able to fly at a speed of 15 (Maneuver Class: B). If he desires, the wearer can actually transform himself into an ordinary bat—all possessions worn or carried will be part of the transformation—and fly accordingly. Flying, either with the cloak or as an ordinary bat, can be accomplished only in darkness (either under the night sky or in a lightless or near-lightless environment underground). Either of the flying powers is usable for up to one hour at a time, but after a flight of any duration, the cloak will not bestow any flying power for a like period of time.

The cloak also provides a +2 bonus to Armor Class. This benefit extends to the wearer even when he is in bat form.

**Cloak of Displacement:** This item appears to be a normal cloak, but when it is worn by a character its magical properties distort and warp light waves. This displacement of light wave causes the wearer to appear to be 1 foot to 2 feet from his actual position. Any missile or melee attack aimed at the wearer automatically misses the first time. This can apply to first attacks from multiple opponents only if the second and successive attackers were unable to observe the initial displacement miss.

After the first attack, the cloak affords a +2 bonus to protection (i.e., two classes better on Armor Class), as well as a +2 bonus to saving throws versus attacks directed at the wearer (such as spells, gaze weapon attacks, spitting and breath attacks, etc., which are aimed at the wearer of the *cloak of displacement*).

Note that 75% of all *cloaks of displacement* are sized for humans or elves (persons 5 to 6 feet tall), and 25% are sized for persons of about 4 feet in height (dwarves, gnomes, halflings).

**Cloak of Elvenkind:** This cloak of neutral gray cloth is indistinguishable from an ordinary cloak of the same color. However, when it is worn, with the hood drawn up around the head, it enables the wearer to be nearly invisible—the cloak has chameleon-like powers.

Outdoors, in natural surroundings, the wearer of the cloak is almost totally invisible; in other settings, he is nearly so. However, the wearer is easily seen if violently or hastily moving, regardless of the surroundings. The invisibility bestowed is:

| | |
|---|---|
| *Outdoors, natural surroundings* | |
| heavy growth | 100% |
| light growth | 99% |
| open fields | 95% |
| rocky terrain | 98% |
| | |
| *Urban surroundings* | |
| buildings | 90% |
| brightly lit room | 50% |
| | |
| *Underground* | |
| torch/lantern light | 95% |
| infravision | 90% |
| light/continual light | 50% |

Fully 90% of these cloaks are sized for human or elven-sized persons. The other 10% are sized for smaller persons (4 feet or so in height).

**Cloak of the Manta Ray:** This cloak appears to be made of leather until the wearer enters salt water. At that time the *cloak of the manta ray* adheres to the individual, and he appears nearly identical to a manta-ray—there is only a 10% chance that someone seeing the wearer will know he isn't a manta ray.

The wearer can breathe underwater and has a movement rate of 18, like a manta ray (see the *Monstrous Compendium*). The wearer also has an Armor Class of at least six, that of a manta ray. Other magical protections or magical armor can improve that armor value.

Although the cloak does not enable the wearer to bite opponents as a manta ray does, the garment has a tail spine which can be used to strike at opponents behind him. The spine inflicts 1d6 points of damage, and there is no chance of stunning. This attack can be used in addition to other sorts, for the wearer can release his arms from the cloak without sacrificing underwater movement if so desired.

**Cloak of Poisonousness:** This particular cloak is usually made of a wool-like material, although it can be made of leather. It radiates magic. The cloak can be handled without harm, but as soon as it is actually donned, the wearer is stricken stone dead.

A *cloak of poisonousness* can be removed only with a *remove curse* spell—this destroys the magical properties of the cloak. If a *neutralize poison* spell is then used, it may be possible to revive the victim with a *raise dead* or *resurrection* spell, but there is a -10% chance of success because of the poison.

**Cloak of Protection:** The various forms of this marvelous device all appear to be normal garments made of cloth or leather. However, each plus of a *cloak of protection* betters Armor Class by one and adds one to saving throw die rolls. Thus, a *cloak +1* would lower Armor Class 10 (no armor) to Armor Class 9, and give a +1 bonus to saving throw rolls. To determine how powerful a given cloak is, roll percentile dice and consult

the table below:

| D100 Roll | Power |
|---|---|
| 01-35 | cloak +1 |
| 36-65 | cloak +2 |
| 66-85 | cloak +3 |
| 86-95 | cloak +4 |
| 96-00 | cloak +5 |

This device can be combined with other items or worn with leather armor. It cannot function in conjunction with any sort of magical armor, normal armor not made of leather, or with a shield of any sort.

**Crystal Ball:** This is the most common form of scrying device: a crystal sphere about 6 inches in diameter. A wizard can use the device to see over virtually any distance or into other planes of existence. The user of a *crystal ball* must know the subject to be viewed. Knowledge can be from personal acquaintance, possession of personal belongings, a likeness of the object, or accumulated information. Knowledge, rather than distance, is the key to how successful location will be:

| Subject is | Chance of Locating* |
|---|---|
| Personally well known | 100% |
| Personally known slightly | 85% |
| Pictured | 50% |
| Part of in possession | 50% |
| Garment in possession | 25% |
| Well informed of | 25% |
| Slightly informed of | 20% |
| On another plane | -25% |

* Unless masked by magic.

The chance of locating also dictates how long and how frequently a wizard will be able to view the subject.

| Chances of Locating* | Viewing Period | Frequency |
|---|---|---|
| 100% or more | 1 hour | 3 times/day |
| 99% to 90% | 30 minutes | 3 times/day |
| 89% to 75% | 30 minutes | 2 times/day |
| 74% to 50% | 30 minutes | 1 time/day |
| 49% to 25% | 15 minutes | 1 time/day |
| 24% or less | 10 minutes | 1 time/day |

* Unless masked by magic.

Viewing beyond the periods or frequencies noted will force the wizard to roll a saving throw vs. spell each round. A failed saving throw permanently lowers the character's Intelligence by one point and drives him insane until healed.

Certain spells cast upon the user of the *crystal ball* can improve his chances of using the device successfully. These are *comprehend languages, read magic, infravision,* and *tongues.* Two spells—*detect magic* and *detect evil/good*—can be cast through a *crystal ball.* The chance of success is 5% per level of experience of the wizard.

Certain *crystal balls* have additional powers. These spell functions operate at 10th level. To determine whether a *crystal ball* has extra powers, roll percentile dice and consult the table below:

| **D100 Roll** | **Additional Power** |
|---|---|
| 01-50 | *crystal ball* |
| 51-75 | *crystal ball* with *clairaudience* |
| 76-90 | *crystal ball* with *ESP* |
| 91-00 | *crystal ball* with *telepathy** |

*Communication only.

Only creatures with Intelligence of 12 or better have a chance of noticing that they are the subjects of scrying. The base chance is determined by class.

| | |
|---|---|
| Fighter | 2% |
| Paladin | 6% |
| Ranger | 4% |
| Bard | 3% |
| Thief | 6% |
| Spell-User | 8% |

For each point of Intelligence above 12, the creature has an additional arithmetically ascending cumulative chance beginning at 1% (i.e., 1% at Intelligence 13, 3% at 14, 6% at 15, 10% at 16, 15% at 17, 21% at 18 Intelligence, and so on). These creatures also have a cumulative chance of 1% per level of experience or Hit Dice of detecting scrying. Treat monsters as the group as which they make saving throws. Check each round of scrying, and if the percentage or less is rolled, the subject becomes aware of being watched.

A *dispel magic* will cause a *crystal ball* to cease functioning for one day. The various protections against *crystal ball* viewing will simply leave the device hazy and nonfunctioning.

You may allow other scrying devices for clerics and druids—water basins and mirrors are suggested. Have them function as normal *crystal balls.*

**Crystal Hypnosis Ball:** This cursed item is indistinguishable from a normal *crystal ball,* and it radiates magic, but not evil, if detected for. Any wizard attempting to use it will become hypnotized, and a telepathic *suggestion* will be implanted in his mind.

The user of the device will believe that the desired object was viewed, but actually he came partially under the influence of a powerful wizard, lich, or even some power/being from another plane. Each further use brings the *crystal ball* gazer more under the influence of the creature, either as a servant or tool. The DM decides whether to make this a gradual or sudden affair according to the surroundings and circumstances peculiar to the finding of the *crystal hypnosis ball* and the character(s) locating it.

**Cube of Force:** This device can be made of ivory, bone, or any hard mineral. It is about the size of a large die—perhaps 3/4 of an inch across—and enables its possessor to put up a *wall of force* 10 feet per side around his person. This cubic screen is impervious to the attack forms shown on the table below. The cube has 36 charges, and this energy is restored each day. The holder presses one face of the cube to activate or deactivate the field:

| Cube Face | Charge Cost Per Turn/ Movement Rate | Effect |
|---|---|---|
| 1 | 1/1 | keeps out gases, wind, etc. |
| 2 | 2/8 | keeps out nonliving matter |
| 3 | 3/6 | keeps out living matter |
| 4 | 4/4 | keeps out magic |
| 5 | 6/3 | keeps out all things |
| 6 | 0/normal | deactivates |

When the force screen is up, the following attacks cost extra charges from the cube in order to maintain the integrity of the screen. Note that these spells cannot be cast either into or out of the cube:

| Attack Form | Extra Charges |
|---|---|
| Catapult-like missiles | 1 |
| Very hot normal fires | 2 |
| *Horn of blasting* | 6 |
| *Delayed blast fireball* | 3 |
| *Disintegrate* | 6 |
| *Fireball* | 3 |
| *Fire storm* | 3 |
| *Flame strike* | 3 |
| *Lightning bolt* | 4 |
| *Meteor swarm* | 8 |
| *Passwall* | 3 |
| *Phase door* | 5 |
| *Prismatic spray* | 7 |
| *Wall of fire* | 2 |

**Cube of Frost Resistance:** When the cube is activated it encloses an area 10 feet per side, resembling a *cube of force.* The temperature within this area is always 65 degrees F. The field will absorb all cold-based attacks (i.e., *cone of cold, ice storm,* and even white

dragon's breath). However, if the field is subjected to more than 50 points of cold damage in any turn (10 rounds), it collapses and cannot be renewed for one hour. If it receives over 100 points of damage in one turn, the cube is destroyed.

Cold below 0 degrees F. effectively inflicts 2 points of cold damage on the cube for every -10 degrees F., -4 at -11 to -20, etc. Thus, at -40 degrees F. the device can withstand only 42 points of damage.

**Cubic Gate:** Another small cubic device, this item is fashioned from carnelian. The six sides of the cube are each keyed to a plane, one of which will always be the Prime Material. The other five sides/planes can be determined by the DM in any manner he chooses.

If a side of the *cubic gate* is pressed once, it opens a nexus to the appropriate plane. There is a 10% chance per turn that something will come through it looking for food, fun, or trouble.

If a side is pressed twice, the creature so doing, along with all creatures in a 5-foot radius will be drawn through the nexus to the other plane. It is impossible to open more than one nexus at a time.

**Daern's Instant Fortress:** This metal cube is small, but when activated it grows to form a tower 20 feet square and 30 feet high, with arrow slits on all sides and a machicolated battlement atop it. The metal walls extend 10 feet into the ground. The fortress has a small door which will open only at the command of the owner of the fortress—even *knock* spells can't open the door.

The adamantite walls of *Daern's instant fortress* are unaffected by normal weapons other than catapults. The tower can absorb 200 points of damage before collapsing. Damage sustained is cumulative, and the fortress cannot be repaired (although a *wish* will restore 10 points of damage sustained).

The fortress springs up in just one round, with the door facing the device's owner. The door will open and close instantly at his command. People and creatures (except the owner) must be careful not to be caught by the fortress's sudden growth. Anyone so caught sustains 10d10 points of damage.

**Decanter of Endless Water:** This stoppered flask looks ordinary but radiates the aura of magic. If the stopper is removed, and the proper words spoken, a stream of fresh or salt water pours out, as ordered. There are separate command words for the amount as well as the type of water. Water can be made to come forth as follows:

*Stream:* pours out 1 gallon per round

*Fountain:* 5-foot long stream at 5 gallons per round

*Geyser:* 20-foot long stream at 30 gallons per round

The geyser causes considerable back pressure, and the holder must be well braced or be knocked over. The force of the geyser will kill small animals and insects (mice, moles, small bats, etc.). The command word must be given to cease.

**Deck of Illusions:** This set of parchment cards is usually found in an ivory, leather, or wood box. A full deck consists of 34 cards of 4 suits. When a card is drawn at random and thrown to the ground, an illusion with audible and visual components is formed. This

lasts until dispelled. The illusionary creature will not go more than 30 feet away from where the card landed, but will otherwise move and act as if it were real. When the *illusion* is dispelled, the card becomes blank and cannot be used again. If the card is picked up, the *illusion* is automatically and instantly dispelled. The cards in a deck and the *illusions* they bring forth are as follows:

**DECK OF ILLUSIONS Cards**

| **Hearts** | **Diamonds** |
|---|---|
| A:Red dragon | A:Beholder |
| K:Fighter & 4 guards | K:Wizard & apprentice |
| Q:Female Wizard | Q:Night hag |
| J:Druid | J:Harpy |
| 10:Cloud giant | 10:Fire giant |
| 9:Ettin | 9:Ogre mage |
| 8:Bugbear | 8:Gnoll |
| 2:Goblin | 2:Kobold |

| **Spades** | **Clubs** |
|---|---|
| A:Lich | A:Iron golem |
| K:Cleric & 2 underpriests | K:Thief & 3 cohorts |
| Q:Medusa | Q:Pixies |
| J:Paladin | J:Bard |
| 10:Frost giant | 10:Hill giant |
| 9:Troll | 9:Ogre |
| 8:Hobgoblin | 8:Orc |
| 2:Goblin | 2:Kobold |

*Jokers (2):* Illusion of the deck's owner

The cards in a particular deck may differ from these, and a deck may be discovered with some of its cards missing. The *illusions* perform normal routines and respond to attacks—they should be played as if they were real creatures.

**Deck of Many Things:** A *deck of many things* (beneficial and baneful) is usually found in a box or leather pouch. Each deck contains a number of cards, or plaques, made of ivory or vellum. Each is engraved with glyphs, characters, and magical sigils. As soon as one of these cards is drawn from the pack, its magic is bestowed upon the person who drew it, for better or worse.

The character with a *deck of many things* can announce that he is drawing only one card, or he can draw two, three, four, or more. However, the number must be announced prior to drawing the first card. If a jester is drawn, the possessor of the deck may elect to draw two additional cards.

Each time a card is taken from the deck it is replaced (making it possible to draw the same card twice) unless the draw is a jester or fool, in which case the card is discarded from the pack. A *deck of many things* contains either 13 cards (75% chance) or 22 cards (25%). Additional cards in a 22-card deck are indicated below by an asterisk (*) before

their names. To simulate the magical cards you may want to use the normal playing card in the suits indicated in the second column. (The notation is face value, then suit).

# DECK OF MANY THINGS

| Plaque | Playing Card | Effect |
|---|---|---|
| Sun | KD | Gain beneficial miscellaneous magical item and 50,000 XP |
| Moon | QD | You are granted 1d4 wishes |
| Star | JD | Immediately gain 2 points to prime requisite ability |
| * Comet | 2D | Defeat the next monster you meet to gain one level |
| Throne | KH | Gain Charisma of 18 plus a small keep |
| Key | QH | Gain a treasure map plus one magic weapon |
| Knight | JH | Gain the service of a 4th-level fighter |
| * Gem | 2H | Gain your choice of 20 pieces of jewelry or 50 gems |
| **The Void** | KC | Body functions, but soul is trapped elsewhere |
| Flames | QC | Enmity between you and an outer planar creature |
| Skull | JC | Defeat Death or be forever destroyed |
| • Talons | 2C | All magical items you possess disappear permanently |
| Ruin | KS | Immediately lose all wealth and real property |
| Euryale | QS | -3 penalty to all saving throws vs. petrification |
| Rogue | JS | One of your henchmen turns against you |
| * Balance | 2S | Change alignment instantly |
| Jester | Joker | Gain 10,000 XP or two more draws from the deck |
| *Fool | Joker withTrademark | Lose 10,000 experience points and draw again |
| * Vizier | AD | Know the answer to your next dilemma |
| * Idiot | AC | Lose 1d4 points of Intelligence; you may draw again |
| * Fates | AH | Avoid any situation you choose . . . once |
| * **Donjon** | AS | You are imprisoned (see below) |

Upon drawing the last card possible, or immediately upon drawing the cards in bold face (The Void and Donjon), the deck disappears. The cards are explained in greater detail below:

*Sun:* Roll for a miscellaneous magical item (Table 88) until a useful item is indicated.

*Moon:* This is best represented by a moonstone gem with the appropriate number of wishes shown as gleams therein. These wishes are the same as the 9th-level wizard spell and must be used in a number of turns equal to the number received.

*Star:* If the two points would place the character's score at 19, use one or both in any of the other abilities in this order: Constitution, Charisma, Wisdom, Dexterity, Intelligence, Strength.

*Comet:* The player must single-handedly defeat the next hostile monster(s) encountered or the benefit is lost. If successful, the character moves to the mid-point of the next experience level.

*Throne:* If Charisma is 18 already, the individual still gains five on encounter and loyalty reactions. He becomes a real leader in people's eyes. The castle gained will be near a stronghold already possessed (if any).

*Key:* DM must prepare a treasure map. The weapon must be one usable by the character, so use the Magical Weapons Table until a useful item is awarded.

*Knight:* The fighter will join as the character's henchman and loyally serve until death. He has +1 per die (18 maximum) on each ability roll.

*Gem:* This indicates wealth. The jewelry will all be gold set with gems, the gems all of 1,000 gp base value. With this wealth should come experience points equal in value, but never more than needed to increase one level of experience.

**The Void:** This black card spells instant disaster. The character's body continues to function, though he or she speaks like an automaton, but the psyche is trapped in a prison somewhere—in an object on a far planet or plane, possibly in the possession of an outer planar creature. A *wish* will not bring the character back, but the plane of entrapment might be revealed. Draw no more cards.

*Flames:* Hot anger, jealousy, and envy are but a few of the possible motivational forces for the enmity. The enmity of the outer planar creature can't be ended until one of the parties has been slain.

*Skull:* A minor Death appears (AC -4; 33 hit points; strikes with a scythe for 2d8 points, never missing, always striking first in a round). The character must fight it alone—if others help, they get minor Deaths to fight as well. If the character is slain, he is slain forever. Treat the Death as undead with respect to spells. Cold, fire, and electrical energy do not harm it.

*Talons:* When this card is drawn, every magical item owned or possessed by the character is instantly and irrevocably gone.

*Ruin:* As implied, when this card is drawn every bit of money (including all gems, jewelry, treasure, and art objects) is lost. All land and buildings currently owned are lost forever as well.

*Euryale:* The medusalike visage of this card brings a curse only the Fates card or godlike beings can remove. The -3 penalty to all saving throws is otherwise permanent.

*Rogue:* When this card is drawn, one of the character's henchmen will be totally alienated and forever-after hostile. If the character has no henchmen, the enmity of some powerful personage—community or religious—can be substituted. The hatred will be secret until the time is ripe for devastating effect.

*Balance:* As in "weighed in the balance and found wanting," the character must change to a radically different alignment. Failure to act according to the new alignment may bring penalties (as described in Chapter 4, "Effects of Changing Alignment"). Discard the cards.

*Jester:* This card actually makes a pack more beneficial if the experience point award is taken. It is always discarded when drawn, unlike all others except the Fool.

*Fool:* The payment and draw are mandatory!

*Vizier:* This card empowers the character drawing it with the ability to call upon supernatural wisdom to solve any single problem or answer fully any question whenever he so requests. Whether the information gained can be successfully acted upon is another question entirely.

*Idiot:* This card causes the loss of 1d4 points of Intelligence immediately. The

additional draw is optional.

*Fates:* This card enables the character to avoid even an instantaneous occurrence if so desired, for the fabric of reality is unraveled and respun. Note that it does not enable something to happen—it can only stop something from happening. The reversal is only for the character who drew the card, and other party members may have to endure the confrontation.

**Donjon:** This signifies imprisonment—either by spell or by some creature/being, at the DM's option. All gear and spells are stripped from the victim in any case. Whether these items are recoverable is, likewise, up to the DM. Draw no more cards.

**Drums of Deafening:** This item is actually a pair of kettle drums about 1_ feet in diameter. These radiate magic, if so detected, but are otherwise unremarkable. If either is struck nothing happens, but if both are sounded together all creatures within 70 feet are permanently deafened and will remain so until a *heal* spell or similar cure is used to restore shattered eardrums. Furthermore, those within 10 feet of the drums will be stunned by the noise for 2d4 rounds.

**Drums of Panic:** These kettle drums, hemispheres about 1_ feet in diameter, come in pairs and are unremarkable in appearance. If both of the pair are sounded, all creatures within 120 feet (with the exception of those within a "safe zone" of 20 feet radius from the drums) must roll a successful saving throw vs. spell or turn and move directly away from the sound for one full turn.

Each turn thereafter, panicked creatures may attempt to save vs. spell again. Each failure brings another turn of movement away from the *drums of panic.* Movement is at the fastest possible speed while fleeing in panic, and three rounds of rest are required for each turn of fast movement after the saving throw is made. Creatures with an Intelligence of 2 roll saving throws -2 with penalties, and those with 1 or less roll with -4 penalties.

**Dust of Appearance:** This fine powder appears like any other dust unless a careful examination is conducted. This will reveal it to be a very fine, very light, metallic dust. A single handful of this substance flung into the air will coat all objects, making them visible even if they are invisible, out of phase, astral, or ethereal. Note that the dust will also reveal mirror images and projected images for what they are, and it likewise negates the effects of *cloaks of displacement* or *elvenkind* and *robes of blending.* The dust's effect lasts for 2d10 turns.

*Dust of appearance* is typically stored in small silk packets or hollow bone blow tubes. A packet can be shaken out to cover an area with a radius of 10 feet from the user. A tube can be blown in a cone shape, 1 foot wide at the start, 15 feet at the end, and 20 feet long. As few as 5 or as many as 50 containers may be found in one place.

**Dust of Disappearance:** This dust looks just like *dust of appearance,* and it is typically stored in the same manner and quantity. All things touched by it reflect and bend light of all sorts (infrared and ultraviolet included), becoming invisible. Normal sight can't see dusted creatures or objects, nor can they be detected by any normal detection or even magical means. Even *detect invisibility* spells don't work. *Dust of appearance,* however, does reveal people and objects made invisible by *dust of*

*disappearance*.

Invisibility bestowed by the dust lasts for 2d10 turns (1d10+10 if sprinkled carefully upon an object). Attack while thus invisible is possible, always by surprise if the opponent fails to note the invisible thing and always at an Armor Class 4 better than normal (while invisibility lasts). Unlike the *invisibility* spell, *dust of disappearance* remains effective even after an attack is made.

**Dust of Dryness:** This special dust has many uses. If a pinch is cast into a cubic yard of water, the liquid is instantly transformed to nothingness, and the dust pinch becomes a marble-sized pellet, floating or resting where it was cast. If this pellet is hurled down, it breaks and releases the same volume of water. When the dust is sprinkled over an area (such as with a wave of the arm), it dries up as much as 15 cubic feet of water. The dust affects only water (whether fresh, salt, brackish, or alkaline), not other liquids.

If the dust is employed against a water elemental or similar creature, the creature must save vs. spell or be destroyed. A successful save still inflicts 5d6 points of damage upon the water-creature.

A pouch of this dust contains 1d6+4 pinches.

**Dust of Illusion:** This unremarkable powder resembles chalk dust or powdered graphite—unless it is stared at. Stare at it and the dust changes color and form. Put a pinch of *dust of illusion* on a creature and the creature appears to become any other creature of similar shape, with a size variance of 50% (plus or minus) from the actual size of the affected creature. Thus, a halfling could appear as a human of small stature, a human as an ogre, a pegasus as a mule, etc. An unwilling recipient is allowed a saving throw vs. spell to escape the effect.

The individual who sprinkles the magical dust must envision the illusion desired as the powder is shaken over the subject creature. The illusionary power lasts for 1d6+6 hours unless otherwise dispelled.

A typical pouch of this dust contains 1d10+10 pinches of the substance.

**Dust of Sneezing and Choking:** This fine dust appears to be either *dust of appearance* or *dust of disappearance*. If spread, however, it causes those within a 20-foot radius to fall into fits of sneezing and coughing. Those failing a saving throw vs. poison die immediately; those who make their saving throw are disabled by the choking for 5d4 rounds.

**Dust of Tracelessness:** This normal-seeming dust is actually a highly magical powder that can be used to conceal the passage of its possessor and his companions. Tossing a pinch of this dust into the air causes a chamber of up to 1,000 square feet to become as dusty, dirty, and cobweb-laden as if it had been abandoned and disused for a decade.

A pinch of dust sprinkled along a trail causes evidence of the passage of as many as a dozen men and horses to be obliterated for a mile back into the distance. No magical radiation occurs from the use of this dust.

The substance is typically found in a finely sewn pouch containing 1d12 + 12 pinches.

**Efreeti Bottle:** This item is typically fashioned of brass or bronze, with a lead stopper

bearing special seals. A thin stream of smoke is often seen issuing from it. There is a 10% chance that the efreeti will be insane and attack immediately upon being released. There is also a 10% chance that the efreeti of the bottle will only grant three wishes. The other 80% of the time, however, the inhabitant of the bottle will serve normally (see *Monstrous Manual*). When opened, the efreeti issues from the bottle instantly.

**Eversmoking Bottle:** This metal urn is identical to an *efreeti bottle* except that it does nothing but smoke. The amount of smoke is very great if the stopper is pulled out, pouring from the bottle and totally obscuring vision in a 50,000-cubic-foot area in one round. Left unstoppered, the bottle will fill another 10,000 cubic feet of space with smoke each round until 120,000 cubic feet of space is fogged. This area remains smoked until the *eversmoking bottle* is stoppered. When the bottle is stoppered, smoke dissipates normally. The bottle can be resealed only if a command word is known.

**Eyes of Charming:** This item consists of a pair of crystal lenses that fit over the user's eyes. When in place, the wearer is able to *charm persons* merely by meeting their gaze. Those failing a saving throw vs. spell are charmed as per the spell. The user can look at and charm one person per round. Saving throws suffer a -2 penalty if the wearer has both lenses, or a +2 bonus if he wears only one of a pair of *eyes of charming.*

**Eyes of the Eagle:** These items are made of special crystal and fit over the eyes of the wearer. They give vision 100 times greater than normal at distances of 1 foot or more (i.e., the wearer can see at 2,000 feet what a person could normally see at 20 feet). Wearing only one of the pair causes a character to become dizzy and, in effect, stunned, for one round. Thereafter, one eye must always be covered to avoid this sensation of vertigo.

**Eyes of Minute Seeing:** In appearance, *eyes of minute seeing* are much like other magical lenses, but they enable the wearer to see 100 times better at distances of 1 foot or less. Thus, tiny seams, minute marks, even the impression left from writing can be seen. Secret compartments and hidden joints can be noted and the information acted upon. The effect of wearing just one of these crystals is the same as that given for *eyes of the eagle.*

**Eyes of Petrification:** Totally indistinguishable from any other magical lenses, the effect of donning *eyes of petrification* is dramatic: the wearer is instantly turned to stone. Note that 25% of these devices work as the gaze of a basilisk does, including reflection of the eyes turning the gazer to stone.

**Figurines of Wondrous Powers:** There are several kinds of *figurines of wondrous power.* Each appears to be a tiny statuette of an animal an inch or so high. When the figurine is tossed down and a command word spoken, it becomes a living animal of normal size (except when noted below). The animal obeys and serves its owner.

If a *figurine of wondrous power* is broken or destroyed in its statuette form, it is forever ruined, all magic is lost, and it has no power. If slain in animal form, the figurine simply reverts to a statuette and can be used again at a later time.

When a figurine is first found, roll percentile dice and consult the table below to

determine the type of animal the figurine becomes:

| D100 Roll | Figurine Type |
|---|---|
| 01-15 | Ebony fly |
| 16-30 | Golden lions (pair) |
| 31-40 | Ivory goats (trio) |
| 41-55 | Marble elephant |
| 56-65 | Obsidian steed |
| 66-85 | Onyx dog |
| 86-00 | Serpentine owl |

*Ebony Fly:* At a word, this small, carved fly comes to life and grows to the size of a pony. The *ebony fly* is Armor Class 4, has 4+4 Hit Dice, and maneuverability class C. It flies at a movement rate of 48 without a rider, 36 carrying up to 210 pounds weight, and 24 carrying from 211 to 350 pounds weight. The item can be used a maximum of three times per week, 12 hours per day. When 12 hours have passed or when the command word is spoken, the *ebony fly* once again becomes a tiny statuette.

*Golden Lions:* These come in pairs. They become normal adult male lions (Armor Class 5/6, 5+2 Hit Dice, and normal attack modes). If slain in combat, the lions cannot be brought back from statuettes form for one full week; otherwise, they can be used once every day. They enlarge and shrink upon speaking the command word.

*Ivory Goats:* These come in threes. Each goat of this trio looks slightly different from the others, and each has a different function. These are:

- The Goat of Traveling—This statuette provides a speedy and enduring mount of Armor Class 6, with 24 Hit Points and 2 attacks (horns) for 1d8 each (consider as 4 Hit Dice monster). Its movement rate is 48 bearing 280 pounds or less. Its movement is reduced by 1 for every additional 14 pounds of weight carried. The goat can travel a maximum of one day each week—continuously or in any combination of periods totalling 24 hours. At this point, or when the command word is uttered, it returns to its small form for not less than one day before it can again be used.
- The Goat of Travail—When commanded, this statuette becomes an enormous creature, larger than a bull, with sharp hooves (2d4+2/2d4+2), a vicious bite (2d4), and a pair of wicked horns of exceptional size (2d6/2d6). If it is charging to attack, it may only use its horns, but +6 damage is added to each hit on that round (i.e., 8-18 hit points per damage per horn). It is Armor Class 0, has 96 hit points, and attacks as a 16 Hit Dice monster. It can be called to life just once per month up to 12 hours at a time. Its movement rate is 24.
- The Goat of Terror—When called upon with the proper command word, this statuette becomes a destrier-like mount, movement rate 36, Armor Class 2, 48 hit points, and no attacks. However, its rider can employ the goat's horns as weapons (one horn as a *spear +3* (lance), the other as a *sword +6*). When ridden versus an opponent, the *goat of terror* radiates terror in a 30-foot radius, and any opponent in this radius must roll a successful saving throw vs. spell or lose 50% of strength and suffer at least a -3 penalty to attack rolls, all due to weakness caused by terror. When all opponents are slain, or upon the proper command, the goat returns to its statuette form. It can be used once every two weeks.

After three uses, each of the goats loses its magical ability forever.

*Marble Elephant:* This is the largest of the figurines, the statuette being about the size of a human hand. Upon utterance of the command word, a *marble elephant* grows to the size and specifications of a true elephant. The animal created from the statuette is fully obedient to the figurine's owner, serving as a beast of burden, mount, or combatant. The type of *marble elephant* obtained is determined by rolling percentile dice and consulting the table below:

| D100 Roll | Elephant Type |
|---|---|
| 01-09 | Normal Elephant |
| 91-00 | Prehistoric Elephant |

Details of each type of creature are found in the *Monstrous Compendium.* The statuette can be used a maximum of 24 hours at a time, four times per month.

*Obsidian Steed:* An obsidian steed appears to be a small, nearly shapeless lump of black stone. Only careful inspection will reveal that it vaguely resembles some form of quadruped, and of course, if magic is detected for, the figurine will radiate magic. Upon speaking the command word, the near formless piece of obsidian becomes a fantastic mount. Treat it as a heavy war horse with the following additional powers: *fly* (at normal movement speed), go ethereal, go astral. It will allow itself to be ridden, but if the rider is of good alignment, it is 10% likely per use to carry its "master" to the floor of the first layer of the Gray Waste and then return to its statuette form. The statuette can be used for a 24-hour period maximum, once per week. Note that when the obsidian steed becomes astral or ethereal, its rider and gear follow suit. Thus, travel to other planes can be accomplished by means of this item.

*Onyx Dog:* When commanded, this statuette changes into a creature with the same properties as a war dog, except that it is endowed with Intelligence of 8-10, can communicate in the Common tongue, and has exceptional olfactory and visual abilities. The olfactory power enables the *onyx dog* to scent the trail of a known creature 100% of the time if the trail is one hour old or less, -10% per hour thereafter. The dog is subject to being thrown off by false trails, breaks, water, and masking or blocking substances or scents. The visual power enables the *onyx dog* to use 90-foot-range infravision, spotting hidden (such as in shadows) things 80% of the time, normally invisible things 65% of the time, and noting astral, ethereal, and out-of-phase things 50% of the time. For details, see "Dog, War" in the *Monstrous Compendium.* An *onyx dog* can be used for up to six continuous hours, once per week. It obeys only its owner.

*Serpentine Owl:* A *serpentine owl* becomes a normal-sized horned owl (AC 7; move 24; 2d2 hit points; 1d2/1d2 points of damage when attacking) if its possessor so commands, or it can become a giant owl if its owner so requires. The maximum duration of the transformation is eight hours in either case. (However, after three transformations into giant owl form, the statuette loses all of its magical properties.) The normal-sized form of the magical statuette moves with 95% silence, has infravision to 90 feet, can see in normal, above-ground darkness as if it were full light, and twice as well as a human. Its hearing is so keen it can detect a mouse moving up to 60 feet away. Anyone or anything trying to move silently has his (or its) chances reduced 50% against the *serpentine owl* in smaller form. Furthermore, the owl can and will communicate with its owner by

telepathic means, informing him of all it sees and hears within the limitations of its intelligence. If commanded to giant-size, a *serpentine owl* is in all respects the same as a giant owl. For information see "Owl, Giant," in the *Monstrous Compendium.* As with most other *figurines of wondrous power*, this one readily obeys all commands of its owner.

**Flask of Curses:** This item looks like an ordinary beaker, bottle, container, decanter, flask, or jug. It has magical properties, but detection will not reveal the nature of the *flask of curses.* It may contain a liquid or it may emit smoke. When the flask is first unstoppered, a *curse* of some sort will be visited upon the person or persons nearby. After that, it is harmless. The type of *curse* is up to the DM. Suggestions include the reverse of the priest's *bless* spell. Typical curses found on scrolls are recommended for use here as well. Or perhaps a monster could appear and attack all creatures in sight.

**Gauntlets of Dexterity:** A pair of these gloves appears to be nothing more than light-weight leather handwear of the everyday sort. Naturally, the radiate magic if so detected. They size themselves magically to fit any hand, from that of a huge human to that of a small halfling. *Gauntlets of Dexterity* increase overall Dexterity by 4 points if the wearer's Dexterity is 6 or less, by 2 points if at 7-13, and by 1 point if Dexterity is 14 or higher. Furthermore, wearing these gloves enables a nonthief character to pick pockets (45% chance) or open locks (37% chance) as if he were a 4th-level thief. If worn by a thief, they increase these two abilities by 10%.

**Gauntlets of Fumbling:** These gauntlets may be of supple leather or heavy protective material suitable for use with armor (ring, scale, chain, etc.). In the former instance, these will appear to be *gauntlets of dexterity;* in the latter case, they will appear to be *gauntlets of ogre power.* They will perform according to every test as if they were *gauntlets of dexterity* or *ogre power* until the wearer finds himself under attack or in a life and death situation. At that time, the curse is activated, and the wearer will become very clumsy, with a 50% chance each round of dropping anything held in either hand—not from both singly. The gauntlets will also lower overall Dexterity by 2 points. Once the curse is activated, the gloves can be removed only by means of a *remove curse* spell or a *wish.*

**Gauntlets of Ogre Power:** These appear the same as typical handwear for armor. The wearer of these gloves, however, is imbued with 18/00 Strength in his hands, arms, and shoulders. When striking with the hand or with a weapon hurled or held, the gauntlets add a +3 bonus to attack rolls and a +6 bonus to damage inflicted when a hit is made. These gauntlets are particularly desirable when combined with a *girdle of giant strength* and a hurled weapon. They grow or shrink to fit human to halfling-sized hands.

**Gauntlets of Swimming and Climbing:** A pair of these gloves appear to be normal light-weight handwear, but they radiate magic if a detection is attempted. The wearer can have hands of large (human) or small (halfling) size. The wearer can swim as fast as a triton (movement of 15) underwater, and as fast as a merman (movement 18) on the surface. These gauntlets do not empower the wearer to breathe in water.

These gloves give the wearer a very strong gripping ability with respect to climbing.

He can climb vertical or nearly vertical surfaces, upward or downward, with a 95% chance of success. If the wearer is a thief, the gauntlets increase success probability to 99%.

**Gem of Brightness:** This crystal appears to be a long, rough prism. Upon utterance of the proper spell words, however, the crystal emits bright light of one of three sorts.

One command word causes the gem to shed a pale light in a cone-shape 10 feet long, emanating from the gem to a radius of 2_ feet at the end of the beam. This does not discharge any of the energy of the device.

Another command causes the *gem of brightness* to send out a very bright ray 1 foot in diameter and 50 feet long. Any creature struck in the eyes by this beam will be dazzled and unable to see for 1d4 rounds. The target creature is entitled to a saving throw versus magic to determine whether or not its eyes were shut or averted in time. This use of the gem expends one energy charge.

The third manner in which the item may be used is to cause it to flare in a blinding flash of light in a cone 30 feet long with a 5-foot radius at its end. Although this glare lasts but a moment, all creatures within its area must save versus magic or be blinded for 1-4 rounds and thereafter suffer a penalty of -1 to -4 to attack rolls due to permanent eye damage. This use expends five charges.

Dazzling or blindness effects can be reversed by a *cure blindness* spell; eye damage can be cured only by a *heal* spell. The *gem of brightness* has 50 charges and cannot be recharged. A *darkness* spell cast at the gem's owner drains one charge from a *gem of brightness,* or makes it useless for one round, at the option of the gem owner. A *continual darkness* spell causes it to be useless for one day, or to expend five charges, at the option of the owner.

**Gem of Insight:** This jewel appears to be a well-cut stone of not less than 5,000 gp value. If magic is detected for, the gem radiates a faint aura of the enchantment sort. If any character possesses the item, he will begin to feel its power after keeping the gem on his person for one week. At the end of two weeks, the individual will discover that he is able to understand things more easily, have better insight, memory, recall, etc. In fact, possession of the gem on a continuing basis (three or more months) raises the Intelligence and Wisdom of the character by one point each. If for any reason the gem is not kept beyond the three-month period, the additional Intelligence remains, but the additional Wisdom is lost. A *gem of insight* functions once every 50 years. If a character acquires a second gem, the second item has no effect.

**Gem of Seeing:** These finely cut and polished stones are indistinguishable from ordinary jewels, although a *detect magic* will reveal its enchantment. When gazed through, the *gem of seeing* enables the user to detect all hidden, illusionary, invisible, astral, ethereal, or out-of-phase things within viewing range.

Peering through the crystal is time-consuming and tedious. The viewing range of the gem is 300 feet for a cursory scan if only large, obvious objects are being sought, 100 feet if small things are to be seen. It requires one round to scan a 200-square-foot area in a cursory manner, two rounds to view a 100-square-foot area in a careful way. There is a 5% chance each time the gem is used that the viewer will see an hallucination, something

that is not there, or possibly through some real thing as if it were an illusion.

**Girdle of Dwarvenkind:** This belt lowers the wearers' Charisma score by 1 with respect to nondwarves and their ilk. The girdle causes the wearer to gain one point of Charisma with respect to halflings of the stout sort and with respect to all gnomes as well. Dwarves regard the wearer as if he has Charisma two points higher than before. The girdle enables the wearer to understand, speak, and read dwarvish language. The wearer also gains the racial benefits of dwarvenkind (i.e., +1 Constitution, saving throw bonuses based on total Constitution, 60-foot infravision, and detection/determination of approximate depth underground as described in the *Player's Handbook*). All bonuses and penalties apply only as long as the individual actually wears the girdle. Benefits such as additional languages and combat bonuses against giant-type-opponents never apply.

**Girdle of Femininity/Masculinity:** This broad leather band appears to be a normal belt, but, if buckled on, it will immediately change the sex of its wearer to the opposite gender. It then loses all power. There is no sure way to restore the character's original sex, although there is a 50% chance a *wish* might do so, and a powerful being can alter the situation. In other words, it takes a godlike creature to set matters aright with certainty. Ten percent of these girdles actually remove all sex from the wearer.

**Girdle of Giant Strength:** This belt looks similar to ordinary belts, but it is imbued with very powerful magic. When worn it increases the physical prowess of its wearer, giving him the Strength of a giant. (It doesn't cause the wearer to grow to giant size, however!) To determine how strong the wearer becomes and the bonuses he gets, roll percentile dice and consult the table below.

The Strength gained is not cumulative with normal or magical Strength bonuses except in combination with *gauntlets of ogre power* and magical warhammers.

**GIRDLE OF GIANT STRENGTH**

| D100 Roll | Giant Equivalent | Strength Rating | Bonuses To Hit | Damage | Open Doors* |
|---|---|---|---|---|---|
| 01-30 | Hill | 19 | +3 | +7 | 16(8) |
| 31-50 | Stone | 20 | +3 | +8 | 17(10) |
| 51-70 | Frost | 21 | +4 | +9 | 17(12) |
| 71-85 | Fire | 22 | +4 | +10 | 18(14) |
| 86-95 | Cloud | 23 | +5 | +11 | 18(16) |
| 96-00 | Storm | 24 | +6 | +12 | 19(17) |

* The number in parentheses is the number of chances out of 20 for the character to be able to force open a locked, barred, magically held, or *wizard locked* door. Only one attempt can be made per door; if it fails, no further attempts can be made.

The wearer of the girdle is able to hurl rocks and bend bars as if he had imbibed a *potion of giant strength.* These abilities are:

| Rock Hurling | Weight | Base | Rock | Bend Bars |
|---|---|---|---|---|

| Type | Allowance | Range | Damage | Weight.* | /Lift Gates |
|---|---|---|---|---|---|
| Hill | 485 | 8 yds. | 1-6 | 140 | 50% |
| Stone | 535 | 16 yds. | 1-12 | 198 | 60% |
| Frost | 635 | 10 yds. | 1-8 | 156 | 70% |
| Fire | 785 | 12 yds. | 1-8 | 170 | 80% |
| Cloud | 935 | 14 yds. | 1-10 | 184 | 90% |
| Storm | 1,235 | 16 yds. | 1-12 | 212 | 95% |

* Approximate average missile weight.

**Girdle of Many Pouches:** This broad waistbelt seems to be nothing more than a well-made article of dress. However, if magic is detected for, the item will radiate strong enchantment along with a fainter aura of alteration.

Examination will reveal that the girdle has eight small pouches on its inner front surface. In fact, there are a total of 64 magical pouches in the girdle, seven others "behind" each of the eight apparent ones. Each of these pouches is similar to a miniature *bag of holding*, able to contain up to one cubic foot of material weighing as much as 10 pounds. The girdle responds to the thoughts of its wearer by providing a full pouch (to extract something from) or an empty one (to put something in) as desired. Naturally, this item is greatly prized by spellcasters, for it will hold components for many spells and make them readily available.

**Gloves of Missile Snaring:** These gloves radiate slightly of enchantment and alteration if magic is detected for. Once snugly worn, they seem to meld with the hands, becoming almost invisible (undetectable unless within five feet of the wearer). Either or both hands so clad, if not already holding something, can be used to pick many sorts of missiles out of the air, thus preventing possible harm, and enabling the wearer to return a hand-thrown missile to its sender as an attack in a subsequent round.

All forms of small, hand-hurled or weapon-propelled missiles (arrows, bolts, darts, bullets, javelins, axes, hammers, spears, and the like) can be caught. If the weapon magically returns to the attacker, then catching it simply prevents damage, and returning the weapon does not result in an attack.

**Harp of Charming:** This instrument appears identical to all other magical harps. When played by a person proficient in the instrument, the player is able to cast one *suggestion* spell each turn of playing. Optionally, the DM can require a successful proficiency check be made to cast the *suggestion.* On a die roll of 20, the harpist has played so poorly as to enrage all those who hear.

**Harp of Discord:** This harp appears normal in all respects. However, when played, the harp emits painful and discordant tones 50% of the time. The remaining 50% of the time it acts as a *harp of charming.* When discordant, the music has the effect of automatically enraging all those within 30 feet. Those enraged will attack the musicians 50% of the time or the nearest other target the remaining 50% of the time. The harpist is not affected by this frenzy unless he is being attacked. The frenzy lasts for 1d4 + 1 rounds after the music stops.

**Hat of Disguise:** This normal-appearing hat contains a powerful enchantment that allows its wearer to alter his appearance as follows:

*Height:* +/-25% of actual height
*Weight:* +/-50% of actual weight
*Sex:* Male or female
*Hair:* Any color
*Eyes:* Any color
*Complexion:* Any color
*Facial features:* Highly mutable

Thus, the wearer could appear as a comely woman, a half-orc, or possibly even a gnome. If the hat is removed, the disguise is instantly dispelled. The headgear can be used over and over. Note that the hat can be changed (as part of a disguise) to appear as a comb, ribbon, head band, fillet, cap, coif, hood, helmet, etc.

**Hat of Stupidity:** This hat is indistinguishable from any other magical hat, even when most carefully detected by magical means. Only by placing it upon the head can its powers be determined. Of course, once on the head, the wearer will believe that the hat is a beneficial item, for he will be overcome by stupidity. Intelligence is lowered to 7, or by -1 if the wearer has a 7 or lower Intelligence normally. The wearer will always desire to have the hat on—especially when he is engaged in any activity which requires thinking, spellcasting, etc. Without the benefit of a *remove curse* spell or similar magic, the wearer will never be free from the magic of the hat. If released, the wearer's Intelligence returns to its normal level.

**Helm of Brilliance:** When discovered, a *helm of brilliance* appears to be nothing more than an ordinary piece of armor for head protection—a helmet, bassinet, mallet, etc. of iron or steel. When worn, it functions only upon the utterance of a special command word. When so empowered the true nature of the helm is visible to all. The helm is armor of +2 value. It is of brilliant silver and polished steel, and set with 10 diamonds, 20 rubies, 30 fire opals, and 40 opals—each of large size and magicked—which perform as explained below. When struck by bright light, the helm will scintillate and send forth reflective rays in all directions from its crown-like, gem-tipped spikes. The jewels' functions are:

| | |
|---|---|
| Diamond | *Prismatic spray* (as the 7th-level wizard spell |
| Ruby | *Wall of fire* (as the 5th-level priest spell) |
| Fire Opal | *Fireball* (as the 3rd-level wizard spell) |
| Opal | *Light* (as the 1st-level priest spell) |

Each gem can perform its spell-like power just once. The helm may be used once per round. The level of the spell is doubled to obtain the level at which the spell was cast with respect to range, duration, and such considerations. Until all of its jewels are magically expended, a *helm of brilliance* also has the following magical properties when activated.

1. It glows with a bluish light when undead are within 30 feet. This light causes pain and 1d6 points of damage to all such creatures except skeletons and zombies.

2. The wearer may command any sword he wields to become a *sword of flame*. This is in addition to any other special properties it may have. This takes one round to take effect.

3. The wearer is protected as if a double-strength *fire resistance ring* were worn, but this protection cannot be augmented by further magical means.

Once all of its jewels have lost their magic, the helm loses all of its powers. The gems turn to worthless powder when this occurs. Removing a jewel destroys the gem. They may not be recharged.

If a creature wearing the helm is attacked by magical fire and fails to save vs. magical fire, he must attempt another saving throw for the helmet without magical additions. If this is failed, the remaining gems on the helm overload and detonate, inflicting on the wearer whatever accumulated effects the gems would normally have.

**Helm of Comprehending Languages and Reading Magic:** Appearing as a normal helmet, a *helmet of comprehending languages and reading magic* enables its wearer to understand 90% of strange tongues and writings and 80% of magical writings. (Note that these percentage figures apply to whether all or none of the speaking/writing or inscription is understandable. Understanding does not necessarily imply spell use.) This device is equal to a normal helmet of the type accompanying Armor Class 5.

**Helm of Opposite Alignment:** This metal hat looks like a typical helmet. If magic is detected for, it radiates magic of an indeterminate sort. Once placed upon the head, however, its curse immediately takes effect, and the alignment of the wearer is radically altered—good to evil, neutral to some absolute commitment (LE, LG, CE, CG) as radically different from the former alignment as possible. Alteration in alignment is mental and, once effected, is desired by the individual changed by the magic.

Only a *wish* can restore former alignment, and the affected individual will not make any attempt to return to the former alignment. If a paladin is concerned, he must undergo a special quest and *atone* if the curse is to be obliterated. Note that once a *helm of opposite alignment* has functioned, it loses all of its magical properties.

**Helm of Telepathy:** This sturdy metal helmet appears to be a normal piece of headgear, although it will radiate magic if this is detected for. The wearer of a *helm of telepathy* is able to determine the thoughts of creatures within a 60-foot range. There are two limitations on this power: The wearer must know the language used by such creatures (the racial tongue will be used in thoughts in preference to the Common, the Common in preference to alignment languages); and there can't be more than 3 feet of solid stone, 3 inches of iron, or any solid sheeting of lead or gold between the wearer and the creatures.

The thought pick-up is directional. Conscious effort must be made to pick up thoughts. The wearer may communicate by language with any creature within range if there is a mutually known speech, or emotions may be transmitted (empathy) so that a creature will receive the emotional message of the wearer.

If the wearer of the helm wants to implant a *suggestion* (see the 3rd-level wizard spell of that name in the *Player's Handbook*), he can attempt to do so as follows: The creature receiving the *suggestion* gains a saving throw vs. spell with a -1 penalty for every two

points of Intelligence lower than the telepathist, but a +1 bonus for every point of Intelligence higher than the wearer of the helm. If Intelligence is equal, no adjustment is made when the saving throw is rolled.

**Helm of Teleportation:** This is another helmet of normal appearance which will give off a magical aura if detected for. Any character wearing this device may *teleport* once per day, exactly as if he were a wizard—the destination must be known, and a risk is involved. If the wearer is a wizard, the helm's full powers can be employed, for the wearer can then memorize a *teleportation* spell, and use the helm to refresh his memory so he can repeat the spell up to three times upon objects or characters and still be able to personally *teleport* by means of the helm. As long as the wizard retains the *teleportation* spell uncast, he can personally *teleport* up to six times before the memory of the spell is lost, and even then a usage of the helm remains as noted above for all characters.

**Helm of Underwater Action:** When this helm is viewed, it is indistinguishable from a normal helmet. However, detection reveals it to be magical, and the possessor is able to see and breathe underwater. Visual properties of the helm are activated when small lenses are drawn across the device from compartments on either side. These allow the wearer to see five times farther than water and light conditions allow for normal human vision. (Note that weeds, obstructions, and the like block vision in the usual manner.) If the command word is spoken, the *helm of underwater action* creates a globe of air around the wearer's head, and maintains it until the command word is spoken again. Thus, the wearer can breathe freely.

**Heward's Handy Haversack:** A magical backpack of this sort appears quite ordinary—well-made and well-used. It is of finely tanned leather, and the straps have brass hardware and buckles. There are two side pouches, each of which appears large enough to hold about a quart of material, but each is similar to a *bag of holding* and will actually contain material equal to as much as two cubic feet in volume or 20 pounds in weight. The large central portion of the pack can contain up to eight cubic feet or 80 pounds of material. The pack has an even greater power: When the wearer reaches into it for a specific item, that item will always be on top. Thus, no digging around and fumbling is ever necessary to find what the haversack contains. *Heward's handy haversack* and whatever it contains gain a +2 bonus to all saving throws.

**Horn of Blasting:** This magical horn appears to be a normal trumpet, but it radiates magic if a *detect magic* is cast upon it. It can be sounded as a normal horn, but if the correct word is spoken and the instrument is then played, it has the following effects, both of which happen at once:

1. A cone of sound, 120 feet long and 30 feet wide at the end, issues forth from the horn. All within this area must roll a successful saving throw vs. spell. Those saving are stunned for one round and deafened for two. Those failing the saving throw sustain 1d10 points of damage, are stunned for two rounds, and deafened for four.
2. A wave of ultrasonic sound 1 foot wide and 100 feet long issues from the horn. This causes a weakening of such materials as metal, stone, and wood. The weakening is equal in effect to the damage caused by a hit from a missile hurled by a large catapult. See

"Siege Damage" in Chapter 9, and suffer an additional -2 penalty to the die roll described there.

If a *horn of blasting* is used magically more than once per day, there is a 10% cumulative chance that it will explode and inflict 5d10 points of damage upon the person sounding it.

There are no charges upon a horn, but the device is subject to stresses as noted above, and each time it is used to magical effect there is a 2% cumulative chance of the instrument self-destructing. In the latter case, no damage is inflicted on the character blowing it.

**Horn of Bubbles:** This cursed musical instrument will radiate magic if detected for. It appears as a normal horn, or possibly any of the many magical ones. It will sound a note and call forth a mass of bubbles that completely surround and blind the individual who blew the horn for 2d10 rounds, but these bubbles appear only in the presence of a creature actively seeking to slay the character who played the horn, so their appearance might be delayed for a very short or extremely lengthy period.

**Horn of Collapsing:** The horn appears to be a normal musical instrument, perhaps a bugle or warning horn of some sort. If it is sounded improperly (e.g., without first speaking the proper command word) or 10% of the time in any event, the following will result:

*Out-of-doors:* A torrent of fist-sized rocks will strike the individual sounding the horn, 2d6 in number, each causing 1d6 hit points of damage.

*Indoors:* The ceiling overhead will collapse when the device is blown. The character suffers 3d12 points of damage.

*Underground:* The area immediately above the character sounding the horn will fall upon him. The damage is 5d4 points base, multiplied by one for each 10 feet of height which the material above drops (i.e., twice damage if a 20-foot ceiling, three times damage if a 30-foot ceiling, etc.).

Proper use of a *horn of collapsing* enables the character to sound it while it is pointed at the roof overhead from 30 to 60 feet beyond the user. The effect is to collapse a section of roof up to 20 feet wide and 20 feet long (10-foot radius from the central aiming point) which inflicts damage as noted above if indoors or underground only.

**Horn of Fog:** This small, buglelike device allows its possessor to blow forth a thick cloud of heavy fog equal to that of a *fog cloud* spell. Each round spent blowing it creates a 10-foot cube fog cloud. The cloud lasts for 2d4 rounds after the last round of blowing the instrument. Note that should it stop being sounded for a round, a new *fog cloud* will have begun, as the initial one has a life expectancy of but 2d4 more minutes, and will have drifted away from the individual sounding it. The device makes a deep, horn-like noise, the note dropping abruptly to a lower register at the end.

**Horn of Goodness/Evil:** This magical instrument adapts itself to the alignment of its possessor, so it will produce either a good or an evil effect depending on the alignment of its owner. If the possessor is absolutely neutral, the horn will have no power whatsoever. If the owner is good, then blowing the horn has the effect of a *protection from evil* spell

in a 10-foot radius, and this protection will last for 10 rounds. Each friendly/allied creature within this area will be affected as if granted the spell. If the horn is of evil alignment, then the reverse of the noted spell occurs within the area of effect. The horn can be blown once per day.

**Horn of the Tritons:** This device is a conch shell horn which can be blown once per day (except by a triton who can sound it three times daily). A *horn of the tritons* can do any one of the following functions when blown:

1. Calm rough waters in a one mile radius. (This has the effect of dispelling a water elemental or water weird.)
2. Summon 5d4 hippocampi (on a d6 roll of 1 or 2), 5d6 giant sea horses (on a roll of 3-5), or 1d10 sea lions (on a roll of 6) if the character is in a body of water in which such creatures dwell. The creatures summoned will be friendly and will obey, to the best of their understanding, the character who sounded the horn.
3. Panic marine creatures with animal or lower Intelligence, causing them to flee unless each saves vs. spell. Those who do save must take a -5 penalty on their attack rolls for 3d6 turns (30-180 rounds).

Any sounding of a *horn of the tritons* can be heard by all tritons within a three-mile radius.

**Horn of Valhalla:** There are four varieties of this magical device. Each appears to be a normal instrument until its command word is spoken. Then, each summons a number of berserkers from Valhalla to fight for the character who summoned them by blowing the horn. Each variety of horn can be blown just once every seven days. The type of horn, its powers, and who is able to employ it are determined by rolling 1d20 and consulting the table below.

Any character whose group is unable to employ a particular *horn of Valhalla* will be attacked by the berserk fighters summoned when the character blows the horn.

Summoned fighters are Armor Class 4, have 6 hp points per die, and are armed with sword and spear (50%), or battle-axe and spear (50%). They gladly attack anyone the possessor of the horn commands them to fight, until they or their opponents are slain, or six turns have elapsed, whichever occurs first.

Fully 50% of these horns are aligned and will summon only fighters of the horn's alignment. A radical alignment difference will cause the horn blower to be attacked by the fighters.

| D20 Roll | Type of Horn | Berserk Fighters Summoned | Usable By |
|---|---|---|---|
| 1-8 | Silver | 2d4+2 2nd level | any group |
| 9-15 | Brass | 2d4+1 3rd level | P, Wi, R |
| 16-18 | Bronze | 2d4 4th level | P, Wa |
| 19-20 | Iron | 1d4+1 5th level | Wa |

**Horseshoes of Speed:** These iron shoes come in sets of four like ordinary horseshoes, but they are magical and will not wear out. When affixed to a horse's hooves, they double the animal's speed. There is a 1% chance per 20 miles traveled that a shoe will drop off,

and if this passes unnoticed, the horse's speed will drop to 150% normal rate. If two or more are lost, speed returns to normal.

**Horseshoes of a Zephyr:** These iron shoes can be affixed like normal horseshoes, but they allow a horse to travel without actually touching the ground. Among other things, this means water can be crossed—passed over without effort—and movement is possible without leaving tracks on any sort of ground. The horse is able to move at normal speeds, and it will not tire for as long as 12 hours' continuous riding per day when wearing these magical horseshoes.

**Incense of Meditation:** The small rectangular blocks of sweet-smelling *incense of meditation* are indistinguishable from nonmagical incense until one is lit. When burning, the special fragrance and pearly-hued smoke of this special incense are recognizable by any priest of 5th or higher level.

When a priest lights a block of the incense of meditation and spends eight hours praying and meditating nearby, the incense will enable him to gain maximum spell effects. Thus, *cure wounds* spells are always maximum, spell effects are of the broadest area possible, and saving throws against their effects suffer -1 penalties, and when dead are brought back to life, their chance of not surviving is reduced by one-half (rounded down).

When this item of magic is discovered, there will be 2d4 pieces of incense. Each piece burns for eight hours, the effects remain for 24 hours.

**Incense of Obsession:** These strange blocks of incense exactly resemble *incense of meditation.* If meditation and prayer are conducted while the lit *incense of obsession* is nearby, its odor and smoke will cause the priest to become totally confident that his spell ability is superior, due to the magical incense. The priest will be determined to use his spells at every opportunity, even when not needed or when useless. The priest will remain obsessed with his abilities and spells until all are cast or 24 hours have elapsed.

There are 2d4 pieces of this incense normally, each burning for one hour.

**Ioun Stones:** These magical stones always float in the air and must be within 3 feet of their owner to be of any use. When a character first acquires the stones, he must hold each and then release it, so it takes up a circling orbit, whirling and trailing, circling 1d3 feet from his head. Thereafter, the stones must be grasped or netted to separate them their owner. The owner may voluntarily seize and stow the stones (at night, for example) to keep them safe, but he loses the benefits of the stones during that time. 1d10 ioun stones will be found, though there are 14 different kinds, in all. Roll 1d20 to determine the property of each stone, a duplication indicating a stone which is burned out and useless but counts as one of the number found:

Whenever ioun stones are exposed to attack, they are treated as Armor Class -4 and take 10 points of damage to destroy. They save as if they were of hard metal—+3 bonus.

# IOUN STONES

| D20 Roll | Color of Stone | Shape | Effect |
|---|---|---|---|

| | | | |
|---|---|---|---|
| 1 | pale blue | rhomboid | adds 1 point to Str. (18 max.) |
| 2 | scarlet & blue | sphere | adds 1 point to Int. (18 max.) |
| 3 | incandescent blue | sphere | adds 1 point to Wis. (18 max.) |
| 4 | deep red | sphere | adds 1 point to Dex. (18 max.) |
| 5 | pink | rhomboid | adds 1 point to Con. (18 max.) |
| 6 | pink & green | sphere | adds 1 point to Cha. (18 max.) |
| 7 | pale green | prism | adds 1 level of experience |
| 8 | clear | spindle | sustains person without food/water |
| 9 | iridescent | spindle | sustains person without air |
| 10 | pearly white | spindle | regenerates 1 hp/turn |
| 11 | pale lavender | ellipsoid | absorbs spells up to 4th level* |
| 12 | lavender & green | ellipsoid | absorbs spells up to 8th level** |
| 13 | vibrant purple | prism | stores 2d6 levels of spells |
| 14 | dusty rose | prism | gives +1 protection |
| 15-20 | dull gray | any | burned out, "dead" stone |

* After absorbing 10-40 spell levels, the stone burns out and turns to dull gray, forever useless.
** After absorbing 20-80 spell levels, the stone burns out and turns dull gray, forever useless.

**Iron Bands of Bilarro:** When initially discovered, this very potent item will appear to be a rusty iron sphere. Close examination will reveal that there are bandings on the three-inch-diameter globe. Magic detection will reveal strong magic of an indeterminate nature.

When the proper command word is spoken and the spherical iron device is hurled at an opponent, the bands expand and tightly constrict the target creature if a successful, unadjusted attack roll is made. A single creature of up to frost/fire giant-size can be captured thus and held immobile until the command word is spoken to bring the bands into globular form again. Any creature captured in the bands, however, gets the chance to break (and ruin) the bands by successfully *bending bars.* Only one attempt is possible before the bands are so set as to be inescapable.

**Iron Flask:** These special containers are typically inlaid with runes of silver and stoppered by a brass plug bearing a seal set round with sigils, glyphs, and special symbols. When the user speaks a command, he can force any creature from another plane into the container, provided the creature fails its saving throw vs. spell—after magic resistance, if any, is checked. Range is 60 feet. Only one creature at a time can be so contained. Loosing the stopper frees the captured creature.

If the individual freeing the captured creature knows the command word, the creature can be forced to serve for one turn (or to perform a minor service which takes up to one hour). If freed without command knowledge, dice for the creature's reaction. Any attempt to force the same creature into the flask a second time allows it +2 on its saving throw and makes it *very* angry and totally hostile. A discovered bottle might contain:

| D100 Roll | Contents |
|---|---|
| 01-50 | Empty |

| | |
|---|---|
| 51-54 | Air elemental |
| 55-65 | Djinni |
| 66-69 | Earth elemental |
| 70-72 | Efreeti |
| 73-76 | Fire elemental |
| 77-86 | Invisible stalker |
| 87-89 | Rakshasa |
| 90-93 | Salamander |
| 94-97 | Water elemental |
| 98-99 | Wind walker |
| 00 | Xorn |

**Jewel of Attacks:** This gleaming gem radiates magic and appears to be a valuable item. It is cursed, however, and doubles the likelihood of encountering wandering monsters and the likelihood of pursuit when monsters are encountered and the party seeks to evade them by flight. Once picked up, the *jewel of attacks* will always magically return to its finder (secreting itself in pouch, bag, pack, pocket, etc.) until a *remove curse* spell or an *atonement* is cast upon him.

**Jewel of Flawlessness:** This magical gem appears to be a very fine stone of some sort, but if magic is detected for, its magical aura will be noted. When a *jewel of flawlessness* is placed with other gems, it doubles the likelihood of their being more valuable (i.e., the chance for each stone going up in value increases from 10% to 20%). The jewel has from 10-100 facets, and whenever a gem increases in value because of the magic of the *jewel of flawlessness* (a roll of 2 on d10), one of these facets disappears. When all are gone, the jewel is a spherical stone that has no value.

**Keoghtom's Ointment:** This sovereign salve is useful for drawing poison, curing disease, or healing wounds. A jar of the unguent is small—perhaps three inches in diameter and one inch deep—but contains five applications. Placed upon a poisoned wound (or swallowed), it detoxifies any poison or disease. Rubbed on the body, the ointment heals 1d4+8 points of damage. Generally, 1d3 jars will be found.

**Lens of Detection:** This circular prism enables its user to detect minute things at 50% of the ability of *eyes of minute seeing*, but it also enables the possessor to look through the lens and track as a 5th-level ranger does. The *lens of detection* is about six inches in diameter. It must be set in a frame with a handle in order to be properly used.

**Libram of Gainful Conjuration:** This mystic book contains much arcane knowledge for wizards of neutral, chaotic neutral, and lawful neutral alignment. If a character of this class and alignment spends a full week cloistered and undisturbed, pondering its contents, he gains experience points sufficient to place him exactly at the mid-point of the next higher level. When this occurs, the libram disappears—totally gone—and that character can never benefit again from reading such a work.

Any non-neutral wizard reading so much as a line of the libram suffers 5d4 points of damage, falls unconscious for a like number of turns, and must seek a priest in order to

atone and regain the ability to progress in experience (until doing so, he gains no further experience).

Any nonwizard perusing the work must roll a saving throw vs. spell in order to avoid insanity. Characters who go insane can be healed only by a *remove curse* and rest for 1 month or by having a priest *heal* them.

**Libram of Ineffable Damnation:** This work is exactly like the *libram of gainful conjuration* except that it benefits evil wizards. Nonevil characters of that class lose one level of experience merely by looking inside its brass-bound covers, in addition to the other ill effects of perusing as little as one line of its contents.

**Libram of Silver Magic:** This mystic text is the reverse of the *libram of ineffable damnation.* It is greatly beneficial to good wizards, most baneful to nongood ones. Like all magical works of this sort, it vanishes after one week of study, and the character having benefitted from it can never be so aided again.

**Lyre of Building:** The enchantments placed upon this instrument make it indistinguishable from a normal one. Even if its magic is detected, it cannot be told from an ordinary instrument until it is played. If the proper chords are struck, a single use of the lyre will negate the effects of a *horn of blasting*, a *disintegrate* spell, or the effects of up to three rounds of attack from a ram or similar siege item. The lyre can be used in this way once per day.

The lyre is also useful with respect to actual building. Once a week its strings can be strummed so as to produce chords that magically construct buildings, mines, tunnels, ditches, or whatever. The effect produced in but three turns of playing is equal to the work of 100 men laboring for three days.

A check must be made whenever the lyre is played. Under normal circumstances, a false chord is sounded on a roll of 1-3 on 1d20. (Characters with the musical instrument proficiency play a false chord only on a roll of 1.) If the player of the lyre is under physical or mental attack, the chance of a false chord increases to 1-10. (Proficient characters resolve a proficiency check by the standard rules under these circumstances.) If a false chord is struck, all effects of the lyre are 20% likely to be negated.

**Manual of Bodily Health:** The metal-bound *manual of bodily health* appears to be an arcane, rare, but nonmagical book. If a *detect magic* spell is cast upon it, the manual will radiate an aura of magic. Any character who reads the work (24 hours of time over 3-5 days) will know how to increase his Constitution by one point—this involves a special dietary regimen and breathing exercises over a one-month period. The book disappears immediately upon completion of its contents.

The point of Constitution is gained only after the prescribed regimen is followed. In three months the knowledge of the secrets to bodily health will be forgotten. The knowledge cannot be articulated or recorded by the reader. The manual will not be useful to any character a second time, nor will more than one character be able to benefit from a single copy.

**Manual of Gainful Exercise:** This work is similar to the *manual of bodily health*, but

its reading and prescribed course of action will result in the addition of one point to the reader's Strength.

**Manual of Golems:** This compilation is a treatise on the construction and animation of golems. It contains all of the information and incantations necessary to make one of the four sorts of golems.

The construction and animation of a golem takes a considerable amount of time and costs quite a bit as well. During the construction/animation process, a single wizard or priest must have the manual at hand to study, and he must not be interrupted. The type of manual found is determined by rolling 1d20 and consulting the table below:

| D20 Roll | Type of Golem | Construction Time | GP Cost |
|---|---|---|---|
| 1-5 | Clay (P) | 1 month | 65,000 |
| 6-17 | Flesh (W) | 2 months | 50,000 |
| 18 | Iron (W) | 4 months | 100,000 |
| 19-20 | Stone (W) | 3 months | 80,000 |

Once the golem is finished, the writing fades and the book is consumed in flames. When the ashes of the manual are sprinkled upon the golem, the figure becomes fully animated.

It is assumed that the user of the manual is of 10th or higher level. For every level of experience under 10th, there is a cumulative 10% chance that the golem will fall to pieces within one turn of completion due to the maker's imperfect understanding.

If a priest reads a work for wizards, he will lose 10,000-60,000 experience points. A wizard reading a priestly work will lose one level of experience. The DM must decide in advance which it is meant for. Any other class of character will suffer 6d6 hit points of damage from opening the work.

**Manual of Puissant Skill at Arms:** This scholarly study contains expert advice and instruction regarding weapon use and various attack and defense modes. Any single bard or fighter (but not a paladin or ranger) who reads the manual and practices the skills described therein for one month goes up to the mid-point of the next higher level. The book disappears after it is read, and the knowledge therein will be forgotten within three months, so it must be acted upon reasonably quickly.

The fighter cannot articulate what he has read, nor can it be recorded in any fashion. Paladins and rangers will understand the work but cannot benefit from reading it. Priests and thieves cannot understand the *manual of puissant skill at arms.* If a wizard so much as scans a few of its letters, he will be stunned for 1d6 turns and lose 10,000-60,000 experience points. A character can benefit from reading a *manual of puissant skill at arms* only one time.

**Manual of Quickness of Action:** The heavy covers and metal bindings of this compilation will not distinguish it from other semi-valuable, nonmagical texts. This work contains secret formulae that enable a single reader to assimilate the text (three days of uninterrupted study) and then practice the skills detailed therein.

If this practice is faithfully done for one month, the character will gain one point of Dexterity. The manual will disappear immediately after reading, but the contents will be remembered for three months. However, the reader will not be able to articulate or otherwise record the information he retains. Only after the month of training will the Dexterity bonus be gained. Further perusal of a similar text will not add to the same character's Dexterity.

**Manual of Stealthy Pilfering:** This is a guide to expertise at thievery. It is so effective that any thief or bard who reads it and then spends one month practicing the skills therein will gain enough experience points to place him at the mid-point of the next higher level. The text disappears after reading, but knowledge is retained for three months. As with other magical texts of this sort, however, the knowledge cannot be recorded or repeated to others. Any additional reading of a similar manual is of no benefit to the character.

Fighters and wizards are unable to comprehend the work. Priests, rangers, and paladins who read even a word of the book suffer 5d4 points of damage, are stunned for a like number of rounds, and, if a saving throw vs. spell is failed, they lose 5,000-20,000 experience points as well. In addition, such characters must *atone* within one day or lose one point of Wisdom.

**Mattock of the Titans:** This huge digging tool is 10 feet long and weighs over 100 pounds. Any giant-sized creature with a Strength of 20 or more can use it to loosen (or tumble) earth or earthen ramparts in a 100-cubic-foot area in one turn. It will smash rock in a 20-cubic-foot area in the same amount of time. If used as a weapon, it has a +3 bonus to attack rolls and inflicts 5d6 points of damage, exclusive of Strength bonuses (see *girdle of giant strength*).

**Maul of the Titans:** This huge mallet is 8 feet long and weighs over 150 pounds. Any giant-sized creature with Strength of 21 or grater can employ it to drive piles of up to 2 feet in diameter into normal earth at 4 feet per blow—two blows per round. The maul will smash to flinders an oaken door of up to 10-foot height by 4-foot width by 2-inch thickness in one blow—two if the door is heavily bound with iron. If used as a weapon, it has a +2 bonus to attack rolls and inflicts 4d10 hit points of damage, exclusive of Strength bonuses.

**Medallion of ESP:** This appears to be a normal pendant disk hung from a neck chain. It is usually fashioned from bronze, copper, or nickel-silver. The device enables the wearer to concentrate and pick up thoughts in a path 1 foot wide at the medallion and broadening 2 feet every 10 feet from the device the magic reaches, up to an 11-foot maximum width at 50 feet. Note that the wearer cannot send thoughts through a *medallion of ESP*.

Use of the medallion requires a full round. It is prevented from functioning by stone of over 3-foot thickness, metal of over 1/6-inch thickness, or any continuous sheet of lead, gold or platinum of any thickness greater than paint. The medallion malfunctions (with no result) on a roll of 6 on 1d6, and the device must be checked each time is used.

The character using the device can pick up only the surface thoughts of creatures in the ESP path. The general distance can be determined, but all thoughts will be

understandable only if the user knows the language of the thinkers. If target creatures use no language, only the prevailing emotions can be felt. Note that undead and mindless golems have neither readable thoughts nor emotions. The type of medallion found is determined by consulting the table below:

| D20 Roll | Medallion |
|---|---|
| 1-15 | 30' range |
| 16-18 | 30' range with empathy |
| 19 | 60' range |
| 20 | 90' range |

**Medallion of Thought Projection:** This device is like an *ESP Medallion* in every respect, even as to the range at which it functions. However, in addition to picking up the thoughts of creatures, it will broadcast the thoughts of the user to the creatures in the path of the beam, thus alerting them. To prevent projecting thoughts, the user rolls 1d6. On a roll of 6, the thoughts remain a secret.

**Mirror of Life Trapping:** This crystal device is usually about 4 square feet in area, framed in metal, wood, etc. It is usable only by wizards, although it can be affixed to a surface to operate alone by giving a command word. A mirror has from 13 to 18 nonspatial/extradimensional compartments within it. Any creature coming within 30 feet of the device and looking at its reflection must successfully save vs. spell or be trapped within the mirror in one of the cells. A creature not aware of the nature of the device will always see its reflection, the probability dropping to 50% if the creature is aware that the mirror traps life.

When a creature is trapped, it is taken bodily into the mirror. Size is not a factor, but automatons and nonliving matter (including golems but excluding intelligent undead) are not trapped. The possessor of the mirror can call the reflection of any creature that is trapped within to the surface of the mirror, and the powerless creature can be engaged in conversation. If mirror capacity is exceeded, one victim (determined randomly) will be set free in order to accommodate the latest one.

If the mirror is broken, all victims are freed (usually to then attack the possessor of the device). Note that the possessor of a *mirror of life trapping* can speak a command word to free a trapped creature, but the creature's cell must be known. Example: "In the name of Zagig the Great, I command the occupant of the third cell to come forth!"

**Mirror of Mental Prowess:** This magical mirror resembles an ordinary one 5 feet by 2 feet. The possessor who knows the proper commands can cause it to perform as follows:

1. Read the thoughts of any creature reflected therein, even though these thoughts are in an unknown language.
2. Scry with it as if it were a *crystal ball* with *clairaudience*, even being able to view into other planes if the viewer is sufficiently familiar with them.
3. Use it as a portal to visit other places (possibly other planes, as well, at the DM's option) by first scrying them and then stepping through to the place pictured—an invisible area remains on the "other side," and those using the portal can return if the

correct spot can be found. (Note that creatures being scried can step through if the place is found by them!)

4. Once per week it will answer one short question regarding a creature whose image is shown upon its surface.

**Mirror Of Opposition:** This item exactly resembles a normal mirror. If a creature is reflected in its surface, an exact duplicate of the creature will come into being, and this opposite will immediately attack the creature reflected. Note that the duplicate will have all items and powers of the original (including magic), but upon the defeat or destruction of either, the duplicate and his item disappear completely.

**Murlynd's Spoon:** This unremarkable eating utensil is typically fashioned from horn. It radiates a dim aura of conjuration if magic is detected for. If the spoon is placed in an empty container—a bowl, a cup, dish, etc.—the vessel will fill with a thick, pasty gruel. Although this substance has a flavor similar to warm, wet cardboard, it is highly nourishing. It contains everything necessary to sustain any herbivorous, omnivorous, or carnivorous creature. The spoon will produce sufficient gruel each day to feed up to four humans.

**Necklace of Adaptation:** This chain resembles a medallion. The wearer can ignore all sorts of gases that affect creatures through respiration. He can also breathe underwater or even exist in airless space for up to seven days.

**Necklace of Missiles:** This device appears to be nothing but a cheap medallion or piece of valueless jewelry. If a character places it about his neck, however, he can see the necklace as it really is—it is actually a golden chain from which hang a number of golden missile globes. The spheres are detachable only by the wearer, who can easily hurl them up to a 70-foot distance. When they arrive at the end of their trajectory, they burst as a magical *fireball*. The number of missiles, and their respective Hit Dice of *fireball* damage, are determined by rolling 1d20 and consulting the table below:

| D20 Roll | Number of Missiles and Power in Dice | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | **11** | **10** | **9** | **8** | **7** | **6** | **5** | **4** | **3** | **2** |
| 1-4 | - | - | - | - | - | - | 1 | - | 2 | - |
| 5-8 | - | - | - | - | - | 1 | - | 2 | - | 2 |
| 9-12 | - | - | - | - | 1 | - | 2 | - | 4 | - |
| 13-16 | - | - | - | 1 | - | 2 | - | 2 | - | 4 |
| 17-18 | - | - | 1 | - | 2 | - | 2 | - | 2 | - |
| 19 | - | 1 | - | 2 | - | 2 | - | 4 | - | - |
| 20 | 1 | - | 2 | - | 2 | - | 2 | - | 2 | - |

For example, on a roll of 9-12, the necklace will possess seven missiles—one 7-dice, two 5-dice, and four 3-dice fireballs.

The size will show that there is a difference in power between globes, but the number of dice and damage each causes cannot generally be known.

If the necklace is being worn or carried by a character who fails his saving throw versus a magical fire attack, the item must undergo a saving throw check as well. If it fails to save, all remaining missiles detonate simultaneously.

**Necklace of Prayer Beads:** A magical necklace of this sort appears to be a normal piece of nonvaluable jewelry until it is placed about a character's neck. Even then, the true nature of the item will be revealed only if the wearer is a priest (excluding druids and characters otherwise able to use spells of a priestly or druidical nature such as paladins and rangers). The *necklace of prayer beads* consists of 1d6+24 semi-precious (60%) and fancy (40%) stones. The wearer will be 25% more likely to successfully petition his deity to grant desired spells. There will also be 1d4+2 special beads (precious stones, gems of 1,000 gp base value) of the following sort (roll 1d20 for each bead):

| D20 Roll | Results |
|---|---|
| 1-5 | Bead of atonement—as the 5th-level spell of the same name |
| 6-10 | Bead of blessing—as the 1st-level spell of the same name |
| 11-15 | Bead of curing—cures blindness, disease, or serious wounds (as the appropriate spells) |
| 16-17 | Bead of karma—allows the priest to cast his spells as if he were four levels higher (with respect to range, duration, etc.) |
| 18 | Bead of summons—calls the priest's deity (90% probability) to come to him in material form (but it had better be for a good reason!) |
| 19-20 | Bead of wind walking—as the 7th-level spell of the same name |

Each special bead can be used once per day. If the priest summons his deity frivolously, the deity will, at the very least, take the necklace as punishment. The function of each bead is known only when the bead is grasped and a *commune* spell used. All powers of the special beads are lost if they are removed from the necklace.

**Necklace of Strangulation:** A *necklace of strangulation* can be identified only when placed around a character's neck. The necklace immediately constricts and cannot be removed by any means short of a *limited wish* or *wish* spell. The wearer suffers 6 points of strangulation damage per round until he is dead. The necklace remains clasped around the character's throat until he is a dry skeleton. It can be reused.

**Nolzur's Marvelous Pigments:** These magical emulsions enable their possessor to create actual objects simply by depicting their form in two dimensions. The pigments are applied by a stick tipped with bristles, hair, or fur. The emulsion flows from the application to form the desired object as the wielder concentrates on the desired image. One pot of *Nolzur's marvelous pigments* is sufficient to create a 1,000-cubic-foot object by depicting it two-dimensionally over a 100-square-foot surface. Thus, a 10-foot by 10-foot rendition of a pit would result in an actual 10-foot by 10-foot by 10-foot pit; a 10-foot by 10-foot depiction of a room would result in a 10-foot by 10-foot by 10-foot room; and so on.

Only normal, inanimate things can be created—doors, pits, flowers, trees, cells, etc.; monsters, people, golems, and the like can't be created. The pigments must be applied to

a surface (i.e., a floor, wall, ceiling, door, etc.). From 1d4 containers of pigments will be found, usually with a single instrument about 1 foot long with which to apply them. It takes one turn to depict an object with pigments. Objects of value depicted by pigments—precious metals, gems, jewelry, ivory, etc.—will appear to be valuable but will really be made of tin, lead, paste gems, brass, bone, etc. Normal armor or weapons can, of course, be created.

**Pearl of Power:** This seemingly normal pearl of average size and coloration is a potent aid to a wizard. Once a day, a *pearl of power* enables the possessor to recall any one spell as desired, even if the spell has already been cast. Of course, the wizard must have the spell to be remembered among those he most recently memorized. The power of the pearl is determined by rolling percentile dice and consulting the table below:

| D100 Roll | Level of Spell Recalled by Pearl |
|---|---|
| 01-25 | first |
| 26-45 | second |
| 46-60 | third |
| 61-75 | fourth |
| 76-85 | fifth |
| 86-92 | sixth |
| 93-96 | seventh |
| 97-98 | eighth |
| 99 | ninth |
| 00 | recalls two spells of 1st to 6th level (use 1d6) |

One in 20 of these pearls is of opposite effect, causing a spell to be forgotten. These pearls can be gotten rid of only by means of a *wish!*

**Pearl of the Sirines:** This normal-seeming pearl radiates faintly of enchantment if magic is detected for. In any event, the stone will be very beautiful and worth at least 1,000 gp on this basis alone. If it is clasped firmly in hand (or to the breast) and the possessor attempts actions related to the pearl's power areas, he will understand and be able to employ the item.

The pearl enables its possessor to breathe in water as if he were in clean, fresh air. Underwater movement rate is 24. The possessor is immune to ill effects from the poison touch of a sirine. The pearl must be within the general area of the possessor—less than 10 feet distant—to convey its powers to him.

**Pearl of Wisdom:** Although it appears to be a normal pearl, a *pearl of wisdom* causes a priest to increase one point in Wisdom if he retains the pearl for one month. The increase happens at the end of 30 days, but thereafter the priest must keep the pearl with him or the one point gain will be lost.

Note that one in 20 of these magical pearls is cursed to work in reverse, but once the point of Wisdom is lost, the pearl turns to powder; the loss is permanent barring some magical restoration means such as a *wish* or *tome of understanding.*

**Periapt of Foul Rotting:** This engraved gem appears to be a gem of small value. If any character claims it as his own, he will contract a terrible rotting disease which can be removed only by application of a *remove curse* spell followed by a *cure disease* and then a *heal, limited wish*, or *wish* spell. The rotting can also be countered by crushing a *periapt of health* and sprinkling its dust upon the afflicted character. Otherwise, the afflicted loses one point each of Dexterity, Constitution, and Charisma per week beginning one week after claiming the item. When any score reaches 0, the character is dead. Each point lost due to the disease will be permanent regardless of subsequent removal of the affliction.

**Periapt of Health:** This gem appears exactly the same as a *periapt of foul rotting*, but the possessor will be immune from all diseases save that of the latter periapt so long as he has it on his person.

**Periapt of Proof Against Poison:** The *periapt of proof against poison* is indistinguishable from other periapts. The character who has one of these magical gems is allowed a saving throw vs. poison that normally disallow any such opportunity. The Special Save column on the table below lists the saving throw for such poisons. The owner rolls against his normal score for poisons which are usually at a penalty, and gets a plus on all other poison saves. Roll 1d20 and consult the table below to determine the effectiveness of a particular periapt:

| D20 Roll | Special Save | Plus of Periapt |
|---|---|---|
| 1-8 | 19 | +1 |
| 9-14 | 17 | +2 |
| 15-18 | 15 | +3 |
| 19-20 | 13 | +4 |

**Periapt of Wound Closure:** This magical stone looks exactly the same as the others of this ilk. The person possessing it need never fear open, bleeding wounds because the periapt prevents them. In addition, the periapt doubles the normal rate of healing, or allows normal healing of wounds that would not do so normally.

**Philosopher's Stone:** This is a rare and magical substance that appears to be an ordinary, sooty black piece of rock. It radiates faintly of unknown magic. If the stone is broken open, a cavity will be discovered. The interior of this cavity is lined with a quicksilver which enables the transmutation of the base metals (iron and lead) into silver and gold. A wizard will be required to bring about such transmutation, however.

From 50 to 500 pounds of iron can be made into silver; from 10 to 100 pounds of lead can be turned into gold from a single *philosopher's stone*. Transmutation must be made fully upon the first attempt, all the quicksilver being employed at one time.

Two other substances may be found in a *philosopher's stone* instead of the quicksilver described above, at the DM's discretion. If he decides there's something different in the stone, there is a 75% chance that a greenish, crystalline salt will be found. This allows the

manufacture of 1d4 *potions of longevity*. There is a 25% chance that a white powder will be found in a stone. When mixed with a *potion of longevity*, this can actually restore life to a dead human or demihuman. The mixture must be administered internally within one week of the creature's demise (see the *raise dead* spell).

**Phlactery of Faithfulness:** There is no means to determine what function this device performs until it is worn. The wearer of a *phylactery of faithfulness* will be aware of any action or item that will adversely affect his alignment and standing with his deity. He acquires this information prior to performing the action or becoming associated with such an item, if a moment is taken to contemplate the action. The phylactery must be worn normally by the priest, of course.

**Phylactery of Long Years:** This device slows the aging process by one-quarter for as long as the priest wears it. The reduction applies even to magical aging. Thus, if a priest dons the phylactery at age 20, he will age nine months in every 12 that pass; in 12 chronological years, he will have aged just nine years, and will be 29 (physically) rather than 32. One in 20 of these devices is cursed to operate in reverse.

**Phylactery of Monstrous Attention:** While this arm wrapping appears to be a beneficial device, it actually draws the attention of supernatural creatures of exactly the opposite alignment of the priest wearing it. This results in the priest being plagued by powerful and hostile creatures whenever he is in an area where such creatures are or can appear. If the priest is of 10th or higher level, the attention of his deity's most powerful enemy will be drawn, causing this being to interfere directly. Once donned, a *phylactery of monstrous attention* cannot be removed without a *wish* spell and then a quest must be performed to re-establish the priest in his alignment.

**Pipes of Haunting:** This magical item appears to be a small set of pan pipes. If checked, it faintly radiates magic. When played by a person skilled in music, the pipes create an eerie, spell-binding tune. A listener will think the source of the music is somewhere within 30 feet of the musician. Those hearing the tune and not aware of the piper must make a saving throw vs. spell. Those who fail become nervous and scared. All morale checks are made with a -2 penalty and the listeners suffer a -1 penalty to all surprise rolls.

**Pipes of Pain:** These appear to be like any other standard or magical set of pipes with nothing to reveal their true nature. When played by a character proficient in music, the pipes create a wondrous melody, surpassing any sound ever heard. All within 30 feet, including the piper, must save vs. spells or be enchanted by the sound. So long as the pipes are played, no one will attack or attempt any action if affected.

As soon as the piping stops, all those affected will be stricken by intense pain at even the slightest noise, causing 1d4 points of damage per round. This pain will last for 2d4 rounds. Thereafter, the least noise will cause the victim to wince, reducing the character's attack and saving throw rolls -2. The effect can be negated only by a *forget* or *remove curse* spell.

**Pipes of Sounding:** When played by a character proficient in music, these pipes can be used to create a variety of sounds. To a listener the source of the sound will seem to be anywhere within 60 feet of the piper. The possible sounds that can be created are: wind blowing, laughter, whistling, bird calls, moaning, footsteps, crying, mumbled voices, screams, running water, or creaking. (Note: The DM can rule that other similar sounds are possible.)

**Pipes of the Sewers:** These wooden pipes appear ordinary, but if the possessor learns the proper tune, he can attract from 10-60 (1d6 x 10) giant rats (80%) or 30-180 (3d6 x 10) normal rats (20%) if either or both are within 400 feet. For each 50-foot distance the rats have to travel, there will be a one-round delay. The piper must continue playing until the rats appear, and when they do so, they are 95% likely to obey the piper so long as he continues to play. If for any reason the piper ceases playing, the rats summoned will leave immediately. If they are called again, it is 70% probable that they will come and obey, 30% likely that they will turn upon the piper.

If the rats are under control of a creature such as a vampire, the piper's chance of taking over control is 30% per round of piping. Once control is assumed, there is a 70% chance of maintaining it if the other creature is actively seeking to reassert its control.

**Portable Hole:** A portable hole is a circle of magical cloth spun from the webs of a phase spider interwoven with strands of ether and beams of Astral plane luminaries. When opened fully, a portable hole is 6 feet in diameter, but it can be folded as small as a pocket handkerchief. When spread upon any surface, it causes an extra-dimensional hole 10 feet deep to come into being. This hole can be "picked up" from inside or out by simply taking hold of the edges of the magical cloth and folding it up. Either way, the entrance disappears, but anything inside the hole remains.

The only oxygen in the hole is that allowed by creation of the space, so creatures requiring the gas cannot remain inside for more than a turn or so without opening the space again by means of the magical cloth. The cloth does not accumulate weight even if its hole is filled (with gold, for example). Each *portable hole* opens on its own particular nondimensional space. If a *bag of holding* is placed within a *portable hole*, a rift to the Astral Plane is torn in the space, and the bag and the cloth are sucked into the void and forever lost. If a *portable hole* is placed within a *bag of holding*, it opens a gate to another plane, and the hole, bag, and any creatures within a 10-foot radius are drawn to the Astral Plane, the *portable hole* and *bag of holding* being destroyed in the process.

**Pouch of Accessibility:** This normal-seeming pouch is actually a strongly magicked item which can contain up to 300 lbs. in 30 specially constructed pockets within it. Each pocket, in turn, holds a maximum of 10 lbs., or one cubic foot of volume, whichever is reached first.

This device also enables the possessor to open it and call forth the item(s) desired. Merely speaking the name of a desired object causes it to appear at the top of the pouch, ready for instant grasp.

These items are similar to *bags of holding* and *portable holes*, and the strictures about placement within such magical spaces apply fully. The pouch weighs 1 lb. empty and 4 lbs. when filled.

**Quaal's Feather Token:** *Feather tokens* are small magical devices of various forms to suit special needs. The types of tokens are listed below. Other token-types can be created as desired. Each token is usable once. To determine the type of *feather token* discovered, consult the following table:

| D20 Roll | Tokens |
|---|---|
| 1-4 | Anchor |
| 5-7 | Bird |
| 8-10 | Fan |
| 11-13 | Swan Boat |
| 14-18 | Tree |
| 19-20 | Whip |

*Anchor:* a token useful to moor a craft in water so as to render it immobile for up to one full day.

*Bird:* a token that can be used to drive off hostile avian creatures or as a vehicle of transportation equal to a roc of the largest size (one-day duration).

*Fan:* a token that forms a huge flapping fan which can cause a strong breeze in an area large enough to propel one ship. This wind is not cumulative with existing wind speeds—if there is already a strong breeze blowing, this cannot be added to it to create a gale. It can, however, be used against it to create an area of relative calm or lesser winds (though this will not affect wave size in a storm, of course). The fan can be used up to eight hours a day. It will not function on land.

*Swan boat:* a token that forms a huge swanlike boat capable of swimming at a rate of 24, and carrying eight horses and gear or 32 men or any equivalent combination (one-day duration).

*Tree:* a token that causes a great oak to spring into being (6-foot diameter trunk, 60-foot height, 40-foot top diameter).

*Whip:* a token that causes a huge leather whip to appear and be wielded against any opponent desired (+1 weapon, 9th-level fighter's attack roll, 1d6+1 points damage plus a saving throw vs. spell or be bound fast for 1d6+1 rounds) for up to six turns. (See *Sword of dancing*).

**Quiver of Ehlonna:** This appears to be a typical arrow container capable of holding about 20 arrows. It has an aura of alteration if magic is detected for, and examination shows that it has three distinct portions. The first and smallest one can contain up to 60 objects of the same general size and shape as long bow arrows. The second, slightly longer, compartment will hold up to 18 objects of the same general size and shape as a javelin. The third and longest portion of the case will contain as many as six objects of the same general size and shape as a bow—spears or staves, for example. Such a quiver is always found empty, but once the owner has filled it, he can command the quiver to produce any stored items he wishes each round.

**Robe of the Archmagi:** This normal-appearing garment can be white (45%—good alignment), gray (30%—neutral, but neither good nor evil, alignment), or black

(25%—evil alignment). Its wearer gains the following powers:

1. It serves as armor equal to AC 5.
2. The robe confers a 5% magic resistance.
3. It adds a +1 bonus to saving throw scores.
4. The robe reduces the victim's magic resistance and saving throws by 20%/-4 when the wearer casts any of the following spells: *charm monster, charm person, friends, hold monster, hold person, polymorph other, suggestion.*

The color of a *robe of the archmagi* is not determined until it is donned by a wizard. If a white robe is donned by an evil wizard, he suffers 11d4+7 points of damage and loses 18,000-51,000 experience points at the DM's discretion. The reverse is true with respect to a black robe donned by a good aligned wizard. An evil or good wizard putting on a gray robe, or a neutral wizard donning either a white or black robe, incurs 6d4 points damage, 6,000-24,000 experience points loss, and the wearer will be moved toward the alignment of the robe by its enchantments (i.e., he will feel himself urged to change alignment to that of the robe, and he will have to make an effort to maintain his old alignment).

**Robe of Blending:** This ordinary-appearing robe cannot be detected by magical means. When it is put on, however, the wearer will know that the garment has very special properties. A *robe of blending* enables its wearer to appear to be part of a rock wall or a plant—whatever is appropriate. It can even make the wearer appear to be a creature of his choice.

The robe does have its limits: It will not make its wearer appear to be more than twice normal height or less than one-half normal. It does not impart vocal capabilities—either understanding or imitating the creature the wearer looks like. (In situations where several different forms are appropriate, the wearer is obliged to state which form he wishes the robe to camouflage him as.)

Creatures with exceptional (15+) or better Intelligence have a 1% per Intelligence point chance of detecting something amiss when they are within 30 feet of someone disguising himself with a *robe of blending.* Creatures with low Intelligence or better and 10 or more levels of experience or Hit Dice have a 1% chance per level or Hit Die of likewise noting something unusual about a robe-wearing character. (The latter is cumulative with the former chance for detection, so an 18 Intelligence wizard of 12th level has a 30% chance—18% + 12%—of noting something amiss.) After an initial check per eligible creature, successive checks should be made each turn thereafter, if the same creatures are within the 30-foot range. All creatures acquainted with and friendly to the wearer will see him normally.

**Robe of Eyes:** This valuable garment appears to be a normal robe until it is put on. Its wearer is able to "see" in all directions at the same moment due to scores of magical "eyes" which adorn the robe. The wearer also gains infravision to a range of 120 feet, and the power to see displaced or out-of-phase objects and creatures in their actual positions. The *robe of eyes* sees all forms of invisible things within a 240-foot normal vision range (or 120 feet if *infravision* is being used).

*Invisibility, dust of disappearance, robes of blending,* and *improved invisibility* are not proof against observation, but astral or ethereal things cannot be seen by means of this robe. Solid objects obstruct even the robe's powers of observation. Illusions and secret doors also can't be seen, but creatures camouflaged or hidden in shadows are easily detected, so ambush or surprise of a character wearing a *robe of eyes* is impossible.

Finally, the robe enables its wearer to track as if he were a 12th-level ranger. A *light* spell thrown directly on a *robe of eyes* will blind it for 1d3 rounds, a *continual light* for 2d4 rounds.

**Robe of Powerlessness:** A *robe of powerlessness* appears to be a robe of another sort, and detection will discover nothing more than the fact that it has a magical aura. As soon as a character dons this garment, he drops to 3 Strength and 3 Intelligence, forgetting all spells and magical knowledge. The robe can be removed easily, but in order to restore mind and body, the character must have a *remove curse* spell and then a *heal* spell placed upon him.

**Robe of Scintillating Colors:** This garment appears quite normal, but a magical aura is detectable. Only a wearer with an Intelligence of 15 or higher and a Wisdom of 13 or more can cause a *robe of scintillating colors* to function. If Intelligence and Wisdom are sufficient, the wearer can cause the garment to become a shifting pattern of incredible hues, color after color cascading from the upper part of the robe to the hem in sparkling rainbows of dazzling light.

This effect sheds light in a 40-foot diameter sphere, and it has the power to hypnotize opponents, making them unable to attack the wearer. A full round passes before the colors begin "flowing" on the robe. Each round after that, any opponent who fails a saving throw vs. spell (or magic resistance check, then save) will stand hypnotized and transfixed for 1d4+1 rounds. Even when this effect wears off, additional saves must be made in order to attack.

Furthermore, every round of continuous scintillation of the robe makes the wearer 5% more difficult to hit with missile attacks or hand-held or body weaponry (hands, fists, claws, fangs, horns, etc.) until a maximum of 25% (-5) is attained—five continuous rounds of the dazzling play of hues.

After the initial round of concealment, the wearer is able to cast spells or engage in all forms of activity that do not require movement of more than 10 feet from his starting position. In noncombat situations, the robe simply hypnotizes creatures failing their saving throws vs. spell for 1d4+1 turns.

**Robe of Stars:** This rather ordinary-appearing garment seems typical of apparel worn by a wizard. However, it will radiate a strong aura of alteration and evocation if examined for magic. The robe enables its wearer to travel physically on the Astral Plane, along with all that he is wearing or carrying. The garment also enables the wearer to survive comfortably in the void of outer space. In other situations, the robe gives its wearer a +1 bonus to all saving throws.

The robe is embroidered with stars, and the wearer can use up to six of these as missile weapons, provided he is proficient with darts as a weapon. Each star is a throwing weapon of +5 value, both to hit and damage. Maximum range is 60 feet and base damage

is 2d4 points per hit. The special star weapons are located on the chest portion of the robe. If the wearer does not use all of these missiles, they will replace themselves magically at the rate of one per day. If all six are used, all of the robe's traveling and missile powers are gone forever.

**Robe of Useful Items:** This appears to be an unremarkable item of apparel, but a wizard who dons it will note that it is adorned with small cloth patches of various shapes. Only the wearer of the robe can see, recognize, and detach these patches. One patch can be detached each round. Detaching a patch causes it to become an actual item, as indicated below. A *robe of useful items* always begins with two each of the following patches:

dagger
lantern (filled and lit)
mirror (large)
pole (10-foot length)
rope (50-foot coil)
sack (large)

In addition, the robe will have 4d4 items which must be diced for. Roll 4d4 to determine how many additional items a robe has and then percentile dice to determine specific items:

| D100 Roll | Result |
|---|---|
| 01-08 | Bag of 100 gold pieces |
| 09-15 | Coffer (_' x _' x 1'), silver (500 gp value) |
| 16-22 | Door, iron (up to 10 feet wide and 10 feet high and barred on 1 side—must be placed upright, will attach and hinge itself) |
| 23-30 | Gems, 10 of 100 gp value each |
| 31-44 | Ladder, wooden (24 feet long) |
| 45-51 | Mule (with saddle bags) |
| 52-59 | Pit (10 cubic feet), open |
| 60-68 | *Potion of extra healing* |
| 69-75 | Rowboat (12 feet long) |
| 76-83 | Scroll of one randomly determined spell |
| 84-90 | War dogs, pair |
| 91-96 | Window (2 feet by 4 feet—up to 2 feet deep) |
| 97-00 | Roll twice more |

Multiple items of the same kind are permissible. Once removed, items are never replaced.

**Robe of Vermin:** This magical-seeming garment will radiate a dim aura of enchantment if magic is detected for. The wearer will notice nothing unusual when the robe is donned, and it will actually convey some magical power at that time—*protection +1*, for example. However, as soon as the wearer is in a situation requiring concentration and action against hostile opponents, the true nature of the garment will be revealed: The

wearer immediately suffers a multitude of bites from the insects that magically infest the garment. He must cease all other activities in order to scratch, shift the robe, and generally show signs of extreme discomfort from the movement and biting of these pests.

The wearer is unable to gain initiative, and has a 50% chance of being unable to complete a spell due to the vermin. All other actions and attack forms requiring manual/locomotive/somatic activity are at half normal probability. The garment can't be removed except by means of a *remove curse* spell or similar magic.

**Rope of Climbing:** A 60-foot long *rope of climbing* is no thicker than a slender wand and weighs no more than three pounds, but it is strong enough to support 3,000 pounds. Upon command, the rope will snake forward, upward, downward, or any other direction at 10 feet per round and attach itself securely wherever desired. It will return or unfasten itself in a similar manner. A *rope of climbing* can also be commanded to knot itself. This causes large knots to appear at 1-foot intervals along the rope. Knotting shortens the rope to a 50-foot length until the knots are untied. One end of the rope must be held by a character when its magic is invoked.

**Rope of Constriction:** This rope looks exactly like a *rope of climbing* or *entanglement.* As soon as it is commanded to perform some action, however, it lashes itself about the neck of the character holding it, and from 1d4 others within 10 feet. Everyone caught by the rope is entitled to a saving throw vs. spell. Anyone failing the saving throw is strangled and crushed (2d6 hit points of damage), and the rope continues to constrict until a *dispel magic* is cast upon it.

Creatures entwined by the rope cannot cast spells or free themselves. An unentangled character can cast a *dispel magic* or try to cut through the rope—it is AC -2 and takes 22 points of damage to cut through; all hit points must be inflicted by the same creature (not the one entangled).

**Rope of Entanglement:** A *rope of entanglement* looks just like any other magical rope. Upon command, the rope lashes forward 20 feet or upward 10 feet to entangle up to eight man-sized creatures. For purposes of entanglement, creatures of different sizes are assigned values, as follows:

| **Size** | **Value** |
|---|---|
| Tiny | .33* |
| Small | .5* |
| Medium | 1 |
| Large | 3 |
| Huge | 4 |
| Gigantic | 8 |

* Round up.

Add the values of all creatures entangled to determine how many are affected by the rope. For example, the rope could entangle up to 24 Tiny creatures or 2 Huge creatures. Any combination of sizes is possible as long as the total value doesn't exceed eight.

The rope cannot be broken by sheer strength—it must be hit by an edged weapon. The

rope is AC -2 and takes 22 points of damage to cut through; all damage must be inflicted by the same creature (not the one entangled). Damage under 22 points will repair itself in six turns. If a *rope of entanglement* is severed, it is destroyed.

**Rug of Smothering:** This finely woven carpet resembles a *carpet of flying* and will detect as magical. The character seating himself upon it and giving a command will be surprised, however, as the *rug of smothering* rolls itself tightly around him, suffocating him in 1d4+2 rounds. The rug cannot be physically prevented from wrapping itself, and it can be prevented from smothering its victim only by the casting of any one of the following spells: *animate object, hold plant, wish.*

**Rug of Welcome:** A rug of this type appears exactly the same as a *carpet of flying*, and it performs the functions of one (6-foot by 9-foot size), but a *rug of welcome* has other, additional powers. Upon command it will function as a *rug of smothering*, entrapping any creature up to ogre-size which steps upon it. A *rug of welcome* can also elongate itself and become as hard and strong as steel, the maximum length being 27 feet by 2 feet. In this form, it can serve as a bridge, barricade, etc. In this latter form it is AC 0 and will take 100 points of damage to destroy. Finally, the possessor need only utter a word of command, and the rug will shrink to half size for easy storage and transportation.

**Saw of Might Cutting:** This notched adamantite blade is 12 feet long and over 1 foot wide. It requires 18/00 or greater Strength to operate alone, or two people of 17 or greater Strength working in tandem. The blade will slice through a 1-foot diameter tree in three rounds, a 2-foot thick hardwood tree in one turn, or a 4-foot thick trunk in three turns. After six turns (cumulative) of cutting with the saw, the character or characters must rest for six turns before doing any further work.

**Scarab of Death:** This small pin appears to be any one of the various beneficial amulets, brooches, or scarabs. However, if it is held for more than one round or placed within a soft container (bag, pack, etc.) within 1 foot of a warm, living body for one turn, it changes into a horrible burrowing beetle-like creature. The thing will tear through any leather or cloth, burrow into flesh, and reach the victim's heart in a single round, causing death. It then returns to its scarab form. (Placing the scarab in a container of hard wood, ceramic, bone, ivory, or metal will prevent the monster from coming to life.)

**Scarab of Enraging Enemies:** When one of these devices is displayed and a command uttered, all intelligent hostile creatures within a 40-foot radius must successfully save vs. spell or become enraged. Those whose saving throws succeed may perform normally; enraged enemies fly into a berserk fury and attack the nearest creature, even their own comrades (+1 bonus to attack rolls, +2 bonus to damage, -3 to their own Armor Class).

The rage lasts for 1d6+6 rounds, and during this period, the enraged creatures will attack continually, without reason or fear, moving on to attack other creatures nearest them if initial opponents are slain. A scarab of this type contains from 1d6+18 charges.

**Scarab of Insanity:** This item is indistinguishable from any other amulet, brooch, or

scarab. When displayed and a command word is spoken, all other creatures within a 20-foot radius must save vs. spell with a -2 penalty (and -10% penalty to any magic resistance as well). Those failing the save are completely insane for 1d4+8 rounds, unable to cast spells or use reasoning of any sort (treat as a *confusion spell* with no chance for acting in a non-confused manner). The scarab has 1d8+8 charges.

**Scarab of Protection:** This device appears to be any one of the various magical amulets, stones, etc. It gives off a faint magical aura, however, and if it is held for one round, an inscription will appear on its surface letting the holder know it is a protective device.

The possessor gains a +1 bonus to all saving throws vs. spell. If no save is normally possible, he gets a one in 20 chance of saving, adjusted by any other magical protections that normally give bonuses to saving throws. Thus, this device allows a saving throw vs. spell at base 20 against *magic missile* attacks, for example. If the target also has a +4 bonus for magical armor and a +1 bonus for a *ring of protection*, any roll of 15 or better would indicate that the missiles did no damage.

The scarab can also absorb up to 12 level-draining attacks (two level drains count as two absorbings), *death touches, death rays*, or *fingers of death.* However, upon absorbing 12 such attacks the scarab turns to powder—totally destroyed.

One in 20 of these scarabs will be a cursed item, giving the possessor a -2 penalty to his saving throws. However, one in five of these cursed items will become a +2 scarab if the curse is removed by a cleric of 16th-level or higher. In this case, the scarab will have absorption capability of 24 rather than 12.

**Scarab Versus Golems:** This magical pin enables its wearer to detect any golem within 60 feet, although he must concentrate in order for the detection to take place. Furthermore, the scarab enables its possessor to combat a golem, with hand-held or missile weapons, as if it were a normal monster, with no special defenses. Each scarab has this effect with regard to a different sort of golem. Roll percentile die and consult the table below:

| D100 Roll | Type(s) of Golem Affected by Scarab | XP Value |
|---|---|---|
| 01-30 | Flesh | 400 |
| 31-55 | Clay | 500 |
| 56-75 | Stone | 600 |
| 76-85 | Iron | 800 |
| 86-95 | Flesh, Clay, Wood | 900 |
| 96-00 | Any golem | 1,250 |

**Sheet of Smallness:** A magical item of this sort appears to be nothing more than a well-made piece of material—possibly some sort of covering or sheet woven of very fine linen or silk. One side will have a larger pattern than the other, or perhaps one side will be white, the other black. In any event, there will be an aura of alteration detectable from this cloth if magic is checked for.

This item causes any magical item wrapped within it to shrink to 1/12 its normal size

and weight. If the item is then wrapped in the sheet so as to be touching the reverse side of the material, it will grow back to its normal size and weight. Note that this item has no effect on artifacts, relics, or living material—it affects only non-living, ordinary magical items—and no item shrunk in this fashion is functional or usable while in reduced form. Change in size requires two rounds to accomplish, either in shrinking or restoring to normal size.

**Slippers of Spider Climbing:** These shoes appear unremarkable, although they will give off a faint aura of alteration magic if detected for. When worn, a pair of these slippers enable the individual to move at a 60-foot rate on vertical surfaces or even upside down along ceilings, with hands free to do whatever the wearer desires. Extremely slippery surfaces—ice, oiled, or greased surfaces—make these slippers useless.

**Smoke Powder:** This magical substance is similar, though not identical, to gunpowder. It is extremely scarce and, due to its volatile nature, dangerous to fabricate. *Smoke powder* will be available in a campaign only if the DM allows it. If the DM doesn't want it in the campaign, it simply doesn't exist.

*Smoke powder* is commonly found divided into two separate components—one, a steely-blue granular substance, the other, a fine white powder. Alone, each component is inert and harmless. However, when equal portions of the two are mixed together, the *smoke powder* is complete and dangerous.

When touched by a flame, the mixed powder explodes with great force, noise, and smoke. The size and force of the explosion varies according to the amount of *smoke powder* used. A small, measured amount (a spoonful of each component) causes 1d2 points of damage. Such an amount is sufficient for a large firecracker or a single charge of an arquebus (if these optional weapons exist in the campaign). Increasing the amount increases the damage proportionally—doubling causes 2d2 points of damage, tripling causes 3d2, and so on.

An explosion capable of causing 30 points of damage (15 charges) has a 5-foot radius. Blasts capable of causing 50 or more points of damage (25 or more charges) have a radius of 15 feet, and affect items and fortifications as would a giant's blow.

When discovered, a pouch of *smoke powder* contains 3d6 charges. Charges from several pouches of *smoke powder* can be combined to create bigger, more damaging explosions.

**Sovereign Glue:** This pale amber substance is thick and viscous. Because of its particular powers, it can be contained only within a flask coated with *oil of slipperiness*, and each time any of the bonding agent is poured from the flask, a new application of the *oil of slipperiness* must be put on the flask within one round to prevent the remaining glue from adhering to the side of the container.

One ounce of the adhesive will cover approximately one square foot of surface, bonding virtually any two substances together in a permanent union. The glue takes one full round to set; if the objects are pulled apart before that time has elapsed, that application of the glue will lose its stickiness and be worthless. If the glue is allowed to set, then attempting to separate the two bonded objects will only result in the rending of one or the other except when *oil of etherealness* or *universal solvent* is applied to the

bond—*sovereign glue* is dissolved only by those liquids. A typical container of the substance holds 1d10 ounces of glue.

**Spade of Colossal Excavation:** This digging tool is 8 feet long with a spade-like blade 2 feet wide and 3 feet long. Any fighter with 18 Strength can use this magical shovel to dig great holes. One cubic yard of normal earth can be excavated in one round. After 10 rounds of digging, the user must rest for five rounds. Hard pan clay takes twice as long to dig, as does gravel. Loose soil takes only half as long.

**Sphere of Annihilation:** A *sphere of annihilation* is a globe of absolute blackness, a ball of nothingness 2 feet in diameter. A sphere is actually a hole in the continuity of the multiverse, a void. Any matter that comes in contact with a sphere is instantly sucked into the void, gone, utterly destroyed—even *wishes* and similar magicks have no effect!

A *sphere of annihilation* is basically static, resting in some spot as if it were a normal hole. It can be caused to move, however, by mental effort. The brain waves of the individual concentrating on moving it bend spatial fabrics, causing the hole to slide. Control range is 40 feet initially, 10 feet/level once control is established. Basic movement rate is 10 feet per round, modified as shown below.

Concentration control is based on Intelligence and level of experience—the higher the level the greater the mental power and discipline. For every point of Intelligence above 12, the wizard adds 1%; for every point over 15, he adds another 3%. In other words, add 1% for each point from 13 to 15, and an additional 3% for each point from 16-18—a maximum of 12% bonus at 18 Intelligence. The bonus applies to this table:

| Level of Wizard | Movement/ Round | Probability of Control/ Round |
|---|---|---|
| up to 5th | 8' | 15% |
| 6th-7th | 9' | 20% |
| 8th-9th | 10' | 30% |
| 10th-11th | 11' | 40% |
| 12th-13th | 12' | 50% |
| 14th-15th | 13' | 60% |
| 16th-17th | 14' | 70% |
| 18th-20th | 15' | 75% |
| 21st & above | 16' | 80% |

Any attempt to control the sphere will cause it to move, but if control is not established, the sphere will slide toward the wizard attempting to move it. The sphere will continue to move in this direction for 1d4 rounds and as long as the wizard is within 30 feet thereafter.

If two or more wizards vie for control of a *sphere of annihilation*, the one with the highest percentage chance to control the sphere is checked first, then the next strongest, etc. Control chance is reduced 5% per person, cumulative, when two or more wizards concentrate on the sphere, even if they are cooperating. If none are successful, the sphere will slip toward the strongest. Control must be checked each round.

Should a *gate* spell be cast upon a sphere, there is a 50% chance that the spell will destroy it, 35% that the spell will do nothing, and 15% that a gap will be torn in the spatial fabric, and everything in a 180-foot radius will be catapulted into another plane or universe.

If a *rod of cancellation* touches a sphere, a tremendous explosion will occur as they negate each other. Everything within a 60-foot radius will sustain 3d4 x 10 points of damage.

See also *talisman of the sphere*, below.

**Stone Horse:** Each item of this nature appears to be full-sized, roughly hewn statue of a horse, carved from some type of hard stone. A command word brings the steed to life, enabling it to carry a burden, and even to attack as if it were a warhorse. There are two sorts of steeds:

*Courser:* This *stone horse* travels at the same movement rate as a light horse (movement rate 24) and attacks as if it were a medium warhorse (three attacks for 1d6/1d6/1d3). It is Armor Class 3 and has 18 hit points. It saves versus all applicable attack forms as if it were "Metal, hard."

*Destrier:* This *stone horse* travels at the same movement rate as a medium horse (movement rate 18) and attacks as if it were a heavy warhorse (three attacks for 1d8/1d8/1d3). It is Armor Class 1 and has 26 hit points. It saves versus all applicable attack forms as if it were "Metal, hard."

A *stone horse* can carry 1,000 pounds tirelessly and never needs to rest or feed. Damage inflicted upon it can be repaired by first using a *stone to flesh* spell, thus causing the *stone horse* to become a normal horse. If then allowed to graze and rest, the animal will heal its wounds at the rate of one point per day. When it is fully healed, it will automatically revert to its magical form.

**Stone of Controlling Earth Elementals:** A stone of this nature is typically an oddly shaped bit of roughly polished rock. The possessor of such a stone need but utter a single command word, and an earth elemental of 12-Hit-Dice size will come to the summoner if earth is available, an 8-Hit-Dice elemental if rough, unhewn stone is the summoning medium. (An earth elemental cannot be summoned from worked stone, but one can be from mud, clay, or even sand, although one from sand is an eight-dice monster.) The area of summoning for an earth elemental must be at least 4 feet square and have four cubic yards volume. The elemental will appear in 1d4 rounds. For detailed information about elementals and their control see the *Monstrous Compendium.* The stone can be used to summon one elemental per day.

**Stone of Good Luck (Luckstone):** This magical stone is typically a bit of rough polished agate or similar mineral. Its possessor gains a +1 (+5% where applicable) on all dice rolls involving factors such as saving, slipping, dodging, etc.—whenever dice are rolled to find whether the character suffers from some adverse happening. This luck does not affect attack and damage rolls or spell failure dice.

Additionally, the *luckstone* gives the possessor a +/- 1% to 10% (at owner's option) on rolls for determination of magical items or diversion of treasure. The most favorable

results will always be gained with a *stone of good luck.*

**Stone of Weight (Loadstone):** This magical stone appears to be any one of the other sorts, and testing will not reveal its nature. However, as soon as the possessor of a *stone of weight* is in a situation where he is required to move quickly in order to avoid an enemy—combat or pursuit—the item causes a 50% reduction in movement, and even attacks are reduced to 50% normal rate. Furthermore, the stone cannot be gotten rid of by any nonmagical means—if it is thrown away or smashed, it will reappear somewhere on the character's person. If a *dispel evil* is cast upon a *loadstone,* the item will disappear and no longer haunt the individual.

**Talisman of Pure Good:** A high priest who possesses this item can cause a flaming crack to open at the feet of an evil priest. The intended victim will be swallowed up forever and sent hurtling to the center of the earth. The wielder of the talisman must be good, and if he is not exceptionally pure in thought and deed, the evil priest will gain a saving throw vs. death.

A *talisman of pure good* has seven charges. It cannot be recharged. If a neutral priest touches one of these magic stones, he will suffer 7d4 points of damage. If an evil priest touches one, he will suffer 12d4 points of damage. Nonpriests will not be affected by the device.

**Talisman of the Sphere:** This is a small adamantite loop and handle which will be useless to nonwizards. Characters of any other class touching a talisman of this sort will suffer 5d6 points of damage. When held by a wizard concentrating on control of a *sphere of annihilation,* a *talisman of the sphere* doubles the Intelligence bonus percentage for control (i.e., 2% per point of Intelligence from 13-15, 6% per point of Intelligence from 16-18).

If control is established by the wielder of a talisman, he need check for continual control only every other round thereafter. If control is not established, the sphere will move toward the wizard at maximum speed (16 feet/round). Note that a *wand of negation* will have no effect upon a *sphere of annihilation,* but if the wand is directed at the talisman it will negate its power of control as long as the wand is directed at it.

**Talisman of Ultimate Evil:** This device exactly resembles a *talisman of pure good* and is exactly its opposite in all respects. It has six charges.

**Talisman of Zagy:** A talisman of this sort appears exactly the same as a *stone of controlling earth elementals.* Its powers are quite different, however, and are dependent upon the Charisma of the individual holding the talisman. Whenever a character touches a *talisman of Zagy,* a reaction check is made as if the individual were meeting another creature.

If a hostile reaction result is obtained, the device will act as a *stone of weight,* although discarding it or destroying it results only in 5d6 points of damage and the disappearance of the talisman.

If a neutral reaction results, the talisman will remain with the character for 5d6 hours, or until a *wish* is made upon it, whichever first occurs, and it will then disappear.

If a friendly reaction result is obtained, the character will find it impossible to be rid of the talisman for as many months as he has points of Charisma.

The device will grant one *wish* for every six points of the character's Charisma. It will also grow warm and throb whenever its possessor comes within 20 feet of a mechanical or magical trap. (If the talisman is not held, its warning heat and pulses will be of no avail.)

Regardless of which reaction result is obtained, when its time period expires, the talisman will disappear. A base 10,000 gp diamond will remain in its stead.

**Tome of Clear Thought:** A work of this nature is indistinguishable from any normal book. Any single character who reads a *tome of clear thought* will be able to practice mental exercises that will increase his Intelligence by one point. Reading a work of this nature takes 48 hours time over six days, and immediately thereafter the book disappears.

The reader must begin a program of concentration and mental discipline within one week of reading the tome. After a month of such exercise, Intelligence goes up. The knowledge gained from reading the work can never be recorded or articulated. Any further perusal of a *tome of clear thought* will be of no benefit to the character.

**Tome of Leadership and Influence:** This leather-and-brass-bound book is similar to a *tome of clear thought*, but upon completion of reading and practice of what was revealed therein, Charisma is increased by one point.

**Tome of Understanding:** Identical to a *tome of clear thought*, this work increases Wisdom by one point.

**Universal Solvent:** This strange and magical liquid appears to be some sort of minor oil or potion. Upon first examination, it seems to have the properties of both *oil of slipperiness* and a potion of *delusion.* However, if it is applied to any form of adhesive or sticky material, the solution will immediately dissolve it. Thus, for instance, the effect of *sovereign glue* will immediately be negated by this liquid, as will any other form of cement, glue, or adhesive. The area of effect of this liquid is one cubic foot per ounce, and a typical container holds 27 ounces.

If the liquid is carefully distilled to bring it down to one-third of its original volume, each ounce will dissolve one cubic foot of organic or inorganic material, just as if a *disintegrate* spell had been employed. To find if a target is affected by this concentrated solution, a normal attack roll is required, and the subject is entitled to a saving throw vs. spell. Inanimate objects are automatically affected by the solution, although if they are magical, a saving throw vs. disintegrate applies.

**Vacuous Grimoire:** A book of this sort is identical to a normal one, although if a *detect magic* spell is cast, a magical aura will be noted. Any character who opens the work and reads so much as a single glyph therein must make two saving throws vs. spell. The first is to determine if one point of Intelligence is lost or not; the second is to find if two points of Wisdom are lost. Once opened and read, the *vacuous grimoire* remains; to be destroyed, the book must be burned and a *remove curse* spell cast. If the tome is placed with other books, its appearance will instantly alter to conform to the look of these

other works.

**Well of Many Worlds:** This strange interdimensional device looks just like a *portable hole.* Anything placed within it is immediately cast to another world—a parallel earth, another planet, or a different plane at the DM's option or by random determination. If the well is moved, the random factor again comes into play. It can be picked up, folded, etc., just like a *portable hole.* Things from the world the well touches can come through the opening, just as easily as from the initiating place.

**Wind Fan:** A *wind fan* appears to be nothing more than a wood and papyrus or cloth instrument with which to create a cooling breeze. The possessor can, however, by uttering the correct word, cause the fan to generate air movement duplicating a *gust of wind* spell as if cast by a 5th-level wizard. The fan can be used once per day with no risk. If it is used more frequently, there is a cumulative 20% chance per usage that the device will tear into useless, nonmagical tatters.

**Wings of Flying:** A pair of these magical wings appear to be nothing more than a plain cloak of old, black cloth. If the wearer speaks a command word, the cloak will turn into a pair of gigantic bat wings (20-foot span) and empower the wearer to fly as follows:

2 turns at speed 32
3 turns at speed 25
4 turns at speed 18
6 turns at speed 15
8 turns at speed 12

After the maximum number of possible turns flying, the wearer must rest for one hour—sitting, lying down, or sleeping. Shorter periods of flight do not require full rest, but only relative quiet such as slow walking for one hour. Any flight of less than one turn's duration does not require any rest. *Wings of flying* can be used just once per day regardless of the length of time spent flying. They will support up to 500 pounds weight.

## Armor and Shields

In this section, you will find descriptions of some very special kinds of armor and shields. Before adding these to your campaign, however, be sure you are fully familiar with the armor gradation system:

For each +1 bonus to armor, regardless of the type of armor, the wearer's Armor Class moves downward (toward AC 2 . . . to 1 . . . to 0, -1, -2, and so on). A normal shield improves the armor class by one. A magical shield improves Armor Class like magical armor—toward -1, -2, etc. Note, however, that Armor Class can never be improved beyond -10.

Thus, *chain mail +1* is like ordinary chain mail (AC 5), but one category better (AC 4). A *shield +1* is equal to Armor Class 8—two places better than no armor (+1 for bearing a shield, +1 for the magical bonus of the shield).

When adding magical armor to the game, be aware of sizing problems: 65% of all armor (except *elven chain mail*) is man-sized, and 20% is elf-sized, 10% is dwarf-sized, and but 5% gnome- or halfling-sized. (*Elven chain mail* sizing is determined by the table found below.)

Special armor and shields are described below:

**Armor of Blending:** This appears to be a normal suit of magical armor (determine type and AC modifier normally, ignoring negative results). However, upon command (a command word can be assigned if the DM desires), the armor changes shape and form, assuming the appearance of a normal set of clothing. The armor retains all its properties (including weight) when disguised. Only a *true seeing* spell will reveal the true nature of the armor when disguised.

**Armor of Command:** This finely crafted plate mail radiates a powerful aura of magic. When worn, the armor bestows a dignified and commanding aura upon its owner. The wearer is treated as if he had a Charisma of 18 for all encounter reactions. Friendly troops within 360 feet of the user have their morale increased by +2. Otherwise, the armor functions as *plate mail +1.* Since the effect arises in great part from the distinctiveness of the armor, the wearer cannot hide or conceal himself in any way and still have the effect function.

**Armor of Missile Attraction:** This armor appears to be a normal suit of magical armor (determine type and modifier normally). However, the armor is cursed and actually serves to attract missiles. The wearer is two or three times more likely to be selected as a random target of missiles than normal. In cases where each person is the target of a set number of missiles (most often in large combats), the wearer will have a greater number of missiles fired at him. Furthermore, the magical protection of the armor will fail when calculated for missile attacks. The true nature of the armor will not reveal itself until the character is fired upon in earnest—simple experiments (throwing rocks, etc.) will not suffice.

**Armor of Rage:** This armor is identical in appearance to *armor of command* and functions as a suit of *plate mail +1.* However, when worn, the armor causes the character to suffer a -3 penalty to all encounter checks. All friendly troops within 360 feet have their morale lowered by -2. The effect is not noticeable to the wearer or those affected (i.e., characters will not immediately notice that donning the armor is the cause of their problems).

**Elven Chain Mail:** This is magical armor so fine and light that it can be worn under normal clothing without revealing its presence. Its lightness and flexibility allow even bards and thieves to use it with few restrictions (see Chapter 3 in the *PHB*). Elven fighter/mages use it without restriction. However, it is rarely sized to fit anyone other than an elf or a half-elf. Roll percentile dice and consult the following table to ascertain what size character *elven chain mail* will fit:

| D100 Roll | Size of Elven Chain Mail |
|---|---|

| | |
|---|---|
| 01-10 | gnome/halfling (hairfoot) |
| 11-15 | dwarf/halfling (Stout or Tallfellow) |
| 16-80 | elf/half-elf |
| 81-95 | man-sized, normal (up to 6 feet, 200 lbs.) |
| 96-00 | man-sized, large (up to 6_ feet, 250 lbs.) |

**Plate Mail of Etherealness:** This is seemingly normal *plate mail +5,* but if a command word is spoken, the suit enables its wearer and all nonliving items he wears and carries to become ethereal, as if *oil of etherealness* had been used. While in the ethereal state the wearer cannot attack material creatures. A *phase door* spell will negate the ethereal state and prevent the armor from functioning for one day.

There are 20 charges placed upon *plate mail of etherealness.* Once used, these cannot be replaced or recharged. Furthermore, every five uses reduces the bonus of the armor by one: If five charges are used to become ethereal, the armor is +4, if 10 are used it is +3, +2 if 15 are used, and only +1 if all 20 are exhausted.

**Plate Mail of Fear:** This armor functions as normal *plate mail +1.* However, it is imbued with 2d23 *fear* charges. Upon uttering the command, a charge is spent and the wearer radiates a 30-foot aura of fear. All creatures (except the one wearing the armor) must save vs. spell or flee in panic for 1d4+1 rounds. When all charges are spent, the armor functions as normal *plate mail +1.* It cannot be recharged.

**Plate Mail of Vulnerability:** This appears to every test to be magical *plate mail +1, +2, or +3,* but it is actually *cursed plate mail -2, -3, or -4.* The armor's great vulnerability will not be apparent until an enemy successfully strikes a blow in anger with desire and intent to kill the wearer. The armor will fall to pieces whenever an opponent strikes the wearer with an unmodified attack roll of 20.

**Shield, large, +1, +4 versus missiles:** This is a large shield with a +1 bonus vs. melee attacks, but it is four times more effective against hand-hurled and mechanically propelled missiles of all sorts. More importantly, the shield has a 20% chance of negating *magic missile* attacks (from a frontal position).

**Shield -1, missile attractor:** This not only makes the bearer equivalent to a shieldless person, it also attracts missiles of all types to itself: It doubles or triples the bearer's chances of being selected by random die rolling according to the size of the party he is with (see Chapter 9, "Firing into a Melee"). This cursed shield is not distinguishable from a useful magical shield.

## Magical Weapons

Magical weapons normally apply their bonuses (+1, +2, +3, or +4) to both attack and damage rolls. Any weapon that is not totally self-explanatory is detailed in one of the special paragraphs below.

Most weapons are of the specific type listed. However, 70% of swords are long

swords, 20% are scimitars or broad swords, 5% are short (small) swords, 4% are bastard swords, and 1% are two-handed swords, unless the description of a specific item indicates otherwise. Magical polearms can be of any type desired. Magical lances are always heavy lances. Other unusual weapons may have special restrictions given in the description of the item.

Spears can be used as hand or missile weapons. As missile weapons, they can be broken by any creature with 18/00 or greater Strength or by one that is massive (cave bear, hippo, or rhino, for example). Intelligent creatures will be 70% likely to use the hurled spear against the hurler if struck by the weapon, 25% likely to break it (the spear must save versus *crushing blow*). Unintelligent creatures will be 25% likely to break it (save as above).

Hand Axes (not battle-axes) can be thrown up to 30 yards and still gain any magical attack roll bonus, but no damage bonus.

## Light Generation

The DM can rule that magical weapons (particularly swords, daggers, and +3 or greater items) shed light and can't be concealed when drawn. However, a magical sword should never glow until the wielder is aware of its magical properties—the light-giving property of a weapon should never be used as an excuse to identify a magical item. Note that the *flame tongue*, *frost brand*, *holy avenger*, *life stealing*, and *sharpness* swords have special properties with regard to light. These are dealt with in the individual weapon descriptions.

## Unknown or Unusual Qualities

**Intelligent Weapons:** One of the rare and more significant properties of a magical weapon is the chance that it is intelligent. The feature is most common among swords, but there are occasional instances of other weapons possessing intelligence. The chance of intelligence varies according to the type of weapon.

Swords have a 25% chance of some form of intelligence. Other melee weapons (axes, spears, polearms, etc.) have a 5% chance of intelligence, provided they do not already possess special powers. Missile weapons (including bows, crossbows, arrows, and bolts) never possess intelligence. Single-use items and those items that do not have a bonus to hit (such as a magical net) never possess intelligence.

If you determine that a weapon is intelligent, it will have one or more special powers. It may also have a special purpose or limitations on its use. This information is found under "Intelligent Weapons."

**Unknown Qualities:** Whenever a weapon has some unknown quality—such as the *wishes* in a *luck blade*—the DM should prepare a special 3-inch by 5-inch index card on it and keep the information handy whenever the possessor of the weapon is playing.

**Magical arrows:** When a magical arrow misses its target, there is a 50% chance it will break or otherwise be rendered useless. A magical arrow that hits is destroyed.

# List of Magical Weapons

**Arrow of Direction:** This typically appears to be a normal arrow. However, its magical properties make it function like a *locate object* spell, empowering the arrow to show the direction to the nearest stairway, passage, cave, etc.

Once per day the device can be tossed into the air; it will fall and point in the requested direction. This process can be repeated seven times during the next seven turns. The request must be for one of the following:

- Stairway (up or down)
- Sloping passage (up or down)
- Dungeon exit or entrance
- Cave or cavern

Requests must be phrased by distance (nearest, farthest, highest, lowest) or by direction (north, south, east, west, etc.).

**Arrow of Slaying:** This is an *arrow +3* with unusual physical characteristics—a shaft of some special material, feathers of some rare creature, a head of some strange design, a rune carved on the nock, etc. These characteristics indicate the arrow is effective against some creature type. If the arrow is employed against the kind of creature it has been enchanted to slay, the missile will kill it instantly if it hits the target creature. The following list comprises only a portion of the possible kinds of these arrows:

1. Arachnids
2. Avians
3. Bards
4. Clerics
5. Dragons
6. Druids
7. Elementals
8. Fighters
9. Giants
10. Golems
11. Illusionists
12. Mages
13. Mammals
14. Paladins
15. Rangers
16. Reptile
17. Sea monsters
18. Thieves
19. Titans
20. Undead

Develop your own types and modify or limit the foregoing as fits your campaign.

**Axe +2, throwing:** This hand axe can be thrown up to 180 feet with the same attack roll and damage bonuses (+2) as if it were swung by the character.

**Axe of Hurling:** This appears to be a normal hand axe. With familiarity and practice, however, the possessor will eventually discover that the axe can be hurled up to 180 feet, and it will return to the thrower in the same round whether or not it scores a hit. Damage inflicted by the magical throwing attack is twice normal (2d6 vs. S or M, 2d4 vs. L), with the weapon's magical bonus added thereafter. (For example, an *axe of hurling +3* will inflict 2d6+3 points of damage vs. S- or M-sized creatures and 2d4+3 points of damage vs. creatures of size L if it hits the target after being thrown.) The axe will cause only

normal damage (plus its magical bonus) when used as a hand-held weapon.

After each week of using the weapon, the possessor has a one-in-eight chance of discovering the full properties of the weapon. In any event, the magical properties of the weapon will be fully known to the possessor after eight full weeks of such familiarization.

The magical bonus of an *axe of hurling* is determined by referring to the table below:

| D20 Roll | Magical Bonus | XP Value |
|---|---|---|
| 1-5 | +1 | 1,500 |
| 6-10 | +2 | 3,000 |
| 11-15 | +3 | 4,500 |
| 16-19 | +4 | 6,000 |
| 20 | +5 | 7,500 |

**Bow +1:** This gives a +1 bonus to attack and damage rolls to arrows fired from it. If magical arrows are used, total the bonuses of both the bow and the arrows used. The type of bow found (composite, short, long, etc.) should be based on the circumstances of your campaign and the nature of the area. A nonmagical arrow fired from a magical bow is a nonmagical missile.

**Crossbow of Accuracy, +3:** This gives a +3 bonus to attack rolls with its missiles but not to damage. All ranges are considered short. About 10% of these weapons will be heavy crossbows.

**Crossbow of Distance:** This has double range in all categories. About 10% of these weapons will be heavy crossbows. This weapon is otherwise +1 bonus to attack and damage rolls.

**Crossbow of Speed:** This item allows its possessor to double the rate of fire normal for the weapon. If it is grasped, the *crossbow of speed* will automatically cock itself. In surprise situations it is of no help. Otherwise, it allows first fire in any melee round, and end-of-round fire also, when applicable. About 10% of these weapons are heavy crossbows. The weapon has a +1 bonus to attack and damage rolls.

**Dagger +2, Longtooth:** This appears to be a normal weapon, or perhaps a nonspecial magical weapon. However, when this broad-bladed weapon is wielded by a small demihuman (like a gnome or halfling), it will actually lengthen and function as a short sword (retaining its +2 bonus in this form). Even when functioning in this way it remains as light and handy to use as a dagger would be in the hands of the same character. The weapon will actually penetrate wood or stone as easily as it will softer material, inflicting maximum damage against either substance.

**Dagger of Throwing:** This appears to be a normal weapon but will radiate strongly of magic when this is checked for. The balance of this sturdy blade is perfect, such that when it is thrown by anyone, the dagger will demonstrate superb characteristics as a

ranged weapon. The magic of the dagger enables it to be hurled up to 180 feet. A successful hit when it is thrown will inflict twice normal dagger damage, plus the bonus provided by the blade, which will range from +1 to +4. To determine the bonus for a specific dagger, roll percentile dice and consult the following table:

| D100 Roll | Magical Bonus | XP Value |
|---|---|---|
| 01-35 | +1 | 250 |
| 36-65 | +2 | 350 |
| 66-90 | +3 | 450 |
| 91-00 | +4 | 550 |

**Dagger of Venom:** This appears to be a standard *dagger +1*, but its hilt holds a hidden store of poison. Any hit on a roll of 20 injects fatal poison into the opponent unless a saving throw vs. poison is successful. The *dagger of venom* holds up to six doses of poison. If the hilt contains fewer than six doses, the owner can pour more in up to the maximum. (Use of this weapon by good—particularly lawful good—characters must be carefully monitored for effects on alignment.)

**Darts of Homing:** These appear to be normal projectiles, but are actually +3 magical weapons. If a dart hits the intended target, it will magically return to the thrower in the same round and can be re-used. A dart inflicts a base 1d6 points of damage plus its magical bonus on a successful hit against any size creature (4-9 points total). A dart that misses its target loses its magical power. These weapons have twice the range of ordinary darts—20 yards short, 40 yards medium, 80 yards long.

**Hammer +3, Dwarven Thrower:** This appears to be a standard *hammer +2*. In the hands of a dwarven fighter who knows the appropriate command word, its full potential is realized. In addition to the +3 bonus, the hammer has the following characteristics:

The hammer has a 180-foot range and will return to its wielder's hand like a boomerang. It has a +3 bonus to attack and damage rolls. When hurled, the hammer inflicts double damage against all opponents except giants (including ogres, ogre magi, trolls, and ettins). Against giants it causes triple damage (plus the bonus of +3).

**Hammer of Thunderbolts:** This appears to be a large, extra-heavy hammer. A character less than 6 feet tall and with Strength less than 18/01 will find it too unbalanced to wield properly in combat. However, a character of sufficient Strength and size will find that the hammer functions with a +3 bonus and gains double damage dice on any hit.

If the wielder wears a *girdle of giant strength* and *gauntlets of ogre power* and he knows the hammer's true name, the weapon can be used to full effect: When swung or hurled it gains a +5 bonus, double damage dice, all *girdle* and *gauntlet* bonuses, and it strikes dead any giant upon which it scores a hit.

(Depending on the campaign, the DM might wish to limit the effect to exclude storm giants and include ogres, ogre magi, trolls, ettins, and clay, flesh, and stone golems.)

When hurled and successfully hitting, a great noise, like a clap of thunder, stuns all creatures within 90 feet for one round. Throwing range is 180 feet. (Thor would throw

the hammer about double the above range.) The *hammer of thunderbolts* is difficult to hurl, so only one throw every other round can be made. After five throws within the space of any two-turn period, the wielder must rest for one turn.

Hammers can be hurled as hand axes.

**Hornblade:** This is a magical weapon with a sickle-like blade resembling some sort of animal horn. *Hornblades* range in size from that of a knife to somewhat less than the length of a short sword. Even a close inspection is 90% unlikely to reveal it as anything other than a piece of horn of a _-foot to 1_-foot in length, set in some sort of handle or grip. If magic is detected for, a *hornblade* will radiate faintly of enchantment magic. However, if the proper pressure is applied in the correct place, a curved blade of great strength and sharpness will spring out.

The small versions (knife-sized and dagger-sized) are usually enchanted to +1 or +2, and the largest version (scimitar-sized) commonly has a bonus of +2 or +3. Smaller *hornblades* can be thrown, and the bonus applies to both the attack number and damage determination.

Any character class permitted to use sickle-like weapons can use a *hornblade*. The possessor can use it with proficiency, providing he has proficiency with the appropriately sized weapon (knife, dagger, or scimitar).

The experience-point value of a *hornblade* depends upon its size and the amount of its magical bonus:

| **Size** | **XP Value** |
|---|---|
| Knife-sized | 500 per "plus" |
| Dagger-sized | 750 per "plus" |
| Scimitar-sized | 1,000 per "plus" |

**Javelin of Lightning:** A *javelin of lightning* is considered equal to a +2 magical weapon, although it has neither attack nor damage bonuses. It has a range of 90 yards and whenever it strikes, the javelin becomes the head of a 5-foot wide, 30-foot long stroke of lightning. Any creature hit by the javelin suffers 1d6 points of damage, plus 20 points of electrical damage. Any other creatures in the path of the stroke take either 10 or 20 points of damage, based on whether their saving throws are successful or not.

From 2-5 javelins will be found. The javelin is consumed in the lightning discharge.

**Javelin of Piercing:** This weapon is not actually hurled—when a command word is spoken, the *javelin of piercing* launches itself. Range is 180 feet, all distances considered as short range. The javelin has a +6 bonus to attack rolls and inflicts 1d6+6 points of damage. (Note this missile will fly horizontally, vertically, or any combination thereof to the full extent of its range.) From 2-8 (2d4) will be found at one time. The magic of the *javelin of piercing* is good for only one throw after which it becomes a normal javelin.

**Knife, Buckle:** This magical blade has a hilt that looks just like a large belt-buckle ornament or a complete small buckle. The hilt can be grasped easily and the weapon drawn from its belt-sheath. The knife blade is short but has a very sharp point—it inflicts damage as a knife.

| D10 Roll | Type | XP Value |
|---|---|---|
| 1-4 | +1 | 100 |
| 5-7 | +2 | 200 |
| 8-9 | +3 | 300 |
| 10 | +4 | 400 |

**Mace of Disruption:** This appears to be a *mace +1,* but it has a neutral good alignment, and any evil character touching it will receive 5d4 points of damage due to the powerful enchantments laid upon the weapon. If a *mace of disruption* strikes any undead creature or evil creature from one of the lower planes, may utterly destroy the creature.

Skeletons, zombies, ghouls, shadows, wights, and ghasts, if hit, are instantly blasted out of existence. Other creatures roll saving throws as follows:

| Creature | Save |
|---|---|
| Wraiths | 5% |
| Mummies | 20% |
| Spectres | 35% |
| Vampires | 50% |
| Ghosts | 65% |
| Liches | 80% |
| Other affected evil creatures | 95% |

Even if these saving throws are effective, the *mace of disruption* scores double damage upon opponents of this sort, and twice the damage bonus.

**Net of Entrapment:** This magical rope net is strong enough to defy Strength under 20 and is equal to AC -10 with respect to blows aimed at cutting it. (Normal sawing attempts to cut it with dagger or sword will not succeed; to sever a strand of the mesh, a character must hack at it until he does 5 points of damage on a strand.)

Each net is 10 feet square and has a 3-inch-square mesh. It can be thrown 20 feet so as to cover and close upon opponents; each creature in range must roll a successful saving throw vs. dragon breath to avoid being entrapped. It can be suspended from a ceiling (or generally overhead) and drop upon a command word. It can be laid upon the floor and close upward upon command. The net stretches so as to close over an area up to five cubic feet. It can be loosened by its possessor on command.

**Net of Snaring:** This net looks just like a *net of entrapment,* but it functions only underwater. There, it can be commanded to shoot forth up to 30 feet to trap a creature. It is otherwise the same as the *net of entrapment.*

**Quarterstaff, Magical:** This appears to be a normal bronzewood staff banded with iron. The shaft is actually as strong as steel, and has two magical qualities. Upon command, the staff will alter its length from as short as 6 feet to as long as 12 feet (or any length in between). It inflicts damage as a quarterstaff (base amount, 1d6 points), with additions to attack and damage rolls based upon its magical bonus.

| D20 Roll | Type | XP Value |
|---|---|---|
| 1-5 | +1 | 250 |
| 6-9 | +2 | 500 |
| 10-13 | +3 | 750 |
| 14-17 | +4 | 1,000 |
| 18-20 | +5 | 1,250 |

**Scimitar of Speed:** This is a magical weapon, usually of +2 bonus, that automatically grants its wielder the first attack in a melee round, even though some magical effect might have otherwise slowed his speed and reaction time. It also allows more than one strike in some rounds, increasing the wielder's figure for attacks per melee round by one place, so that if one attack is normal, then the improvement is to two attacks per round. This increase in attacks is cumulative with any other bonus attacks (such as those provided by a *haste* spell).

The order of attacks in the round is determined normally after the wielder of the *scimitar of speed* has made his first attack to begin activity in the round. It is possible, for instance, that a wielder entitled to three attacks in the round will attack once before any other action takes place, and then (because of poor initiative rolls or other factors) take his remaining two attacks at the very end of the round.

There is a chance (25%) that the weapon will have a bonus of something other than +2; if this occurs, roll percentile dice and refer to the following table to determine the appropriate bonus:

| D100 Roll | Type | XP Value |
|---|---|---|
| 01-50 | +1 | 2,500 |
| (normal form) | +2 | 3,000 |
| 51-75 | +3 | 3,500 |
| 76-90 | +4 | 4,000 |
| 91-00 | +5 | 4,500 |

**Sling of Seeking +2:** This gives its user a +2 bonus for both attack and damage rolls, but missiles from such a weapon are regarded as +1 with respect to whether or not certain creatures are affected by the weapon (i.e., a special defense of "+1 or better weapon to hit" means the creature is vulnerable to normal missiles from this sling).

**Spear, Cursed Backbiter:** This is to all tests a magical spear with a +1 bonus (or at the DM's option +2 or +3). It may even function normally in combat against a deadly enemy, but each time it is used in melee against a foe, there is a one in 20 cumulative chance that it will function against its wielder. Once it begins functioning in this way, you can't get rid of it without a *remove curse* spell. The character always seems to find the spear in his hand despite his best efforts or intentions.

When the curse takes effect, the spear curls around to strike its wielder in the back, negating any shield and Dexterity bonuses to Armor Class, and inflicting normal damage. The curse even functions when the spear is hurled, but if the wielder has hurled the spear, the damage done to the hurler will be double. Once the spear has returned to him, the

character will again find himself compelled to use the spear.

**Sun Blade:** This sword is the size of a bastard sword. However, its enchantment enables the *sun blade* to be wielded as if it were a short sword with respect to encumbrance, weight, speed factor, and ease of use (i.e., the weapon appears to all viewers to be a bastard sword, and inflicts bastard sword damage, but the wielder feels and reacts as if the weapon were a short sword). Any individual able to use either a bastard sword or a short sword with proficiency is proficient in the use of a *sun blade.*

In normal combat, the glowing golden blade of the weapon is equal to a +2 sword. Against evil creatures, its bonus is +4. Against Negative Energy Plane creatures or those drawing power from that plane (such as certain undead), the sword inflicts double damage.

Furthermore, the blade has a special *sunray* power. Once a day, upon command, the blade can be swung vigorously above the head, and it will shed a bright yellow radiance that is like full daylight. The radiance begins shining in a 10-foot radius around the sword-wielder, spreading outward at 5 feet per round for 10 rounds thereafter, creating a globe of light with a 60-foot radius. When the swinging stops, the radiance fades to a dim glow that persists for another turn before disappearing entirely. All *sun blades* are of good alignment.

**Sword +1, +2 vs. magic-using and enchanted creatures:** This sword always provides a +1 bonus. The +2 bonus takes effect when the sword is employed against wizards, monsters that can cast spells, and conjured, created, gated, or summoned creatures. Note that the +2 bonus would not operate against a creature magically empowered by an item (such as a *ring of spell storing*) to cast spells.

**Sword +1, +3 vs. lycanthropes and shape changers:** This gives its +3 against werecreatures—those able to assume the form of another creature (such as a vampire or a druid), or any creature under the influence of a *polymorph* or *shape change* spell.

**Sword +1, +3 vs. regenerating creatures:** This will give the +3 bonus to its wielder even when the regenerating creature does so because of a magical device—such as a *ring of regeneration.*

**Sword +1, +4 vs. reptiles:** this gives the +4 against such creatures as dinosaurs, dragons, hydras, lizards, snakes, wyverns, etc.

**Sword +1, cursed:** This performs in all respects as a +1 weapon, but when its wielder is faced by an enemy, the sword will weld itself to the character's hand and force him to fight until the enemy or the wielder is slain. Thereafter, the possessor can loose, but never rid himself of, the cursed sword. No matter what is done, it will appear in his hand whenever an opponent is faced. The character can be freed of the weapon only by a *remove curse* spell.

**Sword +1, flame tongue, +2 vs. regenerating creatures, +3 vs. cold-using, inflammable, or avian creatures, +4 vs. undead:** This sheds light when its possessor

speaks a command word or phrase. When activated, the *flame tongue* sword's fire illuminates the area as brightly as a torch. The flame from this sword easily ignites oil, burns webs, or sets fire to paper, parchment, dry wood, etc. Cold-using creatures are those whose attack mode involves cold (ice toads, white dragons, winter wolves, yeti, etc.).

**Sword +1, Luck Blade:** This gives its possessor a +1 bonus to all saving throws and will have 1d4+1 *wishes.* The DM should keep the number of wishes secret.

**Sword +2, Dragon Slayer:** This has a +4 bonus against any sort of true dragon. It inflicts triple damage against one sort of dragon (i.e., 3d12+4). Note that an unusual sword with intelligence and alignment will not be made to slay dragons of the same alignment. Determine dragon type (excluding unique ones like Bahamut and Tiamat) by rolling 1d10:

| | |
|---|---|
| 1 black (CE) | 6 gold (LG) |
| 2 blue (LE) | 7 green (LE) |
| 3 brass (CG) | 8 red (CE) |
| 4 bronze (LG) | 9 silver (LG) |
| 5 copper (CG) | 10 white (CE) |

**Sword +2, Giant Slayer:** This provides a +3 bonus versus any giant, giant-kin, ettin, ogre mage, or titan. Against any of the true giants (hill, stone, frost, fire, cloud, storm) the sword causes double damage (i.e., 2d12+3).

**Sword, Short, of Quickness:** This is a special +2 blade that enables the wielder to strike first in every combat round. If the wielder encounters someone with a similar weapon (e.g., a *scimitar of speed*), both strike simultaneously.

**Sword+2, Nine Lives Stealer:** This will always perform as a +2 weapon, but it also has the power to draw the life force from an opponent. It can do this nine times before the ability is lost. A natural 20 must be scored on the wielder's attack roll for the sword to function. The victim is entitled to a saving throw vs. spell. If this succeeds, the sword does not function, no charge is used, and normal damage is determined.

**Sword+3, Frost Brand, +6 vs. fire-using/dwelling creatures:** This sword always provides a +3 bonus. The +6 bonus takes effect against creatures that use fire or live in fiery environments. The weapon does not shed any light, except when the air temperature is below 0 degrees F. It does give special benefits against fire, for its wielder is protected as if he were wearing a *ring of fire resistance.*

The *frost brand* sword also has a 50% chance of extinguishing any fire into which its blade is thrust. This power extends to a 10-foot radius—including a *wall of fire* but excluding a *fireball, meteor swarm,* or *flame strike.*

**Sword,+4 Defender:** This gives its wielder the option of using all, some, or none of the +4 bonus in defense (improving his Armor Class) against any opponent using a hand-

held weapon, such as a dagger, mace, spear (not hurled), sword, etc. For example, the wielder can, on the first round of battle, opt to use the sword as +2 and save the other two bonus factors to be added to his Armor Class. This can be done each round.

Note that there is also a *sword, +5 defender*. This is identical to the +4 sword with one extra bonus point.

**Sword, +5 Holy Avenger:** In the hands of any character other than a paladin, this holy sword will perform only as a *sword +2*. In the hands of a paladin, however, it creates a magic resistance of 50% in a 5-foot radius, dispels magic in a 5-foot radius at the level of the paladin, and inflicts +10 points of bonus damage upon chaotic evil opponents.

**Sword -2, cursed:** This is a sword that gives off a magical aura and performs well against targets in practice, but when it is used against an opponent in combat it lowers its user's attack rolls by -2. Only by careful observation can this lowering be detected.

All damage scored is reduced by 2 hit points, but never below a 1 in any event. The sword will always force the character to employ it against enemies, appearing in the character's hand. It can be gotten rid of only by means of *limited wish* or *wish.*

**Sword of Dancing:** On the first round of melee this weapon is +1, on the second +2, on the third +3, and on the fourth it is +4. On the fifth round, it drops back to +1 and the cycle begins again. In addition, after four rounds of melee its wielder can opt to allow it to "dance."

Dancing consists of loosing the sword on any round (after the first) when its bonus is +1. The sword then fights on its own at the same level of experience as its wielder. After four rounds of dancing, the sword returns to its wielder, who must hold it (and use it) for four rounds before it can dance again. In other words, it is loosed to dance for four more rounds, going from +1 to +4, and must then be held by its wielder at a +1 state and physically used for four successive rounds of melee combat.

When dancing, the sword will leave its owner's hand and may go up to 30 feet distant. At the end of its fourth round of solo combat, it will move to its possessor's hand automatically. Note that when dancing the sword cannot be physically hit, although certain magical attacks such as a *fireball, lightning bolt,* or *transmute metal to wood* spell could affect it.

Finally, remember that the *dancing sword* fights alone exactly the same; if a 7th-level thief is the wielder, the sword will so fight when dancing. Relieved of his weapon for four melee rounds, the possessor may act in virtually any manner desired—resting, discharging missiles, drawing another weapon and engaging in hand-to-hand combat, etc.—as long as he remains within 30 feet of the sword. If he moves more than 30 feet from the weapon, it falls lifeless to the ground and is a +1 weapon when again grasped.

**Sword of Wounding:** This is a sword of only +1 bonus, but any hit made with it cannot be healed by *regeneration.* In subsequent rounds, the opponent so wounded loses one additional hit point for each wound inflicted by the sword.

Thus, an opponent hit for four points of damage on the first melee round will automatically lose one additional hit point on the second and each successive round of combat. Loss of the extra point stops only when the creature so wounded bandages its

wound or after 10 melee rounds (one turn).

Damage from a *sword of wounding* can be healed only by normal means (rest and time), never by potion, spell, or other magical means short of a *wish.* Note that successive wounds will damage in the same manner as the first.

**Sword of Life Stealing:** This +2 weapon will eliminate one level of experience (or Hit Die) and accompanying hit points and abilities when it strikes any opponent on a natural roll of 20. This function is the same as the level-draining ability of certain undead creatures.

The sword wielder can gain as many hit points as an opponent loses to this function of the weapon, up to the maximum number of hit points the character is allowed (i.e., only a character who has suffered loss of hit points can benefit from the function).

**Sword of Sharpness:** This weapon is treated as +3 or better for purposes of who or what can be hit by it, even though it gets only a +1 bonus to attack and damage rolls. Its power is great, however, for on a very high attack roll, it will sever an extremity—arm, leg, neck, tail, tentacle, whatever (but not head) determined by random dice roll:

| **Opponent is** | **Modified score to sever*** |
|---|---|
| normal/armored | 19-21 |
| larger than man-sized | 20-21 |
| Solid metal or stone | 21 |

* Considering only the sword's bonus of +1.

A *sword of sharpness* will respond to its wielder's desire with respect to the light it sheds—none, a 5-foot circle of dim illumination, a 15-foot light, or a 30-foot radius glow equal to a *light* spell.

**Sword, Vorpal:** Similar but superior to a *sword of sharpness*, a *vorpal* weapon has a +3 bonus to attack and damage rolls. Check the table below to determine whether an attack roll is good enough to sever the neck/head of the opponent:

| **Opponent is** | **Modified score to sever*** |
|---|---|
| normal/armored | 20-23 |
| larger than man-sized | 21-23 |
| solid metal or stone | 22-23 |

* Considering only the sword's bonus of +3.

Note that many creatures have no heads or can change their form and, therefore, cannot suffer decapitation. There are also creatures that have heads but will not necessarily be killed by decapitation (among these are dopplegangers, elementals, and golems).

**Sword of the Planes:** This magical weapon has a base bonus of +1 on the Prime Material Plane, but on any Inner Plane its bonus increases to +2. (The +2 bonus also

applies on the Prime Material Plane when the weapon is used against *opponents* from the Inner Planes.) Similarly, when used on an Outer Plane or against creatures from the Outer Planes, the sword becomes a +3 weapon. Finally, it operates as a +4 weapon on the Astral or Ethereal Plane or when used against opponents from either of those planes.

**Sword, Cursed Berserking:** This performs by every test, save that of the heat of battle, as a +2 magical sword of some sort. However, in actual battle its wielder will go berserk, attacking the nearest creature and continuing to fight until dead or until no living thing remains within 60 feet. The sword has a +2 bonus and otherwise acts as a *cursed sword +1*. The possessor of a *cursed berserking sword* can be rid of it only if it is exorcised via a *remove curse* spell or *wish.*

**Trident of Submission:** A weapon of this nature appears unremarkable, exactly as any normal trident. The wielder of a *trident of submission* causes any opponent struck to save vs. spell. If the opponent fails to save, it must check morale the next round *instead* of attacking; if morale is good, the opponent may act normally next round, but if it is poor, the opponent will cease fighting and surrender, overcome with a feeling of hopelessness. The duration of this hopelessness is 2-8 rounds. Thereafter the creature is normal once again. The trident has 17-20 charges. A trident of this type is a +1 magical weapon.

**Trident of Fish Command:** This three-tined fork atop a stout 6-foot long rod appears to be a barbed military fork of some sort. However, its magical properties enable its wielder to cause all fish within a 60-foot radius to roll saving throws vs. spell. This uses one charge of the trident. Fish failing this throw are completely under empathic command and will not attack the possessor of the trident nor any creature within 10 feet of him. The wielder of the device can cause fish to move in whatever direction is desired and can convey messages of emotion (i.e., fear, hunger, anger, indifference, repletion, etc.). Fish making their saving throw are free of empathic control, but they will not approach within 10 feet of the trident.

In addition to ordinary fish, the trident affects sharks and eels. It doesn't affect mollusks, crustaceans, amphibians, reptiles, mammals, and similar sorts of nonpiscine marine creatures. A school of fish should be checked as a single entity.

A trident of this type contains 1d4+16 charges. It is otherwise a +1 magical weapon.

**Trident of Warning:** A weapon of this type enables its wielder to determine the location, depth, species, and number of hostile or hungry marine predators within 240 feet. A *trident of warning* must be grasped and pointed in order for the person using it to gain such information, and it requires one round to scan a hemisphere with a radius of 240 feet. There are 19-24 charges in a trident of this type, each charge sufficient to last for two rounds of scanning. The weapon is otherwise a +2 magical weapon.

**Trident of Yearning:** A *trident of yearning* looks exactly like any normal trident, and its aura is indistinguishable from that of other enchanted weapons of this sort. Any character grasping this type of trident immediately feels an overwhelming desire to immerse himself in as great a depth of water as possible. This unquenchable longing causes the affected character to proceed immediately toward the largest/deepest body of

water—in any event, one that is sufficient to completely cover his or her person. Once there, he will immerse himself permanently.

The character cannot loose his grip on the trident, and only a *water breathing* spell (after submersion) or a *wish* will enable the character to do so. The trident is otherwise a -2 cursed magical weapon. Note that this item does not confer the ability to breathe underwater.

## Intelligent Weapons

Tables 113 through 119 should be used to determine the properties of an intelligent weapon: the number of powers, unusual properties, alignment, and special purpose of the item (if any). Such weapons are useful to give higher-level fighters some additional tactical options and limited-use special abilities.

The DM is encouraged to design unusual magical weapons along special themes and for specific campaign purposes, using the tables as guidelines and for inspiration. Just because a power is rolled doesn't mean it must be given out. If the DM feels a combination is too bizarre or powerful, he can simply change or ignore it.

The first step in creating an intelligent weapon is to determine its general capabilities. These are found by rolling 1d100 on Table 113. Then, move onto Tables 114-118 until all the capabilities of the weapon have been specified.

**Table 113:**

### Weapon Intelligence and Capabilities

| D100 Roll | Intelligence | Communication | Capabilities |
|---|---|---|---|
| 01-34 | 12 | Semi-empathy* | 1 primary ability |
| 35-59 | 13 | Empathy | 2 primary abilities |
| 60-79 | 14 | Speech** | 2 primary abiliites |
| 80-91 | 15 | Speech** | 3 primary abilities |
| 92-97 | 16 | Speech** | 3 primary abilities† |
| 98-00 | 17 | Speech and Telepathy*** | 3 primary abilities††<br>+1 extraordinary power |

* The possessor will receive some signal (a throb, tingle, etc.) and feel urges when its ability functions.

** The weapon will speak the character's native tongue plus one or more other tongues as indicated on Table 118 below.

*** The weapon can use either communication mode at will, with language use as any speaking weapon.

†: The weapon can also read languages/maps of any nonmagical type.

††: The weapon can read languages as well as magical writings.

## Intelligent Weapon Alignment

Any weapon with intelligence will have an alignment. Note that *holy avenger* swords have alignment restrictions. All cursed weapons are absolutely neutral.

**Table 114:**

## Weapon Alignment

| D100 Roll | Alignment of Weapon |
|---|---|
| 01-05 | Chaotic good |
| 06-15 | Chaotic neutral* |
| 16-20 | Chaotic evil |
| 21-25 | Neutral evil* |
| 26-30 | Lawful evil |
| 31-55 | Lawful good |
| 56-60 | Lawful neutral* |
| 61-80 | Neutral (absolute) |
| 81-00 | Neutral good* |

* The item can also be used by any character whose alignment corresponds to the non-neutral alignment portion of the weapon's alignment (i.e., chaotic, evil, good, or lawful). Thus any chaotic character can use a weapon with chaotic neutral alignment.

Any character whose alignment does not correspond to that of the weapon, except as noted by the asterisk above, will sustain points of damage equal to the number of ego points (see Table 119) of the weapon. This damage is suffered every time (or for every round) the character touches any portion of the weapon unless the weapon is in the grasp or possession of a character whose alignment is compatible with the weapon.

## Weapon Abilities

Using the number of capabilities determined by Table 113, the weapon's specific abilities are determined by rolling on the appropriate tables below.

**Table 115:**

## Weapon Primary Abilities

| D100 Roll | Ability |
|---|---|
| 01-11 | Detect "elevator"/shifting rooms/walls in a 10-foot radius |
| 12-22 | Detect sloping passages in a 10-foot radius |
| 23-33 | Detect traps of large size in a 10-foot radius |
| 34-44 | Detect evil/good in a 10-foot radius |
| 45-55 | Detect precious metals, kind, and amount in a 20-foot radius |
| 56-66 | Detect gems, kind, and number in a 5-foot radius |
| 67-77 | Detect magic in a 10-foot radius |

| | |
|---|---|
| 78-82 | Detect secret doors in a 5-foot radius |
| 83-87 | Detect invisible objects in a 10-foot radius |
| 88-92 | Locate object in a 120-foot radius |
| 93-98 | Roll twice on this table ignoring scores of 93 to 00 |
| 99-00 | Roll on Table 116 instead |

If the same ability is rolled twice or more, range of the power is double, triple, etc.

All abilities function only when the weapon is held, drawn, and the possessor is concentrating on the desired result. A weapon can perform only one function at a time, and thus can fight or detect but one thing at a time.

Other abilities can be created by the DM.

**Table 116:**

## Weapon Extraordinary Powers

| D100 Roll | Power* |
|---|---|
| 01-07 | *Charm person* on contact—3 times/day |
| 08-15 | *Clairaudience*, 30 yards range—3 times/day, 1 round per use |
| 16-22 | *Clairvoyance*, 30 yards range—3 times/day, 1 round per use |
| 23-28 | Determine direction and depth—2 times/day |
| 29-34 | *ESP*, 30 yards range—3 times/day, 1 round per use |
| 35-41 | *Flying*, 120 feet/turn—1 hour/day |
| 42-47 | *Heal*—1 time/day |
| 48-54 | *Illusion*, 120 yards range—2 times/day, as the wand |
| 55-61 | *Levitation*, 1-turn duration—3 times/day, at 6th level of magic use ability |
| 62-67 | *Strength*—1 time/day (upon wielder only) |
| 68-75 | *Telekinesis*, 250 pounds maximum—2 times/day, 1 round each use |
| 76-81 | *Telepathy*, 60 yards range—2 times/day |
| 82-88 | *Teleportation*—1 time/day, 600 pounds maximum, casting time 2 |
| 89-94 | *X-ray vision*, 40 yards range—2 times/day, 1 turn per use |
| 95-97 | Roll twice on this table ignoring scores of 95-97 |
| 98-99 | Character may choose 1 power from this table |
| 00 | Character may choose 1 power from this table, and then roll for a Special Purpose on Table 117 |

If the same power is rolled twice, the uses/day are doubled, etc.

Powers function only when the weapon is drawn and held and the possessor is concentrating upon the desired effect. Most powers require that the character stop and concentrate for a full round.

**Table 117:**

## Special Purpose Weapons

**A. Purpose**

Purpose must suit the type and alignment of the weapon in question. Killing is always restricted to evil when the weapon is of good alignment. Weapons edicated to *slaying monsters* will always be either *good* and slay neutral or evil monsters, or *evil* and slay neutral or good monsters.

| D100 Roll | Purpose |
|---|---|
| 01-10 | Defeat/slay diametrically opposed alignment* |
| 11-20 | Defeat priests (of a particular type) |
| 21-30 | Defeat fighters |
| 31-40 | Defeat wizards |
| 41-50 | Defeat thieves |
| 51-55 | Defeat bards |
| 56-65 | Overthrow law and/or chaos |
| 66-75 | Defeat good and/or evil |
| 76-95 | Defeat nonhuman monsters |
| 96-00 | Other |

* The purpose of the true neutral version of this weapon is to preserve the balance (see "Alignment") by defeating/slaying powerful beings of the extreme alignments (lawful good, lawful evil, chaotic good, chaotic evil).

**B. Special Purpose Power**

The power will operate only in pursuit of the special purpose.

| D100 Roll | Power |
|---|---|
| 01-10 | blindness* for 2d6 rounds |
| 11-20 | confusion* for 2d6 rounds |
| 21-25 | disintegrate* |
| 26-55 | fear* for 1d4 rounds |
| 56-65 | insanity* for 1d4 rounds |
| 66-80 | paralysis* for 1d4 rounds |
| 81-00 | +2 to all saving throws, -1 to each die of damage sustained |

* Upon scoring a hit with the weapon unless the opponent succeeds with a saving throw vs. spell.

**Table 118:**

## Languages Spoken by Weapon

The DM should determine languages spoken by the weapon based on his campaign and the history of the weapon. Thus, an intelligent warhammer fashioned by the dwarves

would certainly understand dwarvish as one of its powers.

| D100 Roll | Number of Languages |
|---|---|
| 01-40 | 1 |
| 41-70 | 2 |
| 71-85 | 3 |
| 86-95 | 4 |
| 96-99 | 5 |
| 00 | 6* |

* Or the result of 2 additional rolls ignoring a score of 00, whichever is the greater.

## Weapon Ego

Only after all aspects of a weapon have been determined and recorded can the ego rating of a weapon be found. Ego, along with intelligence, will be a factor with regard to the dominance of weapon over character, as detailed on Table 119.

**Table 119:**

### Weapon Ego

| Attribute of Weapon | Ego Points |
|---|---|
| Each + of weapon* | 1 |
| Each primary ability** | 1 |
| Each extraordinary power** | 2 |
| Special purpose | 5 |
| Each language spoken | 1 |
| Telepathic ability | 2 |
| Reading languages ability | 1 |
| Reading magic ability | 2 |

* Thus, a *sword +1* has one ego point, but if it has another (higher) plus, these are also counted. For example, a *flame tongue +1* has a maximum plus of 4, so it is +1/+4 for five ego points. In addition, weapons that have no extra pluses but extra powers (*holy avenger*, *sharpness*, etc.) add double their + rating for ego.

** If double ability, double ego points.

## Weapons Versus Characters

When a weapon possesses unusual characteristics, it has a *personality*, which is rated by combining its intelligence and ego scores. The weapon will, of course, be absolutely true to its alignment, and if the character who possesses the weapon is not, personality conflict—weapon versus character—will result.

Similarly, any weapon with an ego of 19 or higher will always consider itself superior

to any character, and a personality conflict will result if the possessor does not always agree with the weapon.

The *personality score* of a character is:

Intelligence + Charisma + Experience Level

Note that the personality score is reduced by one for every group of hit points of damage taken equal to the character's average number of points per level. Divide the character's total hit points by his level (round up). For example: A fighter of 7th level has 53 hit points: 53 divided by 7 equals 7.6. Thus for every eight points of damage he suffers, his personality score will be lowered by one.

Whenever personality conflict occurs, the weapon will resist the character's desires and demand concessions such as:

1. Removal of associates, henchmen, hirelings, or creatures of alignment or personality distasteful to the weapon.
2. The character divesting himself of all other magical weapons.
3. Obedience from the character so weapon can lead the expedition for its own purposes
4. Immediate seeking out and slaying of creatures hateful to the weapon
5. Encrustation of pommel, hilt, scabbard, baldric, or belt with gems and a special container made of precious substances for its safekeeping.
6. Magical protections and devices to protect it from molestation when not in use
7. That the character pay it handsomely for all abilities and powers the weapon is called upon to exercise in behalf of its possessor
8. That the character carry it with him on all occasions
9. That the character relinquish the weapon in favor of a more suitable person due to alignment differences or conduct

Any time the personality score of a weapon exceeds the personality score of the character who possesses it, the weapon will dominate its possessor, and it can force any or all of the above demands or actually cause any of the following actions:

1. Force its possessor into combat
2. Refuse to strike opponents
3. Strike at its wielder or his associates
4. Force its possessor to surrender to an opponent
5. Cause itself to drop from the character's grasp

Naturally, such actions are unlikely where the character-weapon alignment and purposes are harmonious. However, the weapon might well wish to have a lesser character possess it so as to easily command him, or a higher level possessor so as to better accomplish its goals.

All magical weapons with personalities will desire to play an important role in the success of activities, particularly combat. Such weapons are rivals of each other, even if of the same alignment. They will be aware of the presence of any similar weapon within

60 feet, and try their best to lead a possessor into missing or destroying the rival unless this is totally inimical to its nature—a *holy avenger,* for example, would certainly not allow destruction of any other lawful good weapon and might encourage their discovery, even at the risk of having to face grim odds to do so.

Weapons of this nature will never be totally controlled or silenced by the characters who possess them, even though they may be heavily outweighed by personality force. They may be powerless to force their demands, but they will be in there plugging. Even a humble +1 weapon of unusual nature can be a vocal martyr, denigrating its own abilities and asking only that the character give it the chance to shatter itself against some hated enemy, etc.

Note: Most players will be unwilling to play weapons with personalities as the personalities dictate. It is incumbent upon the DM to ensure that the role of the weapon is played to the hilt, so to speak, with the DM assuming the persons of the weapon if necessary.

# Credits

**Project Coordinator:** Tim Beach
**Editor:** Doug Stewart
**Editorial Assistant:** Gaye O'Keefe
**Cover Illustration:** Jeff Easley
**Interior Illustrations:** Tony DiTerlizzi (pencils, inks, and colors on insects, crustaceans, faerie-folk, and miscellaneous creepy things), Jeff Butler (pencils and inks on humans, demihumans, humanoids, giants, genies, dragonets, and miscellaneous part-human creatures), Dave Simons (pencils, inks, and colors on normal animals, almost normal animals, and squishy things), Tom Baxa (pencils, inks, and colors on gith-kind and miscellaneous), Mark Nelson (pencils and inks on dragons, dinosaurs, and miscellaneous), Les Dorscheid (colors on most of the book), Tim Beach and Doug Stewart (invisible stalker)
**Art Coordination:** Peggy Cooper with Tim Beach
**Typesetting:** Gaye O'Keefe
**Keylining:** Paul Hanchette
**Proofreading:** Karen Boomgarden, Anne Brown, Andria Hayday, Thomas Reid, David Wise
**Guidance:** Steve Winter, Tim Brown, James M. Ward
**Monster Selection Committee:** Jeff Grubb, David Wise, John Rateliff, Tim Beach
**Development:** Tim Beach, Doug Stewart, Slade Henson, Thomas Reid, Jeff Grubb, Wolfgang Baur, Jon Pickens, John Rateliff
**Design Concept for MONSTROUS COMPENDIUM® Appendices:** David "Zeb" Cook, Steve Winter, Jon Pickens
**HTML checker:** Vsevolod A. Krishchenko (unofficial)

We would like to offer special thanks to the artists and the people who helped with development, as well as Rich Baker, Carolyn Chambers, Bill Connors, Peggy Cooper, Slade Henson, Dawn Kegley, Dana Knutson, Georgia S. Stewart, and Sue Weinlein.
Many people have contributed to either the original first edition monster books or to the MONSTROUS COMPENDIUM™ appendices. The list that follows may not be complete, but we would like to thank the following people for their contributions to the monsters described in this book: the designers and editors, Rich Baker, Jay Battista, Wolfgang Baur, Tim Beach, Scott Bennie, Donald J. Bingle, Linda Bingle, Karen Boomgarden, Grant Boucher, Al Boyce, Mike Breault, Anne Brown, Tim Brown, Dr. Arthur W. Collins, Bill Connors, David "Zeb" Cook, Troy Denning, Dale Donovan, Newton Ewell, Nigel Findley, Steve Gilbert, Ed Greenwood, Jeff Grubb, Gary Gygax, Luke Gygax, Allen Hammack, Kris & Steve Hardinger, Andria Hayday, Bruce A. Heard, Slade Henson, Tracy Hickman, Harold Johnson, Rob King, Vera Jane Koffler, Heike Kubasch, Steve Kurtz, J. Paul LaFountain, Lenard Lakofka, Jim Lowder, François Marcela-Froideval, David Martin, Colin McComb, Anne McCready, Blake Mobley, Kim Mohan, Roger E. Moore, Chris Mortika, Bruce Nesmith, C. Terry Phillips, Jon Pickens, Brian Pitzer, Mike Price, Louis J. Prosperi, Tom Prusa, Jean Rabe, Paul Reiche, Jim Sandt, Lawrence Schick, Rick Swan, Greg Swedburg, Teeuwynn, John Terra, Gary Thomas, Allen Varney, James M. Ward, Dori Watry, Skip Williams, and Steve Winter; the artists who helped define the monsters, Tom Baxa, Brom,

Jeff Butler, Clyde Caldwell, Doug Chaffee, Tony DiTerlizzi, Les Dorscheid, Jeff Easley, Larry Elmore, Fred Fields, Jim Holloway, Daniel Horne, Mark Nelson, Keith Parkinson, Harry Quinn, Robh Ruppel, Dave Simons, Dave Sutherland, D.A. Trampier, Valerie Valusek; and the people who put the books together and make them look good, Linda Bakk, Dee Barnett, Steve Beck, Peggy Cooper, Sarah Feggestad, Paul Hanchette, Angelika Lokotz, Gaye O'Keefe, Stephanie Tabat, and Tracey Zamagne; and anyone who has ever asked a question, offered constructive criticism, written an article, or offered an opinion about the monsters of the AD&D® game. Special thanks to Christopher M. Carter and Seth Goodkind for spotting errors.

# How To Use This Book

This hardcover *Monstrous Manual* was created in response to the many requests to gather monsters into a single, durable volume which would be convenient to carry. With the *DUNGEON MASTER™ Guide (DMG)* and the *Player's Handbook (PHB)*, the *Monstrous Manual* forms the core of the AD&D® 2nd Edition game.

Every monster from the MONSTROUS COMPENDIUM® Volumes One and Two are contained within, as well as a few creatures from later volumes. The monsters in the *Monstrous Manual* have been revised, edited, and updated. Statistics for many of the creatures have been corrected, new information has been added to many of the entries, and many monsters have been reclassified. There are some new beasts, as well. In cases of conflicting information, the *Monstrous Manual* supersedes all previously published data.

Certain entries have been greatly condensed from MONSTROUS COMPENDIUM entries, to make this book as complete as possible without increasing its size or price. For instance, there is a full-page description of ravens in the MONSTROUS COMPENDIUM appendix for the GREYHAWK® campaign setting; in this book, ravens are given only a few lines in the "Bird" entry. This provides enough information to use the creatures for a short encounter, and it allows a page to be devoted to another adversary.

To find a monster in this book, flip through the pages or look in the index, which contains listings for the common name(s) of every monster in the book, referenced to the correct page.

All of the monsters described here are typical for their type. DMs should note that unusual variations are encouraged, but they are most effective when they depart from the expected. Likewise, entries describe typical lairs for creatures, from the dungeon complexes they inhabit to the tree houses they build; changing the look of these can make a monster encounter unique.

# Contents

This introduction describes how to interpret the monsters in this book. In addition, there are three small appendices in the back of the book. The first deals with making monsters. The second covers monster summoning and includes tables for random determination of summoned creatures; to make random encounter charts for a campaign, the DM should refer to Chapter 11 of the *DMG*. The third appendix is concerned with creating NPC parties.

# Other Worlds

Several of the monsters in this book have been imported from specialized game worlds, such as the SPELLJAMMER® campaign setting, the FORGOTTEN REALMS® setting, or the DARK SUN® world. The monsters in this book may be used in any setting; if a campaign setting is noted, it simply describes where the monster was first encountered, or where it is the most common. A particular monster still may not be encountered in a specific campaign world; this is up to the DM. For monsters from one of the specific worlds, the DM should consult the appropriate MONSTROUS COMPENDIUM appendices.

# The Monsters

Each monster is described fully, with entries that describe behavior, combat modes, and so on. These are explained in the following text.

**Climate/Terrain** defines where the creature is most often found. Climates include arctic, sub-arctic, temperate, and tropical. Typical terrain includes plain/scrub, forest, rough/hill, mountain, swamp, and desert. In some cases, a range is given; for instance, "cold" implies arctic, sub-arctic, and colder temperate regions.

**Frequency** is the likelihood of encountering a creature in an area. Chances can be adjusted for special areas.

| | |
|---|---|
| Very Rare | = 4% chance |
| Rare | = 11% chance |
| Uncommon | = 20% chance |
| Common | = 65% chance |

**Organization** is the general social structure the monster adopts. "Solitary" includes small family groups.

**Activity Cycle** is the time of day when the monster is most active. Those active at night can be active at any time in subterranean settings. These are general guidelines and exceptions are fairly common.

**Diet** shows what the creature usually eats. Carnivores eat meat, herbivores eat plants, and omnivores eat either. Scavengers primarily eat carrion. If a monster does not fit any of these categories, the substances it does eat are described in the entry or in the text.

**Intelligence** is the equivalent of human "IQ." Certain monsters are instinctively cunning; these are noted in the monster descriptions. Ratings correspond roughly to the following Intelligence ability scores:

| | |
|---|---|
| 0 | Nonintelligent or not ratable |
| 1 | Animal intelligence |
| 2-4 | Semi-intelligent |
| 5-7 | Low intelligence |
| 8-10 | Average (human) intelligence |
| 11-12 | Very intelligent |

| | |
|---|---|
| 13-14 | Highly intelligent |
| 15-16 | Exceptionally intelligent |
| 17-18 | Genius |
| 19-20 | Supra-genius |
| 21+ | Godlike intelligence |

**Treasure** refers to the treasure tables in the *DUNGEON MASTER Guide.* If individual treasure is indicated, each individual may carry it (or not, at the DM's discretion). Major treasures are usually found in the monster's lair; these are most often designed and placed by the DM. Intelligent monsters will use the magical items present and try to carry off their most valuable treasures if hard pressed. If treasure is assigned randomly, roll for each type possible; if all rolls fail, no treasure of any type is found. Treasure should be adjusted downward if a few monsters are encountered. Large treasures are noted by a multiplier (x10, for example); this should not be confused with treasure type X. Treasure types listed in parentheses are treasures found in the creatures' lair. Do not use the tables to place dungeon treasure, since the numbers encountered underground will be much smaller.

**Alignment** shows the general behavior of the average monster of that type. Exceptions, though uncommon, may be encountered.

**No. Appearing** indicates an average encounter size for a wilderness encounter. The DM should alter this to fit the circumstances as the need arises. This should not be used for dungeon encounters.
Note that some solitary creatures are found in small groups; this means they are found in very small family units, or that several may happen to be found together, but do not cooperate with one another.

**Armor Class** is the general protection worn by humans and humanoids, protection due to physical structure or magical nature, or difficulty in hitting due to speed, reflexes, etc. Humans and humanoids of roughly man-size that wear armor will have an unarmored rating in parentheses. Listed AC does not include any special bonuses noted in the description.

**Movement** shows the relative speed rating of the creature. Higher speeds may be possible for short periods. Human, demihuman, and humanoid movement rate is often determined by armor type (unarmored rates are given in parentheses). Movements in different mediums are abbreviated as follows:

Fl = flying
Sw = swimming
Br = burrowing
Cl = climbing
Wb = moving across webs

Flying creatures also have a Maneuverability Class from A to E. Class A creatures have virtually total command over their movements in the air; they can hover, face any direction in a given round, and attack each round. Class B creatures are very maneuverable; they can hover, turn 180 degrees in a round, and attack in each round. Class C creatures are somewhat agile in the air; they cannot move less than half

their movement rate without falling, they can turn up to 90 degrees in a round, and attack aerially once every two rounds. Class D creatures are somewhat slow; they cannot move less than half their movement rate without falling, can turn only 60 degrees in a round, and can make a pass once every three rounds. Class E includes large, clumsy fliers; these cannot move less than half their movement rate without falling, can turn only 30 degrees in a round, and they can make one pass every six rounds. See Chapter 9 of the *DMG* for more information.

**Hit Dice** controls the number of hit points damage a creature can withstand before being killed. Unless otherwise stated, Hit Dice are 8-sided (1-8 hit points). The Hit Dice are rolled and the numbers shown are added to determine the monster's hit points. Some monsters have a hit point spread instead of Hit Dice, and some have additional points added to their Hit Dice. Thus, a creature with 4+4 Hit Dice has 4d8+4 hit points (8-36 total). Note that creatures with +3 or more hit points are considered the next higher Hit Die for purposes of attack rolls and saving throws.

**THAC0** is the attack roll the monster needs to hit Armor Class 0. This is always a function of Hit Dice, except in the case of very large, nonaggressive herbivores (such as some dinosaurs), or creatures which have certain innate combat abilities. A human or demihuman always uses a player character THAC0, regardless of whether they are player characters or "monsters." The THAC0 does not include any special bonuses noted in the descriptions.

**No. of Attacks** shows the basic attacks the monster can make in a melee round, excluding special attacks. This number can be modified by hits that sever members, spells such as *haste* and *slow*, and so forth. Multiple attacks indicate several members, raking paws, multiple heads, etc.

**Damage/Attack** shows the amount of damage a given attack causes, expressed as a spread of hit points (based on a die roll or combination of die rolls). If the monster uses weapons, the damage done by the typical weapon will be allowed by the parenthetical note "weapon." Damage bonuses due to Strength are listed as a bonus following the damage range.

**Special Attacks** detail attack modes such as dragon breath, magic use, etc. These are explained in the monster description.

**Special Defenses** are precisely that, and are detailed in the monster description.

**Magic Resistance** is the percentage chance that any magic cast upon the creature will fail to affect it, even if other creatures nearby are affected. If the magic penetrates the resistance, the creature is still entitled to any normal saving throw allowed. Creatures may have resistances to certain spells; this is not considered "magic resistance", which is effective against all spells.

**Size** is abbreviated as

T = tiny (2' tall or less);
S = smaller than a typical human (2+' to 4');
M = man-sized (4+' to 7');
L = larger than man-sized (7+' to 12');
H = huge (12+' to 25'); and

G = gargantuan (25+').

Most creatures are measured in height or length; some are measured in diameter. Those measured in diameter may be given a different size category than indicated above. For instance, while a 6-foot tall humanoid is considered size M, a spherical creature 6 feet in diameter has much more mass, so is considered size L. Similarly, a creature 12 feet long with a very slender body (like a snake) might be considered only man-sized. Adjustments like these should not move a creature more than one size category in either direction.

**Morale** is a general rating of how likely the monster is to persevere in the face of adversity or armed opposition. This guideline can be adjusted for individual circumstances. Morale ratings correspond to the following range:

| | |
|---|---|
| 2-4 | Unreliable |
| 5-7 | Unsteady |
| 8-10 | Average |
| 11-12 | Steady |
| 13-14 | Elite |
| 15-16 | Champion |
| 17-18 | Fanatic |
| 19-20 | Fearless |

**XP Value** is the number of experience points awarded for defeating, but not necessarily killing, the monster. This value is a guideline that can be modified by the DM for the degree of challenge, encounter situation, and for overall campaign balance.

**Combat** is the part of the description that discusses special combat abilities, arms and armor, and tactics.

**Habitat/Society** outlines the monster's general behavior, nature, social structure, and goals. In some cases, it further describes their lairs (the places they live in), breeding habits, and reproduction rates.

**Ecology** describes how the monster fits into the campaign world, gives any useful products or byproducts, and any other miscellaneous information.

**Variations** of a monster are given in a special section after the main monster entry. These can be found by consulting the index. For instance, the xorn entry also describes the xaren, a very similar creature.

**Psionics** are mental powers possessed by many creatures in the *Monstrous Manual*. The psionic listings are explained below:
**Level:** How tough the monster is in terms of psionic experience level.
**Dis/Sci/Dev:** How many *disciplines* the creature can access, followed by the total number of sciences and

devotions the creature knows. Monsters can know *sciences* and *devotions* only from the disciplines they can access.

**Attack/Defense:** The telepathic attack and defense modes that the creature can use. Note that defense modes are not included in the total number of powers the creature knows. Abbreviations used are as follows:

| | | | |
|---|---|---|---|
| PB | Psionic Blast | M- | Mind Blank |
| MT | Mind Thrust | TS | Thought Shield |
| EW | Ego Whip | MB | Mental Barrier |
| II | Id Insinuation | IF | Intellect Fortress |
| PsC | Psychic Crush | TW | Tower of Iron Will |

**Power Score:** The creature's usual score when using a power that is not automatically successful.

**PSPs:** The creature's total pool of psionic strength points (the maximum available to it).

The rest of the listing indicates, by discipline, which powers the creature has, sometimes listing the most common powers, sometimes listing only the powers that all members of the species have. Unless otherwise noted, the creature always knows powers marked by an asterisk.

For information regarding psionic powers, see PHBR5, *The Complete Psionics Handbook.* If the DM chooses not to use psionics in the campaign, the powers can be changed to magical equivalents or simply ignored, though the latter severely impedes certain monsters.

# Aarakocra

| | |
|---|---|
| **Climate/Terrain:** | Tropical and temperate mountains |
| **Frequency:** | Very rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | D |
| **Alignment:** | Neutral good |
| **No. Appearing:** | 1-10 |
| **Armor Class:** | 7 |
| **Movement:** | 6, Fl 36 (C) |
| **Hit Dice:** | 1+2 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | 1-3/1-3 or 2-8 (weapon) |
| **Special Attacks:** | Dive +4 |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | M (20' wing span) |
| **Morale:** | Steady (11) |
| **XP Value:** | 65 |

The aarakocra are a race of intelligent bird-men that live on the peaks of the highest mountains, spending their days soaring on the thermal winds in peace and solitude.

Aarakocra are about 5 feet tall and have a wing span of 20 feet. About halfway along the edge of each wing is a hand with three human-sized fingers and an opposable thumb. An elongated fourth finger extends the length of the wing and locks in place for flying. Though the wing-hands cannot grasp during flight, they are nearly as useful as human hands when an aarakocra is on the ground and its wings are folded back. The wing muscles anchor in a bony chest plate that provides the aarakocra with extra protection. The powerful legs end in four sharp talons that can unlock and fold back to reveal another pair of functional hands, also with three human-sized fingers and an opposable thumb. The hand bones,

like the rest of an aarakocra's skeleton, are hollow and fragile.
Aarakocra faces resemble crosses between parrots and eagles. They have gray-black beaks, and black eyes set frontally in their heads that provide keen binocular vision. Plumage color varies from tribe to tribe, but generally males are red, orange, and yellow while females are brown and gray.
Aarakocra speak their own language, the language of giant eagles, and, on occasion, the common tongue (10% chance).

**Combat:** In aerial combat, an aarakocra fights with either talons or the heavy fletched javelins that he clutches in his lower hands. An aarakocra typically carries a half dozen javelins strapped to his chest in individual sheaths. The javelins, which can be used for throwing or stabbing, inflict 2d4 points of damage. Owing to the aarakocra's remarkable skill at throwing javelins in the air, it incurs none of the attack penalties for aerial missile fire. An aarakocra will always save its last javelin for stabbing purposes rather than throwing it. Its favorite attack is to dive at a victim while clutching a javelin in each hand, then pull out of the dive just as it reaches its target, and strike with a blood-curdling shriek. This attack gains a +4 bonus to the attack roll and causes double damage, but an aarakocra must dive at least 200 feet to execute it properly.
An aarakocra is reluctant to engage in grappling or ground combat, since its fragile bones are easily broken. Though rarely used except when cornered, an aarakocra's sharp beak can bite for 1-3 points of damage.

**Habitat/Society:** Aarakocra live in small tribes of about 11-30 (1d20+10) members. Each tribe has a hunting territory of about 10,000 square miles with colorful banners and pennants marking the boundaries.
Each tribe lives in a communal nest made of woven vines with a soft lining of dried grass. The eldest male serves as the tribe's leader. In tribes of more than 20 members, the second oldest male serves as the shaman, leading simple religious ceremonies involving the whistling of melodic hymns at sunset on the first day of a new month. Males spend most of their waking hours hunting for food and occasionally for treasure, such as gems and other shiny objects. Females spend eight months of the year incubating their eggs, passing the time by fabricating javelins and other tools from wood and stone. While resting on their backs, aarakocra females can use all four hands at the same time to weave boundary pennants, javelins sheaths, and other useful objects from vines and feathers.
Five aarakocra, including a shaman, can summon an air elemental by chanting and performing an intricate aerial dance for three melee rounds. The summoned air elemental will comply with the aarakocras' request for a favor, though it will not endanger its life on their behalf.
Aarakocra are extremely claustrophobic and will not willingly enter a cave, building, or other enclosed area.

**Ecology:** Aarakocra have little to do with other species, including neighboring aarakocra tribes, and leave their home territory only in extreme circumstances. They rarely encounter humans except for an occasional foray into a rural community to snatch a stray farm animal; this is not an intentionally malicious act, as aarakocra are unable to distinguish between domestic and wild animals. A human venturing into aarakocra territory may be able to convince one to serve as a guide or a scout in exchange for a shiny jewel or coin.

| 8 | 3/5/16 | TS,IF,TW | = Int | 250 |

**Telepathy:** False Sensor Input, Mindlink, Mass Domination.

The aboleth is a loathsome amphibious creature that lives in subterranean caves and lakes. It despises most land-dwelling creatures and seeks to enslave intelligent surface beings. It is as cruel as it is intelligent.

An aboleth resembles a plump fish, 20 feet in length from its bulbous head to its fluke-like tail. Its body is blue-green with gray splotches, and its pink-tan underbelly conceals a toothless, rubbery mouth. Three slit-like eyes, purple-red in color and protected by bony ridges, are set one atop the other in the front of its head. Four pulsating blue-black orifices line the bottom of its body and secrete gray slime that smells like rancid grease. Four leathery tentacles, each 10 feet in length, grow from its head. An aboleth uses its tail to propel itself through the water and its tentacles to drag itself along dry land.

**Combat:** The aboleth attacks with its tentacles for 1d6 points of damage each. If a victim struck by a tentacle fails a saving throw vs. spell, the victim's skin transforms into a clear, slimy membrane in 1d4+1 rounds. If this occurs, the victim must keep the membrane damp with cool water or suffer 1d12 points of damage each turn. *Cure disease* cast upon the victim before the membrane completely forms stops the transformation. Otherwise, *cure serious wounds* will cause the membrane to revert to normal skin.

Because its sluggish movement makes attacks difficult, the aboleth attempts to lure victims close by creating realistic illusions at will, complete with audible, olfactory, and other sensory components. The aboleth can attempt to enslave creatures within 30 feet; it can make three attempts per day, one creature per attempt. If the victim fails a saving throw vs. spell, he follows all of the aboleth's telepathic commands, although the victim will not fight on the aboleth's behalf. The enslavement can be negated by *remove curse*, *dispel magic*, the death of the enslaving aboleth, or, if the victim is separated from the aboleth by more than a mile, a new saving throw (one attempt per day.)

When underwater, an aboleth surrounds itself with a mucous cloud 1 foot thick. A victim in contact with the cloud and inhaling the mucus must roll a successful saving throw vs. poison or lose the ability to breathe air. The victim is then able to breathe water, as if having consumed a *potion of water breathing*, for 1-3 hours. This ability may be renewed by additional contact with the mucous cloud. An affected victim attempting to breathe air will suffocate in 2d6 rounds. Wine or soap dissolves the mucus.

**Habitat/Society:** An aboleth brood consists of a parent and one to three offspring. Though the offspring are as large and as strong as the parent, they defer to the parent in all matters and obey it implicitly. Aboleth have both male and female sexual organs. A mature aboleth reproduces once every five years by concealing itself in a cavern or other remote area, then laying a single egg and covering it in slime. The parent aboleth guards the egg while the embryo grows and develops, a process that takes about five years. A newborn aboleth takes about 10 years to mature.

The aboleth spends most of its time searching for slaves, preferably human ones. It is rumored that the aboleth use their slaves to construct huge underwater cities, though none have ever been found. The aboleth are rumored to know ancient, horrible secrets that predate the existence of man, but these rumors are also unsubstantiated. There is no doubt that aboleth retain a staggering amount of knowledge. An offspring acquires all of its parent's knowledge at birth, and a mature aboleth acquires the knowledge of any intelligent being it consumes.

An aboleth's treasure consists of items taken from its slaves. The items are buried in caverns under a layer of slime resembling gray mud, recognizable by the distinctive rancid grease odor.

**Ecology:** The omnivorous aboleth will eat any organic matter, usually algae and micro-organisms, but they are also fond of intelligent prey so they can absorb nutrients and information at the same time. Aboleth have no natural enemies, as even the mightiest marine creatures give them a wide berth. Aboleth

slime is sometimes used as a component for *potions of water breathing*.

# Ankheg

| | |
|---|---|
| **Climate/Terrain:** | Temperate and tropical/Plains and forests |
| **Frequency:** | Rare |
| **Organization:** | Brood |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Non- (0) |
| **Treasure:** | C |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-6 |
| **Armor Class:** | Overall 2, underside 4 |
| **Movement:** | 12, Br 6 |
| **Hit Dice:** | 3-8 |
| **THAC0:** | 17-13 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 3-18 (crush)+1-4 (acid) |
| **Special Attacks:** | Squirt acid |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | L-H (10' to 20' long) |
| **Morale:** | Average (9) |
| **XP Value:** | 175-975 |

The ankheg is a burrowing monster usually found in forests or choice agricultural land. Because of its fondness for fresh meat, the ankheg is a threat to any creature unfortunate enough to encounter it. The ankheg resembles an enormous many-legged worm. Its six legs end in sharp hooks suitable for burrowing and grasping, and its powerful mandibles are capable of snapping a small tree in half with a single bite. A tough chitinous shell, usually brown or yellow, covers its entire body except for its soft pink belly. The ankheg has glistening black eyes, a small mouth lined with tiny rows of chitinous teeth, and two sensitive antennae that can detect movement of man-sized creatures up to 300 feet away.

**Combat:** The ankheg's preferred attack method is to lie 5 to 10 feet below the surface of the ground until

its antennae detect the approach of a victim. It then burrows up beneath the victim and attempts to grab him in its mandibles, crushing and grinding for 3d6 points of damage per round while secreting acidic digestive enzymes to cause an additional 1d4 points of damage per round until the victim is dissolved. The ankheg can squirt a stream of acidic enzymes once every six hours to a distance of 30 feet. However, since it is unable to digest food for six hours after it squirts enzymes, it uses this attack technique only when desperate. A victim struck by the stream of acidic enzymes suffers 8d4 points of damage (half damage if the victim rolls a successful saving throw vs. poison).

**Habitat/Society:** The ankheg uses its mandibles to continuously dig winding tunnels 30-40 feet deep in the rich soil of forests or farmlands. The hollowed end of a tunnel serves as a temporary lair for sleeping, eating, or hibernating. When an ankheg exhausts the food supply in a particular forest or field, it moves on to another.

Autumn is mating season for ankhegs. After the male fertilizes the female, the female kills him and deposits 2d6 fertilized eggs in his body. Within a few weeks, about 75% of the eggs hatch and begin feeding. In a year, the young ankhegs resemble adults and can function independently. Young ankhegs have 2 Hit Dice and an AC 2 overall and an AC 4 for their undersides; they bite for 1d4 points of damage (with an additional 1d4 points of damage from enzyme secretions), and spit for 4d4 points of damage to a distance of 30 feet. In every year thereafter, the ankheg functions with full adult capabilities and gains an additional Hit Die until it reaches 8 Hit Dice.

Beginning in its second year of life, the ankheg sheds its chitinous shell just before the onset of winter. It takes the ankheg two days to shed its old shell and two weeks to grow a new one. During this time, the sluggish ankheg is exceptionally vulnerable. Its overall AC is reduced to 5 and its underside AC is reduced to 7. Additionally, it moves at only half its normal speed, its mandible attack inflicts only 1d10 points of damage, and it is unable to squirt acidic enzymes. While growing a new shell, it protects itself by hiding in a deep tunnel and secreting a repulsive fluid that smells like rotten fruit. Though the aroma discourages most creatures, it can also pinpoint the ankheg's location for human hunters and desperately hungry predators.

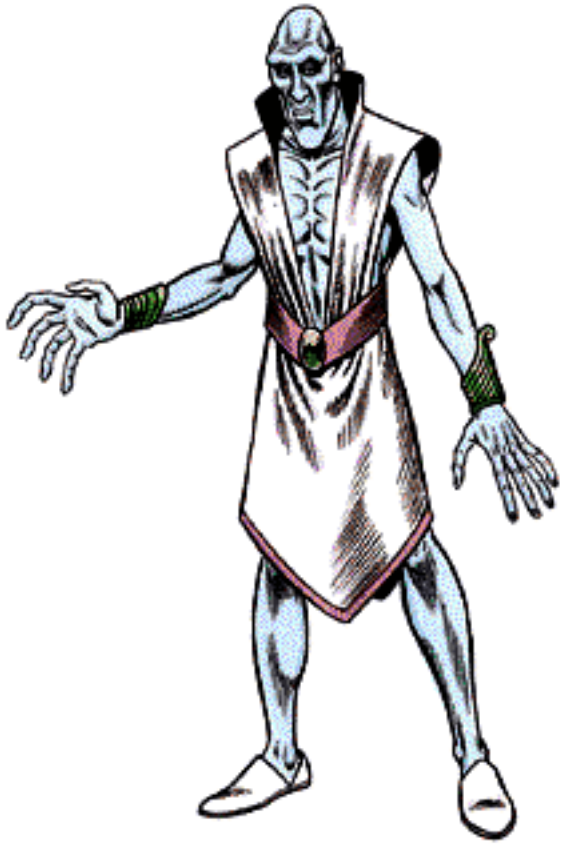
Ankhegs living in cold climates hibernate during the winter. Within a month after the first snowfall, the ankheg fashions a lair deep within the warm earth where it remains dormant until spring. The hibernating ankheg requires no food, subsisting instead on nutrients stored in its shell. The ankheg does not secrete aromatic fluid during this time and is thus relatively safe from detection. Though the ankheg's metabolism is reduced, its antennae remain functional, able to alert it to the approach of an intruder. A disturbed ankheg fully awakens in 1d4 rounds, after which time it can attack and move normally.

The ankheg does not hoard treasure. Items that were not dissolved by the acidic enzymes fall where they drop from the ankheg's mandibles and can be found scattered throughout its tunnel system.

**Ecology:** Though a hungry ankheg can be fatal to a farmer, it can be quite beneficial to the farmland. Its tunnel system laces the soil with passages for air and water, while the ankheg's waste products add rich nutrients. The ankheg will eat decayed organic matter in the earth, but it prefers fresh meat. All but the fiercest predators avoid ankhegs. Dried and cured ankheg shells can be made into armor with an AC of 2, and its digestive enzymes can be used as regular acid.

# Arcane

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Very rare |
| **Organization:** | Entourage |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Genius (17-18) |
| **Treasure:** | R |
| **Alignment:** | Lawful neutral |
| **No. Appearing:** | 1 (1-6) |
| **Armor Class:** | 5 (3) |
| **Movement:** | 12 |
| **Hit Dice:** | 10 |
| **THAC0:** | 11 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-8 (weapon) |
| **Special Attacks:** | Nil |
| **Special Defenses:** | Invisibility, dimension door |
| **Magic Resistance:** | 40% |
| **Size:** | L (12' tall) |
| **Morale:** | Champion (15) |
| **XP Value:** | 3,000 |



The arcane are a race of merchants, found wherever there is potential trade in magical items. They appear as tall, lanky, blue giants with elongated faces and thin fingers; each finger having one more joint than is common in most humanoid life. The arcane dress in robes, although there are individuals who are found in heavier armor, a combination of chain links with patches of plate (AC 3).

**Combat:** For creatures of their size, the arcane are noticeably weak and non-combative. They can defend themselves when called upon, but prefer to talk and/or buy themselves out of dangerous situations. If entering an area that is potentially dangerous (like most human cities), the arcane hires a group of adventurers as his entourage.
The arcane can become *invisible*, and can *dimension door* up to three times a day, usually with the

intention of avoiding combat. An arcane feels no concern about abandoning his entourage in chancy situations. They can also use any magical items, regardless of the limitations of those items. This includes swords, wands, magical tomes, and similar items restricted to one type of character class. They will use such items if pressed in combat and they cannot escape, but more often use them as bartering tools with others.
Arcane have a form of racial telepathy, such that an injury to one arcane is immediately known by all other arcane. The arcane do not seek vengeance against the one who hurt or killed their fellow. They react negatively to such individuals, and dealing with the arcane will be next to impossible until that individual makes restitution.

**Habitat/Society:** Nothing is known about the arcane's origins; they come and go as they please, and are found throughout the known worlds. When they travel, they do so on the ships and vehicles of other races. Finding such ships with arcane aboard is rare, and it is suspected that the arcane have another way of travelling over long distances.
Contacting the arcane is no trouble in most civilized areas: a few words spread through the local grapevine, through taverns, guilds, and barracks, are enough to bring one of these creatures to the surface. In game terms, there is a base 10% chance per day of finding an arcane, if PCs actively look for one; the chance increases or decreases depending on their location. Arcane never set up permanent "magic shops."
The arcane's stock in trade is to provide magical items, particularly *spelljamming helms*, which allow rapid movement through space. The arcanes' high quality and uniform (if high) prices make them the trusted retailers. They accept payment in gold, or barter for other magical items (as a rule of thumb, costs should be five times the XP reward of the item, or a more valuable item).
The arcane take no responsibility for the use of the items they sell. The arcane will deal with almost anyone. They often make deals with both sides in a conflict, fully aware that they might annihilate all of their potential customers in a region. The arcane have no dealings with neogi, nor with creatures from other planes, such as genies, tanar'ri, and fiends. It is unknown whether the arcane create a wide variety of magical devices, or secure them from an unknown source.
Those dealing with the arcane find them cool, efficient, and most importantly, uncaring. Trying to haggle with an arcane is a chancy business, at best. Sometimes they will engage in haggling with a bemused smirk, but just as often leave the buyer hanging and walk out on the negotiations. They do not like being threatened, insulted, or blackmailed. Those who do so will find it very difficult to purchase reliable equipment. An arcane will not raise his hand in vengeance or anger -- there are more subtle ways to wreak revenge.

**Ecology:** It is not known what arcane do with the gold, gems, and magic they collect. One theory says they need the items for reproduction (the basis for a large number of bawdy arcane jokes), while another links it to production and acquisition of more magical items. The arcane seem sexless. No young arcane have been reported, and the arcane keep their own counsel.

# Argos

| | |
|---|---|
| **Climate/Terrain:** | Space/Any Earth-based body |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Feed till consume 2xHD, then rest 2 hours/HD |

| **Alignment:** | Neutral evil |
| **No. Appearing:** | 1 |
| **Armor Class:** | 0 |
| **Movement:** | 9, Fl 3 (B) |
| **Hit Dice:** | 5-10 |
| **THAC0:** | 5-6 HD: 15<br>7-8 HD: 13<br>9-10 HD: 11 |
| **No. of Attacks:** | 3 per victim |
| **Damage/Attack:** | 1-4 |
| **Special Attacks:** | See below |
| **Special Defenses:** | See below |
| **Magic Resistance:** | 25% |
| **Size:** | L-G (2' per HD) |
| **Morale:** | Champion (16) |
| **XP Value:** | 5-6 HD: 2,000 (+1,000 for additional HD) |

Argos are found in the same regions of wildspace as the baleful beholder nations. An argos resembles a giant amoeba. It has one large, central eye with a tripartite pupil, and a hundred lashless, inhuman eyes and many sharp-toothed mouths. An argos can extrude several pseudopods, each tipped with a fanged maw that functions as a hand to manipulate various tools.

Argos move by slithering; they can cling to walls and ceilings. They can levitate and fly at the very slow rate of 3.

Argos colors tend toward shades of transparent blues and violets; they smell like a bouquet of flowers. They are huge beasts ranging in size from 10 to 20 feet in diameter, weighing about 200 pounds per Hit Die. Though they exhibit signs of being intelligent tool users, they do not wear clothes, choosing rather to carry gear stored in temporary cavities within their bodies. However, their digestive juices often ruin devices within two to three weeks (saving throw vs. acid).

**Combat:** An argos can attack with one to three weapons or items, or it can enfold a victim in a pseudopod and attack with 1d3 mouths for 1d4 points of damage each. It may attack as many foes in this way as it can physically reach.

If an argos rolls a natural 20 on an attack, it envelopes its victim, swallowing him whole. A swallowed victim suffers 2d8 points of damage each round from the creature's digestive juices. The victim may attempt to cut his way free from within, using only short cutting weapons. He must inflict 8 points of damage to break free.

The eyes of an argos, like those of a beholder, have a variety of special powers. An argos can bring 1d10 of its smaller eyes to bear on any target. The large, central eye can focus only on targets that are in front of the creature (within 90 degrees of the "straight-ahead point" of the central eye). Though the creature has nearly 100 eyes, only 20 special powers have been noted; therefore a number of eyes must possess the same power.

Each point of damage inflicted on an argos eliminates one eye; the DM decides which powers are reduced in the process. It is possible to target one particular eye by attacking with a -4 penalty to the attack roll.

Each ability of an argos's eye is treated as a spell effect. Use the argos's Hit Dice as the caster level. Roll 1d20 and check the following table for a particular eye's power.

1. *Blindness*
2. *Burning Eyes (Hands)*
3. *Charm Monster*
4. *Clairvoyance*
5. *Confusion*
6. *Darkness, 15' rad.*
7. *Dispel Magic*
8. *Emotion*
9. *ESP*
10. *Fumble*
11. *Gaze Reflection*
12. *Heat Metal*
13. *Hold Monster*
14. *Imp. Phantasmal Force*
15. *Irritation*
16. *Light*
17. *Slow*
18. *Suggestion*
19. *Tongues*
20. *Turn Flesh to Stone*

The central eye can use one of three different powers once per round. It can create a personal illusion (an *alter self* spell), or it can cast a *color spray* or a *ray of enfeeblement* spell.

**Habitat/Society:** Argos are solitary creatures, though it is not unheard of to discover an argos guardian aboard an eye tyrant ship. Argos appear capable of replenishing their own air envelope and thus may be encountered wandering asteroid rings and dust clouds alone.

Despite its relative intelligence, the argos is a ravenous creature driven by its hunger. It tries to lure prey into its grasp, feeding until it has consumed a number of creatures equal to two times its own Hit Dice. It then slips away to digest its meal for a period equal to two hours per Die. If an argos is unable to find food within a week of its last meal, it loses 1 Hit Die per week until it becomes a 5-Hit Die creature. After that point, it can hibernate for up to a year by crystallizing its outer shell and forming a chrysalis.

**Ecology:** Argos consume anything that moves and is digestible. Their preference is to use their abilities to lure their prey into traps and then to pick off individuals one at a time. It sorts through the tools and weapons of its victims and keeps the useful items.

# Aurumvorax

| | |
|---|---|
| **Climate/Terrain:** | Temperate hills |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore (see below) |
| **Intelligence:** | Animal (1) |
| **Treasure:** | Special |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 |
| **Armor Class:** | 0 |
| **Movement:** | 9, Br 3 |
| **Hit Dice:** | 12 |
| **THAC0:** | 9 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 2-8 |
| **Special Attacks:** | 2-8 claws for 2-8 each |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | S (3' long) |
| **Morale:** | Fearless (19-20) |
| **XP Value:** | 9,000 |

Despite being only the size of a large badger, the aurumvorax, or "golden gorger," is an incredibly dangerous creature. The animal is covered with coarse golden hair and has small silver eyes with golden pupils. It has eight powerful legs that end in 3-inch-long copper claws. The aurumvorax's shoulders are massively muscled while its heavy jaw is full of coppery teeth.
The creature weighs over 500 pounds. This incredible density provides the animal with much of its natural protection. This, combined with its speed, power, and sheer viciousness, makes it one of the most dangerous species yet known.

**Combat:** The aurumvorax charges any creature that enters its territory, causing a -3 to opponents' surprise rolls if attacking from its den. A female of the species receives a +2 bonus to attack rolls when

guarding her young.
The creature bites at its prey until it hits, clamping its massive jaws onto the victim and doing 2-8 hit points of damage. After it hits, the aurumvorax locks its jaws and hangs on, doing an additional 8 points of damage per round until either the aurumvorax or its enemy is dead. Only death will cause the aurumvorax to relax its grip.
Once its jaws lock, the golden gorger also rakes its victim with 2-8 of its legs, causing 2-8 hit points of damage per additional hit. An opponent who is held by an aurumvorax receives no dexterity adjustment to Armor Class.
Due to its incredibly dense hide and bones, the aurumvorax takes only half damage from blunt weapons. It is immune to the effects of small, normal fires and takes only half damage from magical fires. Neither poison nor gasses have any effect on the sturdy creature.

**Habitat/Society:** The aurumvorax makes its solitary home in light forests, hills, and at the timberline on mountainsides. An aurumvorax chooses a likely spot and then uses its powerfully clawed legs to create a burrow, sometimes into solid rock.
Due to their unusual dietary needs, aurumvorae make their lairs in spots that either contain rich veins of gold ore or are very near to an area where gold is readily available.
The aurumvorax is a solitary creature which jealously guards its territory, even from others of its kind. The only time adult aurumvorae willingly meet is during mating season, which occurs approximately every eight years.

The pair will stay together for a week or two before the male returns to his territory and the female prepares for the birth of her kits. A litter of 1d6+2 kits is born four months after mating.
For the first two weeks of life, the kits are blind and hairless. They must be fed both meat and precious ores, including gold, in order to survive. It is unusual for more than 1-2 of the strongest kits to survive. If a kit is found and "adopted" before its eyes are open, it can be tamed and trained.
Dwarves tend to dislike aurumvorae, though some communities have been known to raise one or more of the beasts for use in sniffing out veins of ore.

**Ecology:** In order to survive, the aurumvorax supplements its carnivorous diet with quantities of gold. The ability to digest and utilize gold and other ores makes it possible for the creature to develop the dense fur, hide, and bones that protect it so well.
If an aurumvorax is killed with a minimum of cutting damage to its hide, the hide may be turned into a garment of incredible strength and beauty worth 15,000-20,000 gold pieces. The garment will also protect its wearer as armor, the specific Armor Class depending on the size of the aurumvorax. A garment with AC 2 weighs 50 pounds, one with AC 3 weighs 40 pounds, and one with AC 4 weighs 30 pounds.
The wearer also receives a +4 bonus on saving throws vs. normal fires and a +2 bonus on saving throws vs. magical fire.
If an aurumvorax is burned in a forge, approximately 150-200 pounds of gold are left behind. This burning process is very difficult and usually takes between one and two weeks to perform. Of course, the hide may be removed before the creature is burned; if burned at the same time, the hide will provide an additional 21-40 (1d20+20) pounds of gold.
The aurumvorax's teeth and claws are also prized for decoration, and can bring up to 1 gp each on the open market.

| **XP Value:** | 57,500 | 21,500 | 23,500 | 25,500 |

**General:** The baatezu are the primary inhabitants of the Nine Hells. They are a strong, evil tempered race held together by an equally strong organization. The baatezu live in a rigid caste system where authority is derived from power and station.
The baatezu wish to fulfill their ancient quest to destroy the tanar'ri, their blood enemies. The baatezu also know that by infiltrating humans and entering their world they will gain power over the tanar'ri. Toward this end they constantly strive to dominate the Prime Material plane and its natives.
The baatezu are divided into three groups: greater, lesser, and least. Below are listed a few:

| Greater baatezu | Lesser baatezu | Least baatezu |
|---|---|---|
| amnizu | abishai | nupperibo |
| cornugon | barbazu | spinagon |
| gelugon | erinyes | |
| pit fiend | hamatula | |
| | osyluth | |

In addition, there are the lemures, the common "foot soldiers" of the baatezu at the very bottom in station.

**Combat:** All baatezu except for lemures, nupperibo, and spinagon are able to perform the following magical abilities, once per round, at will: *advanced illusion, animate dead, charm person, infravision, know alignment* (always active), *suggestion,* and *teleport without error.*
Baatezu are affected by the following attack forms:

| Attack | Damage | Attack | Damage |
|---|---|---|---|
| acid | full | cold | half* |
| electricity (lightning) | full | fire (dragon, magical) | none* |
| gas | half | iron weapon | none** |
| *magic missile* | full | poison | none |
| silver weapon | full*** | | |

*the gelugon suffers half damage from fire and none from cold.
**unless affected by normal weapons.
***greater baatezu suffer half damage from silver weapons.

**Pit Fiend:** The most terrible baatezu of the Nine Hells, pit fiends appear to be giant, winged humanoids, very much like gargoyles in appearance, with huge wings that wrap around their bodies for defense. Pit fiend's fangs are large and drip with a vile, green liquid. Their bodies are red and scaly, often emitting flames when they are angered or excited. In the rare situations they choose to communicate, they use telepathy.

**Combat:** In physical combat, the pit fiend is capable of dealing out tremendous punishment, using its incredible 18/00 Strength (+6 damage adjustment). They can attack six times in a single round, dividing attacks against six different opponents. They can attack with two hard, scaly wing buffets for 1-4 points of damage per hit. Their powerful claws do 1-6 points of damage per successful attack. The bite of a pit fiend is dreadful indeed, causing any creature bitten to take 2-12 points of damage and receive a lethal dose of poison. A saving throw vs. poison is required or the victim dies in 1-4 rounds. The bite also infects the victim with a disease.
Pit fiends can also attack with their tail every round, inflicting 2-8 points of damage per hit. The tail can then hold and constrict the victim for 2-8 points of damage per round until the victim makes a successful Strength check to break free. Pit fiends can also carry jagged-toothed clubs which inflict 7-12 points of damage per hit (this replaces one claw attack).
Once per round a pit fiend can use one of the following spell-like powers, plus those available to all baatezu: *detect magic, detect invisibility, fireball, hold person, improved invisibility, polymorph self, produce flame, pyrotechnics,* and *wall of fire.*
They can, once per year, cast a *wish* spell. They may always *gate* in two lesser or one greater baatezu with a 100% chance of success, performing this action once per round. Once per day, a pit fiend can use a *symbol* of pain -- the victim must save vs. rod, staff or wand or suffer a -4 penalty on attack dice, and a -2 penalty to Dexterity for 2-20 rounds.
Pit fiends regenerate 2 hit points per round and radiate a *fear* aura in a 20-foot radius (save vs. rod, staff, or wand at a -3 penalty or flee in panic for 1-10 rounds).

**Habitat/Society:** Pit fiends are the lords of the Nine Hells. They are the baatezu of the greatest power and the highest station. Pit fiends are found throughout the various layers of the Nine Hells, but are very rare on the upper layers.
Wherever they are found, these mighty lords hold a position of great authority and power. They sometimes command vast legions consisting of dozens of complete armies, leading them into battle against the tanar'ri. These huge forces are terrifying to behold, and any non-native of the lower planes, of less than 10 Hit Dice, who sees them, flees in panic for 1-3 days. Those of 10 Hit Dice or more must make a saving throw vs. rod, staff, or wand or flee in panic for 1-12 turns.

**Ecology:** Pit fiends are spawned from the powerful gelugons of the Nine Hells' eighth layer. When those icy fiends are found worthy they are cast into the Pit of Flame for 1,001 days after which they emerge as pit fiends.

**Abishai:** Abishai are common on the first and second layers of the Nine Hells, appearing much like gothic gargoyles. They are thin and reptilian with long, prehensile tails and great wings. There are three varieties of

abishai. They are, in ascending order of station, black, green, and red. Abishai communicate with telepathy.

**Combat:** In battle, the abishai strikes with formidable claws, inflicting 1-4 points of damage per successful hit. It can also lash out with its flexible tail for 2-5 points of damage. Hidden in the end of an abishai's tail is a small stinger that injects poison on a successful hit, requiring a saving throw vs. poison (failure results in death).

Abishai can fly into the air and dive at enemies, striking with both claws. Their attack roll is made with a +2 bonus. A successful hit inflicts double damage.

In addition to the powers possessed by all baatezu, an abishai can perform the following magical powers, one at a time, once per round: *change self*, *command*, *produce flame*, *pyrotechnics*, and *scare*. They can also attempt to *gate* 2-12 lemures (60% chance of success, once per day) or 1-3 abishai (30% chance of success, once per day).

All abishai are susceptible to damage from holy water. If a vial is splashed on it, an abishai suffers 2-8 points of damage. All abishai regenerate 1 hit point per melee round unless the damage was done by holy water or a holy magical weapon.

**Habitat/Society:** Abishai are voracious and evil. They delight in tormenting those few natives of the Nine Hells that are lower in power. Abishai are fond of using *change self* and *charm person* to tempt mortals bold enough to travel to the Nine Hells.

**Ecology:** The abishai comprise the main body of many large, evil armies battling against the tanar'ri and intruders against the Nine Hells. In some cases, a red abishai may have proven himself worthy enough to command a force of lemures. If it is successful in this endeavor, the red abishai may be promoted to a higher form of baatezu.

# Banshee

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Night |
| **Diet:** | Nil |
| **Intelligence:** | Exceptional (15-16) |
| **Treasure:** | (D) |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1 |
| **Armor Class:** | 0 |
| **Movement:** | 15 |
| **Hit Dice:** | 7 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-8 |
| **Special Attacks:** | Death wail |
| **Special Defenses:** | +1 or better weapon to hit |
| **Magic Resistance:** | 50% |
| **Size:** | M (5'-6' tall) |
| **Morale:** | Elite (13) |
| **XP Value:** | 4,000 |

The banshee or groaning spirit, is the spirit of an evil female elf -- a very rare thing indeed. Banshee hate the living, finding their presence painful, and seek to harm whomever they meet.
Banshees appear as floating, luminous phantasms of their former selves. Their image glows brightly at night, but is transparent in sunlight (60% invisible). Most banshees are old and withered, but a few (10%) who died young retain their former beauty. The hair of a groaning spirit is wild and unkempt. Her dress is usually tattered rags. Her face is a mask of pain and anguish, but hatred and ire burns brightly in her eyes. Banshees frequently cry out in pain -- hence their name.

**Combat:** Banshees are formidable opponents. The mere sight of one causes *fear*, unless a successful saving throw vs. spell is rolled. Those who fail must flee in terror for 10 rounds and are 50% likely to

drop any items they were carrying in their hands.
A banshee's most dreaded weapon is its wail or keen. Any creature within 30 feet of a groaning spirit when she keens must roll a saving throw vs. death magic. Those who fail die immediately, their faces contorted in horror. Fortunately, groaning spirits can keen just once per day, and then only at night. The touch of a groaning spirit causes 1d8 points of damage.
Banshees are noncorporeal and invulnerable to weapons of less than +1 enchantment. In addition, groaning spirits are highly resistant to magic (50%). They are fully immune to *charm*, *sleep*, and *hold* spells and to cold- and electricity-based attacks. Holy water causes 2d4 points of damage if broken upon them. A *dispel evil* spell will kill a groaning spirit. A banshee is turned as a "special" undead.
Banshees can sense the presence of living creatures up to five miles away. Any creature that remains within five miles of a groaning spirit lair is sure to be attacked when night falls. The nature of this attack varies with the victim. Beasts and less threatening characters are killed via a touch. Adventurers or demihumans are attacked by keening. Creatures powerful enough to withstand the groaning spirit's keen are left alone.
When attacking adventurers, the groaning spirit attacks at night with her wail. If any characters save successfully, she then retreats to her lair. Thereafter, each night, the groaning spirit returns to wail again. This routine is repeated until all of the victims are dead or have left the groaning spirit's domain, or until the groaning spirit is slain.

**Habitat/Society:** Banshees loathe all living things and thus make their homes in desolate countryside or ancient ruins. There they hide by day, when they cannot keen, and wander the surrounding countryside by night. The land encircling a groaning spirit's lair is strewn with the bones of beasts who heard the groaning spirit's cry. Once a groaning spirit establishes her lair she will remain there.
The treasure of groaning spirits varies considerably and often reflects what they loved in life. Many hoard gold and fine gems. Other groaning spirits, particularly those that haunt their former homes, show finer tastes, preserving great works of art and sculptures, or powerful magical items.
It is nearly impossible to distinguish the cry of a groaning spirit from that of a human or elf woman in pain. Many a knight gallant has mistaken the two sounds, and then paid for the mistake with his life.
Banshees are exceptionally intelligent and speak numerous languages, including common, elvish, and other demihuman languages.
Banshees occasionally use their destructive powers to seek revenge against their former adversaries in life.

**Ecology:** Banshees are a blight wherever they settle. They kill without discretion, and their only pleasure is the misfortune and misery of others. In addition to slaying both man and beast, a groaning spirit's keen has a powerful effect upon vegetation. Flowers and delicate plants wither and die and trees grow twisted and sickly, while hardier plants, thistles and the like, flourish. After a few years all that remains within five miles of a groaning spirit's lair is a desolate wilderness of warped trees and thorns mixed with the bones of those creatures that dared to cross into the groaning spirit's domain.

| **XP Value:** | 1,400 | 7,000 | 3,000 |

These reptilian monsters all posses a *gaze* that enables them to turn any fleshy creature to stone; their gaze extends into the Astral and Ethereal planes.

### Basilisk

Although it has eight legs, its sluggish metabolism allows only a slow movement rate. A basilisk is usually dull brown in color, with a yellowish underbelly. Its eyes glow pale green.

**Combat:** While it has strong, toothy jaws, the basilisk's major weapon is its *gaze*. However, if its gaze is reflected, and it sees its own eyes, it will become petrified itself, but this requires light at least equal to bright torchlight and a good, smooth reflector. In the Astral plane its gaze kills; in the Ethereal plane it turns victims into ethereal stone. These will only be seen by those in the Ethereal plane or who can see ethereal objects.

### Greater Basilisk

The greater basilisk is a larger cousin of the more common reptilian horror, the ordinary basilisk. These monsters are typically used to guard treasure.

**Combat:** The monster attacks by raising its upper body, striking with sharp claws, and biting with its toothy maw. The claws carry Type K poison (saving throws vs. poison are made with a+4 bonus). Its foul breath is also poisonous, and all creatures, coming within 5 feet of its mouth, even if just for a moment, must roll successful saving throws vs. poison (with a+2 bonus) or die (check each round of exposure).
Even if a polished reflector is used under good lighting conditions, the chance for a greater basilisk to see its own gaze and become petrified is only 10%, unless the reflector is within 10 feet of the creature. (While its gaze weapon is effective to 50 feet, the creature's oddly-shaped eyes are nearsighted and it cannot see its own gaze unless it is within 10 feet.)

### Dracolisk

The sages say that the dracolisk is the offspring of a rogue black dragon and a basilisk of the largest size. The result is a deep brown, dragon-like monster that moves with relative quickness on six legs. It can fly, but only for short periods -- a turn or two at most.

**Combat:** This horror can attack with its taloned forelegs and deliver vicious bites. In addition, it can spit a stream of acid 5 feet wide and up to 30 feet away. The acid causes 4d6 points of damage, half-damage

if a successful saving throw vs. breath weapon is rolled. The dracolisk can spit up to three times per day. The eyes of a dracolisk can petrify any opponent within 20 feet if the monster's gaze is met. Because its hooded eyes have nictating membranes, the monster is only 10% likely to be affected by its own gaze. Opponents in melee with a dracolisk and seeking to avoid its gaze fight with a -4 penalty to their to attack rolls.

Bats are common animals in many parts of the world. While ordinary bats are annoying but harmless, larger varieties can be quite deadly. With almost 2,000 different species of bats known, one can find wingspans from less than two inches across to 15 feet or more. The small body of the ordinary bat resembles a mouse, while the wings are formed from extra skin stretched across its fore limbs. The larger bats are scaled up but otherwise similar in appearance.
Despite the common belief that bats are blind, nearly all known species have rather good eyesight. In the dark, however, they do not rely on their visual acuity, but navigate instead by echo-location. By emitting a high-pitched squeal and listening for it to bounce back to them, they can "see" their surroundings by this natural form of sonar.

**Combat:** Ordinary bats attack only if cornered and left with no other option. If startled, bats tend to become frightened and confused. This causes them to swarm around and often fly into things. The typical bat swarm ends up putting out torches (1% chance per bat encountered per round), confusing spell casting (Wisdom roll required to cast spells), inhibiting combatants' ability to wield weapons (by a -2 THAC0 penalty), and otherwise getting in the way. Under ideal flying conditions, a bat's Armor Class rating rises from 8 to 4.

**Habitat/Society:** While bats are found almost anywhere, they prefer warm and humid climes. Some species hibernate during the cold season and a few are know to migrate. Bats live in caves, dark buildings, or damp crevices, hanging by their toes during the day, and leaving at dusk to feed during the night. In large, isolated caverns there may be thousands of bats.

**Ecology:** Most bats eat fruit or insects, though some include small animals or fish in their diets. The rare vampire bat travels at night to drink the warm blood of living mammals, but its victims are rarely humans or demihumans. Care must be taken not to confuse the vampire bat with the true vampire in this regard. Rot grubs and carrion crawlers are among the few creatures known to live in the guano on the floor of large bat-infested caverns, making any expeditions into such caves dangerous indeed. If the noxious odor from the guano is not enough to subdue the hardiest of adventurers (a single Constitution check to stay conscious), these crawling denizens are.

## Large Bat

These creatures are large versions of the carnivorous variety of the ordinary bat with 3-foot-long bodies and 5- to 6-foot-long wingspans. They dwell in dark caverns, usually underground, and depend on their sonar in flight to compensate for their poor eyesight. Only 10% of giant bats are of the more powerful 1 Hit Die variety.

Extremely maneuverable in flight, large bats gain an Armor Class bonus of +3 when an opponent with a Dexterity of 13 or less fires a missile weapon at it. The creature must land (usually on its victim) to attack with its bite. The typical example of this species inflicts 1d2 points of damage with its teeth while the larger does 1d4 points of damage. Anyone bitten by a large bat has a 1% chance per point of damage done to contract rabies.

When rabies is contracted, there is a 1d4+6 day incubation period. Once this period has ended, the victim has 10 days to live. The victim cannot drink or eat anything and is overly irritable. Anything from loud noises to being awakened at night can set the victim off (the DM determines the temper triggers). If temper flares, the victim must roll a Wisdom check. If the check fails, the rabid person attacks until he is killed or knocked unconscious. When a character contracts rabies, he or she dies from the infliction, unless cured by a *wish*, *alter reality*, *limited wish*, *cure disease*, or similar spell.

## Huge Bat (Mobat)

Mobats prefer warm-blooded prey that they bite to death with their fangs. They have a dim and evil intelligence that gives them a desire for shiny objects. Because the typical mobat has a wingspan of 12 to 16 feet, they must have large areas to serve as flight runways.

Because Mobats' flight is so rapid and silent, their victims suffer a -3 penalty to their surprise rolls. They can also give a piercing screech that causes such great pain that victims seek to cover their ears rather than fight, unless a saving throw versus paralyzation is successful. This screech is always used if the prey resists and it is effective in a 20-foot radius about the mobat. Note that mobile mobats have an Armor Class of 2. Under crowded flying conditions, their Armor Class suffers and raises to 7. When not in flight, mobats have an Armor Class of 10.

## Azmyth

Azmyths live on flowers, small plants, and insects. They are solitary wanderers, though they do have "favorite haunts" to which they return. They often form partnerships with humanoids for mutual benefit, sometimes forming loyal friendships in the process. Azmyths have been known to accompany creatures for their entire lives, and then accompany the creatures' offspring. The life span of azmyths are presently unknown but is believed to be over 100 years. They are not familiars as wizards understand the term; no direct control can be exercised over one, except by spells.

Azmyths have crested heads and bearded chins, white, pupil-less eyes, and leathery gray, mauve, or emerald green skin. They emit shrill squeaks of alarm or rage, and endearing, liquid chuckles of delight or amusement. They communicate by *telepathy* that has a range of 60 feet, and have infravision to 90 feet. They can *know alignment* three times per day, become *invisible* (self only for six rounds or less, ending when the azmyth makes a successful attack) once per day, and create *silence 15' radius*, centered on themselves, once per day.

In combat, the azmyth bites for 1 point of damage and stabs with its powerful needle-sharp tails for 1d2 points. Twice per day, an azmyth can unleash a *shocking grasp* attack, transmitting 1d8+6 points of electrical damage through any direct physical contact with another creature. This attack can be combined with a physical attack for cumulative damage.

## Night Hunter

This species, know as dragazhar, is named after the adventurer who first domesticated one, long ago. Nocturnal on the surface, it is active anytime in the gloom of the underworld. It eats carrion if it must, but usually hunts small beasts. Desperate dragazhar are known to attack livestock, drow, or humans.
Night hunters swoop down to bite prey (1d4), rake with their wing claws (1d2 each), and slash (1d6) or stab (3d4) with their dexterous, triangular-shaped, razor sharp tails. They stalk their prey, flying low and dodging behind hillocks, ridges, trees, or stalactites, to attack from ambush. They have infravision to a distance of 120 feet, but rarely surprise opponents, since they emit echoing, loon-like screams when excited.
Night hunter lairs usually contain over 30 creatures. They typically live in double-ended caves, or above ground in tall, dense woods. Night hunters do not tarry to eat where they feel endangered, so their lairs often contain treasure fallen from prey carried there. Night hunters roost head-down when sleeping. They are velvet in hue, even to their claws, and have violet, orange, or red eyes.

## Sinister

These mysterious jet-black creatures most closely resemble manta rays. They have no distinct heads and necks, and their powerfully-muscled wings do not show the prominent finger bones common to most bats. A natural ability of *levitation* allows them to hang motionless in midair. This unnerving appearance and behavior has earned them their dark name, but sinisters are not evil. Above ground, they prefer to hunt at night, when their 160'-range infravision is most effective. They eat carrion if no other food is available, and regularly devour flowers and seed pods of all sorts.
Sinisters are both resistant to magic and adept in its use. In addition to their pinpoint, precision *levitation*, they are surrounded at all times by a naturally-generated 5-foot-deep energy field akin to a *wall of force*. This field affords no protection against spells or melee attacks, but missile attacks are stopped utterly; normal missiles are turned away, and such effects as *magic missile* and *Melf's acid arrow* are absorbed harmlessly. In addition, all sinisters can cast one *hold monster* (as the spell) once per day. They usually save this for escaping from creatures more powerful than themselves, but may use it when hunting, if ravenous.
Curiously, though they are always silent (communicating only with others of its kind via 20-foot-range limited *telepathy*), sinisters love music-both vocal and instrumental. Many a bard making music at a wilderness campfire has found him or herself surrounded by a silent circle of floating sinisters. Unless they are directly attacked, the sinisters will not molest the bard in any way, but may follow the source of the music, gathering night after night to form a rather daunting audience.
Sinisters are usually encountered in small groups and are thought to have a long life span. Their social habits and mating rituals are unknown.

| **XP Value:** | 175 | 420 | 650 | 1,400 |

A rather common omnivorous mammal, bears tend to avoid humans unless provoked. Exceptions to this rule can be a most unfortunate occurrence.
Bears are, in general, large and powerful animals which are found throughout the world's temperate and cooler climates. With dense fur protecting them from the elements and powerful claws protecting them from other animals, bears are the true rulers of the animal kingdom in the areas where they live.
The so-called black bear actually ranges in color from black to light brown. It is smaller than the brown bear and the most widespread species by far.

**Combat:** Although black bears are usually not aggressive, they are able fighters when pressed. If a black bear scores a paw hit with an 18 or better it also hugs for 2-8 (2d4) points of additional damage.

**Habitat/Society:**All bears have excellent senses of hearing and smell but rather poor eyesight. The size shown is an average for the variety and larger individuals will, of course, be correspondingly more powerful.
One common misconception people hold about bears is that they hibernate during the winter. In fact, they sleep most of the time, but their metabolism does not slow down, and they often wake up and leave their lairs during warm spells.
Bears live in small family groups. Female bears are very protective of their young, and more than one individual has been badly injured when taunting or playing with seemingly harmless bear cubs.

**Ecology:** All of these ursoids are omnivorous, although the gigantic cave bear tends towards a diet of meat.
Bears are fairly intelligent animals that can be trained to perform in a variety of ways, particularly if captured as cubs. Bears can thus be found dancing in circuses or accompanying "mountain men" in the wilderness.

### Brown Bear
The brown bear, of which the infamous grizzly is the most well known variety, is a bear of very aggressive disposition. Brown bears are more carnivorous than their smaller cousins, the black bears. The grizzly in particular will often bring down large game such as deer and elk.
Brown bears are aggressive hunters. If a brown bear scores a paw hit with a roll of 18 or better it will also hug for 2-12 (2d6) points of additional damage. Brown bears will continue to fight for 1-4 melee rounds after reaching 0 to -8 hit points. At -9 or fewer hit points, they are killed immediately.

### Cave Bear
Cave bears are quite aggressive, willing to attack well-armed parties without provocation. If a cave bear

scores a paw hit with an 18 or better it also hugs for 2-16 (2d8) points of additional damage. Cave bears will continue to fight for 1-4 melee rounds after reaching 0 to -8 hit points. At -9 or fewer hit points, they are killed immediately.

### Polar Bear

These powerful swimmers feed mostly on marine animals. A paw hit of 18 or better indicates a "hug", which inflicts 3-18 (3d6) points of additional damage. These aggressive animals will fight for 2-5 rounds after being brought to 0 to -12 hit points, but beyond that they will die instantly.

Giant beetles are similar to their more ordinary counterparts, but thousands of times larger -- with chewing mandibles and hard wings that provide substantial armor protection.
Beetles have two pairs of wings and three pairs of legs. Fortunately, the wings of a giant beetle cannot be used to fly, and in most cases, its six bristly legs do not enable it to move as fast as a fleeing man. The hard, chitinous shell of several varieties of these beetles are brightly colored, and sometimes have value to art collectors. While their shells protect beetles as well as plate mail armor, it is difficult to craft armor from them, and a skilled alchemist would need to be brought in on the job.
All beetles are basically unintelligent and always hungry. They will feed on virtually any form of organic material, including other sorts of beetles. They taste matter with their antennae, or feelers; if a substance tasted is organic, the beetle grasps it with its mandibles, crushes it, and eats it. Because of the thorough grinding of the mandibles, nothing eaten by giant beetles can be revived by anything short of a *wish.*
Beetles do not hear or see well, and rely primarily on taste and feel.
Except as noted below, giant beetles are not really social animals; those that are found near each other are competitors for the same biological niche, not part of any family unit.

### Bombardier Beetle

The bombardier beetle is usually found above ground in wooded areas. It primarily feeds on offal and carrion, gathering huge heaps of the stuff in which to lay its eggs.

**Combat:** If it is attacked or disturbed, there is a 50% chance each round that it will turn its rear toward its attacker and fire off an 8-foot, spherical cloud of reeking, reddish, acidic vapor from its abdomen. This cloud causes 3d4 points of damage per round to any creature within range. Furthermore, the sound caused by the release of the vapor has a 20% chance of stunning any creature with a sense of hearing within a 15-foot radius, and a like chance for deafening any creature that was not stunned. Stunning lasts for 2d4 rounds, plus an additional 2d4 rounds of deafness afterwards. Deafening lasts 2d6 rounds. The giant bombardier can fire its vapor cloud every third round, but no more than twice in eight hours.

**Ecology:** The bombardier action of this beetle is caused by the explosive mixture of two substances that are produced internally and combined in a third organ. If a bombardier is killed before it has the opportunity to fire off both blasts, it is possible to cut the creature open and retrieve the chemicals. These chemicals can then be combined to produce a small explosive, or fire a projectile, with the proper equipment.
The chemicals are also of value to alchemists, who can use them in various preparations. They are worth 50 gp per dose.

### Boring Beetle

Boring beetles feed on rotting wood and similar organic material, so they are usually found individually

inside huge trees or massed in underground tunnel complexes.

**Combat:** The large mandibles of the boring beetle have a powerful bite and will inflict up to 20 points on damage to the victim.

**Habitat/Society:** Individually, these creatures are not much more intelligent than other giant beetles, but it is rumored that nests of them can develop a communal intelligence with a level of consciousness and reasoning that approximates the human brain. This does not mean that each beetle has the intelligence of a human, but rather that, collectively, the entire nest has attained that level. In these cases, the beetles are likely to collect treasure and magical items from their victims.

**Ecology:** In tunnel complexes, boring beetles grow molds, slimes, and fungi for food, beginning their cultures on various forms of decaying vegetable and animal matter and wastes.
One frequent fungi grown is the shrieker, which serves a dual role. Not only is the shrieker a tasty treat for the boring beetle, but it also functions as an alarm when visitors have entered the fungi farm. Boring beetles are quick to react to these alarms, dispatching the invaders, sometimes eating them, but in any case gaining fresh organic matter on which to raise shrieker and other saprophytic plants.

### Fire Beetle

The smallest of the giant beetles, fire beetles are nevertheless capable of delivering serious damage with their powerful mandibles. They are found both above and below ground, and are primarily nocturnal.

**Combat:** Despite its name, the fire beetle has no fire attacks, relying instead on its huge mandibles to inflict up to three times the damage of a dagger in a single attack.

**Ecology:** Fire beetles have two special glands above their eyes and one near the back of their abdomens. These glands produce a luminous red glow, and for this reason they are highly prized by miners and adventurers. This luminosity persists for ld6 days after the glands are removed from the beetle, and the light shed will illuminate a radius of 10 feet.
The light from these glands is "cold" -- it produces no heat. Many mages and alchemists are eager to discover the secret of this cold light, which could be not only safe, but economical, with no parts to heat up and burn out. In theory, they say, such a light source could last forever.

### Rhinoceros Beetle

This uncommon monster inhabits tropical and subtropical jungles. They roam the rain forests searching for fruits and vegetation, and crushing anything in their path. The horn of a giant rhinoceros beetle extends about 6 feet.

**Combat:** The mandibles of this giant beetle inflict 3d6 points of damage on anyone unfortunate enough to be caught by them; the tremendous horn is capable of causing 2d8 points of damage by itself.

**Ecology:** The shell of this jungle dweller is often brightly colored or iridescent. If retrieved in one piece, these shells are valuable to clerics of the Egyptian pantheon, who use them as giant scarabs to decorate temples and other areas of worship. It is a representation of this, the largest of all beetles, that serves as the holy symbol for clerics of Apshai, the Egyptian god whose sphere of influence is said to include all insects.

### Stag Beetle

These woodland beetles are very fond of grains and similar growing crops, and they sometimes become great nuisances when they raid cultivated lands.

**Combat:** Like other beetles, they have poor sight and hearing, but they will fight if attacked or attack if they encounter organic material they consider food. The giant stag beetle's two horns are usually not less than 8 feet long; they inflict up to 10 points of damage each.

**Ecology:** The worst damage from a stag beetle raid is that done to crops; they will strip an entire farm in short order. Livestock suffers too, stampeding in fear and wreaking more havoc. The beetles may even devour livestock, if they are hungry enough.

### Water Beetle

The giant water beetle is found only in fresh water no less than 30 feet deep.

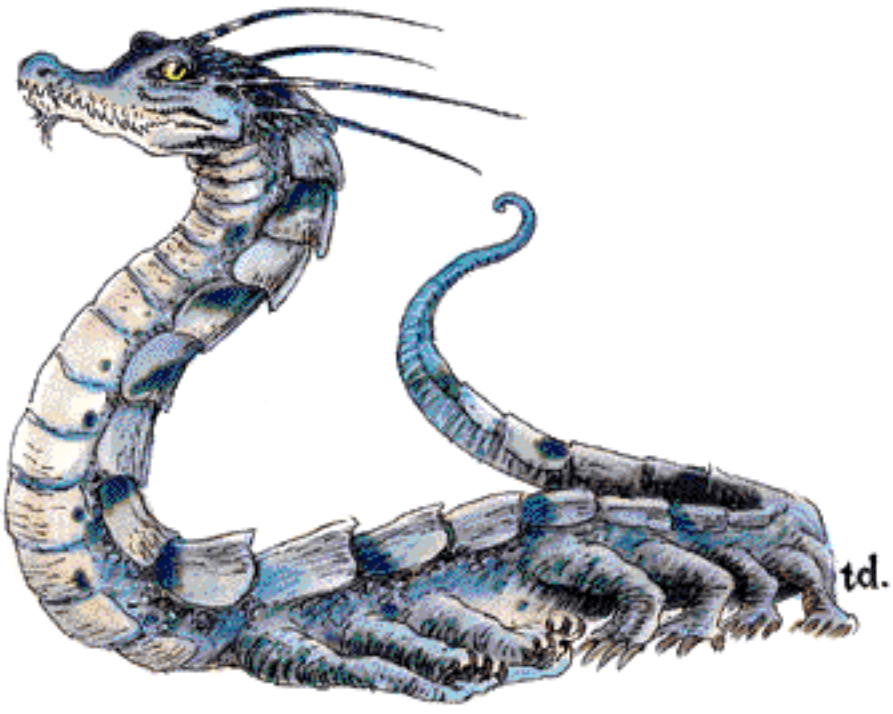
**Combat:** Voracious eaters, these beetles prey upon virtually any form of animal, but will eat almost anything. Slow and ponderous on land, they move very quickly in water. Giant water beetles hunt food by scent and by feeling vibrations.

**Habitat/Society:** Water beetles sometimes inhabit navigable rivers and lakes, in which case they can cause considerable damage to shipping, often attacking and sinking craft to get at the tasty morsels inside.

**Ecology:** Although they are air breathers, water beetles manage to stay underwater for extended periods of time by catching and holding a bubble of air beneath their giant wings. They will carry the bubble underwater, where it can be placed in a cave or some other cavity capable of holding an air supply.

# Behir

| | |
|---|---|
| **Climate/Terrain:** | Any land |
| **Frequency:** | Rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | See below |
| **Alignment:** | Neutral evil |
| **No. Appearing:** | 1-2 |
| **Armor Class:** | 4 |
| **Movement:** | 15 |
| **Hit Dice:** | 12 |
| **THAC0:** | 9 |
| **No. of Attacks:** | 2 or 7 |
| **Damage/Attack:** | 2-8 (2d4)/2-5 (1d4+1) or 2-8 (2d4)/6 x 1-6 |
| **Special Attacks:** | Lightning bolt |
| **Special Defenses:** | Immune to electricity, poison |
| **Magic Resistance:** | Nil |
| **Size:** | G (40' long) |
| **Morale:** | Champion (15) |
| **XP Value:** | 7,000 |



The behir is a snake-like reptilian monster whose dozen legs allow it to move with considerable speed and climb at fully half its normal movement rate. It can fold its limbs close to its long, narrow body and slither in snake-fashion if it desires. The head looks more crocodilian than snake-like, but has no difficulty in opening its mouth wide enough to swallow prey whole, the way a snake does.
Behir have band-like scales of great hardness. Their color ranges from ultramarine to deep blue with bands of gray-brown. The belly is pale blue. The two large horns curving back over the head look dangerous enough but are actually used for preening the creature's scales and not for fighting.

**Combat:** A behir will attack its prey by first biting and then looping its body around the victim and squeezing. If the latter attack succeeds, the victim is subject to six talon attacks next round.
A behir can discharge a 20-foot long stroke of electrical energy once every 10 rounds. This *lightning bolt* will cause 24 points of damage unless a saving throw vs. breath weapon is made. In the latter case, the target takes only half damage.
On a natural attack roll of 20 the behir swallows man-sized prey whole. Any creature swallowed will lose 1/6 of its starting Hit Points each round until it dies at the end of the sixth round. The behir will digest its meal in 12 turns, and at that time the victim is totally gone and cannot be raised from the dead. Note, however, that a creature swallowed can try to cut its way out of the behir's stomach. The inner armor class of the behir is 7, but each round the creature is in the behir it subtracts 1 from the damage each of its attacks does. This subtraction is cumulative, so on the second melee round there is a -2, on the third a -3, and so on.

**Habitat/Society:**Behir are solitary creatures, meeting others of their kind only to mate and hatch a clutch of 1-4 eggs. The female guards these eggs for eight months while the male hunts for the pair. When the young hatch, they are immediately turned out of the nest to fend for themselves, and the adults separate. Newly hatched behir are about 2 feet long. Behir grow at a rate of 8 feet per year until fully mature. Interestingly enough, newly hatched behir do not have all of their legs, having instead only six or eight. Additional pairs of legs grow slowly over time until the creature has its full complement when it reaches adulthood.
Behir range over a territory of about 400 square miles, often living high up a cliff face in a cave.
Behir are never friendly with dragonkind, and will never be found coexisting in the same geographical area with any type of dragon. If a dragon should enter a behir's territory, the behir will do everything it can to drive the dragon out. If the behir fails in this task, it will move off to find a new home. A behir will never knowingly enter the territory of a dragon.

**Ecology:** Behir are useful to mages, priests, and alchemists for a number of concoctions. The horns of a behir can be used to brew the ink necessary to inscribe a *lightning bolt* scroll, and the sharp talons can likewise be used by a cleric to make the ink for a *neutralize poison* scroll. The heart of the behir is one of the more common ingredients for ink for a *protection from poison* scroll.
As behir sometimes swallow prey whole, there is a 10% chance that there will be some small items of value inside the monster. More often than not (60%) these will be gems (10 x Q). Otherwise, there is a 30% chance that there will be from 1-8 pieces of jewelry and a 10% chance that a single small magical object of an indegistible nature may be found. Such objects are never found in a behir's lair, because the creature expels this waste and buries it elsewhere.
The scales are valued for their hardness and color, and are worth up to 500 gp to an armorer who can use them to fashion a highly ornate set of scale mail armor.

The beholder is the stuff of nightmares. This creature, also called the *sphere of many eyes* or the *eye tyrant*, appears as a large orb dominated by a central eye and a large toothy maw, has 10 smaller eyes on stalks sprouting from the top of the orb. Among adventurers, beholders are known as deadly adversaries.
Equally deadly are a number of variant creatures known collectively as beholder-kin, including radical and related creatures, and an undead variety. These creatures are related in manners familial and arcane to the "traditional" beholders, and share a number of features, including the deadly magical nature of their eyes. The most extreme of these creatures are called *beholder abominations*.
The globular body of the beholder and its kin is supported by levitation, allowing it to float slowly about as it wills. Beholders and beholder-kin are usually solitary creatures, but there are reports of large communities of them surviving deep beneath the earth and in the void between the stars, under the dominion of hive mothers.
All beholders speak their own language, which is also understood by all beholder-kin. In addition, they often speak the tongues of other lawful evil creatures.

**Combat:** The beholder has different Armor Classes for different parts of their body. When attacking a beholder, determine the location of the attack before striking (as the various Armor Classes may make a strike in one area, and a miss in another):

| Roll | Location | AC |
|---|---|---|
| 01-75 | Body | 0 |
| 76-85 | Central Eye | 7 |
| 86-95 | Eyestalk | 2 |
| 96-00 | One smaller eye | 7 |

Each of the beholder's eyes, including the central one has a different function. The standard smaller eyes of a beholder are as follows:
1. *Charm person* (as spell)
2. *Charm monster* (as spell)
3. *Sleep* (as spell, but only one target)
4. *Telekinesis* (250 pound weight)
5. *Flesh to stone* (as spell, 30-yard range)
6. *Disintegrate* (20-yard range)
7. *Fear* (as wand)
8. *Slow* (as spell, but only a single target)
9. *Cause serious wounds* (50-yard range)
10. *Death* ray (as a *death* spell, with a single target, 40-yard range)

The central eye produces an *anti-magic ray* with a 140-yard range, which covers a 90 degree arc before the creature. No magic (including the effects of the other eyes) will function within that area. Spells cast in or passing through that zone cease to function.
A beholder may activate the magical powers of its eyes' at will. Generally, a beholder can use 1d4 smaller eyes if attackers are within a 90 degree angle in front, 1d6 if attacked from within a 180 degree angle, 1d8 if attacked from a 270 degree arc, and all 10 eyes if attacked from all sides. The central eye can be used only against attacks from the front. If attacked from above, the beholder can use all of the smaller eyes.

The beholder can withstand the loss of its eyestalks, each eyestalk/smaller eye having 5-12 hit points. This loss of hit points is over and above any damage done to the central body. The body can withstand two thirds of the listed hit points in damage before the creature perishes. The remaining third of the listed hit points are located in the central eye, and destroying it will eliminate the anti-magic ray. A beholder with 45 hit points will have a body that will take 30 points of damage, a central eye that will take 15 points, while one with 75 hit points will have a body that will withstand 50 points of damage, and a central eye that takes 25 hit points to destroy. Both beholders would have smaller eyestalks/eyes that take 5-12 (1d8+4) points of damage to destroy, but such damage would not affect the body or central eye. Slaying the body will kill the beholder and render the eyes powerless. Destroyed eyestalks (but not the central eye) can regenerate at a rate of one lost member per week.

**Habitat/Society:** The beholders are a hateful, aggressive and avaricious race, attacking or dominating other races, including other beholders and many of the beholder-kin. This is because of a xenophobic intolerance among beholders that causes them to hate all creatures not like themselves. The basic, beholder body-type (a sphere with a mouth and a central eye, eye-tipped tentacles) allows for a great variety of beholder subspecies. Some have obvious differences, there are those covered with overlapping chitin plates, and those with smooth hides, or snake-like eye tentacles, and some with crustacean-like joints. But something as small as a change in hide color or size of the central eye can make two groups of beholders sworn enemies. Every beholder declares its own unique body-form to be the "true ideal" of beholderhood, the others being nothing but ugly copies, fit only to be eliminated.
Beholders will normally attack immediately. If confronted with a particular party there is a 50% chance they will listen to negotiations (bribery) before raining death upon their foes.

**Ecology:** The exact reproductive process of the beholder is unknown. The core racial hatred of the beholders may derive from the nature of their reproduction, which seems to produce identical (or nearly so) individuals with only slight margin for variation. Beholders may use parthenogenic reproduction to duplicate themselves, and give birth live (no beholder eggs have been found). Beholders may also (rarely) mate with types of beholder-kin.
The smaller eyes of the beholder may be used to produce a *potion of levitation,* and as such can be sold for 50 gp each.

**Death Kiss (beholder-kin)**
The Death Kiss, or "bleeder," is a fearsome predator found in caverns or ruins. Its spherical body resembles that of the dreaded beholder, but the "eyestalks" of this creature are bloodsucking tentacles, its "eyes" are hook-toothed orifices. They favor a diet of humans and horses, but will attack anything that has blood. An older name for these creatures is *eye of terror.*
The central body of a death kiss has no mouth. Its central eye gives it 120-foot infravision, but the death kiss has no magical powers. A death kiss is 90% likely to be taken for a beholder when sighted. The 10 tentacles largely retract into the body when not needed, resembling eyestalks, but can lash out to a full 20-foot stretch with blinding speed. The tentacles may act separately or in concert, attacking a single creature or an entire adventuring company.
A tentacle's initial strike does 1-8 points of damage as the barb-mouthed tip attaches to the victim. Each attached tentacle drains 2 hit points worth of blood per round, beginning the round after it hits.
Like the beholder, the death kiss has variable Armor Classes. In ordinary combat, use the following table, though situations may dictate other methods (should the creature be attacking with a tentacle from 20 feet away, then no attack on the body or central eye may be made, while attacks on the stalk and mouth are still possible).

| Roll | Location | AC | Hit Points |
|---|---|---|---|
| 01-75 | Body | 4 | 77-84 |
| 76-85 | Central Eye | 8 | 6 |
| 86-95 | Tentacle stalk | 2 | 6 |
| 96-00 | Tentacle mouth | 4 | See following text |

A hit on a tentacle-mouth inflicts no damage, but stuns the tentacle, causing it to writhe helplessly for 1-4 rounds. If its central eye is destroyed, a bleeder locates beings within 10 feet by smell and sensing vibrations, but it is otherwise

unaffected.
Tentacles must be struck with edged weapons to injure them. They can be torn free from the victim by a successful bend bars/lift gates roll. Such a forceful removal does the victim 1-6 damage per tentacle, since the barbed teeth are violently torn free from the tentacle.
If an attached tentacle is damaged but not destroyed, it instantly and automatically drains sufficient hit points, in blood, from the victim's body to restore it to a full 6 hit points. This reflex effect occurs after every non-killing hit on a tentacle, even if it is wounded more than once in a round. This cannot occur more than twice in one round. The parasitic healing effect does not respond to damage suffered by the central body or other tentacles.
A tentacle continues to drain blood, if it was draining when the central body of the death kiss reaches 0 hit points. Tentacles not attached to a victim at that time are incapable of further activity. A death kiss can retract a draining tentacle, but voluntarily does so only when its central body is at 5 hit points or less; it willfully detaches once the victim has been drained to 0 hit points.
Ingested blood is used to generate electrical energy -- 1 hit point of blood becomes 1 charge. A death kiss uses this energy for motor activity and healing. An eye of terror expends one charge every two turns in moving, and thus is almost constantly hunting prey. Spending one charge enables a bleeder to heal 1 hit point of damage to each of its 10 tentacles, its central body, and its eye (12 hit points in all). It can heal itself with one charge of stored energy every other round in addition to its normal attacks and activity.
Each tentacle can store up to 24 charges of drained energy, the body capable of storing 50 charges of drained energy. A severed tentacle is 70% likely to discharge its cumulative charges, when severed, into anything touching it; each charge delivers 1 hit point of electrical damage.
Finally, bleeders can ram opponents with their mass. This attack does 1-8 damage.
A death kiss may "shut itself down," remaining motionless and insensitive on the ground, and can remain alive in that state for long periods of time. To awaken from its hibernation, the creature requires an influx of electrical energy, considerable heat, or the internal shock caused by a blow, fall, wound, or magical attack; any of the above stimulants must deal at least 5 points of damage to the death kiss to awaken it. Adventurers finding a hibernating death kiss usually provide such stimulation, thinking the sleeper helpless prey.
Eyes of terror are solitary hunters, fully inheriting the paranoia and ego of their cousins, the beholders. If they encounter one of their kin, the result is often a mid-air struggle to the death. The loser's body becomes an incubator and breeding ground for the death kiss' offspring. Within one day, 1-4 young will "hatch". Each new bleeder has half its parent's hit points, and fully matures in 1 month.
The death kiss has an organ in the central, upper body that is a valued ingredient in magical potions and spell inks concerned with levitation (and may be sold like beholder eyes). In addition, a brain or nerve node, deep in a bleeder's body hardens into a soft-sided, faceted red gem upon the creature's death. Called "bloodeyes," these typically fetch a market price of 70 gp each. They are valued for adornments since they glow more brightly as the wearer's emotions intensify.

**Eye of the Deep (beholder-kin)**
This is a water breathing version of the beholder, and dwells only at great depths, floating slowly about, stalking prey. They have two crab-like pincers which inflict 2-8 (2d4) points of damage each, and a wide mouth full of sharp teeth that does 1-6 points of damage.
The primary weapons of the eyes of the deep, however, are their eyes. The creatures large central eye emits a cone of blinding *light* 5 feet wide at its start, 30 feet long, and 20 feet wide at its base. Those in the cone must save vs. poison or be *stunned* for 2-8 (2d4) rounds.
The eye of the deep also has two smaller eyes on long stalks, and uses both to *create illusion*. Acting independently, the small eyes are able to cast *hold person* and *hold monster* spells respectively.
The eye of the deep has an Armor Class of 5 everywhere, including its eyes and eye stalks. If its eyestalks are severed they will grow back in about a week.

**Gauth (beholder-kin)**
The Gauth is a relative of the beholder that feeds on magic. Its spherical body is 5 feet in diameter and brown in color, mottled with purple and gray. Located in the center of the gauth's forward hemisphere is a large central eye surrounded by a ring of smaller eyes that are protected by ridges of tough flesh. These secondary body eyes provide the creature

with normal vision in lighted areas and infravision to 90 feet. On the underside is the beast's fearsome mouth with its accompanying cluster of four feeding tendrils, while the top is adorned with a crown of six eye stalks. Attacks on the creature hit as follows:

| Roll | Location | AC | Hit Points |
|---|---|---|---|
| 01-85 | Body | 0 | As listed |
| 86-90 | Central Eye | 7 | Part of Body |
| 91-00 | Eyestalk/Tendril | 2 | 6 hit points |

While the gauth is similar to the beholder, its ability to feed on the energy of magical objects makes it even more dangerous in some ways.

When a gauth moves into combat, it begins to glow, much as if it were the object of a *faerie fire* spell, to attract the attention of its foes. A creature that meets the *gaze* of the central eye must roll a successful saving throw vs. spell, with a -2 penalty, or be affected as if the victim of a *feeblemind* spell.

If a gauth chooses to bite with its great maw, the sharp fangs inflict 3d4 points of damage. The four tendrils around the mouth can grab and hold victims as if they had a Strength of 18, but they can inflict no damage.

A gauth in combat can also employ its six eye stalks. These eyes have the following powers:

1. *Cause serious wounds* (as spell, 30-foot range).
2. *Repulsion* (as spell, 10-foot wide path, 40-foot range)
3. *Cone of cold* (as spell, inflicts 3d4 points of damage and has an area of effect 5 feet wide at the start, 50 feet long, and 20 feet wide at the base; this eye can be used only three times per day)
4. *Lightning bolt* (as spell, inflicts 4d4 damage with 80' range; this power can be used up to four times per day)
5. *Paralyzation* (as wand, 40-foot range, single target; only a *dispel magic* or the beholder's death can free the victim)
6. *Dweomer drain* (see below)

Perhaps the most feared of the gauth's powers, its dweomer drain, permits the gauth to drain charges from magical items. It has a 40-foot range and can be targeted on one individual per round. In addition to preventing one object from functioning for the duration of that round, this power drains one charge from one charged object. Permanent objects, such as magical swords, are rendered powerless for one round by this ability. Artifacts are not affected by the *dweomer drain.* The eye has no effect on spells that have been memorized (but not yet cast) and it will not break the concentration of a wizard. It does neutralize any spell cast by its target that round, however.

A *dispel magic* spell cast on any of the gauth's eye stalks prevents its use for 1d4 rounds. The central eye, any fully retracted eye stalks, the body's ability to glow, and the gauth's natural levitation are not subject to injury by such a spell.

If a gauth is slain, its magical energy dissipates. Usually, this is a harmless event, but there is a 2% chance that it is catastrophic, inflicting 4d4 points of damage to all creatures within 10 feet (no saving throw). Gauth are immune to their own powers and to those of other gauth. They have an unusual physiology that enables them to regenerate 1 hit point every two turns.

Although gauth are not known to fight over territories or prey, they do go to great lengths to avoid each other. Even when they encounter another of their kind in the wilderness, they often ignore them utterly.

A gauth can survive by eating meat but it greatly prefers to devour magical objects. In some unknown manner, the creature is able to absorb magical energy and feed on it. Each turn that an object spends in the gauth's stomach causes it to lose one charge. A permanent object is rendered inoperative after one day (artifacts are not affected, nor do they provide sustenance). Magical objects that cannot be entirely digested by a gauth are spat out after they have been drained of all their power.

Gauth are thought to live a century or so. Within a week of their "natural" death, two young gauth emerge from the corpse. Although smaller than their parent (each has 2+2 or 3+3 HD and a bite that causes only 2d4 points of damage), they have all the powers of a full-grown adult.

**Spectator (beholder-kin)**
Another relative of the beholder, the spectator is a guardian of places and treasures, and capable of limited planar travel. Once it is given a task, the spectator will watch for up to 101 years. It will allow no one to use, borrow, or examine an item or treasure, except the one who gave it its orders. The spectator has a large central eye and four smaller eye stalks protruding from the top of its hovering, spherical body.
The spectator is difficult to surprise, and has a +2 surprise modifier and a +1 initiative modifier. It is basically a passive creature, and will attempt to communicate and implant *suggestion* as its first act, unless it is immediately attacked. Striking a spectator has the following effects:

| Roll | Location | AC | Hit Points |
|---|---|---|---|
| 01-70 | Body | 4 | 4+4 HD |
| 71-90 | Eyestalk/Eye | 7 | 1 hit point |
| 91-00 | Central Eye | 7 | 1 hit point |

A spectator, if blinded in all of its eyes, cannot defend its treasure and will teleport to the outer plane of Nirvana. This is the only condition under which it will leave its post. Its eyes regenerate in one day and then it returns. If the treasure is gone, the creature again leaves for Nirvana, never to return.
Spectator has a general magic resistance of 5%. As long as the central eye is undamaged, it can also *reflect* one spell cast at it, per round, sending it back against the caster. This does not apply to spells whose range is touch. Reflection occurs only if the spectator rolls a successful saving throw vs. spell. If the saving throw fails, magic resistance (and a further saving throw) must be rolled. Reflection is possible only if the caster is standing within the 60 degree arc of the central eye. Only the spellcaster is affected by a reflected spell.
All of the smaller eyes may be used at the same time against the same target. Their powers are:

1. *Create food and water* (creates the amount of food and water for a large meal for up to six people; this takes one full round)
2. *Cause serious wounds* (inflicts 2d8+3 points of damage to a single being at a range of 60 yards; a saving throw vs. spell is allowed for half damage)
3. *Paralyzation ray* (range 90 feet, one target only, for 8d4 rounds).
4. *Telepathy* (range 120 feet, only one target; communication is possible in this way, and the beast can also plant a *suggestion* if the target fails a saving throw vs. spell; the *suggestion* is always to leave in peace).

If properly met, the spectator can be quite friendly. It will tell a party exactly what it is guarding early in any conversation. If its charge is not threatened, it can be very amiable and talkative, using its telepathy.
Spectators move by a very rapid levitation, in any direction. They will drift aimlessly when asleep (20% likely when encountered), never touching the ground.
The treasure being guarded is 90% likely to be a magical item. If the spectator gains incidental treasure while performing its duty, this is not part of its charge and it will freely allow it to be taken. Incidental treasure can be generated as follows: 40% for 3-300 coins of mixed types, 30% for 1d6 gems of 50 gp base value, 20% for 1d4 potions, 15% for a +1 piece of armor, 15% for a +1 weapon, and 5% for a miscellaneous magical item valued at 1,000 XP or less.
Spectators are summoned from Nirvana by casting *monster summoning V* with material components of three or more small eyes from a beholder. (The chance of success is 10% per eye.) The spectator can be commanded only to guard some treasure. It performs no other duty, and if commanded to undertake some other task, it returns to Nirvana immediately. If its guarded treasure is ever destroyed or stolen, the spectator is released from service and returns to Nirvana. The summoner may take the item with no interference from the spectator, but this releases the creature.

**Undead Beholder (Death Tyrant)**
Death tyrants are rotting, mold-encrusted beholders. They may be shriveled, wounds exposing their internal, spherical networks of circular ribs, among the remnants of their exoskeletal plates. All sport wounds, some have eyestalks missing, or a milky film covering their eyes. They move and turn more slowly than living beholders, striking and

bringing their eyes to bear last in any combat round.
An undead beholder can use all the powers of its surviving eyes, just as it did in life. The powers of 2-5 eyes (select randomly, including the central eye) are lost due to injuries or death, and the change to undeath. Although a death tyrant "heals" its motive energies through time, it cannot regenerate lost eyestalks or their powers.
*Charm* powers are lost in undeath. The two eyes that charmed either become useless (60%), or function as weak *hold monster* effects (40%). A being failing to save against such a *hold* remains held as long as the eye's gaze remains steadily focused on them. If the eye is turned on another being, or the victim hooded, or forcibly removed, the *hold* lasts another 1-3 rounds. Death tyrants are immune to *sleep, charm* and *hold* spells.
If not controlled by another creature through magic, a death tyrant hangs motionless until its creator's instructions are fulfilled (for example, "Attack all humans who enter this chamber until they are destroyed or flee. Do not leave the chamber."). If no instructions are given to a "new" death tyrant, it attacks all living things it perceives. Death tyrants occur spontaneously in very rare instances. In most cases, they are created through the magic of evil beings -- from human mages to illithid villains. Some outcast, magic-using beholders have even been known to create death tyrants from their own unfortunate brethren.
Death tyrants have no self-awareness or social interaction; they are mindless servants of more powerful masters. "Mindless" is a relative term; the once highly intelligent brains of death tyrants still use eyes skillfully to perceive and attack nearby foes. When a death tyrant is controlled by another being, consider it to have the intelligence of its controller.
Death tyrants are created from dying beholders. A spell, thought to have been developed by human mages in the remote past, forces a beholder from a living to an undead state, and imprints its brain with instructions. "Rogue" death tyrants also exist: those whose instructions specifically enable them to ignore all controlling attempts. These are immune to the control attempts of all other beings. Beholders often leave them as traps against rivals.
Human spell researchers report that control of a death tyrant is very difficult. A beholder's mind fluctuates wildly in the frequency and level of its mental activity, scrambling normal *charm monster* and *control undead* spells. A special spell must be devised to command a death tyrant.

### Saving Throws

Most beholders make saving throws according to their Hit Dice. The Death Kiss makes saving throws as a 10th-level warrior. The typical beholder and undead beholders make saving throws as follows:

| Creature hit points | Saves as |
|---|---|
| **45-49** | **10th level warrior** |
| **50-59** | **12th level warrior** |
| **60-69** | **14th level warrior** |
| **70+** | **16th level warrior** |

### Hive Mother (beholder-kin)

The legendary hive mothers are also called the "Ultimate tyrants", or just "Ultimates". They are twice the size of typical beholders, and differ in appearance as well.
Their mouths are larger, so large that they can gulp down a man-sized target on a natural die roll of 20. Once swallowed, the prey takes 5-20 points of damage (5d4) each round until it is dead or escapes. The beholder's mouth is not very deep, so a victim can escape by making a successful attack roll.
The ultimate has no eyestalks, but its magical eyes are protected by hooded covers in the flesh of the creature's body, so that they cannot be severed. The central eye has 15 hit points.

| Roll | Location | AC | Hit Points |
|---|---|---|---|
| 01-90 | Body | 0 | 20 HD |
| 91-00 | Central Eye | 7 | 15 hp |

The ultimate's true ability is in controlling the actions of large numbers of beholders and beholder-kin. A hive mother may have 5-10 ordinary beholders under its command, or 5-20 abomination beholder-kin (see below), which it communicates with telepathically. A nesting hive mother spells disaster for the surrounding region, as it can apparently create a community of beholders, beholder-kin, and abominations. If destroyed, the beholders and beholder-kin will turn on each other, or seek their own lairs.
Hive mothers may be the ancestral stock of the better known beholder, the next step of its evolution, a magical mutation, or a separate species. The reality remains unknown.

### Director (abomination)

Directors are a social, warrior-beholder, and breed specialized mounts. They mindlink with their mounts to better control them.
Directors resemble beholders, but their central eye is smaller. They possess only six small eyes on retractable eye stalks. Directors have a fanged mouth below the central eye and possesses three clawed, sensory tendrils on their ventral surface. These tendrils are used to cling to the mount and link with its limited mind.
Directors' eyes have their own powers:
1. *Magic Missile* (as spell , 2/round)
2. *Burning Hands* (as spell at 8th level)
3. *Wall of Ice* (as spell)
4. *Slow* (as spell)
5. *Enervation* (as spell)
6. *Improved Phantasmal Force* (as spell)

A director's central eye has the power of *deflection* -- all frontal attacks on director suffer a -2 penalty to the attack roll and damage is halved. The director also gains a +2 bonus to all saving throws against spells cast by those in the field of vision of the central eye.
Director mounts seem to have derived from an insect stock, as they are covered in chitin and have simple eye spots and multiple limbs.
Directors normally possess 8 Hit Dice, but when mounted the director and mount are treated as a single creature whose Hit Dice equals the sum of those of the director and the mount. After a director/mount suffers half damage, the mount's speed is reduced to half and the director gets only one physical attack per round. A director may flee and leave his mount to fend for itself (the mount suffers a -4 penalty to its attack rolls). Directors have an AC of 4, but are AC 2 when mounted. Directors may use all of their normal powers while mounted, within the restrictions of beholder targeting angles.
**Crawler**(a typical mount): A crawler resembles a cross between a centipede and a spider. It has 4 Hit Dice. It has 10 legs, two pairs of frontal antennae, and two fighting spider fangs that can be used for separate stabbing attacks causing 2d4 points of damage each. Victims who fail to roll successful saving throws vs. poison are paralyzed for 1d4 rounds. Crawlers are omnivores that prefer to eat smaller creatures. Unmounted, they may roll into a ball to gain an AC of 0. They have cutting mandibles beneath their front fangs.

### Examiner (abomination)

An examiner is a 4-foot diameter sphere with no central eye and only four small eyes, each at the end of an antenna, mounted atop the sphere. They have one small, lamprey-like mouth on their ventral surface. The mouth is surrounded by four multi-jointed limbs ending in gripper pads. These limbs can pick up and manipulate tools, the chief strength of the examiner.
Examiners are scholars and clerks involved in spell and magical item enhancement, research, and creation. They can use any artifact or tool as well as humans, and they can wield up to four items at a time. Examiners regenerate 1 point of damage each round. The powers of their four eyes are given below (all spell-like effects are cast at the 8th level).
1. *Enlarge* or *Reduce*
2. *Identify* or *Legend Lore*
3. *Transmute Form* (similar to a *Stone Shape* spell, but works on all types of nonmagical, nonliving material)
4. *Spell Reflection* as a *ring of spell turning*

Examiners are not the bravest of beholder-kin, but they are potentially the most dangerous with their command of artifacts. They are often the lackeys of beholders, overseers, and hive mothers.

### Lensman (abomination)

A lensman has one eye set in the chest of its five-limbed, starfish-shaped, simian body. Beneath the eye is a leering, toothy maw. Four of the five limbs end in three-fingered, two-thumbed, clawed hands. The fifth limb, atop the body, is a prehensile, whip-like tentacle. Its chitin is soft and there are many short, fly-like hairs. Lensmen are the only kin to wear any sort of garb -- a webbing that is used to hold tools and weapons. Their preferred weapons are double-headed pole arms.
Lensmen are semi-mindless drones that don't question their lot in life. The eye of each lensman possesses only one of the following six special powers (all at the 6th level of ability).
1. *Emotion*

2. *Heal*
3. *Dispel Magic*
4. *Tongues*
5. *Phantasmal Force*
6. *Protections* (as scrolls, any type, but only one at a time)

### Overseer (abomination)

Overseers resemble fleshy trees. They have 13 limbs, each of which ends in a bud that conceals an eye; one of these limbs forms the top spine, and three yammering mouths surround the spine. There are eight thorny, vine-like limbs that are used to grasp tools and for physical defense, inflicting 1d10+2 points of damage each. Overseers sit on root-like bases and can inch along when movement is required. They cannot levitate.

Overseers are covered with a fungus which changes color as the overseers desire, commonly mottled green, gray, and brown.

Overseers may use any physical weapons or artifacts. The powers of their 13 eyes are as follows (all magical effects are cast at 14th level).

1. *Cone of Cold*
2. *Dispel Magic*
3. *Paralysis*
4. *Chain Lightning*
5. *Telekinesis* 250 lb. weight
6. *Emotion*
7. *Mass Charm*
8. *Domination*
9. *Mass Suggestion*
10. *Major Creation*
11. *Spell Turning*
12. *Serten's Spell Immunity*
13. *Temporal Stasis*

An overseer's AC is 2, but each eye stalk is AC 7 and is severed if it suffers 10 points of damage.

Like hive mothers (that operate with them), overseers can convince similar beholders and beholder-kin to work together. Overseers are very protective of their health and always have one or two beholder guards and at least a half dozen directors protecting their welfare.

### Watcher (abomination)

Watchers are 6-foot-diameter spheres with three central eyes arranged around the circumference of the sphere. These eyes are huge and unlidded. On the crown of the sphere is a compound eye and a ring of six eye spots that make it difficult to surprise a watcher. A large tentacle with a barbed prehensile pad extends from the ventral surface, right behind the small mouth with its rasp-like tongue. Watchers feed on carrion and stunned prey. They are information gatherers and are the least brave of all the eye tyrant races.

Watchers can attack with their single tentacle for 3d6 points of damage. The tentacle also inflicts an electrical shock; victims who fail a system shock roll fall unconscious.

Each of a watcher's main eyes has two powers, and the compound eye on top may draw on three different abilities. The six eye spots have no special powers.

1. *True Seeing* and *ESP*
2. *Advanced Illusion* and *Demi-Shadow Magic*
3. *Telekinesis* 1,000 lb. and *Teleport*

Compound Eye: *Message, Tongues,* and *Suggestion*

Watchers are not aggressive warriors; they prefer misdirection and flight to actual confrontation.

## Other Beholders and Beholder-kin

The beholder races are not limited to the ones presented here. The plastic nature of the beholder race allows many mutations and abominations in the breed, including, but not limited to, the following.

### Beholder Mage

Shunned by other beholders, this is a beholder which has purposely blinded its central eye, so that it might cast spells. It does so by channeling spell energy through an eyestalk, replacing the normal effect with that of a spell of its choice.

### Elder Orb

These are extremely ancient beholders of godlike intelligence and power. Though they have lost the function of some of their eyestalks, they have more hit points and are able to cast spells. They can supposedly create and control death tyrants.

### Orbus

This is a stunted, pale-white beholder retaining only its anti-magic eye and reputed to have great magical ability.

### Doomsphere

This ghost-like undead beholder is created by magical explosions.

### Kasharin

An undead beholder, it passes on the rotting disease which killed it.

### Astereater

This abomination is a great boulder-like beholder-kin without eyes.

### Gorbel

The gorbel is a wild, clawed beholder-kin lacking magic but with the nasty habit of exploding if attacked.

In addition, there are beholders which are in all appearances "normal" but have eyes with alternate magical abilities, such as a *detect lie* instead of a *death* ray. Such creatures are usually treated as outcasts by all the beholder and beholder-kin races.

Avians, whether magical or mundane in nature, are among the most interesting creatures ever to evolve. Their unique physiology sets them apart from all other life, and their grace and beauty have earned them a place of respect and adoration in the tales of many races.

### Blood Hawk

Blood hawk hunt in flocks and are fond of humanoids. They continue to attack humans even if the melee has gone against them. Male blood hawks kill humans not only for food but also for gems, which they use to line their nests as an allurement to females.

### Boobrie

The boobrie, giant relative of the stork, stands 12 feet tall. A boobrie's diet consists of giant catfish and other wetland denizens. When times are lean, the boobrie feeds on snakes, lizards, and giant spiders. Its occasional dependence on a diet of creatures that deliver a toxic bite has made the boobrie immune to all poisons. When a boobrie hunts, it finds a grove of tall marsh grass or similar vegetation and slips into it. Once in its hunting blind, it remains still for hours at a time, until prey comes within sight. When employing this means of ambush, its opponents suffer a -3 penalty to their surprise rolls.

### Condor

Condors measure three to six feet and have a wingspan of 13 to 20 feet. They rarely land except to feed -- they even sleep in flight. Condor eggs and hatchlings are worth 30-60 gp. They can be trained to act as spotters or retrievers. Humanoids of small or tiny size can train them as aerial mounts. Used in this way, they can carry 80 pounds, either held in their claws or riding atop their backs.

### Eagle

An eagle typically attacks from great heights, letting gravity hurtle it toward its prey. If an eagle dives more than 100 feet, its diving speed is double its normal flying speed and the eagle is restricted to attacking with its claws. These high-speed attacks gain a +2 attack bonus and double damage. Eagles are never surprised because of their exceptional eyesight and hearing. Eagles mate for life and, since they nest in one spot, it is easy to identify places where eagles are normally present. On occasion, in an area of rich feeding, 1d8+4 eagles are encountered instead of the normal individual or pair. Eagles generally hunt rodents, fish, and other small animals. Eagles also feed on the carrion of recently killed creatures as well. Eagles never attack humanoids, though small creatures like brownies have to be wary of a hunting eagle.

### Eagle, Giant

Giant eagles stand 10 feet tall and have wing spans of up to 20 feet. They share the coloration and fighting methods of their smaller cousins. However, if a giant eagle dives more than 50 feet, it adds +4 to its attack roll and doubles its claw damage.
Giant eagles have exceptional eyesight and hearing and cannot be surprised except at night or in their lair, and then only 10% of the time. Far more social than normal eagles, up to 20 nests can be found in the same area, one nest for each mated pair. Giant eagles can be trained, and their eggs sell for 500 to 800 gp.

## Eblis

Their bodies look like those of storks, with grey, tan, or off-white plumage on their bodies and sleek black necks. Their heads are narrow and end in long, glossy-black, needle-like beaks. Eblis speak a language of chirps, whistles, and deep-throated hoots. In addition, spellcasting eblis have managed to learn a rudimentary version of common, allowing them to converse with those they encounter. Each community is led by one individual with spellcasting ability. These eblis cast 2d4 spells per day as 3rd-level casters. To determine the available spells, roll 1d8 and consult the following table. Duplicate rolls indicate the spell may be employed more than once per day.

| Roll | Spell | Roll | Spell |
|---|---|---|---|
| 1 | *Audible glamer* | 5 | *Hypnotic pattern* |
| 2 | *Blur* | 6 | *Spook* |
| 3 | *Change self* | 7 | *Wall of fog* |
| 4 | *Hypnotism* | 8 | *Whispering wind* |

Eblis love shiny objects (like gems); even the most wise and powerful of the eblis can be bribed with an impressive jewel. An eblis community consists of 2d4 huts built from straw and grasses common to the marsh around the community. Care is taken by the eblis to make these huts difficult to detect. In fact, only a determined search of the area by a ranger or someone with the animal lore proficiency is likely to uncover the community.
All eblis secrete an oil that coats their feathers and provides them with a +1 bonus to all saving throws against fire- and flame-based attacks. Any damage caused by a fire- or flame-based attack is lessened by -1 for each die of damage.
The evil nature of the eblis is best seen in the delight it takes in hunting and killing. When an eblis spots travelers who have objects it desires for its nest, it attacks. Since the eblis is cunning, these attacks often take the forms of ambushes.

## Falcon

Falcons are smaller, swifter, and more maneuverable than hawks. These birds of prey are easily trained and are preferred by hunters over hawks. Trained falcons sell for around 1,000 gp each.

## Flightless Bird

These avians are typified by the ostrich, emu, and rhea. Although they share many of the physiological adaptations that enable other birds to take wing and break the bonds of earth, they are unable to fly.

The ostrich is the largest and strongest, standing 8 feet tall and weighing 300 pounds. The animal's small head and short, flat beak are perched atop a long, featherless neck. The ostrich fans is able to run at 40 miles per hour. If forced to fight, an ostrich uses its legs to deliver a kick that inflicts 1d8 points of damage.
The emu reaches 6 feet high and 130 pounds. Unlike those of their larger cousins, the wings of an emu are rudimentary appendages hidden beneath their coarse, hair-like feathers.
The rhea resembles a small ostrich, standing 3 feet tall and weighs 80 pounds. The differences between the two species lie in the structure of the feet and the tail feathers. Ostriches have two toes, while rheas have three, and ostriches have elegant, flowing tail plumes, while the rhea's are far shorter. Long feathers on the bird's sides swoop down to cover the stunted tail feathers.

### Hawk
Hawks have wingspans up to 5 feet. They attack in plummeting dives, usually from a height of 100 feet or more. This dive gives them a +2 attack bonus, enabling their talons to inflict double damage. Hawks cannot attack with their beaks during the round in which they use a dive attack. After the initial dive, hawks fight by biting and pecking with their beaks, tearing at their opponents with their talons. Hawks target eyes and they have a 25% probability of striking an eye whenever its beak strikes. Opponents struck in the eye are blinded for 1dl0 rounds and have a 10% chance of losing the use of the eye. Because of their superior eyesight, hawks can never be surprised. Any intruder threatening the nest is attacked, regardless of size. If taken young and trained by an expert, hawks can be taught to hunt. Fledglings bring 500 gp and trained hawks sell for as much as 1,200 gp.

### Owl
Owls hunt rodents, small lizards, and insects, attacking humans only when frightened (or magically commanded). They have 120' infravision and quadruple normal hearing. They fly in total silence, giving their prey a -6 penalty to their surprise rolls. Owls cannot be surprised during hours of dusk and darkness; during daylight hours, their eye sight is worse than that of humans, suffering a -3 on their surprise roll if discovered in their daylight roosting place. Owls attack with sharp talons and hooked beaks. If they swoop from a height of 50 feet or more, each attack is +2 and inflicts double damage, but no beak attack is possible.

### Owl, Giant
These nocturnal creatures inhabit very wild areas, preying on rodents, large game birds, and rabbits. They are too large to gain swoop bonuses but can fly in nearly perfect silence; opponents suffer a -6 on their surprise roll. Giant owls may be friendly toward humans, though they are naturally suspicious. Parents will fight anything that threatens their young. Eggs sell for 1,000 sp and hatchlings sell for 2,000 sp.

### Owl, Talking
Talking owls appear as ordinary owls, but speak common and six other languages (DM's option). Their role is to serve and advise champions of good causes on dangerous quests, which they do for 1d3 weeks if treated kindly on the first encounter; a talking owl feigns a broken wing to see how a party will react. Talking owls can *detect good*. They have a wisdom score of 21, with the appropriate spell immunities.

### Raven (Crow)
Ravens and crows are often mistaken as bad omens by superstitious farmers and peasants. They attack

with strong claws and their long, sharp beaks. Ravens employ a grab and peck approach to combat. These birds are 10% likely to attack an opponent's eyes. If successful, the attack causes the opponent to lose an eye. All birds of this type travel in flocks. Any encountered solo are actually scouts. As soon as they see any approaching creature, the scouts give warning cries and maintain a safe distance to keep track of them. Because of the scouts, ravens cannot be surprised during daylight conditions.

### Raven, Giant

Giant ravens are both pugnacious and easily trained (if raised from fledglings), and are often used as guards and messengers. While they are too small to be used as mounts by all but small humanoids (i.e., faerie folk and PCs under the effects of a *potion of diminution*), the strength of these birds is enough to carry an adult halfling.

### Raven, Huge

Huge ravens have malicious dispositions, occasionally serving evil masters. Not all raven familiars and consorts are evil -- the alignment of the master is a decisive factor in such arrangements.

### Swan

These aquatic birds tend to inhabit areas frequented by similar waterfowl. Such areas include rivers, ponds, lakes, and marshes. Swans posses acute senses. They are 90% likely to detect intruders. There is a 10% chance that any swan encounter includes one or more swanmays (q.v.) in avian form.

### Vulture

Vultures are scavengers that search the skies for injured or dead creatures to feed upon. They measure 2 to 3 feet long with a wingspan of up to 7 feet. Greasy blue-black feathers cover the torso and wings; its pink head is bald. Vultures are cowards, and will wait until an intended meal stops moving. If six or more vultures are present, they may attack a weakly moving victim. If the victim defends itself, the vultures move out of reach but maintain their deathwatch. Creatures that are unconscious, dead, or magically sleeping or held are potential meals. If the surviving combatants are further than 20 feet from the fallen creatures, the vultures alight and begin feeding. Because of their diet, vultures kin have developed a natural resistance to disease and organic toxins.

### Vulture, Giant

Giant vultures measure 3 to 5 feet. Domesticated giant vultures can be trained to associate specific species (i.e., as humanoids) with food, hence the birds concentrate on locating those creatures. Giant vulture eggs and hatchlings are worth 30-60 gp.

# Brain Mole

| | |
|---|---|
| **Climate/Terrain:** | Any/ Below ground |
| **Frequency:** | Very rare |
| **Organization:** | Family |
| **Activity Cycle:** | Night |
| **Diet:** | Psionic energy |
| **Intelligence:** | Animal (1) |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-3 |
| **Armor Class:** | 9 |
| **Movement:** | 1, Br 3 |
| **Hit Dice:** | 1 hp |
| **THAC0:** | Nil |
| **No. of Attacks:** | Nil |
| **Damage/Attack:** | Nil |
| **Special Attacks:** | Psionic |
| **Special Defenses:** | Psionic |
| **Magic Resistance:** | Nil |
| **Size:** | T (3" long) |
| **Morale:** | Unsteady (5-7) |
| **XP Value:** | 35 |

These small, furry animals are nearly blind, and look like normal moles. Brain moles are seldom seen, however. They live in underground tunnels, burrowing through rock as easily as through dirt. Usually, the only discernible evidence of a brain mole's presence is a network of blistered stone or mounded dirt above ground, which marks the tunnel complex. These creatures damage more than landscapes, however. Brain moles feed on psionic activity. From the protection of their tunnels, they will psionically burrow into a victim's brain, and drain his psionic energy.

**Combat:** A brain mole commonly attacks its victim in forests or underground; in either case, the creature is usually out of its direct line of sight. The mole waits for a psionically endowed being to appear above it, or it will burrow in search of prey.

Brain moles have an innate psionic sense and can automatically detect any psionic activity within 200 yards. However, they can only feed on psionic energy when their victim is nearby: within 30 yards if the victim is a psionicist or psionic creature, 30 feet if the victim is a wild talent. The mole can't get a fix on its prey until the victim actually uses a psionic power.
Once a brain mole locates a victim it will attempt to establish contact. If contact is made, it will attempt to feed. If the victim is a wild talent, feeding is accomplished by using mindwipe. If the victim is a psionicist (or psionic creature), feeding is accomplished through amplification.
A brain mole does not attack maliciously. It must feed at least once a week or it will die.

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| 6 | 2/1/4 | MT/M- | 12 | 100 |

**Telepathy - Sciences:** Mindlink, mindwipe; **Devotions:** Contact, mind thrust
**Metapsionics - Devotions:** Psychic drain (no cost), psionic sense

A brain mole can perform mindwipe up to a range of 30 feet. Strangely enough, a brain mole must establish contact before using psychic drain. Furthermore, it can only perform psychic drain upon psionicists or psionic creatures. However, it does not have to put them into a trance or a deep sleep first, it just starts siphoning away psionic energy.

**Habitat/Society:** Brain moles live in family units that include one male, one female, and 1d6 young (one of which may be old enough to feed by itself). Large brain mole towns of up to 3d6 family units have been reported. Of course, these only occur in places frequently traveled by the psionically empowered.

**Ecology:** Though brain moles can be dangerous to some, others keep them as pets. The moles are rather friendly, and easily tamed. They are favored by royalty, who enjoy the special protection which only brain moles can provide. Some sages claim that even a dead brain mole can offer protection from psionic attacks, provided the carcass is worn about one's neck as a medallion. Sometimes, nobles who have been harassed by a particular psionicist will send heroes out on quests for the little furry rodents.
On the open market, adult brain moles sell for 50 gp. Youngsters sell for 5 gp each.

# Broken One

| **Size:** | M (4-7'tall) | M (4-7' tall) |
| **Morale:** | Unsteady (5-7) | Steady (11-12) |
| **XP Value:** | 175 | 650 |

Broken ones (or *animal men*) are the tragic survivors of scientific and magical experiments gone awry. While they were once human, their beings have become mingled with those of animals and their very nature has been forever altered by the shock of this event. It is rumored that some broken ones are the result of failed attempts at *resurrection*, *reincarnation*, or *polymorph* spells.

While broken ones look more or less human, they are physically warped and twisted by the accidents that made them. The characteristics of their non-human part will be clearly visible to any who see them. For example, a broken one who has been infused with the essence of a rat might have horrific feral features,

wiry whiskers, curling clawed fingers, and a long, whip-like tail.
Broken ones know whatever languages they knew as human beings and 10% of them can communicate with their non-human kin as well. It is not uncommon for the speech of a broken one to be heavily accented or slurred by the deformities of its body.

**Combat:** Broken ones tend to be reclusive creatures and combat with them is rare. Still, they are strong opponents. Broken ones are almost always blessed with a greater than human stamina, reflected in the fact that they always have at least 5 hit points per Hit Die. Thus, the weakest of broken ones has at least 15 hit points. In addition, broken ones heal at a greatly accelerated rate, regenerating 1 hit point each round.
A broken one will often wield weapons in combat, inflicting damage according to the weapon used. Many broken ones have also developed claws or great strength, which makes them deadly in unarmed combat. Hence, all such creatures inflict 1d6 points of damage in melee. Unusually strong strains might receive bonuses to attack and damage rolls.
Many broken ones have other abilities (night vision, keen hearing, etc.) that are derived from their animal half. As a general rule, each creature will have a single ability of this sort.

**Habitat/Society:** Broken ones tend to gather together in bands of between 10 and 60 persons. Since they seldom find acceptance in human societies, they seek out their own kind and dwell in secluded areas of dense woods or rocky wastes far from the homes of men. From time to time they will attack a human village or caravan, either for supplies, in self-defense, or simply out of vengeance for real or imagined wrongs. If possible, they will try to seek out their creator and destroy him for the transformations he has brought upon them.
When a society of these monsters is found, it will always be tribal in nature. There will be from 10-60 typical broken ones with one greater broken one for every 10 individuals. The greater broken ones (described below) will act as leaders and often have absolute power over their subjects.

**Ecology:** Broken ones are unnatural combinations of men and animals. Their individual diets and habits are largely dictated by their animal natures. Thus, a broken one who has leonine characteristics would be carnivorous, while one infused with the essence of a horse would be vegetarian. There are no known examples of a broken one who has been formed with the essence of an intelligent nonhuman creature.
Broken ones do manufacture the items they need to survive. These are seldom of exceptional quality, however, and are of little or no interest to outsiders. Occasionally, broken ones may be captured by evil wizards or sages who wish to study them.

### Greater Broken Ones

From time to time, some animal men emerge who are physically superior. While they are still horrible to look upon and cannot dwell among men, they are deadly figures with keen minds and powerful bodies. Their twisted and broken souls, however, often lead them to acts of violence against normal men.
These creatures regenerate at twice the rate of their peers (2 hit points per round) and inflict 1d8 points of damage in unarmed combat. When using weapons, they gain a +3 to +5 bonus on all attack and damage rolls. Like their subjects, they often have special abilities based on their animal natures. Such powers, however, are often more numerous (from 1-4 abilities) and may be even better than those of the animal they are drawn from. For example, a greater broken one who is created from scorpion stock might have a chitinous shell that gives it AC 2 *and* it might have a poisonous stinger.

# Brownie

| | Brownie | Killmoulis |
|---|---|---|
| **Climate/Terrain:** | Temperate rural | Human areas |
| **Frequency:** | Rare | Uncommon |
| **Organization:** | Tribal | Solitary |
| **Activity Cycle:** | Night | Nocturnal |

| **No. of Attacks:** | 1 | Nil |
| **Damage/Attack:** | 1-2 (weapon) | Nil |
| **Special Attacks:** | Spells | See below |
| **Special Defenses:** | Save as 9th-level cleric | See below |
| **Magic Resistance:** | Nil | 20% |
| **Size:** | Tiny (2' tall) | Tiny (under 1' tall) |
| **Morale:** | Steady (11-12) | Average (8-10) |
| **XP Value:** | 175 | 35 |

Brownies are small, benign humanoids who may be very distantly related to halflings. Peaceful and

friendly, brownies live in pastoral regions, foraging and gleaning their food.
Standing no taller than 2 feet, brownies are exceedingly nimble. They resemble small elves with brown hair and bright blue eyes. Their brightly colored garments are made from wool or linen with gold ornamentation. They normally carry leather pouches and tools for repairing leather, wood, and metal. Brownies speak their own language and those of elves, pixies, sprites, and halflings, as well as common.

**Combat:** Brownies prefer not to engage in combat, and only do so if threatened. Angry brownies rarely meet their foes in hand to hand combat, relying instead on magic.
Since their senses are so keen, it is impossible to surprise brownies. They are superb at blending into their surroundings and can become all but invisible when they choose. This, combined with their great agility, gives them an AC of 3.
Brownies use spells to harass and drive away enemies. They can use the following spells, once per day: *protection from evil, ventriloquism, dancing lights, continual light, mirror image* (3 images), *confusion,* and *dimension door.* If cornered and unable to employ any spells, brownies attack with short swords.

**Habitat/Society:** Brownies live in rural areas, making their homes in small burrows or abandoned buildings. They often live close to or on farms, as they are fascinated by farm life.
Brownies live by harvesting wild fruits and gleaning grain from a farmer's field. Being honest to the core, a brownie always performs some service in exchange for what is taken. One might milk a farmer's cows and take only a small amount.
Some brownies go so far as to become house brownies. They observe the families in a given area, and if one meets their high moral standards, these brownies secretly enter the household. At night, while the residents are asleep, they perform a variety of helpful tasks; spinning, baking bread, repairing farm implements, keeping foxes out of the hen house, mending clothes, and performing other household tasks. If a thief creeps silently into the house, they will make enough noise to awaken the residents. Watchdogs and domestic animals consider brownies friendly and never attack or even bark at them.
All brownies ask in exchange for their labor is a little milk, some bread, and an occasional bit of fruit. Etiquette demands that no notice be taken of them. If the residents boast about the presence of a brownie, the brownie vanishes.
Brownies are not greedy, but they do have small hoards of treasure which they have taken from evil monsters or received as gifts from humans. A brownie sometimes leaves his treasure in a location where a good person in need is bound to find it.
Strangers and outsiders are constantly watched by the brownies of the community until their motives are established. If the brownies decide that a stranger is harmless, he is left in peace. If not, the brownies unite and drive the intruder out.
Brownies know every nook and cranny of the areas where they live, and thus make excellent guides. If asked politely, there is a 50% chance that a brownie will agree to act as a guide.

**Ecology:** Brownies are basically vegetarians who live very comfortably on the gleanings of agricultural life. They make efficient use of leftovers that are too small for humans to notice. When brownies glean from fields, they do so after harvest, gathering grains and fruits which might otherwise be wasted.

**Killmoulis:** The killmoulis is a distant relative of the brownie, standing under 1-foot in height but with a disproportionately large head and a prodigious nose. Killmoulis are able to blend into surroundings and are therefore 10% detectable. They live in symbiotic relationships with humans, usually where foodstuffs are handled, making their homes under the floors, and in the walls and crawlspaces.

# Bugbear

| | |
|---|---|
| **Climate/Terrain:** | Any subterranean |
| **Frequency:** | Uncommon |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivorous |
| **Intelligence:** | Low to average (5-10) |

| **Size:** | L (7' tall) |
| **Morale:** | Steady to Elite (11-13) |
| **XP Value:** | 120 |
| Bugbear leader: | 175 |
| Bugbear chief: | 175 |
| Bugbear shaman: | 175 |

Bugbears are giant, hairy cousins of goblins who frequent the same areas as their smaller relatives. Bugbears are large and very muscular, standing 7' tall. Their hides range from light yellow to yellow brown and their thick coarse hair varies in color from brown to brick red. Though vaguely humanoid in appearance, bugbears seem to contain the blood of some large carnivore. Their eyes recall those of some savage bestial animal, being greenish white with red pupils, while their ears are wedge shaped, rising from the top of their heads. A bugbear's mouth is full of long sharp fangs.

Bugbears have a nose much like that of a bear with the same fine sense of smell. It is this feature which earned them their name, despite the fact that they are not actually related to bears in any way. Their tough leathery hide and long sharp nails also look something like those of a bear, but are far more dexterous.
The typical bugbear's sight and hearing are exceptional, and they can move with amazing agility when the need arises. Bugbear eyesight extends somewhat into the infrared, giving them infravision out to 60 feet.
The bugbear language is a foul sounding mixture of gestures, grunts, and snarls which leads many to underestimate the intelligence of these creatures. In addition, most bugbears can speak the language of goblins and hobgoblins.

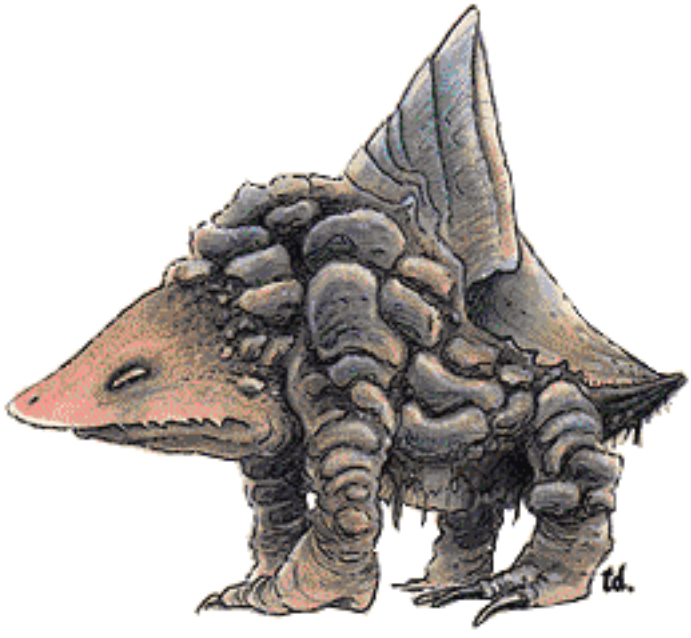
**Combat:** Whenever possible, bugbears prefer to ambush their foes. They impose a -3 on others' surprise rolls.
If a party looks dangerous, bugbear scouts will not hesitate to fetch reinforcements. A bugbear attack will be tactically sound, if not brilliant. They will hurl small weapons, such as maces, hammers, and spears before closing with their foes. If they think they are outnumbered or overmatched, bugbears will retreat, preferring to live to fight another day.

**Habitat/Society:** Bugbears prefer to live in caves and in underground locations. A lair may consist of one large cavern or a group of caverns. They are well-adapted to this life, since they operate equally well in daylight and darkness.
If a lair is uncovered and 12 or more bugbears are encountered they will have a leader. These individuals have between 22 and 25 hit points, an Armor Class of 4, and attack as 4 Hit Die monsters. Their great strength gives them a +3 to all damage inflicted in melee combat.
If 24 or more bugbears are encountered, they will have a chief in addition to their leaders. Chiefs have between 28 and 30 hit points, an Armor Class of 3, and attack as 4 Hit Die monsters. Chiefs are so strong that they gain a +4 bonus to all damage caused in melee. Each chief will also have a sub-chief who is identical to the leaders described above.
In a lair, half of the bugbears will be females and young who will not fight except in a life or death situation. If they are forced into combat, the females attack as hobgoblins and the young as kobolds.
The species survives primarily by hunting. They have no compunctions about eating anything they can kill, including humans, goblins, and any monsters smaller than themselves. They are also fond of wine and strong ale, often drinking to excess.
Bugbears are territorial, and the size of the domains vary with the size of the group and its location. It may be several square miles in the wilderness, or a narrow, more restricted area in an underground region.
Intruders are considered a valuable source of food and treasure, and bugbears rarely negotiate. On occasion, they will parley if they think they can gain something exceptional by it. Bugbears sometimes take prisoners to use as slaves.
Extremely greedy, bugbears love glittery, shiny objects and weapons. They are always on the lookout to increase their hoards of coins, gems, and weapons through plunder and ambush.

**Ecology:** Bugbears have two main goals in life: survival and treasure. They are superb carnivores, winnowing out the weak and careless adventurer, monster and animal. Goblins are always on their toes when bugbears are present, for the weak or stupid quickly end up in the stewpot.

# Bulette

| | |
|---|---|
| **Climate/Terrain:** | Temperate/Any terrain |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivorous |
| **Intelligence:** | Animal (1) |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-2 |
| **Armor Class:** | -2/4/6 |
| **Movement:** | 14 (3) |
| **Hit Dice:** | 9 |
| **THAC0:** | 11 |
| **No. of Attacks:** | 3 |
| **Damage/Attack:** | 4-48/3-18/3-18 |
| **Special Attacks:** | 8' jump |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | L 9½' tall, 12' long |
| **Morale:** | Steady (11) |
| **XP Value:** | 4,000 |



Aptly called a landshark, the bulette (pronounced Boo-lay) is a terrifying predator that lives only to eat. The bulette is universally shunned, even by other monsters.
It is rumored that the bulette is a cross between an armadillo and a snapping turtle, but this is only conjecture. The bulette's head and hind portions are blue-brown, and they are covered with plates and scales ranging from gray-blue to blue-green. Nails and teeth are dull ivory. The area around the eyes is brown-black, the eyes are yellowish and the pupils are blue green.

**Combat:** A bulette will attack anything it regards as edible. The only things that it refuses to eat are elves, and it dislikes dwarves. The bulette is always hungry, and is constantly roaming its territory in search of food. When burrowing underground, the landshark relies on vibrations to detect prey. When it

senses something edible (i.e., senses movement), the bulette breaks to the surface crest first and begin its attack. The landshark has a temperament akin to the wolverine -- stupid, mean, and fearless. The size, strength, and numbers of its opponents mean nothing. The bulette always attacks, choosing as its target the easiest or closest prey. When attacking, the bulette employs its large jaw and front feet.
The landshark can jump up to 8 feet with blinding speed, and does this to escape if cornered or injured. While in the air, the bulette strikes with all four feet, causing 3d6 points of damage for each of the rear feat as well. The landshark has two vulnerable areas: the shell under its crest is only AC 6 (but it is only raised during intense combat), and the region of the bulette's eyes is AC 4, but this is a small oval area about 8 inches across.

**Habitat/Society:** Fortunately for the rest of the world, the bulette is a solitary animal, although mated pairs (very rare) will share the same territory. In addition, other predators rarely share a territory with a landshark for fear of being eaten. The bulette has no lair, preferring to wander over its territory, above and below ground, burrowing down beneath the soil to rest. Since their appetites are so voracious, each landshark has a large territory that can range up to 30 square miles.
Bulettes consume their victims, clothing, weapons, and all, and the powerful acids in the stomach quickly digest the armor, weapons, and magical items of their victims. They are not above nibbling on chests or sacks of coins either, the bulette motto being eat first and think later. When everything in the territory is eaten, the bulette will move on in search of a new territory. The sole criteria for a suitable territory is the availability of food, so a bulette will occasionally stake out a new territory near human and halfling territories and terrorize the residents.
Very little is known of the life cycle of the bulette. They presumably hatch from eggs, but no young have ever been found, though small landsharks of 6 Hit Dice have been killed. It may be that the bulette is hatched from very small eggs, with few young surviving to maturity. Still other sages theorize that the bulette bears live young. There is also evidence that the bulette, like carp and sharks, grow larger as they get older, for unusually large landsharks of 11 feet tall and taller have been seen. Certainly no one has ever come upon the carcass of a bulette that died of old age.

**Ecology:** The bulette has a devastating effect on the ecosystem of any area it inhabits. Literally nothing that moves is safe from it -- man, animal, or monster. In the process of hunting and roaming, the landshark will uproot trees of considerable size. In hilly and rocky regions, the underground movements of the bulette can start small landslides. Ogres, trolls, and even some giants all move off in search of greener and safer pastures when a bulette appears. A bulette can turn a peaceful farming community into a wasteland in a few short weeks, for no sane human or demihuman will remain in a region where a bulette has been sighted.
There is only one known benefit to the existence of the bulette: The large plates behind its head make superb shields, and dwarven smiths can fashion them into shields of +1 to +3 in value. Some also claim that the soil through which a bulette has passed becomes imbued with magical, rock-dissolving properties. Many would argue, however, that these benefits are scarcely worth the price.

# Bullywug

| | |
|---|---|
| **Climate/Terrain:** | Tropical, subtropical, and temperate/Swamp |
| **Frequency:** | Rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore |
| **Intelligence:** | Low to average (5-10) |
| **Treasure:** | J, K, M, Q, (x5); C in lair |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 10-80 |
| **Armor Class:** | 6 (better with armor) |
| **Movement:** | 3 Sw 15 (9 in armor) |
| **Hit Dice:** | 1 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 3 or 1 |
| **Damage/Attack:** | 1-2/1-2/2-5 or by weapon |
| **Special Attacks:** | Hop |
| **Special Defenses:** | Camouflage |
| **Magic Resistance:** | Nil |
| **Size:** | S to M (4'-7') |
| **Morale:** | Average (10) |
| **XP Value:** | 65 |

The bullywugs are a race of bipedal, frog-like amphibians. They inhabit swamps, marshes, meres, or other dank places.

Bullywugs are covered with smooth, mottled olive green hide that is reasonably tough, giving them a natural AC of 6. They can vary in size from smaller than the average human to about seven feet in height. Their faces resemble those of enormous frogs, with wide mouths and large, bulbous eyes; their feet and hands are webbed. Though they wear no clothing, all bullywugs use weapons, armor, and shields if they are available. Bullywugs have their own language and the more intelligent ones can speak a limited form of the common tongue.

**Combat:** Bullywugs always attack in groups, trying to use their numbers to surround their enemies. Whenever they can, bullywugs attack with their hop, which can be up to 30 feet forward and 15 feet upward. When attacking with a hop, bullywugs add a +1 bonus to their attack (not damage) rolls, and double the damage if using an impaling weapon. This skill, combined with their outstanding camouflage abilities, frequently puts the bullywugs in an ideal position for an ambush (-2 penalty to opponent's surprise rolls).

**Habitat/Society:** More intelligent than frogs, all bullywugs live in organized or semi-organized socially fascist groups, cooperating for the purpose of hunting and survival. They live primarily on fish and any other game, preferring a diet of meat. They are adept hunters and fisherman, and skilled in the use and construction of snares and nets.

Bullywug society is a savage one. Males are the dominant sex, and females exist only to lay eggs. Though females and young make up about one-half of any tribe, they count for little in the social order. The only signs of respect that bullywugs ever
bestow are toward their leader and their bizarre frog god. The race is chaotic evil, and totally lacking in any higher emotions or feelings.

The leader of a bullywug community is a large individual with 8 hit points. Communities of 30 or more bullywugs have five subleaders (8 hp each) and a powerful leader (2 HD, 12+ hp, +1 to damage). Communities of 60 or more bullywugs have a chieftain (3 HD, 20+ hp, +2 to damage) and five subchieftains (2 HD, 12+ hp, +1 to damage).

All bullywugs favor dank, dark places to live, since they must keep their skin moist. Most bullywugs live in the open and maintain only loose territorial boundaries. Ordinary bullywugs do not deal with incursions into their territory very efficiently, but they kill and eat interlopers if they can. They hate their large relatives (advanced bullywugs, see below) with a passion, and make war upon them at every opportunity. Bullywugs prize treasure, though it benefits them little. They value coins and jewels, and occasionally a magical item can be found amongst their hoard.

On an individual level, bullywugs lack the greed and powerlust seen in the individuals of other chaotic races, such as orcs. Fighting among members of the same group, for example, is almost nonexistent. Some would say that this is because they lack the intelligence to pick a fight, and not from a lack of spite. The tribes are lead by the dominant male, who kills and eats the previous leader when it is too old to rule. This is one of the few instances when they fight among themselves.

**Ecology:** Bullywugs tend to disrupt ecosystems, rather than fill a niche in them. They do not have the intelligence to harvest their food supplies sensibly and will fish and hunt in an area until its natural resources are depleted, and then move on to a new territory. They hate men, and will attack them on sight, but fortunately prefer to dwell in isolated regions far from human beings.

### Bullywug, Advanced

A small number of bullywugs are larger and more intelligent than the rest of their kind. These bullywugs make their homes in abandoned buildings and caves, and send out regular patrols and hunting parties. These groups tend to be well equipped and organized, and stake out a regular territory, which varies with the size of the group. They are more aggressive than their smaller cousins, and will fight not only other bullywugs but other monsters as well. The intelligent bullywugs also organize regular raids outside their territory for food and booty, and especially prize human flesh. Since they are chaotic evil, all trespassers, including other bullywugs, are considered threats or sources of food.

For every 10 advanced bullywugs in a community, there is a 10% chance of a 2nd-level shaman being

present.

# Carrion Crawler

| | |
|---|---|
| **Climate/Terrain:** | Subterranean |

| **Size:** | L (9' long) |
| **Morale:** | Special |
| **XP Value:** | 420 |

The carrion crawler is a scavenger of subterranean areas, feeding primarily upon carrion. When such food becomes scarce, however, it will attack and kill living creatures.
The crawler looks like a cross between a giant green cutworm and a cephalopod. Like so many other hybrid monsters, the carrion crawler may well be the result of genetic experimentation by a mad, evil wizard.
The monster's head, which is covered with a tough hide that gives it Armor Class 3, sprouts eight slender, writhing tentacles. The body of the carrion crawler is not well protected and has an armor class of only 7. The monster is accompanied by a rank, fetid odor which often gives warning of its approach.

**Combat:** The carrion crawler can move along walls, ceilings and passages very quickly, using its many

clawed feet for traction.
When attacking, the monster lashes out with its 2' long tentacles, each of which produces a sticky secretion that can paralyze its victims for 2-12 turns. A save versus paralyzation is allowed to escape these effects. They kill paralyzed creatures with their bite which inflicts 1-2 points of damage. The monster will always attack with all of its tentacles.
Carrion crawlers are non-intelligent, and will continue to attack as long as any of their opponents are unparalyzed. Groups of crawlers attacking together will not fight in unison, but will each concentrate on paralyzing as many victims as they can. When seeking out prey, they rely primarily on their keen senses of sight and smell. Clever travelers have been known to fool an approaching carrion crawler with a sight and smell illusion, thus gaining time to make good their escape.

**Habitat/Society:** Carrion crawlers are much-feared denizens of the underground world. They live in lairs, venturing out in search of carrion or food every few days. Some underground inhabitants such as goblins and trolls will make use of carrion crawlers by leaving the bodies of dead foes out in designated areas. This keeps the creatures at a good distance from their own homes and encourages them to "patrol" certain areas. Some orcs have been known to chain live prisoners near the lairs of these fearsome monsters.
Carrion crawlers will sometimes live with a mate or in a small group numbering no more than 6. This does not mean that they cooperate in hunting, but merely share the same space and compete fiercely for the same food. If 2 crawlers have made a kill or discovered carrion, they will often fight over the food, sometimes killing one another in the process.
The carrion crawler mates once a year. Several days after mating, the female will go off in search of a large kill. When she has found or killed an adequate food supply, she lays about 100 eggs among the carrion. The grubs hatch one week later and begin feeding.
Maternal care ceases once the eggs have been laid and it is not uncommon for eggs to later be eaten by the female who laid them. Females die a few weeks after laying their eggs, exhausted by the effort. Males live only a short time longer, having mated with as many females as possible. Grubs have been known to consume one another in feeding frenzies, and are a favorite food of adult carrion crawlers. Few of the grubs reach maturity, but those who do have eaten voraciously and will achieve their full size in a single year. When they reach maturity, the mating cycle begins again.
These monsters exist on the most basic instinctual level, having no more intelligence than earthworms or most insects. The carrion crawler is driven by two urges: food and reproduction. It has absolutely no interest in the collection of treasure.

**Ecology:** The carrion crawler provides the same useful, if disagreeable, function that jackals, vultures, and crows perform. Like so many other predators carrion crawlers instinctively prey on the weak, sick, and foolish. In the long run, this has a beneficial effect on the prey, strengthening its gene pool. The carrion crawler also works wonders in over crowded caverns, quickly eliminating population problems among the weaker monsters. Thus, the life cycle of the crawler is inextricably linked to those of its prey -- when the prey flourishes so does the crawler.

The great cats are among the most efficient of all predators.

## Cheetah

The cheetah is a medium-sized, lightly built cat. Its fur is sand colored and it is covered with dark spots. The cheetah is unique among cats because of its non-retractable claws.

A skilled hunter endowed with natural camouflage, victims of a cheetah attack suffer a -3 on their surprise roll. They are famed for their tremendous bursts of speed, and can run at triple speed (45 feet per round) for three rounds. The cat must rest 3 turns before sprinting again. Cheetahs can spring 10 feet upward or 20 feet forward. If both forepaws hit during an attack the cheetah is able to rake for 1-2 points of damage with each of its rear claws. If defending their young, cheetahs receive a +2 on their attack and damage rolls and will fight to the death.

Cheetahs inhabit warm plains and grasslands, often sharing their range with lions. Their favorite prey are the antelope that inhabit the plains, and they rarely attack men. Cheetahs are territorial, but may live alone, in pairs and in groups. The female raises a litter of 2-4 young alone. The young, who stay with their mother for as long as 2 years, can be completely trained and domesticated.

The fortunes of the cheetah rise and fall with those of its prey; when the population of antelope and other game declines, so does that of the cheetah.

## Jaguar

The jaguar is a powerful cat with a deep chest and muscular limbs. Its color ranges from light yellow to brownish red, and it is covered with dark spots.

The jaguar will attack anything that it perceives as a threat. It relies on stealth to close with its prey, often pouncing from above. The jaguar can leap 30' to attack. If both of its forepaws strike it will rake with its two rear claws for 2-5 (1d4+1) points of damage each.

The jaguar inhabits jungles, spending a great deal of time in tree tops. It climbs, swims, and stalks superbly. Jaguars are solitary and territorial, meeting only to mate. If found in a lair, there is a 75% chance there will be 1-3 cubs. Cubs do not fight effectively.

Their strength and ferocity make jaguars one of the most feared predators of the jungle.

## Leopard

The leopard is a graceful cat with a long body and relatively short legs. Its color varies from buff to tawny, and its spots are rosette shaped.

Leopards prefer to leap on their prey, imposing a -3 on the surprise rolls of their victims. Leopards can spring upward 20 feet or ahead 25 feet. If they strike successfully with both forepaws, they rake with their rear claws for 1-4 points each.

Leopards are solitary, inhabiting warm deserts, forest, plains, and mountains. They hunt both day and night preying on animals up to the size of large antelopes. They swim and climb well, and will often sit in treetops sunning themselves. Leopards will also drag their prey to safety in the treetops to devour in

peace. The female bears 1-3 young, and cares for them for up to two years. If found in the lair, there is a 25% chance that there will be cubs there. The young have no effective attack.
A skilled predator, the leopard is often threatened by human incursions. In areas where it is hunted, it is nocturnal.

### Lion

Among the largest and most powerful of the great cats, lions have yellow or golden brown fur. The males are distinguished by their flowing manes.
Both male and female lions are fierce fighters. Lions hunt in prides, with females doing most of the actual hunting. Since their senses are so keen, lions can only be surprised on a 1. All lions can leap as far as 30 feet. Males have an Armor Class of 5 in their forequarters and 6 in their hindquarters while females are Armor Class 6 in all areas. If a lion hits with both forepaws, it can rake with its rear claws doing 2-7 points damage each.
Lions prefer warmer climates, thriving in deserts, jungles, grasslands, and swamps. They live and hunt in prides, and are extremely territorial. A pride usually consists of 1-3 males and 1-10 females. Lions frequently kill animals the size of zebras or giraffes. Lionesses will cooperate when hunting, driving their prey into an ambush. They have been known to attack domestic livestock, but will almost never attack men. A lair will contain from 1-10 cubs which are 30%-60% grown. Cubs are unable to fight. Lions are poor climbers and dislike swimming.
Lions flourish only when the supply of game is adequate. Their size and strength have made them a favorite target of human hunters.

### Mountain Lion

Not a true lion, this brownish cat is lankier than its large cousins. Except for their size, males and females are difficult to tell apart.
The mountain lion is more cautious and less aggressive than its larger relatives. They can spring upward 15 feet or ahead 20 feet to attack or retreat. If they score hits with both of their forepaws, they will rake with their back ones for 1-4 points of damage each. It will not attack men unless threatened.
Mountain lions range in warm and temperate mountains, forests, swamps, and plains. They are solitary, with males and females each maintaining separate territories. Their favorite prey are deer. The female rears 2-4 cubs alone, which remain with her for 1-2 years.
The mountain lion is flexible and elusive. It is adept at surviving on the fringes of human civilization.

### Spotted Lion

Spotted lions are large, fierce, dappled versions of the lion. They are generally found in the plains of the Pleistocene epoch, and rarely occur elsewhere.

### Giant Lynx

The giant lynx is distinguished by its tufted ears and cheeks, short bobbed tail, and dappled coloring. It has a compact muscular body, with heavy legs and unusually large paws.
The giant lynx is the most intelligent of the great cats and uses its wits in combat. When hiding, a giant lynx will avoid detection 90% of the time. The lynx can leap up to 15 feet and imposes a -6 on the surprise rolls of its prey. It has a 75% chance of detecting traps. If a giant lynx strikes with both forepaws, it attempts a rear claw rake, causing 1-3 points of damage per claw. The giant lynx almost never attacks men.
The giant lynx prefers cold coniferous and scrub forests. They can communicate in their own language

with others of its kind, which greatly increases its chances of survival. The nocturnal lynx stalks or ambushes its prey, catching rodents, young deer, grouse, and other small game. The cubs remain with their mother for 6 months.
The giant lynx has all the advantages of the great cats plus the added bonus of a high intelligence which makes it even more adaptable.

### Tiger

The tiger is the largest and most feared of the great cats. Tigers have reddish-orange fur and dark vertical stripes.
A tiger is a redoubtable foe in battle and is surprised only on a 1. They are experts in stalking and often hunt in pairs or groups. They can leap 10 feet upward, and spring forward 30 feet to 50 feet to attack. If they strike successfully with both forepaws, their rear claws rake for 2-8 (2d4) points of damage per claw.
This species ranges from the subarctic to the tropics, generally inhabiting wooded or covered terrain. Tigers are nocturnal, solitary, graceful climbers and swimmers who are capable of sustained high speed. These animals rarely fight among themselves, but will protect their territories ferociously. They are also the most unpredictable and dangerous of the great cats, not hesitating to attack men. Their favorite prey includes cattle, wild pigs and deer. Females raise their 1-3 cubs alone. The cubs remain with their mother for several years. If encountered in the lair, there is a 25% chance that the cubs will be present.
Feared by men, tigers are hunted aggressively, and are threatened by the destruction of forests. In the untamed wilderness, however, the tiger occupies the top predatory niche.

### Smilodon

Although not truly a member of the cat family, the so-called sabre-toothed tiger is similar to them in many ways. Smilodons are known for their 6 inches long fangs which are capable of inflicting terrible wounds. Their powerful jaws and large teeth give them a +2 on their attack rolls. They are similar to normal tigers but are found only during the Pleistocene epoch.

| **XP Value:** | 7 | 35 | 650 |

Cats of different sizes and colorations are common throughout the world. Some are pets, while many are wild.

**Combat:** Cats are efficient hunters, moving with grace and stealth; opponents suffer a -3 penalty on surprise rolls. A cat's excellent senses and agility allows it to be surprised only on a 1 or 2. Its senses also allow it to hunt efficiently at night.
Cats attack with their claws and teeth; if they hit with front claws, they rake with rear claws. A domestic cat's claws and rake each count as only one attack, rather than one per claw.
Cats have retractable claws which can be extended for climbing or drawn in for speed. They are agile climbers and can scale or move in trees at half normal movement rate. They can leap great distances to avoid obstacles or spring onto prey.

**Habitat/Society:** Cats are common in settled regions. Many cultures keep them as pets, and they can be found in the homes of nobles and peasants alike. Some societies worship cats as divine beings, while other nations fear and hate them as the minions of evil.

**Ecology:** Cats are commonly used to control rodent populations, though some hunters use them to recover downed birds and other small prey.

### Domestic Cat

There are many breeds of domestic cat, all of which share basic characteristics, differing only in outward appearance. An average adult cat weighs eight to ten pounds, though some pampered specimens can weigh as much as 25 pounds.
Cats seldom attack creatures larger than themselves, though they will defend themselves. They often chase and kill mice, birds, rats, and other small creatures. A domestic cat is capable of a burst of speed, boosting its movement rate to 18 for a round and maintaining such speed for 1d10 rounds.
A well-treated cat will live for 15 years or more. The cat's gestation period is about two months, with 1d4+1 kittens in each litter. Kittens are weaned when about eight weeks old. Mother cats will fight to the death to defend kittens.

### Wild Cat

Wild cats are very similar to domestic cats, and some were pets that went feral. Generally, wild cats are tougher, stronger, and more capable hunters than domestic cats.

### Elven Cat

Cats kept by elves have evolved into magical creatures, possibly aided by arcane means. They are very intelligent and have their own language, and many can speak a crude form of the elven tongue. Some live with gnomes, brownies, or woodland creatures, and also speak a basic form of their keepers' language. Most have gray-brown fur with dark stripes.

Elven cats are very stealthy, imposing a -5 penalty to opponents' surprise rolls. They are surprised only on a 1. Elven cats have a 99.9% chance to move silently, and a 90% chance to hide in wilderness areas. They are excellent climbers, can leap 20 feet with ease, and enjoy swimming and playing in water.

Elven cats have magical abilities that they use to avoid enemies. They have limited *ESP* which is used to determine intent. They can use *enlarge* and *trip* once per day, and *reduce* and *tree* twice per day; for magical abilities, elven cats are treated as 9th-level spellcasters. *Enlarge* doubles an elven cat's Hit Dice and damage; *tree* allows it to assume the form of a tree's limb.

# Catoblepas

| | |
|---|---|
| **Climate/Terrain:** | Any swamp |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |
| **Intelligence:** | Semi (2-4) |
| **Treasure:** | (C) |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-2 |
| **Armor Class:** | 7 |
| **Movement:** | 6 |
| **Hit Dice:** | 6+2 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-6+stun |
| **Special Attacks:** | Gaze causes death |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | L (6' tall at shoulder) |
| **Morale:** | Steady (11-12) |
| **XP Value:** | 975 |

The catoblepas is a bizarre, loathsome creature that inhabits dismal swamps and marshes. Its most terrifying features are its large bloodshot eyes, from which emanate a deadly ray.
The body of the catoblepas is like that of a large, bloated buffalo, and its legs are stumpy, like those of a pygmy elephant or a hippopotamus. Its long, snakey tail is swift and strong, and can move with blinding speed. The head of the catoblepas is perched upon a long, weak neck, and would be much like that of a warthog except that the catoblepas is uglier.

**Combat:** In combat, the catoblepas relies on two forms of attack.
First, it will use its strong, snaky tail to strike and stun its foes. Anyone struck by the tail suffers 1-6 points of damage and has a base 75% chance of being stunned for 1-10 melee rounds. The base chance of

being stunned is lowered by 5% for every level above first, or for each additional Hit Die in the case of monsters and animals.
Despite the danger of a tail strike, the catoblepas' second mode of attack is by far the more fearsome of the two. The gaze of the catoblepas emanates a *deathray*, with a 60 yard range. Any creature meeting its gaze dies without a saving throw. If a party is surprised by a catoblepas, there is a 1 in 6 chance that someone in the group has met the creature's gaze. Those who close their eyes or act with their eyes averted can still be affected by the *deathray*, but a saving throw vs. death magic is allowed.
Since the neck of the creature is very weak, it has only a 25% chance of raising its head and using the *deathray* on subsequent rounds. If the catoblepas and its target are both relatively still, this increases by 15% per melee round. If the catoblepas is forced to follow quick motions it has only a 10% chance of raising its head.
If more than one catoblepas is attacking, the monsters will cooperate with one another, attempting to herd their targets into a crossfire.

**Habitat/Society:** For the most part, the catoblepas is a meandering creature that wanders about its swamp nibbling on marsh grasses and the like. Once a month, usually under the light of the full moon, the catoblepas seeks out meat to round out its diet. It is at this time that the catoblepas is most likely to be encountered by adventurers.
The lair of the catoblepas is usually some sort of sheltered place where the ground is firm. More often than not it is surrounded by a tall stand of reeds or other marsh plants. The creature has little fear of being disturbed in its lair, since it is frequently the most feared carnivore in the swamp.
The catoblepas mates for life and when more than one catoblepas is encountered they will be a mated pair. There is a 10% chance that the couple will have a single offspring with them. An immature catoblepas will have half the Hit Dice of an adult. It takes almost nine years for the offspring to reach youthful maturity and an adult female will bear but one child every 10 or 12 years. Both the male and the female will cooperate in raising the offspring.
When the catoblepas ventures forth to hunt it eats fish, marsh birds, eels, water rats, large amphibians, snakes, and other swamp animals. The catoblepas usually stuns its prey with its tail and then kills it with its gaze.
The catoblepas is an opportunistic predator when it hunts and it is not above eating carrion. Since it is semi-intelligent, it will treat parties of humans with respect, preferring to size them up first. As a rule, it will not attack unless it is hunting or feels that its mate or offspring is threatened. Being long-lived (150 to 200 years or so) and semi-intelligent, the catoblepas is capable of learning from the mistakes of earlier encounters and hunts.
The catoblepas has no special interest in wealth, and the listed treasure type is the result of victorious encounters with intruders. It attaches no value to the coins, gems, and occasional magical items strewn about the lair.

**Ecology:** The catoblepas has no natural enemies, since its gaze provides it with more than adequate protection from even the fiercest of predators.

The cave fisher is a large insectoid that has adapted to life below ground. It combines many of the characteristics of a spider and a lobster.
The cave fisher has a hard, chitinous shell of overlapping plates and eight legs. The 6 rear legs are used for movement and traction on stony walls and corridors. Because of these limbs, the fisher has no difficulty in moving up and down vertical walls. The front pair of legs are equipped with powerful pincers, which are used for killing and dismembering prey. The most unusual feature of the cave fisher is its long snout, which can fire a strong, adhesive filament. The monster can also use its adhesive to anchor itself in place on walls and ledges.

**Combat:** The cave fisher has two ways of hunting. Its preferred method is to string its long filament in

the vicinity of its lair. The filaments are thin and strong, making them exceedingly difficult to detect or cut. There is only a 20% chance of noticing the strand at 10', and no chance at all of seeing them at a greater distance. A *detect snares and pits* spell will reveal a strand. The filament is coated with an adhesive which can only be dissolved by liquids with a high alcohol content (such as the cave fisher's blood). The filaments can only be cut by +1 or better edged weapons.
The fisher's favorite food are small, flying creatures like bats. Ever opportunistic, they are constantly trying to vary their diet by trapping a careless adventurer, foolish goblin, or orc (provided that they think that they can get away with it). If more than one fisher inhabits a lair, they will frequently pool their resources to catch larger prey. Once the victim is trapped in the filament, the cave fisher draws its prey in, reeling its filament in like a fishing line.
Should a tempting target escape the monster's neatly laid traps, the cave fisher will try another mode of attack. It will spend one round drawing its filament in and then shoot it at the prey, striking as a 6 Hit Die monster. It will try to snare its prey in this manner so long as it remains within the fisher's established territory. If the prey is hit by the filament, the monster can pull a weight of up to 400 pounds at a movement rate of 15' per round. In the event that a “tug of war” breaks out, the fisher has a strength of 18/00 with its strand.

**Habitat/Society:** Cave fishers prefer living on ledges and caves located above well-traveled paths, sharing their lairs with others of their kind. No more than four cave fishers will be found in one lair. Their filaments are always strung before their lair, and they attempt to kill anything they trap, often storing food for future use.
Their territories are very small, and never larger than about 300 feet to either side of the lair. Anything man-sized or smaller is considered fair game by the cave fisher and halflings are thought to be tasty treats. A single cave fisher would never attack a large, well armed party for the sake of a single meal. Still, they are cunning, and a group of the monsters might reel in their filaments and attempt an ambush if they thought they could get away with it. If hunting in one area becomes scarce, the cave fisher will simply find a new area to hunt, where the small game is more plentiful and careless.
Like all predators, the cave fisher is interested in survival. This means a steady supply of food and a mate. Females lay eggs in the vicinity of the lair, which they protect from predators. The young scatter when the eggs hatch, seeking lairs of their own.
Although the cave fisher does not collect treasure, its lair is often strewn with the possessions of its former victims.

**Ecology:** The cave fisher preys primarily on small flying game, and in the subterranean world this frequently means a diet of bats. It is not the top predator in its ecological niche, and has learned caution in dealing with other monsters. The cave fisher is sufficiently intelligent to know the dangers of preying on large, well-organized groups, who might grow tired of its depredations and hunt it to extinction. The monster instinctively picks the easiest route for survival, and relies on stealth and cunning to trap its prey and avoid being eaten itself.
The filaments of the cave fisher are highly prized by many thieves' guilds, for they can be made into thin and very strong rope which is nearly invisible. The filaments are wound onto reels and then specially treated to dilute the adhesive. The resulting strands are made into ropes, while the diluted adhesive is turned into a special solution, which when applied to gloves and boots, greatly increases traction for climbing.

# Centaur

| | |
|---|---|

| **Morale:** | Elite (13-14) |
| **XP Value:** | 175 |
| Centaur leader | 270 |
| Centaur priest | 420 |

Centaurs are woodland beings who shun the company of men. They dwell in remote, secluded glades and pastures.
The appearance of a centaur is unmistakable: they have the upper torso, arms, and head of a human being and the lower body of a large, powerful horse.
Centaurs speak their own language and some among them (about 10%) can converse in the tongue of elves.

**Combat:** A band of centaurs is always armed, and the leaders carry shields. Half of the centaurs will be

wielding oaken clubs (the equivalent of morning stars), one quarter will carry composite bows and have 10-30 arrows (either flight or sheaf, depending on the current state of affairs in the area). The remainder of the band will be leaders (AC4; HD5) using medium shields and medium horse lances. Centaurs make 3 attacks each round in melee: once with their weapons and twice with their hooves.

**Habitat/Society:** Centaurs are sociable creatures, taking great pleasure in the society of others of their kind. Their overall organization is tribal, with a tribe divided into family groups living together in harmony. The size of the tribe varies, it range from 3-4 families to upwards of 20 families. Since males have the dangerous roles of hunter and protector, females outnumber males by two to one. The centaur mates for life, and the entire tribe participates in the education of the young.

The lair is located deep within a forest, and consists of a large, hidden glade and pasture with a good supply of running water. Depending upon the climate, the lair may contain huts or lean-tos to shelter the individual families. Centaurs are skilled in horticulture, and have been known to cultivate useful plants in the vicinity of their lair. In dangerous, monster infested areas, centaurs will sometimes plant a thick barrier of tough thorn bushes around their lair and even set traps and snares. In the open area, away from the trees, are hearths for cooking and warmth. If encountered in their lair, there will be 1-6 additional males, females equal to twice the number of males, and 5-30 young. The females (3 Hit Dice) and the young (1-3 Hit Dice) will fight only with their hooves, and only in a life or death situation.

Each tribe will have a priest who is treated as a leader but has the spell abilities of a 3rd level druid. Centaurs survive through a mixture of hunting, foraging, fishing, agriculture and trade. Though they shun dealings with humans, centaurs have been known to trade with elves, especially for food and wine. The elves are paid from the group treasury, which comes from the booty of slain monsters.

The territory of a centaur tribe varies with its size and the nature of the area it inhabits. Centaurs are also not above sharing a territory with elves. The attitude of a centaur toward a stranger in its territory will vary with the visitor. Humans and dwarves will usually be asked to leave in a polite manner, while halflings or gnomes will be tolerated, and elves will be welcomed. Monsters will be dealt with in a manner according to the threat they represent to the welfare and survival of the tribe. Were a giant or dragon to enter the territory, the centaurs would pull up stakes and relocate, while trolls and orcs and their like will be killed.

Centaurs will take the treasure of their fallen foes, and are fully aware of its value. Most male centaurs have a small coin supply, while the tribe has a treasury which may well include some magical items. Leaders will have twice the normal individual treasure. This treasure is used to buy food for the group, or to ransom (90% likely) captured or threatened members of the tribe.

While basically neutral or chaotic good, centaurs have been known to become rowdy, boorish, and aggressive when under the influence of alcohol. They are also extremely protective of their females and young. Centaurs are basically pastoral, but will react with violence if their lifestyle and survival is threatened.

**Ecology:** The centaur lives in close harmony with nature and spends its lifetime carefully conserving the natural resources around its lair. The race seems to have an innate knowledge of how to achieve this precious balance. If forced to chop down a tree, a centaur will plant another to replace it. Centaurs never over hunt or over fish an area as a human group might do, but choose their game with care, limiting the amount they eat.

Giant centipedes are loathsome, crawling arthropods that arouse almost universal disgust from all intelligent creatures (even other monsters). They are endemic to most regions.
One of the things that makes the centipede so repulsive is its resemblance to the worm. Its long body is divided into many segments from which protrude many tiny feet. Hence the name "centipede" (or hundred-footed). The giant centipede is so named because it is over 1-foot long. The body is plated with a chitinous shell and it moves with a slight undulating motion. The creature has the added benefit of protective coloration, and varies in color depending on the terrain it inhabits. Those that favor rocky areas are gray, those that live underground are black, while centipedes of the forest are brown or red.

**Combat:** When hunting, centipedes use their natural coloration to remain unseen until they can drop on their prey from above or crawl out of hiding in pursuit of food. They attack by biting their foes and injecting a paralytic poison. The poison can paralyze a victim for 2d6 hours, but is so weak that victims are permitted a +4 bonus to their saving throw. Due to its small size, the giant centipede is less likely to resist attacks and receives a -1 penalty to all its saving throws. Although a single giant centipede rarely constitutes a serious threat to a man, these creatures frequently travel in groups. When more than one centipede is encountered, the monsters will fight independently, even to the point of fighting among themselves over fallen victims.

**Habitat/Society:** The centipede behaves like most other insects, roving from place to place in search of food; it has no set territory or dwelling. The centipede simply goes where its hunger leads it. It is an aggressive and hungry carnivore that must eat at least once a day to survive. Hungry centipedes often resort to cannibalism.

**Ecology:** Giant centipedes have several natural advantages, including poison and protective coloration, allowing them to compete with other small predators for game. Their poison bestows a certain immunity from being hunted, but hungry and skilled animals such as coyotes and large predatory birds hunt them effectively in lean times.
Their preferred targets are small mammals that are easily overcome by their weak poison. If they are very hungry, however, they have been known to attack anything that moves, including humans.

### Huge Centipedes
These are identical to giant centipedes save that they are only 6 inches long. Their poison is weaker than that of their larger cousins and a failed saving throw will immobilize the victim for only 1d6 hours. Huge centipedes make their own saving throws at -2. Mice and other large insects are the favorite prey of huge centipedes. They in turn are hunted by giant centipedes.

### Megalo-centipede
The megalo-centipede, because of its great size, is no longer classed as an irritant but is a threat to human

and animal alike. Its acidic poison is far more potent than that of its weaker cousins. The victims of a megalo-centipede bite receive no bonuses on their saving throws and failure indicates death. If the target successfully resists the poison, the acid burns the victim's skin, inflicting 2d4 points of damage.
The megalo-centipede is more intelligent than its smaller cousins and it is a far more cunning hunter, although they still do not cooperate with each other. In the wilderness the megalo-centipede prey on animals the size of deer. In the subterranean environment, it attacks man-sized or smaller creatures, including orcs, goblins, or humans. The megalo-centipede receives no penalties to its own saving throws.

### Tunnel Worm

This cousin of the giant centipede feeds upon and lays its eggs in carrion. A tunnel worm attacks by lunging out of its hidden burrow to strike with a +2 bonus to the attack roll. Success indicates the tunnel worm has seized its prey in its mandibles, but no damage is inflicted until the worm chews through the victim's armor. It takes one round for the worm to chew through leather or worse, two rounds for armor tougher than leather but no tougher than chain mail, and three rounds for armor tougher than chain mail. Once the armor is breached, the worm automatically inflicts 2d8 points of damage each round. If the worm suffers 15 or more points of fire damage or loses 60% of its hit points, it drops its victim and retreats to its lair. Tunnel worm lairs often have treasure from earlier victims.

How chimerae were created is a dark mystery better left unexplored. The chimera has the hindquarters of a large, black goat and the forequarters of a huge, tawny lion. Its body has brownish-black wings like those of a dragon.
The monster has three heads, those of a goat, a lion, and a fierce dragon. The goat head is pitch black, with glowing amber eyes and long ochre horns. The lion head is framed by a brown mane and has green eyes. The dragon head is covered with orange scales and has black eyes.
The chimera speaks a limited form of the foul language of red dragons. As a rule, however, it will only pause to communicate with those creatures who are more powerful than itself.

**Combat:** Its many heads and powerful physique make the chimera a deadly foe in combat. The monster prefers to surprise its victims, often swooping down upon them from the sky. It can attack 6 times each round, clawing with its forelegs, goring with its two horns, and biting with its lion and dragon heads. If it desires to do so, the dragon head can loose a stream of flame some 5 yards long in lieu of biting. The dragon's fire causes 3-24 (3d8) points damage, although a saving throw vs. breath weapon will cut the damage in half. The chimera will always attempt to breathe if its opponents are in range. If more than 1 chimera is encountered, they will attack in concert.
The armor classes are split as follows: Dragon, AC 2 (flank); Lion, AC 5 (front); Goat, AC 6 (rear).

**Habitat/Society:** The chimera, being a hybrid, combines the preferences of the lion, the goat, and the dragon in its habitat, society and ecology. The dragonish part of its nature gives the chimera a distinct preference for caves as lairs. The dragon and lion parts seem to war with one another, for some chimerae are dragon-like in their preference for solitude, while others live in small prides. Even if they mate, offspring are rare.
The monster is an omnivore. The goat head will browse on the toughest plants and shrubs and will derive nutrition from the most barren vegetation while the lion and dragon heads can only be satisfied with flesh. The chimera hunts once every 3 or 4 days, using its strength and limited intelligence to gain an advantage over those it preys on. Having a voracious appetite, it sometimes roams over territories as large as 20 square miles.
Being chaotic evil in nature, the chimera enjoys preying upon men, elves, dwarves, and halflings. It will even gladly attack other monsters in its search for food. Anyone entering its territory becomes prey, and will be treated accordingly.
The chimera cannot resist attacking groups of travelers or monsters for another reason: its dragon nature craves the treasure that its prey might be carrying. Although it has no earthly use for it, the chimera will gather the coins of its fallen foe into a heap and roost on it like a dragon. Its hoard is nothing like that of a true dragon, however, and consists mainly of copper and silver coins, with perhaps some jewelry and a few magical items.

**Ecology:** The chimera fills the role of both omnivore and a top predator in its ecosystem. It is very adaptable. During times when its prey is scarce or non-existent, the chimera can make do with a vegetarian diet.

**The Gorgimera**
The gorgimera has the hindquarters of a gorgon, forequarters of a lion, and body and wings of a red

dragon. Like the chimera, it has the heads of its three constituent creatures.
The monster can attack with its claws, bite with its lion and dragon heads, and butt with its gorgon head. In place of making its normal attack, the gorgon and dragon heads can employ their breath weapons. While the dragon's attack is similar to that of the chimera, the gorgon's breath causes petrification to any caught in its area of effect. The gorgon head can use its breath weapon twice per day to strike in a cone 3 feet long which is 1 foot wide at its base and 3 feet wide at its mouth. The gorgimera will always use one of its breath weapons if its foes are within 10 feet. A save vs. petrification will allow a victim to avoid the effects of the gorgon's breath.
The gorgon's head can see into both the Astral and Ethereal planes, and its breath weapon extends therein.
Like its relative the chimera, the gorgimera can also speak a limited form of the language of red dragons.

# Cloaker

| | |
|---|---|
| **Climate/Terrain:** | Any subterranean |

| **Size:** | L (8' long) |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 1,400 |

Cloakers are fiendish horrors, related to trappers, that dwell in dark places far beneath the surface of the earth. They generally seek to kill those who enter their lairs, unless they can think up some other, more amusing way to punish interlopers.

When a cloaker is first seen, it is almost impossible to distinguish this monster from a common black cloak. The monster's back has two rows of black eye spots running down it that look much like buttons, and the two ivory-colored claws on its upper edge can easily be mistaken for bone clasps.

When it unfurls itself and moves to attack, however, its true nature becomes all too obvious. At this point, its white underside is clear and the monster's face is fully visible. This face, with the glow of its two piercing, red eyes and the needle-like fangs that line its mouth, is a truly horrible sight. At this point, the monster also uncurls the whip-like tail at its trailing edge and begins to swish it back and forth in

anticipation.

**Combat:** When a cloaker strikes at its victim, it moves with blinding speed. Without warning, the cloaker flies at its target and, if the attack roll is successful, engulfs its prey within its folds. Any creature that falls victim to this attack is all but helpless and can be bitten easily (no roll required) for 1d4 points of damage plus the victim's unadjusted Armor Class. Thus, an adventurer in chain mail (AC 5) suffers 1d4+5 points of damage each round. Shields offer no protection from such attacks.

While it is devouring its chosen victim, the cloaker uses its two whip-like tail attacks to inflict 1d6 points of damage on those who move in to help rescue the captive. The tail is AC 1 and can be cut off if a total of 16 points of damage are inflicted upon it.

Any attacks made on the cloaker inflict half their damage to the cloaker and the other half to the trapped victim. Area effect spells, such as *fireball*, cause full damage to both the monster and its victim.

The cloaker can also emit a special subsonic moan of increasing intensities. Although this power is blocked by stone or other dense materials, it can be very effective in an open chamber. Cloakers may not moan and bite during the same round. A cloaker may emit one of four types of moan each round.

The first intensity of moaning causes unease and numbs the minds of those within 80 feet of the cloaker. The immediate effect of this moan is to cause a -2 penalty to the victims' attack and damage rolls against the cloaker. Further, any creature that is forced to listen to the moan for six consecutive rounds is temporarily forced into a trance that renders it unable to attack or defend itself as long as the moaning continues.

The second intensity of moaning acts as a *fear* spell. All creatures within 30 feet of the cloaker must roll a successful saving throw vs. spell or flee in terror for two rounds.

The third intensity of moaning causes nausea and weakness and affects all those in a cone 30 feet long and 20 feet wide at its open end. Anyone caught in this area must roll a successful saving throw vs. poison or be overcome by nausea and weakness for 1d4+1 rounds. During this time, those who fail their saving throws are unable to act in any manner.

The fourth and final intensity of moaning acts as a *hold person* spell. This power can be used on only one person at a time, has a range of 30 feet, and lasts for five rounds.

Each of the various effects of the cloaker's moan can be defeated by the use of a *neutralize poison* spell on a victim.

Cloakers also have the power to manipulate shadows. Known as shadow shifting, this power can be used in a number of ways, but in only one particular manner at any given time. The cloaker can employ its shadow shifting ability to obscure its opponents' vision, thus bettering its Armor Class to 1. Or the creature can produce precise images from the shadows that can be used to trick its adversaries. One common means of employing these images is to create a duplicate of the cloaker to draw away enemy attacks. If this method of shadow shifting is employed, it can be treated as a *mirror image* spell that creates 1d4+2 images.

A *light* spell cast directly at a specific cloaker blinds it and prevents it from using its shadow shifting powers.

**Habitat/Society:** The thought processes of cloakers are utterly alien to most other life forms. As such, they can only be communicated with by mages who have devoted long hours to training their minds in the arcane discipline necessary to understand these creatures.

**Ecology:** It is believed that cloakers are asexual, although no definitive proof of this has ever been found.

| **XP Value:** | 650 | 1400 |

The cockatrice is an eerie, repulsive hybrid of lizard, cock, and bat. It is infamous for its ability to turn flesh to stone.

The cockatrice is about the size of a large goose or turkey, and has the head and body of a cock, with two bat-like wings and the long tail of a lizard tipped with a few feathers. Its feathers are golden brown, its beak yellow, its tail green, and its wings gray. The cockatrice's wattles, comb, and eyes are bright red.

Females, which are much rarer than males, differ only in that they have no wattles or comb.

**Combat:** The cockatrice will fiercely attack anything, human or otherwise, which it deems a threat to itself or its lair. When attacking, the cockatrice will attempt to grapple with its foe, touching exposed flesh and turning it to stone. Flocks of cockatrices will do their utmost to overwhelm and confuse their opponents, and they will sometimes fly directly into their victims' faces.
While the fatal touch of a cockatrice's beak will affect victims clothed in leather or fabric, it will not work through metal armor. The touch will, however, extend into the Ethereal Plane. The cockatrice is somewhat aware of the limits of its powers, and natural selection has taught it to strike only at exposed flesh. If large areas of the opponent's flesh are exposed, it should be assumed that the cockatrice automatically touches flesh. If the target is reasonably well armored, the base chance of a cockatrice striking an area which it can affect is equal to 10% times the adjusted Armor Class of the victim.

**Habitat/Society:** The cockatrice is immune to the petrification powers of others of its kind.
The diet of the cockatrice consists of insects, small lizards and the like. When it hunts these animals, the creature does not employ its power to petrify living things.
It is distinguished from other avians by its unusual habits and nasty temperament. Since females are rare, they are the dominant sex and often have more than one mate. In fact, males fight or strut for the privilege of joining a female's harem. These mated groups usually build their nests in caves. Nest sites are permanent, and the cockatrice constantly seeks to decorate its nesting site by lining it with shining objects like coins and gems. Females lay one or two brownish red, rust speckled eggs per month. There is only a 25% chance that any given egg will hatch. Those that are fertile hatch in 11-19 days. The young reach maturity and full power within six months. Once they achieve adulthood, the hatchlings are driven away from the nesting site by their parents. Larger groups of cockatrices encountered will frequently be young driven from the nest who have temporarily united for survival.

**Ecology:** The cockatrice thrives in the wilderness. Its petrification power makes it immune to most predators and enables it to compete with other birds for food. The feathers of the cockatrice are prized by certain wizards as many magical scrolls must be inscribed with pens made from such quills. Many people also seek unhatched eggs, or even live cockatrices, as unusual pets or guardians.

**Pyrolisk**
Frequently mistaken for its less malignant relative, the pyrolisk is virtually identical to the cockatrice except for the single red feather in its tail and the reddish cast of its wings. Whereas the cockatrice is motivated by instinct alone, the pyrolisk revels in spreading mayhem. Any victims who fail to save vs. death magic when meeting its gaze will instantly burst into flames, dying in agony. If the save is made, they are still burnt for 2-13 (1d12+1) points of damage. Any creature within 30 feet innately or magically immune to fire will not be affected by its gaze, and anyone who makes their saving throw is thereafter immune to the gaze of that particular pyrolisk.
The creature can cause any fire source within 30 yards to explode in fireworks (as a *pyrotechnics* spell) once per round.
The pyrolisk is itself immune to all fire-based spells and attacks.
The pyrolisk's mortal enemy is the phoenix, although any creature which the monster encounters is likely to be attacked.

**Clarsentience:** aura sight, all-round vision, see sound; **Psychometabolism:** metamorphosis, clemical simulation, ectoplasmic form; Psychoporatation: teleport, time shift; Telepathy: mindlink, ESP, invisibility.

The couatl are feathered serpents of myth and lore. It is believed that they are distant relatives of dragons, although this remains unproven.
So rare as to be considered almost legendary, the couatl is one of the most beautiful creatures in existence. It has the body of a long serpent and feathered wings the color of the rainbow. Since it has the ability to polymorph, the couatl will sometimes appear in the form of other creatures (always of good alignment).
Couatl are able to communicate via telepathy with almost any intelligent creature which they encounter. In addition, they can speak common and most serpent and avian languages.

**Combat:** A couatl will seldom attack without provocation, though it will always attack evildoers caught red-handed. Whenever possible, a couatl will attack from the air.
Since it is highly intelligent, the couatl will frequently use its spells from a distance before closing with its foes. If more than one couatl is involved, they will discuss their strategy before a battle. The couatl will also not hesitate to polymorph into another, more effective form in combat.
The couatl have a variety of abilities which make them more than a match for most other creatures. In addition to being able to polymorph themselves at will, a couatl can use magic. Fully 45% will be 5th level wizards, while 35% can act as 7th level priests. The remaining 20% are able to use both types of abilities.
In addition to their other magical abilities, couatl can render themselves and up to 450 pounds of additional matter ethereal at will. Further, they can *detect good/evil*, *detect magic*, turn *invisible*, and employ *ESP* whenever they desire to do so. The oldest and most powerful of couatl can also use a *plane shift* on themselves and up to 8 others. This ability has a 90% chance of reaching the desired plane.
The couatl uses its poisonous bite and constriction when forced into melee combat. When it bites it does 1-3 points of damage and injects a deadly toxin. If the victim fails a save vs. poison it is killed instantly. If the constriction attack succeeds, the victim takes 2-8 points damage each round until it or the couatl is killed.

**Habitat/Society:** This winged serpent is native to warm, jungle-like regions but can also be found flying through the ether. Their intelligence and goodness have made them objects of reverence by the natives of the regions which they inhabit. Considered to be divine, there are many legends in which the couatl is the benefactor of mankind and the bestower of such precious gifts as agriculture and medicine. There are even shrines in certain areas dedicated to the couatl, and any who attack or harm a couatl are automatically viewed as the blackest of villains.
Although solitary in nature, couatl think of themselves as a single, extended clan. This clan is led by the oldest and wisest of their numbers but assembles only in dire emergencies.
Most couatl dwell alone, making their lairs in caves and abandoned buildings in remote, uninhabited regions. They hunt jungle animals for food once every fortnight or so. Many enjoy traveling, often undertaking long journeys of exploration.
On rare occasions, a pair will mate for life and establish a joint lair. Unlike many other reptiles, the couatl bear live young. Births are rare, averaging only one per couple each century. Both parents participate in the rearing and education of the single offspring, and will fight to the death if their child is threatened. Young couatl reach maturity in thirty or forty years and, though some will elect to remain with their parents for as long as a century, will eventually set off in search of the couatl's never-ending quest for wisdom.
Intellectually curious, all couatl have vast stores of information and enjoy learning more. When one of

them learns some new and fascinating fact he will inevitably set out in search of his brethren to share and discuss it.
Couatl can sometimes be persuaded to help good adventurers or give sound council. If they feel that they are being sought for frivolous reasons, they will simply fly away. They are not greedy and do not seek treasure for its own sake. Aid from a couatl may well take the form of a magical item from its hoard.

**Ecology:** The couatl usually reigns supreme in its jungle, having little to fear from most other monsters.

# Crabman

| | |
|---|---|
| **Climate/Terrain:** | Temperate to tropical sea coasts |
| **Frequency:** | Rare |
| **Organization:** | Tribal |

| **Morale:** | Steady (11-12) |
| **XP Value:** | 65 |

Crabmen are man-sized intelligent crabs. They walk upright on two pairs of legs. The small pincers tipping the short arms above their legs are used for fine manipulation. The two longer arms end in large claws. Two slender eyestalks bob above the beak-like collection of mandibles which makes up the crabman's mouth. Male crabmen are often brightly colored and females may be reddish-brown, green, or black.

**Combat:** Though generally peaceful, crabmen will fight back with their large claws if attacked, causing 1d6 points of damage per hit. Males of certain subspecies have an enlarged claw on one side which does 1d8 damage. Crabmen have never been known to wield weapons.

If severed, a crabman's limbs and eyestalks will grow back in 1-4 weeks.
At certain times, population pressure and food shortages will cause crabmen to voraciously hunt other creatures. Most such attacks are directed towards other tribes of crabmen or other coastal inhabitants. However, they will occasionally raid coastal towns for food, attacking anything that moves. Such savage frenzies last only a few days, during which the crabman population is generally reduced back to a tolerable level.

**Habitat/Society:** Crabmen live as simple hunter-gatherers, subsisting primarily on carrion and algae. Much of each crabman's day is spent hunting, filtering algae, or scavenging along the shore. Crabman often gather large amounts of sand into their mouths, suck out all the organic material, and spit out fist-sized pellets of sand and dirt. These hardened pellets betray the presence of a nearby crabman lair.
Crabmen generally live in coastal caves. Some tribes dig extensive burrows in seaside cliffs. Within a burrow complex, each crabman has an individual lair, situated near a large, central meeting area.
Males and females are found in approximately equal numbers in a tribe. They mate at irregular times throughout the year. The female produces about 100 eggs within two weeks. They are laid in the ocean, where they hatch into clear, soft-shelled, crablike larvae. In six months they molt, develop a stronger shell, and begin to dwell on land. The eggs and larvae are delicious, and predators greatly reduce their numbers before they reach adulthood. Larvae are almost defenseless, with AC 8, 1 HD, and weak claws which do only 1-2 points of damage per hit.
Crabmen continue to grow and molt throughout their lives, and specimens as tall as 10 feet have been reported. A crabman can live for up to 20 years.
A crabman tribe seldom has commerce with other tribes, and almost never with other intelligent races. They produce few artifacts, primarily seaweed weavings, driftwood carvings, and seashell constructions. Though these are often impermanent, some are quite beautiful. Though details of crabman religion are unknown, most artifacts are believed to be religious in nature, and are jealously guarded.
Each tribe appears to be led by a dominant, elder male or female. These leaders have maximum hit points, but are otherwise unremarkable.
Crabmen speak their own language, which consists mostly of hisses and clicks. The crabmen's xenophobia and the extreme difficulty of their language make it virtually impossible for humans and similar races to learn to speak the crabman tongue. Those few sages who know anything about the language know only a few basic words.
Crabmen are attracted to shiny metal, particularly silver-colored metal, though they seem unable to differentiate between silver, platinum, and steel. Crabman lairs often contain piles of these metals, with many pieces worked into sculptures. If the metal has rusted or tarnished, it is sometimes scraped to reveal the shine again, but often simply thrown into a refuse pile.

**Ecology:** Crabman artifacts can sometimes bring good prices from collectors, though they are often fragile, and readily decompose if made of plants.
Crabmen are rumored to be very tasty, especially their legs and claws. Primitive coastal inhabitants, particularly sahuagin, consider them a delicacy and often raid crabman villages. Their shells dry out and become brittle soon after they are removed or molted, so they cannot be used as armor. The claws can be used as passable clubs.

# Crawling Claw

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Rare |
| **Organization:** | Swarm |
| **Activity Cycle:** | Any |
| **Diet:** | Special |
| **Intelligence:** | Non- (0) |
| **Treasure:** | Any |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-20 |
| **Armor Class:** | 7 |
| **Movement:** | 9 |
| **Hit Dice:** | 2-4 hit points |
| **THAC0:** | 20 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-4 (armored foes)<br>1-6 (unarmored foes) |
| **Special Attacks:** | Nil |
| **Special Defenses:** | See below |
| **Magic Resistance:** | See below |
| **Size:** | T (human hand) |
| **Morale:** | Fearless (19-20) |
| **XP Value:** | 35 |

The much feared crawling claw is frequently employed as a guardian by those mages and priests who have learned the secret of its creation.
No single description of a crawling claw is possible as they are not uniform in appearance. Since claws are the animated remains of hands or paws of living creatures, they are apt to be found in a wide variety of shapes and sizes.

**Combat:** When a claw detects a potential victim, it leaps to the attack. Although it may not appear to be

capable of such a feat, its great strength enables it to do so. The maximum distance a claw can leap is 15 feet.
Once a claw lands on its victim, it attacks in one of two ways. If the victim is wearing metal armor, the claw delivers a powerful blow that inflicts 1d4 points of damage. Against those who are not armored (or only wearing leather) the claw can employ its great strength in a crushing grip. This manner of attack causes 1d6 points of damage.
In some cases, a claw may be instructed to attempt to strangle or gouge out the eyes of a victim. In any such case, the DM should consider all aspects of the situation and determine how much, if any, damage is done.
Claws are immune to any form of death magic or *raise dead* spells, although a *resurrection* spell renders them immobile for a number of turns equal to the level of the caster. Claws have the same resistance to *charm*, *sleep*, and *hold* spells that undead do, but claws are not subject to turning, *control undead* spells, or damage by holy water. Cold-based spells make claws brittle so that all rolls to damage them are increased by 1 point per die.
Edged weapons inflict only half damage on a claw; all magical weapons cause damage as if they were not enchanted in any way (although to hit bonuses still apply).

**Society/Habitat:** Crawling claws are nothing more than the animated hands and paws of once-living creatures. As such, they have no culture or society to speak of. Despite this, crawling claws do have a limited ability to communicate with each other. This takes the form of a basic telepathic link between all the claws of a single "batch." Whenever one claw finds a victim, all of the others in the area who were made at the same time move in to help it.
In addition, claws that have been instructed to do so can act in concert with each other to move large objects. The DM should use five pounds per claw as a reasonable limit to the weight that can be moved.

**Ecology:** Crawling claws can be created by any mage or priest who has knowledge of the techniques required to do so. To begin with, the creator must assemble the severed limbs that are to animated. The maximum number of claws that can be created at any one time is equal to the level of the person enchanting them. The hands (or paws) can be either fresh, skeletal, or at any stage of decomposition in between.
Claws can be controlled in one of two ways: directly or via programming. The manner of a claw's control must be specified when it is created and cannot be changed thereafter. All of the claws in a particular batch must be controlled in the same manner.
Programmed claws are given a single, brief instruction that they attempt to carry out to the best of their ability. The maximum length of the programming, in words, is 15 plus the level of the creator. This programming sets the conditions under which the claw attack. A sample command might be: Kill anyone except me who opens this chest.
Directly controlled claws are manipulated by the thoughts of their creator. The mental effort of controlling claws is quite tiring and cannot be maintained for more than three consecutive rounds without a one-round rest. Further, the range of such control is limited to 10 feet plus 5 feet per level of the creator. A person controlling claws cannot undertake spellcasting or any other activity. Injury to a controller does not break his control unless unconsciousness results. If direct control is broken for some reason, the claws continue to follow the last orders they were given.

The crocodile is a large, dangerous predatory reptile native to tropical and subtropical climes. It spends most of its time submerged in swamps, rivers, or other large bodies of water.

The crocodile is one of the most feared and ugliest predators of the tropics. It has a long, squat body, ranging in size from a scant foot to well over ten feet long. Most mature specimens range from eight to 15 feet long, and some even larger. Many sages argue that crocodiles never stop growing. The crocodile

has a long jaw filled with sharp, conical teeth. The powerful maw is superbly adapted for dragging prey beneath the water and dismembering it. Its four short legs are very powerful, and can propel the crocodile rapidly through the water and over the land. Its long tail is also very strong and is sometimes used on land to unbalance its foes.
The crocodile is covered with a tough horny hide, which blends in very well with the surrounding water. Its eyes and nose are placed so that when the crocodile floats, only they remain above water, enabling the beast to spot and ambush prey. The crocodile is adept at floating through the water and remaining quite still, presenting the illusion that it is nothing more than a floating log.

**Combat:** Ever voracious, hungry crocodiles will attack anything that looks edible, including men. They prefer to lie in wait for their prey (-2 penalty to opponent's surprise roll), and are exceedingly sensitive to movements in the water. They have been known to swiftly and silently swim up to the shore and seize a man, dragging him below the surface of the water. They prefer to attack with their powerful jaws, causing 2d4 points of damage, and lash with their tails for 1d12 points of damage. Crocodiles will fight among themselves for any prey they seize in their jaws, sometimes tearing their victim to pieces. The only thing that can slow a crocodile is cold. They become slow and sluggish (reduced to 50% of their normal movement) when the temperature falls below 40 F.

**Habitat/Society:** Crocodiles sometimes congregate in large numbers, but they are not by nature sociable, nor do they cooperate in hunting. They have well-concealed lairs and will often drag their prey to their lairs before eating it. When a tasty morsel comes its way, a group of crocodiles will go into a feeding frenzy, each attempting to get a part of the feast. They hunt almost daily, primarily in the water, rarely on land. Their tastes are broad: fish, men, small mammals, aquatic birds, and even a careless lion has occasionally been known to fall into their grasp. Hungry crocodiles will sometimes upend boats to see what falls out.
Crocodiles mate once a year, and the female lays a clutch of about 60 eggs, carefully burying them in the sand. Unlike many other reptiles, the female carefully guards her eggs, protecting them from other predators. When the time comes for the eggs to hatch, the mother assists by digging the eggs out of the sand. The newly hatched young are thrown entirely on their own resources to survive. Very few of the young survive to maturity.
Swamps and rivers are not the only abode of the crocodile. In recent years there have been dreadful rumors that some of these reptiles have made their homes in the sewers of cities in tropical regions, living on waste and carrion.

**Ecology:** The crocodile is a formidable predator and has little competition for food from other water creatures. One of the few monsters that can compete with it is the dragonturtle. Even on the riverbanks it has little to fear from rival predators; most would prefer not to tangle with a crocodile. The only predator that the crocodile need fear is man, who hunts it for its tough hide, which can be transformed into a beautiful, gleaming leather. Crocodiles are also hunted to eliminate the danger that they represent to riverside communities.

### Giant Crocodile

These creatures are far rarer than their smaller cousins. They attain sizes from 21 to 30 feet long, and they also continue to grow until death. Giant crocodiles typically inhabit salt water or prehistoric settings, where they have been know to prey upon sharks, small whales, and small seagoing crafts, such as fishing boats. When attacking a small boat, their favorite technique is to ram it, attempting to capsize and smash

it open with their huge jaws. They have been known to gorge upon the catch within the fishing boats, and then to swim away, leaving the fishermen unharmed.

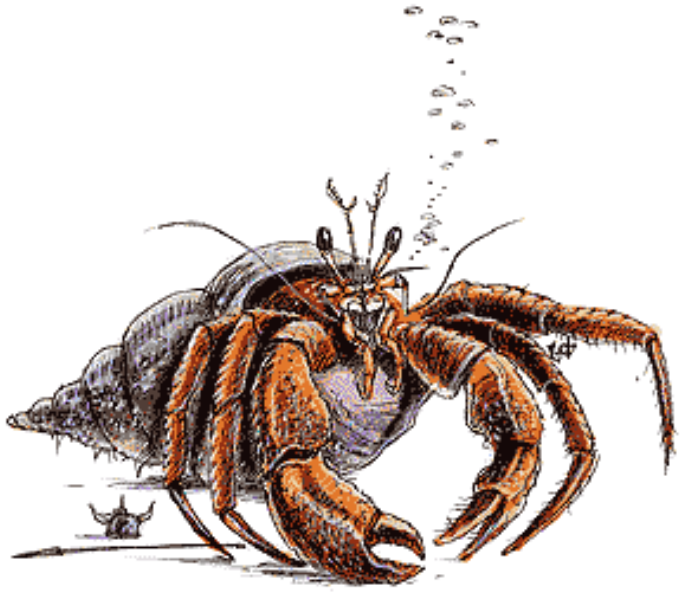
| **XP Value:** | 65 | 175 |



Giant crustaceans are peculiar mutations of crabs and freshwater crayfish. The first inhabits saltwater regions, while the latter is found only in fresh water.

### Giant Crabs

Giant crabs look just like regular crabs except for their enormous size. They come in a variety of colors, such as reds, browns, and grays. They have eyes set on stalks, which enable them to see around corners and onto ledges. Their bodies are covered by a large, chitinous shell. Crabs are distinguished by their scuttling, sideways mode of locomotion.

**Combat:** Always hungry, crabs prefer to sneak up upon their prey (-3 penalty to opponent's surprise roll) and catch it in their pincers, dismembering and eating it. A successful attack by the pincers causes 2d4 points of damage. Once they have caught something edible, they stop to eat it, unless they are attacked. If a crab finds its meal in question, it

attempts to scuttle off with the prize, perhaps to its den.

**Habitat/Society:** The giant crab lives on the shoreline, searching beaches for food and venturing into the water in search of fish and other aquatic life. It is well adapted to this sort of life, since it is able to breathe both air and water. Giant crabs frequently feed on large dead fish and other carrion washed up on the shore. They operate equally well on land and in the water. Giant crabs sometimes burrow into the sand during the day, emerging only at dusk and dawn to feed. At these times the beach is alive not only with the giant crabs, but with their tiny cousins as well. The giants may also hunt during the day and night.
The crab exists only on the most basic instinctive level, and is interested solely in survival. Crabs mate in the autumn and males attempt to mate with as many females as they can. Females bury their eggs in the sand. The eggs hatch the following spring; few hatchlings survive to reach maturity. Nature has forced the giant crabs to become flexible eaters, always willing to try new food sources.

**Ecology:** The giant crab performs a useful ecological function in keeping the seashores free of large carrion that would otherwise rot. On the shore, it is hunted by the ultimate predators -- humans and demihumans -- for its superb meat and hard chitinous shell, which is prized by some for making armor and shields.

### Giant Crayfish

The crayfish is essentially a freshwater lobster. It has a similar multi-plated shell, numerous legs, eyes set on stalks, and two wicked pincers. The giant crayfish is muddy brown or sand colored, depending upon the color of the river bottom it inhabits. Some say that the giant crayfish, like the lobster, keeps growing as it gets older; certain sages even argue that the giant crayfish is really the same species as the ordinary crayfish, merely an extremely old specimen.

**Combat:** Like the crab, the crayfish prefers to ambush its prey (-2 penalty to opponent's surprise roll). It sits quietly on the river bottom, waiting, and then rushes forth to seize its food in its pincers. The giant crayfish does not normally represent a danger to adventurers, since it inhabits only deep rivers and spends all of its time on the river bottom. It would therefore only attack adventurers who were swimming along the river bottom, and then only if they came within its range. An attack by a giant crayfish's pincers inflicts 2d6 points of damage. The crayfish prefers to drag its catch back to its watery lair and eat in peace. Its shell is very tough, giving the creature AC 4.

**Habitat/Society:** The giant crayfish inhabits only wide and deep rivers, and feeds almost exclusively upon bottom-dwelling fish. Due to its great size, it can easily prey on such fish as sturgeon, carp, and large eels. It is voracious and spends most of its time hunting. On the whole it rarely crosses paths with adventurers, but it does compete with river fishermen.

**Ecology:** The giant crayfish is considered a delicacy by other creatures, which perhaps accounts for its rarity. Nixies especially prize the meat of the giant crayfish. Dragon turtles, giant snapping turtles, merrows, giant otters, gar, giant pike, and storm giants are just some of the monsters that hunt the giant crayfish. It is very far from being the top predator in its food chain, and must fight for its survival.

# Crypt Thing

| | |
|---|---|
| **Climate/Terrain:** | Any/Tomb or grave area |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Nil |
| **Intelligence:** | Very (11-12) |
| **Treasure:** | Z |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 |
| **Armor Class:** | 3 |
| **Movement:** | 12 |
| **Hit Dice:** | 6 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-8 |
| **Special Attacks:** | Teleport |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | M (6' tall) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | 975 |

Crypt things are strange undead creatures that sometimes guard tombs, graves, and corpses. There are two types of crypt things -- ancestral and summoned. The former type are "natural" creatures, while the others are called into existence by a wizard or priest of at least 14th level.
A crypt thing looks like nothing more than an animated skeleton, save that it is always clothed in a flowing robe of brown or black. Each eye socket is lit by a fierce, red pinpoint of light that is almost hypnotic in its intensity.

**Combat:** A crypt thing exists only to protect the bodies of those who have been laid to rest in its lair. It acts only to defend its crypt. Should grave robbers or vandals seek to enter and profane the sanctity of its tomb, the crypt thing becomes instantly animated.

A crypt thing's first line of defense is a powerful variety of teleportation, which it can cast once on any given group of adventurers. Each of those attacked with this spell must roll a successful saving throw vs. spell or be instantly transported away from the crypt. DMs should use the following table as a guideline, rolling 1d100 for each person who fails the saving throw, but they are free to use their own judgment as well:

| | |
|---|---|
| 01-20 | 1d10 x 100' north |
| 21-40 | 1d10 x 100' east |
| 41-60 | 1d10 x 100' west |
| 61-80 | 1d10 x 100' south |
| 81-90 | 1 dungeon level up |
| 91-00 | 1 dungeon level down |

Those teleported by the crypt thing cannot materialize inside solid matter, but they do not necessarily arrive at floor level. Particularly clever crypt things have been known to transport victims several hundred feet into the air or atop a vast chasm, leaving them to fall to their deaths.
Once it has employed this power, a crypt thing attacks by clawing with its skeletal hands for 1d8 points of damage.
A crypt thing can be hit only by magical weapons.
Like all undead, crypt things are immune to certain spells. It is impossible to employ a *charm*, *hold*, or *sleep* spell against a crypt thing with any chance of success. Crypt things are harmed by holy water or holy symbols, as are many undead creatures. The magic that roots them to their lairs is so powerful, in fact, that it also eliminates any chance for priests or paladins to turn them.

**Habitat/Society:** Crypt things are not a natural part of our world; they have no organized society or culture. They are found wherever tombs and crypts are located.
The most common crypt thing is the summoned variety. By use of a 7th-level spell (see below), any caster capable of employing necromantic spells can create a crypt thing.
Ancestral crypt things are the raised spirits of the dead that have returned to guard the tombs of their descendants. This happens only in rare cases (determined by the DM).

**Ecology:** The crypt thing is not a being of this world and, thus, has no proper ecological niche. It is rumored that the powdered marrow from a crypt thing's bones can be used to create a *potion of undead control*. In addition, anyone who employs the bones of a crypt thing to manufacture a set of *pipes of haunting* is 80% likely to create a magical item that imposes a -2 penalty to its victims' saving throws and has double normal effectiveness if the saving throws fail.

## Create Crypt Thing

**7th-level Wizard or Priest spell (necromantic)**
**(Reversible)**

| | |
|---|---|
| Range: Touch | Casting Time: 1 round |
| Components: V,S | Area of Effect: 1 corpse |
| Duration: Permanent | Saving Throw: None |

This spell enables the caster to cause a single dead body to animate and assume the status of a crypt thing. This spell can be cast only in the tomb or grave area the crypt thing is to protect; the spell requires that the caster touch the skull of the subject body. Once animated, the crypt thing remains until destroyed. Only one crypt thing may guard a given tomb.

A successful *dispel magic* spell returns the crypt thing to its original unanimated state. Attempts to restore the crypt thing before this is done fail for any magic short of a *wish*.

The reverse of this spell, *destroy crypt thing*, utterly annihilates any one such being as soon as it is touched by the caster. The target is allowed a saving throw vs. death magic to avoid destruction.

# Death Knight

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Nil |
| **Intelligence:** | Genius (17-18) |
| **Treasure:** | Nil |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1 |
| **Armor Class:** | 0 |
| **Movement:** | 12 |
| **Hit Dice:** | 9 (10-sided dice) |
| **THAC0:** | 11 |
| **No. of Attacks:** | 1 with +3 bonus |
| **Damage/Attack:** | By weapon |
| **Special Attacks:** | See below |
| **Special Defenses:** | See below |
| **Magic Resistance:** | 75% (see below) |
| **Size:** | M (6'-7' tall) |
| **Morale:** | Fanatic (17) |
| **XP Value:** | 6,000 |

A death knight is the horrifying corruption of a paladin or lawful good warrior cursed by the gods to its terrible form as punishment for betraying the code of honor it held in life.
A death knight resembles a hulking knight, typically taller than 6 feet and weighing more than 300 pounds. Its face is a blackened skull covered with shards of shriveled, rotting flesh. It has two tiny, glowing orange-red pinpoints for eyes. Its armor is scorched black as if it had been in a fire. The demeanor of a death knight is so terrifying that even kender have been known to become frightened.
A death knight's deep, chilling voice seems to echo from the depths of a bottomless cavern. A death knight converses in the language it spoke in its former life, as well as up to six additional languages.

**Combat:** A death knight retains the fighting skills it had in its former life. Since it has little regard for its

own safety and an intense hatred of most living creatures, it is an extremely dangerous opponent. Still, a death knight retains a semblance of the pride it held as a good warrior and fights honorably: It never ambushes opponents from behind, nor does it attack before an opponent has an opportunity to ready his weapon. Surrender is unknown to a death knight, and it will parley only if it senses its opponent has crucial information (such as the fate of a former family member).
A death knight has a strength of 18(00). It usually attacks with a sword; 80% of the time, this is a magical sword. When a magical sword is indicated, roll 1d6 and consult the following table:

| Roll | Death Knight's Sword |
|---|---|
| 1 | *Long sword +2* |
| 2 | *Two-handed sword +3* |
| 3 | *Two-handed sword +4* |
| 4 | *Short sword of quickness* |
| 5 | *Short sword of dancing* |
| 6 | *Short sword of life stealing* |

A death knight wears the same armor it wore in its previous life, but regardless of the quality of the armor, it always has an AC of 0. Hit points for a death knight are determined by rolling 10-sided dice.
A death knight's magical abilities make it especially dangerous. It constantly generates *fear* in a 5-foot radius, and it can cast *detect magic*, *detect invisibility*, and *wall of ice* at will. Twice per day, it can cast *dispel magic*. Once per day, it can use either *power word, blind*, *power word, kill*, or *power word, stun*. It can also cast *symbol of fear* or *symbol of pain* once per day, as well as a 20-dice *fireball* once per day. All of its magical spells function at the 20th level of ability.
A death knight cannot be turned, but it can be dispelled by *holy word* spell. It has the power over undead of a 6th-level evil priest. Its magic resistance is 75%, and if an 11 or lower is rolled on the percentile roll, the spell is reflected back at the caster (the magic resistance is rerolled each time a spell is cast at a death knight).

**Habitat/Society:** Death knights are former good warriors who were judged by the gods to be guilty of unforgivable crimes, such as murder or treason. (For instance, Krynn's Lord Soth, the most famous of all death knights, murdered his wife so that he could continue an affair with an elfmaid.) Death knights are cursed to remain in their former domains, usually castles or other strongholds. They are further condemned to remember their crime in song on any night when the moon is full; few sounds are as terrifying as a death knight's chilling melody echoing through the moonlit countryside. Death knights are likely to attack any creature that interrupts their songs or trespasses in their domains.

**Ecology:** Death knights have no physiological functions. They are sometimes accompanied by skeleton warriors, liches, and other undead who serve as their aides.

# Deepspawn

| **Morale:** | Elite (15-16) |
| **XP Value:** | 12,000 |

Deepspawn are infamous horrors who give birth to many other varieties of monsters; a single Deepspawn can make a vast area dangerous, even for alert, well-armed adventurers.
Deepspawn look like large, rubbery spheres of mottled grey and brown. Six arms project from their bodies; three are tentacle-arms, and three are jaw-arms, ending in mouths of many teeth. A Deepspawn also has over 40 long, retractable, flexible eye stalks it extends only three or four at a time, well away from harm.

**Combat:** When found, Deepspawn are usually half buried in a pile of slippery, shifting coins and other

treasure. This may conceal their arms, so that tentacles and mouths erupting from the treasure may at first seem to be the attacks of separate monsters. The treasure may hamper opponents and even shield the Deepspawn from some damage (as determined by the DM).
A Deepspawn attacks by casting *hold* spells at intruders, casting spells once every three rounds. Victims under a *hold* spell are gripped by tentacle-arms and constricted, as other tentacles fight off other intruders by wielding weapons -- including any magical items usable by fighters. Deepspawn love to engage prey with weapons, and then bite them from behind with a jaw-arm.
A tentacle-arm can slap for ld4+1 points of damage, grasp items or beings and move them about (with 17 Strength), wield delicate keys or weapons, or constrict victims.
Constriction requires a successful attack roll (automatic if the victim is under a *hold* spell), and does 1d4 points of damage, plus 1d4+1 points per round thereafter. ln any round in which a being gets free, it takes only 1 point of constriction damage. Constricted victims can be swung about as bludgeons -- doing 1d2 damage to any others struck, ruining spellcasting, and forcing saving throws on fragile items. This action causes the constricted victim no extra damage unless driven onto points or blades (determine damage on a case-by-case basis).
Victims may only escape constriction by severing the tentacle-arm or tearing free. Tentacle-arms release their victims if severed. Each arm has 2 HD; severing occurs if damage equal to half a tentacle-arm's hit points is dealt in a concentrated area by edged or pointed weapons. To tear free, roll a d20 for both the victim and the Deepspawn on each round of constriction, adding their respective strengths (17 for the Deepspawn). If the victim has the higher total, it wins its freedom.
Deepspawn can also cast *ESP* and *water breathing* at will, and may employ a *heal* spell (self only), once a day. If a Deepspawn's life is threatened, it hurls caches of seized weapons as missiles, unleashes any magical items it has, and tries to escape by a planned route. Deepspawn seem immune to all known venoms, and regenerate lost arms and stalks, though slowly, healing 2 hp per day.
**Habitat/Society:** Deepspawn prefer to let their offspring fight for them. Their lairs are in caverns, dungeons, or ruins and are amply protected by traps and guardian monsters (their "spawn"). If these defenses are penetrated, the Deepspawn will usually be found in a readily-defended room or den, and it will always have at least one or more escape routes.
Deepspawn are native to the Deeps, and have successfully resisted attempts by dwarves, drow, duergar, cloakers, illithids, and aboleth to exterminate them. Deepspawn seldom make their lairs within 30 miles of each other, but individuals may be much closer together underground, on different levels.

**Ecology:** Deepspawn will eat anything organic, but prefer fresh meat. By some unexplained, natural means, Deepspawn can "grow" and give birth to any creature native to the Prime Material plane it has ever devoured (but not undead or other dual dimensional creatures). The "spawn" have the natural attacks, magical abilities, alignment, and intelligence of their creators. Class abilities and other learned skills are not passed on to them. A spawn "grows" in 1d4 days (varying with size and complexity) in a Deepspawn, which must ingest meat, vegetable matter, and water or blood to fuel the "birth". The Deepspawn then opens and ejects a fully active spawn. Spawn are never hostile towards their parent, and cannot be made to attack them even by magical means. Spawn can attack or defend themselves within one round of emerging. At the DM's option, they may use certain powers or abilities clumsily for a few rounds.

Dinosaurs are found on alternate planes of existence, or even on lost continents. The frequency figures given are for areas where dinosaurs are normally found; in all other places, they are very rare at best. All dinosaurs in this entry share the following characteristics:

| | |
|---|---|
| **Activity Cycle:** | Day |
| **Intelligence:** | Animal (1) |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **Magic Resistance:** | Nil |
| **Special Defenses:** | Nil |

Dinosaurs, or "terrible lizards," are reptiles descended from ancestral reptiles called thecodonts. The two types of dinosaurs are saurischians ("lizard-hipped") and ornithischians ("bird-hipped"), named for terms describing their pelvic structures. Within the saurischia are the carnivorous therapods, represented here by tyrannosaurus, and the herbivorous sauropods, represented here by diplodocus. Saurischians also include ornithomimosaurs and the related dromaeosaurs, represented here by deinonychus.
Many ornithischians have armor, horns, or both. They include ceratopsians, represented by triceratops; ornithopods, such as the hadrosaurs, represented by the lambeosaurus; ankylosaurus; and stegosaurus.
Dinosaurs come in many sizes and shapes. Those presented here are generally large. Bigger species have drab colors, while smaller dinosaurs have a wide variety of markings. Most dinosaurs have a skin which is pebbly in texture; some closely related species of reptile have fur, and some may have feathers.

**Combat:** Dinosaurs seem to be a mixture of endothermic ("warm-blooded") and exothermic ("cold-blooded"). They regulate body temperature internally, but also depend on external heat somewhat. Though they may be slow on a cold morning, they may not be as slow as a typical reptile.
Most of these huge reptiles have comparatively small brains, but many of the predators are quite cunning. All must eat large amounts of food to maintain their huge bodies. As a result, sauropods eat almost constantly, and carnivores hunt almost constantly and also eat carrion.
Though the carnivores are both voracious and ferocious, certain plant eaters are very aggressive in their defense, usually with armor or horns. Just because they do not eat meat does not mean they will not kill other animals.

**Habitat/Society:** Dinosaurs can be found in almost any type of environment, except desert, high mountains, and frozen wastes. They have no society and little family life, with most species abandoning eggs before they hatch.

**Ecology:** Sages do not understand what has made dinosaurs extinct on certain worlds, but they do exist in the "lost lands" on several worlds. There may be places where dinosaurs have continued to evolve into different forms; they may be ancestors of modern lizard men.

### Ankylosaurus

This armadillo-like ornithischian weighs four or five tons, most of this weight being its armor plating, side spines, and great, knobbed tail. If attacked or threatened, this creature lashes out with its tail, delivering blows of considerable force.
A related species is the paleocinthus, which has better plating (AC -3) and a spiked, rather than club-like, tail.

### Deinonychus

This fast carnivore uses its speed, its long, grasping forearms, large teeth, and hind legs with their ripping talons in terrible combination. It hunts by running at prey, leaping, and raking with its rear claws as it claws and bites. The jump is a charge, so the creature gains a +2 on attack rolls. The rear talons count as only one attack, and cause a total of 2d6 damage. When attacking a larger creature, the deinonychus often jumps on top of it, and holds on with its front claws while continuing to rake with the rear claws.
The deinonychus has a relatively large brain for a dinosaur, and its pack hunts with cunning tactics. Despite being 12 feet long, this dinosaur is only about 6 feet tall. Its tail extends straight out behind it, held aloft by an intricate structure of bony supports, thus allowing its 150 pounds of weight to be carried entirely by the back legs.

The deinonychus is a dromaeosaur, dinosaurs which are related to ornithomimosaurs; its distant relatives include the chicken-sized night hunter, compsognathus, and the ostrich-like struthiomimus. Neither is as formidable as the deinonychus.

### Diplodocus

This sauropod lives primarily on water plants, so is often found in or near lakes and marshes. It and related species can also be found on fern prairies and in open forests. It weighs about 10 tons. Though it usually ignores small things, it can step on anything in its way, or even rear up and come down on threatening creatures; this trampling causes 3d10 damage. The diplodocus can also whip with its tail for 2d8 damage.

Related species include the huge brachiosaurus, which weighs about 90 tons and averages 75 feet in length. It causes 8d10 damage when trampling.

### Elasmosaurus

The elasmosaurus looks like a snake with fins and a thick body. It is aggressive, attacking anything it notices. Its neck makes up one-half its total length. The creature is strong, fast, and highly maneuverable, able to turn quickly and lunge at prey. When hunting, the elasmosaurus travels with its head out of the water, snapping down quickly to seize prey.

This creature's relatives include many other types of plesiosaurs and pliosaurs. Females travel onto sandy beaches to lay their eggs in shallow depressions.

### Lambeosaurus

This is a very common "duck-billed" dinosaur, bipedal, with a flat snout, and crests on its head. A peaceful herbivore, this hadrosaur prefers to run from attack; its only defense is its lashing tail. It has excellent senses, used to detect predators.

Its enemies include most carnivores. Related species include many other species of duck-billed dinosaurs, as well as the iguanodon. The latter has sharp thumb spikes which can cause 1-3 damage each, in addition to its tail attack.

### Pteranodon

Although this flying reptile typically dives for marine prey, it attacks any creature that appears to be vulnerable. The pteranodon has no teeth, but spears victims with its beak if they are too large to swallow at a gulp. The beak of a typical pteranodon is about 4 feet long.

Despite the creature's huge wingspan, its wings are very light, and its furred body is only a little larger than a human being; the whole weighs only about 50 pounds. A pteranodon can carry off prey up to four times its own weight.

There are all sizes of related species; close relatives have crests on their heads to balance their long beak for flight.

### Stegosaurus

Another of the ornithischians, the stegosaurus, or "plated lizard," is a large, stupid, herbivorous dinosaur with aggressive defenses. It thrives nearly anywhere and is often found on plains or in jungles.

A stegosaurus is about 8 feet tall at the middle of its back; its humped spine is lined with a double row of leaf-shaped plates which help the creature absorb and dissipate heat. The creature has a spiked tail, with four or more bony spikes of up to 3 feet in length. An enlarged spinal node helps relay commands to the tail and rear legs. The stegosaurus continually turns its posterior towards an enemy, while tucking its

head low. It reacts in the same manner if anything near seems threatening.
Similar species include the dacentrus, which has spikes along its backbone instead of plates, and the kentrosaurus, which has bony plates along the front half of its spine, and spikes along the rear half. All have spiked tails.

### Triceratops

The largest of the ceratopsians, or horn-faced dinosaurs, and by far the most aggressive, this beaked herbivore is a plains-dweller. It has a huge front plate of bone protecting its 6-foot-long head, from which project two great horns (each over 3 feet long), while a shorter horn juts from its nose. The head and neck are AC 2; its body is not armored, so is AC 6. The triceratops weighs just over 10 tons.
Any creature that infringes on the territory of these reptiles is likely to be charged and skewered. Smaller creatures are trampled, suffering 2d12 points of damage. The triceratops also uses its horns in fights for dominance within the herd, so it is not unusual to find specimens with past injuries on their heads.
Related species have the same bony plate which protects their necks, as well as different numbers of horns. The monoclonius has a single nose-horn; the pentaceratops has three true horns, like the triceratops, plus horn-like protrusions jutting from its cheeks; and the styracosaurus has a frill of horns located around the edge of its neck-plate.

### Tyrannosaurus

This ravenous creature is one of the most fearsome and terrible of all carnivorous dinosaurs. Despite its huge size and eight-ton weight, the monster is a swift runner. Its huge head is nearly 6 feet long, and its teeth are from 3 to 6 inches in length.
Tyrannosaurus rex, the "tyrant lizard king," is a plains dweller, and so relentlessly and stupidly fierce that it will attack a small triceratops, kill it, and swallow its head in one gulp -- thus killing itself in a matter of hours as the horns of the victim pierce the stomach of the victor.
This dinosaur's favorite food is any hadrosaur, such as the trachodon. The monster pursues and eats nearly anything; creatures of man-size or smaller are swallowed whole on a natural attack roll of 18 or higher. The tyrannosaurus also eats carrion, chasing away any smaller creatures to steal a meal found with its keen sense of smell.
There are many other species of carnosaur, some smaller and faster than tyrannosaurus. Some have stronger arms and more dangerous upper claws.

# Displacer Beast

| | |
|---|---|
| **Climate/Terrain:** | Temperate mountains |
| **Frequency:** | Very rare |
| **Organization:** | Pack |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivorous |
| **Intelligence:** | Semi-(2-4) |
| **Treasure:** | (D) |
| **Alignment:** | Lawful evil |
| **No. Appearing:** | 2-5 (1d4 +1) |
| **Armor Class:** | 4 |
| **Movement:** | 15 |
| **Hit Dice:** | 6 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | 2-8 (2d4)/2-8 (2d4) |
| **Special Attacks:** | Nil |
| **Special Defenses:** | -2 on opponent's attack roll |
| **Magic Resistance:** | Nil |
| **Size:** | L (8'-12' long) |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 975 |

The displacer beast is a magical creature that resembles a puma with two powerful black tentacles growing from its shoulders. Very rare, they stay far from human habitations.
The displacer beast has the blue-black coloring of a dark panther,and a long cat-like body and head. Females range in length from 8 to 9 feet, and weigh 450 pounds; males are 10 to 12 feet long, and weigh up to 500 Lbs. They have 6 legs. Tentacles are tipped with rough horny edges that can inflict terrible wounds. Their eyes glow bright green, even after death.

**Combat:** The displacer beast is a fierce, savage creature that hates all forms of life. Highly aggressive, the displacer beast will attack on sight, using its tentacles to inflict 2-8 (2d4) points of damage to its victims.

Their main advantage in combat is their magical power of *displacement*, which allows them to appear to be some 3 feet from their actual location. Anyone attacking a displacer beast does so at -2 on his attack roll. In addition, the beasts save as 12th-level fighters; adding +2 to their die rolls.
To determine the true position of the displacer beast and its illusion, roll 1d10. On 1-5, the illusion is in front of the creature, 6-7 to the creature's left, 8-9, to the right. On 10, the illusion is behind the beasts actual position. Although this ability is magical, the beast's location can not be determined by *dispel* or *detect magic*. Only *true seeing* will reveal its position.
Displacer beasts will not use their claws or teeth unless near death, or when in combat with a very large opponent. If they do employ them, each claw does 1-3 points of damage, and each bite does 1-8 points of damage.

**Habitat/Society:** Displacer beasts are carnivores. Unless they are raising young, they usually run in packs, carving a savage swath of destruction as they go. They hate all life, and will sometimes kill purely for pleasure. Fierce and vicious as they are, however, displacer beasts never fight among themselves. The pack is a well-run and highly efficient killing machine. When encountered in packs, displacer beasts are more than a match for many large creatures and have been known to make a meal of orcs, goblins, and bands of men. Any creature entering their territory is viewed as potential prey.
Displacer beasts mate in the autumn, and the young are born in spring. A mated pair of displacer beasts makes its home in a cave, producing litters of 1-4 young. The cubs, about the size of domestic cats, are born without tentacles and reach maturity, though not full size, within 4 months. They remain in the cave until their displacement abilities are fully developed. This is followed by a two month period during which the cubs are taught how to hunt. When this is completed, the family group disbands and the monsters wander off to join separate packs. While raising young, the monsters are fiercely protective of their lairs. One adult always remains with the cubs, usually the female, while the other goes off to hunt. Dead prey is dragged back to the lair to be eaten by the family. Lairs are littered with the bones, equipment, and the treasures of its victims.
Naturally vicious and almost evil at times, displacer beasts harbor an undying hatred of blink dogs. Many theories attempt to account for this enmity. Some sages believe it springs from antipathy in temperaments -- the lawful good blink dog would naturally be the enemy of a creature as savage and destructive as the displacer beast. Others argue that it is the displacement and blink abilities which cause this antipathy -- the two abilities, when in close proximity, somehow stimulate the nervous system and produce hostile reactions. Encounters between the two breeds are rare however, since they do not share the same territory.

**Ecology:** Displacer beasts have little to fear from other large predators, save perhaps trolls or giants. Some wizards and alchemists value their hides for use in certain magical preparations, and will offer generous rewards for them. The eyes of a displacer beast are a highly prized, if uncommon, good luck charms among thieves who believe that they will protect the bearer from detection.

| **XP Value:** | 35 | 65 | 270 | 120 |

Smaller than wolves, the appearance of the wild dog varies from place to place. Most appear very wolf-like, while others seem to combine the looks of a wolf and a jackal.

**Combat:** Wild dogs fight as an organized pack. They favor small game, and attack men and human habitations only in times of great hunger. The bite of a wild dog inflicts 1-4 points of damage.

**Habitat/Society:** Wild dogs are found almost anywhere. They run in packs, and are led by the dominant male. The pack usually hunts a variety of game, even attacking deer or antelope. Pups are born in the spring. Wild dogs can be tamed if separated from their pack.

**Ecology:** Wild dogs are omnivores which usually thrive on a combination of hunting and foraging.

### War Dogs

Generally large mastiffs or wolfhounds, they have keen senses of smell and hearing, making them adept at detecting intruders. Most war dogs are not usually vicious, and will rarely attack without cause.
The status of war dogs varies greatly; some are loyal and beloved pets, some are watch dogs, others are hunting dogs, and some are trained for battle.

### Blink Dogs

Blink dogs are yellowish brown canines which are stockier and more muscular than other wild dogs. They are intelligent and employ a limited form of teleportation when they hunt.
A blink dog attack is well organized. They will blink to and fro without any obvious pattern, using their powers to position themselves for an attack. Fully 75% of the time they are able to attack their targets from the rear. A dog will teleport on a roll of 7 or better on a 12-sided die. To determine where the dog appears, roll a 12-sided die: 1 = in front of opponent, 2 = shielded (or left) front flank, 3 = unshielded (or right) front flank, 4-12 = behind. When blinking, the dog will appear from 1 to 3 feet from its opponent and will immediately be able to attack.
Blinking is an innate power and the animal will never appear inside a space occupied by a solid object. If seriously threatened, the entire pack will blink out and not return.
Blink dogs are intelligent, and communicate in a complex language of barks, yaps, whines, and growls. They inhabit open plains and avoid human haunts. A lair will contain 3-12 (3d4) pups 50% of the time (1-2 hit dice, 1-2/1-3 hit points damage/attack). These puppies can be trained and are worth between 1,000 to 2,000 gold pieces.

### Death dog

Death dogs are large two-headed hounds which are distinguished by their penetrating double bark. Death

dogs hunt in large packs.
Each head is independent, and a bite does 1-10 points of damage. Victims must save vs. poison or contract a rotting disease which will kill them in 4-24 (4d6) days. Only a *cure disease* spell can save them. A natural roll of 19 or 20 on their attack die means that a man-sized opponent is knocked prone and attacks at a -4 until able to rise to its feet again. There is an 85% chance that death dogs will attack humans on sight.

| **Morale:** | Fanatic (17-18) |
| **XP Value:** | 9,000 |

Often mistaken for baneful monsters, moon dogs are native creatures of Elysium and champions of the causes of good. They often appear in the Prime Material plane to fight evil wherever it shows itself. Moon dogs look very similar to large wolf hounds. Their strange heads are slightly human in appearance, giving the animals a very intelligent look. The creatures' forepaws are adaptable, giving the moon dogs the ability to travel bipedally or on all fours. They are dark colored animals, ranging from dark gray to deep black. Moon dogs have amber eyes.

Moon dogs speak their own language, and they can communicate with all canines and lupines as well. They can speak common using a limited form of telepathy.

**Combat:** Woe to those who enter combat with a moon dog. These creatures of good are potent fighters and merciless against evil. Their powerful bite inflicts 3-12 points of damage.
Moon dogs prefer to attack with their keening howl. This baying is harmful to evil creatures only. Any evil creature within an 80 foot radius of a *baying* moon dog is affected as by a *fear* spell cast at 12th-level of magic use. Additional moon dogs baying have a cumulative effect. The *howling* will also cause 5-8 points of damage per round to evil creatures within 40 feet. In addition, the *howling* will cause intense physical pain to extra-planar creatures of evil alignment so much that they are 5% likely per moon dog howling to return to their plane. Moon dogs can *whine* to dispel illusions or *bark* to dispel evil, once per round.
The following spell-like powers (at 12th-level of use) are available to a moon dog one at a time, once per round, at will:

- *change self,* 3 times per day
- *cure disease,* by lick, 1 time per individual per day
- *cure light wounds,* by lick, 1 time per individual per day
- *dancing lights*
- *darkness,* 15' radius
- *detect evil,* always active
- *detect invisibility,* always active
- *detect magic,* always active
- *detect snares & pits,* always active
- *improved invisibility*
- *light*
- *mirror image,* 3 times per day
- *non-detection*
- *shades,* 1 time per day
- *slow poison,* by lick, 1 time per individual per day
- *wall of fog*

Moon dogs can become ethereal and have the ability to travel in the ethereal and Astral plane at will. They have superior vision equal to double normal vision, including 60' infravision. Combined with an unusually keen sense of smell and hearing, this grants moon dogs the detection abilities listed above, plus the ability to detect all illusions. Association with a moon dog for one hour or more removes *charms* and acts as a *remove curse*.
When in shadowy light, a moon dog is able to move in such a way as to effectively create magic equal to a *hypnotic pattern* of shadows. Only evil creatures will be affected. At the same time, each creature of good within the area will effectively gain a *protection from evil* and *remove fear* spell benefit. Moon dogs may not attack or perform any other action when weaving this pattern of shadows. It requires one full round to weave and extends to a range of 50 feet. The moon dog can *dispel magic,* but doing so will force it back to its own plane immediately.
Moon dogs may be damaged only by +2 or better magical weapons. They are never surprised (due to their keen senses) and cause opponents to subtract 3 from their surprise rolls. Moon dogs are immune to *fear* spells. They make all saving throws at a +2 bonus and takes half or quarter damage.

**Habitat/Society:** Moon dogs are native to the plane of Elysium. They are champions of good and will

often travel about the upper planes and the Prime Material plane to challenge evil.
Moon dogs are friendly to all good and neutral races and those friendly to those races. They will not long associate with anyone because they are constantly on the move, hunting evil.

**Ecology:** Moon dogs will often communicate with communities of men, using telepathy, in order to locate trouble spots among them.

Dolphins are intelligent seagoing mammals.
While all dolphins share a variety of common traits, the species comes in a variety of shapes and sizes. Their long, compact bodies are superbly adapted to the aquatic environment, and dolphins are among the most powerful swimmers in the oceans. All breeds of dolphins have a large fin on their backs, two flippers, a powerful tail, jaws filled with many sharp teeth, a blow hole, and are 5 to 6 feet long. Most common and well-known are the gray, or bottle-nosed dolphins, so named for their gray skin and bottle-shaped snouts. Other varieties have two-toned blue and gray coloring. The species communicates through an intricate speech consisting of high-pitched sounds, some out of the range of human hearing.

**Combat:** Inherently peaceful, dolphins will generally attack only if threatened. Unless outnumbered 2 to

1, dolphins always attack sharks. Whether attacking a foe or defending their school, dolphins fight as an organized unit, responding to commands from their leader. They fight with special vehemence to protect their young, and a select number of dolphins may sometimes engage in a holding action, sacrificing themselves so that the remainder of the school can swim to safety.

**Habitat/Society:** Dolphins are completely carnivorous, living on a diet of fish. Though they can remain submerged for several minutes at a time, they must surface regularly to breathe. Unlike most mammals, breathing is a conscious, rather than unconscious action on the part of dolphins; in other words, they literally must remember to breathe. Newborn dolphins are assisted to the surface to breathe by their mothers and a female dolphin midwife. Dolphins are by nature playful, good-tempered, and lawful good, despising evil creatures. Most roam the oceans in schools, numbering as large as 20 dolphins, swimming where their fancy suits them. They never fight among themselves or with other breeds of dolphins. Dolphins are famous for the great pleasure they take in life; when swimming they often perform dazzling aquatic stunts, leaping in and out of the water in a spectacular fashion. They will also play with objects that they find and enjoy games. Dolphins sometimes follow ships, entertaining the crews and passengers with their antics.

About 10% of all dolphins live in organized communities. These groups have 1d4+1 swordfish (AC 6, move 24, 1+1 Hit Dice, 2d6 points of damage/attack) or 1-3 narwhales (AC 6, move 21, 4+4 Hit Dice, 2d12 points of damage/attack) as guards, depending on the climatic region. If a community is found, there is a 75% possibility that there are 1d4 additional communities of dolphins within a five-mile radius. These organized communities of dolphins do not tolerate the presence of evil sea creatures in their domain, and if necessary enlist the aid of nomadic schools of dolphins to drive out evil creatures. Any region inhabited by dolphin communities is also shark and killer whale free.

Dolphins are highly intelligent and take a benign, distant interest in human doings. They will always help humans in distress, guiding them to the shore and keeping the sharks at bay. Certain solitary dolphins, known as rogues, have been known to form closer attachments to humans, accompanying them in a friendly fashion on swimming and fishing expeditions. These rogues often play dolphin games with their human companions. Dolphins are far more valuable to men in other respects. Friendly dolphins have warned sailors of the approach of pirate ships and the intentions of evil sea creatures. More than one ship owes its safe arrival in port to the timely intercession and warning of dolphins. They have come to men's aid when their ships were attacked by mermen and sahuagin. Dolphins have been known to raid sahuagin communities and destroy their eggs, for dolphins perceive these monsters as a threat to their safety.

**Ecology:** The dolphin is both a hunter and hunted in its marine world. Sharks and other large evil sea creatures hunt the dolphin with enthusiasm. Despite its many enemies, the dolphin has many distinct advantages that enable it to survive and even flourish. Not only is it a strong, swift swimmer, but its intelligence and organized lifestyle are highly effective defenses against its enemies.

# Doppleganger

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Very rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Very (11-12) |
| **Treasure:** | E |
| **Alignment:** | Neutral |
| **No. Appearing:** | 3-12 |
| **Armor Class:** | 5 |
| **Movement:** | 9 |
| **Hit Dice:** | 4 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-12 |
| **Special Attacks:** | Surprise |
| **Special Defenses:** | See below |
| **Magic Resistance:** | See below |
| **Size:** | M |
| **Morale:** | Elite (13) |
| **XP Value:** | 420 |

The doppleganger is a master of mimicry that survives by taking the shapes of men, demihumans, and humanoids. Dopplegangers are bipedal and generally humanoid in appearance. Their bodies are covered with a thick, hairless gray hide, which gives them a natural AC of 5. They are, however, rarely seen in their true forms.

**Combat:** This monster is able to assume the shape of any humanoid creature between four and eight feet high. The doppleganger chooses a victim, duplicates his form, and then attempts to kill the original and assume his place. The doppleganger is able to use *ESP* and can imitate its victim with 90% accuracy, even duplicating the victim's clothing and equipment. If unsuccessful in taking its victim's place, the doppleganger attacks, relying on the ensuing confusion to make it indistinguishable from its victim. A

doppleganger is immune to *sleep* and *charm* spells and rolls all saving throws as if he was a 10th-level fighter.
Dopplegangers work in groups and act together to ensure that their attacks and infiltrations are successful. They are very intelligent and usually take the time to plan their attacks with care. If a group of the monsters spots some potential victims, the dopplegangers often trail their targets, waiting for a good chance to strike, choosing their time and opportunity with care. They may wait until nightfall, or until their victims are alone, or even follow them to an inn.

**Habitat/Society:** Dopplegangers are rumored to be artificial beings that were created long ago by a powerful wizard or godling. They were originally intended to be used as spies and assassins in an ancient, highly magical war. Their creator died long ago, but they live on, still working as spies for evil powers, thieves, and government. They have even been known to work as assassins.
All dopplegangers belong to a single tribe. Although this is rare, groups of dopplegangers can be found anywhere at any time, and in unexpected locations. Working as a unit, they select a group of victims, such as a family or a group of travelers. Basically lazy, dopplegangers find it easier to survive and live comfortably by taking humanoid, and especially human, shape. They prefer to take the form of someone comfortably provided for, and shun assuming the form of hardworking peasants. Since they are only 90% accurate in their mimicry, most dopplegangers are eventually discovered and driven out, and then forced once more to assume a new shape.
Dopplegangers are found most often in their true forms in a dungeon or in the wilderness. Groups often set up a lair in an area well-suited to ambush and surprise, patrolling a regular territory. These bands make a good living by attacking weak humanoid monsters or travelers and stealing their food and treasure. If food and treasure are scarce, they hire out to a powerful wizard or thieves' guild.
A doppleganger who has been hired to replace a specific person will plan its attack with special care, learning as much about the victim and his environment as it can.
The dopplegangers' weaknesses are greed and cowardice. They spend their lives in avid pursuit of gold and other wealth. If attacking a group of adventurers, for example, they often choose the richest-looking one to attack first. If they target a party of adventurers, the dopplegangers wait until the party is on the way out of the dungeon and heading back to town. Since they are cowardly, however, they prefer to take the easiest route toward riches. A doppleganger who chooses a rich adventurer avoids risks once the treasure is safely in hand, and retreats at the earliest opportunity, making some plausible excuse for separating from the human members of the group. They sometimes hire out as spies and assassins for money as well.

**Ecology:** Dopplegangers are sophisticated and dangerous parasites, living off the labors of others. They must also be reckoned with as clever and effective spies and assassins who can wreak political mayhem in positions of power. Evil wizards have on rare occasions controlled entire kingdoms for short periods of time by replacing a king, prince, or councilor with a doppleganger.

# Dracolich

| | |
|---|---|
| **Climate/Terrain:** | See below |
| **Frequency:** | Very rare |

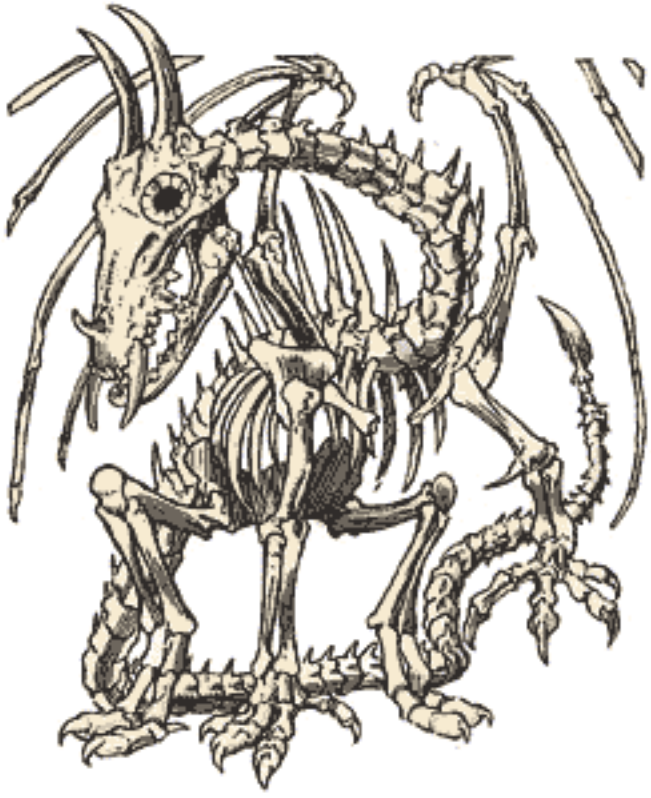
| **Size:** | As per individual dragon |
| **Morale:** | See below |
| **XP Value:** | As per individual dragon, plus 1,000 (both dracolich and host must bedestroyed) |



The dracolich is an undead creature resulting from the unnatural transformation of an evil dragon. The mysterious Cult of the Dragon practices the powerful magic necessary for the creation of the dracolich, though other practitioners are also rumored to exist.

A dracolich can be created from any of the evil dragon subspecies. A dracolich retains the physical appearance of its original body, except that its eyes appear as glowing points of light floating in shadowy eye sockets. Skeletal or semi-skeletal dracoliches have been observed on occasion.

The senses of a dracolich are similar to those of its original form; it can detect invisible objects and

creatures (including those hidden in darkness of fog) within a 10-foot radius per age category and also possesses a natural *clairaudience* ability while in its lair equal to a range of 20 feet per age category. A dracolich can speak, cast spells, and employ the breath weapon of its original form; it can cast each of its spells once per day and can use its breath weapon once every three combat rounds. Additionally, a dracolich retains the intelligence and memory of its original form.

**Combat:** Dracoliches are immune to *charm*, *sleep*, *enfeeblement*, *polymorph*, *cold* (magical or natural), *electricity*, *hold*, *insanity*, and *death* spells or *symbols*. They cannot be poisoned, paralyzed, or turned by priests. They have the same magic resistance as their original forms; only magical attacks from wizards of 6th level or higher, or from monsters of 6 or more Hit Dice have a chance of affecting dracoliches.
The Armor Class of a dracolich is equal to the Armor Class of its original form, bettered by -2 (for example, if the AC of the original form was -1, the AC of the dracolich is -3). Attacks on a dracolich, due to its magical nature, do not gain any attack or damage roll bonuses.
Initially, a dracolich has the same morale rating as its original form. However, after a dracolich is successful in its first battle, its morale rating permanently becomes Fearless (19 base); this assumes that the opponent or opponents involved in the battle had a Hit Dice total of at least 100% of the Hit Dice of the dracolich (for instance, a 16-HD dracolich must defeat an opponent or opponents of at least 16 total HD to receive the morale increase). Once a dracolich receives the morale increase, it becomes immune to magical fear as well.
The dracolich has a slightly stronger ability to cause fear in opponents than it did in its original form; opponents must roll their saving throws vs. spell with a -1 penalty (in addition to any other relevant modifiers) to resist the dracolich's fear aura. The gaze of the dracolich's glowing eyes can also paralyze creatures within 40 yards if they fail their saving throws (creatures of 6th level {or 6 Hit Dice}or higher gain a +3 bonus to their saving throws). If a creature successfully saves against the gaze of a dracolich, it is permanently immune to the gaze of that particular dracolich.
The attack routine of a dracolich is similar to that of its original form; for example, a dracolich that was originally a green dragon will bring down a weak opponent with a series of physical attacks, but it will stalk more formidable opponents, attacking at an opportune moment with its breath weapon and spells. All physical attacks, such as clawing and biting, inflict the same damage as the dracolich's original form, plus 2d8 points of chilling damage. A victim struck by a dracolich who fails a saving throw vs. paralyzation is paralyzed for 2d6 rounds. Immunity to cold damage, temporary or permanent, negates the chilling damage but not the paralyzation. Dracoliches cannot drain life levels.
All dracoliches can attempt *undead control* (as per a *potion of undead control*) once every three days on any variety of undead with 60 yards. The undead's saving throws against this power suffer a -3 penalty; if the *undead control* is successful, it lasts for one turn only. While *undead control* is in use, the dracolich cannot use other spells. If the dracolich interrupts its undead control before it has been used for a full turn, the dracolich must still wait three days before the power can be used again.
If a dracolich or proto-dracolich is slain, its spirit immediately returns to its host. If there is no corpse in range for it to possess, the spirit is trapped in the host until such a time -- if ever -- that a corpse becomes available. A dracolich is difficult to destroy. It can be destroyed outright by *power word*, *kill* or a similar spell. If its spirit is currently contained in its host, destroying the host when a suitable corpse is not within range effectively destroys the dracolich. Likewise, an active dracolich is unable to attempt further possessions if its host is destroyed. The fate of a disembodied dracolich spirit -- that is, a spirit with no body or host -- is unknown, but it is presumed that it is drawn to the lower planes.

**Habitat/Society:** The creation of a dracolich is a complex process involving the transformation of an evil

dragon by arcane magical forces, the most notorious practitioners of which are members of the Cult of the Dragon. The process is usually a cooperative effort between the evil dragon and the wizards, but especially powerful wizards have been known to coerce an evil dragon to undergo the transformation against its will.

Any evil dragon is a possible candidate for transformation, although old dragons or older with spell-casting abilities are preferred. Once a candidate is secured, the wizards first prepare the dragon's host, an inanimate object that will hold the dragon's life force. The host must be a solid item of not less than 2,000 gp value resistant to decay (wood, for instance, is unsuitable). A gemstone is commonly used for a host, particularly ruby, pearl, carbuncle, and jet, and is often set in the hilt of a sword or other weapon. The host is prepared by casting *enchant an item* upon it and speaking the name of the evil dragon; the item may resist the spell by successfully saving vs. spell as an 11th-level wizard. If the spell is resisted, another item must be used for the host. If the spell is not resisted, the item can then function as a host. If desired, *glassteel* can be cast upon the host to protect it.

Next, a special potion is prepared for the evil dragon to consume. The exact composition of the potion varies according to the age and type of the dragon, but it must contain precisely seven ingredients, among them a *potion of evil dragon control*, a *potion of invulnerability*, and the blood of a vampire. When the evil dragon consumes the potion, the results are determined as follows (roll percentile dice):

| Roll | Result |
|---|---|
| 01-10 | No effect. |
| 11-40 | Potion does not work. The dragon suffers 2d12 points of damage and is helpless with convulsions for 1-2 rounds. |
| 41-50 | Potion does not work. The dragon dies. A full *wish* or similar spell is needed to restore the dragon to life; a *wish* to transform the dragon into a dracolich results in another roll on this table. |
| 51-00 | Potion works. |

If the potion works, the dragon's spirit transfers to the host, regardless of the distance between the dragon's body and the host. A dim light within the host indicates the presence of the spirit. While contained in the host, the spirit cannot take any actions; it cannot be contacted nor attacked by magic. The spirit can remain in the host indefinitely.

Once the spirit is contained in the host, the host must be brought within 90 feet of a reptilian corpse; under no circumstances can the spirit possess a living body. The spirit's original body is ideal, but the corpse of any reptilian creature that died or was killed within the previous 30 days is suitable.

The wizard who originally prepared the host must touch the host, cast a *magic jar* spell while speaking the name of the dragon, then touch the corpse. The corpse must fail a saving throw vs. spell for the spirit to successfully possess it; if it saves, it will never accept the spirit. The following modifiers apply to the roll:

-10 if the corpse is the spirit's own former body (which can be dead for any length of time).
-4 if the corpse is of the same alignment as the dragon.
-4 if the corpse is that of a true dragon (any type).

-3 if the corpse is that of a firedrake, ice lizard, wyvern, or fire lizard.
-1 if the corpse is that of a dracolisk, dragonne, dinosaur, snake, or other reptile.

If the corpse accepts the spirit, it becomes animated by the spirit. If the animated corpse is the spirit's former body, it immediately becomes a dracolich; however, it will not regain the use of its voice and breath weapon for another seven days (note that it will not be able to cast spells with verbal components during this time). At the end of seven days, the dracolich regains the use of its voice and breath weapon. If the animated corpse is not the spirit's former body, it immediately becomes a proto-dracolich. A proto-dracolich has the mind and memories of its original form, but has the hit points and immunities to spells and priestly turning of a dracolich. A proto-dracolich can neither speak nor cast spells; further, it cannot cause chilling damage, use a breath weapon, or cause fear as a dracolich. Its strength, movement, and Armor Class are those of the possessed body.

To become a full dracolich, a proto-dracolich must devour at least 10% of its original body. Unless the body has been dispatched to another plane of existence, a proto-dracolich can always sense the presence of its original body, regardless of the distance. A proto-dracolich will tirelessly seek out its original body to the exclusion of all other activities. If its original body has been burned, dismembered, or otherwise destroyed, the proto-dracolich need only devour the ashes or pieces equal to or exceeding 10% of its original body mass (total destruction of the original body is possible only through use of a *disintegrate* or similar spell; the body could be reconstructed with a *wish* or similar spell, so long as the spell is cast in the same plane as the *disintegration*). If a proto-dracolich is unable to devour its original body, it is trapped in its current form until slain.

A proto-dracolich transforms into a full dracolich within seven days after it devours its original body. When the transformation is complete, the dracolich resembles its original body; it can now speak, cast spells, and employ the breath weapon of its original body, in addition to having all of the abilities of a dracolich.

The procedure for possessing a new corpse is the same as explained above, except that the assistance of a wizard is no longer necessary (casting *magic jar* is required only for the first possession). If the spirit successfully re-possesses its original body, it once again becomes a full dracolich. If the spirit possesses a different body, it becomes a proto-dracolich and must devour its former body to become a full dracolich.

A symbiotic relationship exists between a dracolich and the wizards who create it. The wizards honor and aid their dracolich, as well as providing it with regular offerings of treasure items. In return, the dracolich defends its wizards against enemies and other threats, as well as assisting them in their various schemes. Like dragons, dracoliches are loners, but they take comfort in the knowledge that they have allies.

Dracoliches are generally found in the same habitats as the dragons from which they were created; dracoliches created from green dragons, for instance, are likely to be found in subtropical and temperate forests. Though they do not live with their wizards, their lairs are never more than a few miles away. Dracoliches prefer darkness and are usually encountered at night, in shadowy forests, or in underground labyrinths.

**Ecology:** Dracoliches are never hungry, but they must eat in order to refuel their breath weapons. Like dragons, dracoliches can consume nearly anything, but prefer the food eaten by their original forms (for instance, if a dracolich was originally a red dragon, it prefers fresh meat). The body of a destroyed dracolich crumbles into a foul-smelling powder within a few hours; this powder can be used by knowledgeable wizards as a component for creating *potions of undead control* and similar magical substances.

# Dragon, General

Dragons are an ancient, winged reptilian race. They are known and feared for their size, physical prowess, and magical abilities. The oldest dragons are among the most powerful creatures in the world. Most dragons are identified by the color of their scales.

There are many know subspecies of dragons, several of which fall into three broad categories: chromatic, gem, and metallic dragons. Chromatic dragons include black, blue, green, red, and white dragons; all are extremely evil and are feared by most. The metallic dragons are the brass, bronze, copper, gold, and silver dragons; these are noble and good, highly respected by wise people.

The gem dragons are the amethyst, crystal, emerald, sapphire, and topaz dragons; they are neutral with respect to good and evil, and are very charismatic and suave, masters of persuasion who delight in riddles. Though generally smaller and slower than other dragons, gem dragons are often wiser and more intelligent, and have other powers to compensate, like psionics.

In addition to the dragons in these three classifications, there are other dragons that may at first seem to be members of those categories. For instance, the steel dragon seems to be a metallic dragon, but has only one breath weapon; while each "true" metallic dragon has two. Likewise, the brown dragon seems to be a typical, evil chromatic dragon; but has no wings, so is not a "true" chromatic dragon.

Although all subspecies of dragons are believed to have come from the same roots tens of thousands of years ago, the present subspecies keep to themselves, working together only under extreme circumstances, such as a powerful mutual threat. Good dragons never work with evil dragons, however, though a few neutral dragon specimens have been known to associate with evil or good dragons. Gold dragons occasionally associate freely with silver dragons, and emerald dragons are sometimes found with sapphire dragons.

When evil dragons of different species encounter each other, they usually fight to protect their territories. While good dragons of different subspecies are more tolerant of each other, they are also very territorial. They usually try to work out differences in a peaceful manner. Gem dragons often settle inter-species disputes with riddling contests.

All subspecies of dragons have 12 age categories, and gain more abilities and greater power as they age. Dragons range in size from several feet upon hatching to more than 100 feet, after they have attained the status of great wyrm. The exact size varies according to age and subspecies. A dragon's wingspan is about equal to its body length; 15-20% of a dragon's body length is neck.

Generally, when multiple dragons are encountered they are a mated pair and young. Mated dragons are always young adults, adults, or mature adults; young dragons found with their parents are of the young adult stage or younger. To determine the age of young dragons roll 1d6: 1 = egg; 2 = hatchling; 3 = very young; 4 = young; 5 = juvenile; 6 = young adult.

During the early part of a dragon's young adult stage it leaves its parents, greed driving it on to start a lair of its own. Sometimes, although rarely, juvenile dragons leave their parents to start their own lives. As a pair of mated dragons age beyond the mature adult stage, they split up, independence and the lust for treasure driving them apart. Older dragons of either sex sometimes raise young, but only on their own -- the other parent leaves when the eggs are laid.

Dragons, especially older ones, are generally solitary due to necessity and preference. They distance themselves from civilization, which they consider to be a petty and foolish mortal invention.

Dragons are fearsome predators, but scavenge when necessary and can eat almost anything if they are hungry enough. A dragon's metabolism operates like a highly efficient furnace, making use of 95% of all the food the dragon eats. A dragon can also metabolize inorganic material, and some dragons have developed a taste for such fare.
Although dragons' goals and ideals vary among subspecies, all dragons are covetous. They like to hoard wealth, collecting mounds of coins and gathering as many gems, jewels, and magical items as possible. They find treasure pleasing to look at, and they bask in the radiance of the magical items. For a dragon, there is never enough treasure. Those with large hoards are loath to leave them for long, venturing out of their lairs only to patrol the immediate areas or to get food. Dragons like to make beds of their treasure, shaping nooks and mounds to fit their bodies. By the time they mature to the great wyrm stage, hundreds of gems and coins are imbedded in their hides.

**Dragon Defenses:** A dragon's Armor Class improves as it gets older and the creature becomes tougher. Old dragons or older dragons are immune to normal missiles; their gem-encrusted hides deflect arrows and other small projectiles. Large missiles (from catapults, giants, etc.) and magical missiles affect them normally. Young adult and older dragons radiate a personal aura that makes them partially resistant to harmful magic. A dragon's resistance to magic increases as it ages.

**Dragon Hide:** Dragon skin is prized by armorers with the skill to turn it into shields and armor, valuable because of its appearance and the protection it affords. Dragon armor grants its wearer an Armor Class of 4 less than the Armor Class of the dragon it was taken from, for a minimum Armor Class of 8. For example, armor from a juvenile brass dragon (AC O) grants its wearer AC 4. Dragon armor is supple and non-bulky, weighing only 25 pounds.
The scales of gem dragons take on properties of actual gems; they are faceted and reflect light. They are slightly more brittle than those of other dragons, so armor made from them requires repair more often. Dragon armor affords no extra protection, such as resistance to fire or cold, although the armor can be enchanted to provide such protection. A dragon's resistance to certain elements is based on its total makeup, not just its skin. Plain dragon armor is expensive to make, costing 1,000-10,000 gp, based on the workmanship and protection the armor affords. Dragon skin armor can be enchanted, just as other forms of armor can, to a maximum of +5.
Dragon shields also offer no additional protection. They are made of stretched hide over a wooden frame. Such shields weigh 3 pounds (if small) or 8 pounds (if large) and cost 20-120 or 30-180 gold pieces.

**Dragon Senses:** All dragons have excellent senses of sight, smell, and hearing. Their enhanced senses enable them to detect all invisible objects and creatures (including creatures or items hidden in darkness or fog) within a radius equal to 10 feet times their age category. All dragons possess a natural clairaudience ability with respect to their lairs; the range is 20 feet per age category. The dragon must concentrate on a specific section within its lair or surrounding area to hear what is going on.
Some dragons are able to communicate telepathically with any intelligent creature. The percentage chance for a dragon to speak is based on its Intelligence and age category. Refer to individual descriptions for percentages.

**Dragon Lairs:** All dragon lairs are far from mortal civilization, and they are difficult to find because the dragons take careful measures to cloak their coming and going. There is usually little, if any, wildlife around the lairs because neighboring creatures fear the dragons, and most dragons eat the few creatures that are foolish enough to remain.

When a young adult dragon leaves its parents in search of its own lair, it spends a few years moving from place to place to find a cave or cavern which best suits its personality. In most cases, the dragons search for increasingly larger caves which can easily accommodate them as they grow. Usually by the time a dragon has reached the mature adult stage, it has selected a large lair it plans to keep for the remainder of its life. A dragon at this stage has gathered a considerable amount of treasure and is loath to move it to a different location.
The location and character of dragon lairs vary based on each subspecies; consult individual dragons for specific information. However, one thing remains constant: any dragon considers its lair and neighboring areas its domains. A creature which violates or threatens the lair is threatening the dragon and will be dealt with harshly. Some good dragons may be more lenient than other subspecies in this matter. All dragons keep their treasure hidden deep within their lairs, and some dragons create hazardous conditions within their lain to keep unwary creatures from reaching the treasure.

**Dragon Flight:** Despite their large size, dragons are graceful and competent fliers; most are maneuverability class C. This is due partially to their powerful wings, and partially to the dragon's innate magic. Dragons can climb at half speed and dive at double speed.
A dragon can change direction quickly by executing a wingover maneuver. A dragon cannot gain altitude during the round it executes a wingover, but it may dive. The maneuver enables the dragon to make a turn of 120 to 240 degrees regardless of its speed or size.
Diving dragons can strike with their claws with a +2 bonus to attack rolls. Dragons diving on land-bound opponents can also strike with both wings, but then must land immediately after attacking.
When engaging other flying opponents, dragons can either claw or bite, but not both. An airborne dragon must glide to cast spells (but innate abilities can be used at any time). A gliding dragon loses 1,000 feet of altitude per round, and its forward speed is equal to one half its flight speed on the round before it began gliding.

## Dragon Table

| Age Category | Age (in years) | Hit Die Modifier | Combat Modifier | Fear Radius | Fear Save Modifier |
|---|---|---|---|---|---|
| 1 Hatchling | 0-5 | -6 | +1 | Nil | Nil |
| 2 Very young | 6-15 | -4 | +2 | Nil | Nil |
| 3 Young | 16-25 | -2 | +3 | Nil | Nil |
| 4 Juvenile | 26-50 | Nil | +4 | Nil | Nil |
| 5 Young adult | 51-100 | +1 | +5 | 15 yards | +3 (+7) |
| 6 Adult | 101-200 | +2 | +6 | 20 yards | +2 (+6) |
| 7 Mature adult | 201-400 | +3 | +7 | 25 yards | +1 (+5) |
| 8 Old | 401-600 | +4 | +8 | 30 yards | 0 (+4) |
| 9 Very old | 601-800 | +5 | +9 | 35 yards | -1 (+3) |
| 10 Venerable | 801-1,000 | +6 | +10 | 40 yards | -2 (+2) |
| 11 Wyrm | 1,001-1,200 | +7 | +11 | 45 yards | -3 (+1) |
| 12 Great Wyrm | 1,200+ | +8 | +12 | 50 yards | -4 (0) |

**Dragon Fear:** Dragons can inspire panic or fear. The mere sight of a young adult or older dragon causes creatures with fewer than 1 Hit Die (as well as all noncarnivorous, nonaggressive creatures with fewer Hit Dice than the dragon) to automatically flee in panic for 4d6 rounds.
Trained war mounts, organized military units, and single creatures with 1 Hit Die or more, but with fewer Hit Dice than the dragon are not panicked, but they may be stricken with fear if they are within the dragon's fear aura. The aura surrounds attacking or charging dragons in the specified radius and in a path along the ground directly beneath a flying dragon whose altitude is 250 feet or less. Creatures not automatically panicked are entitled to saving throws vs. petrification. Creatures failing their saving throws are stricken with fear and fight with a -2 penalty to their attack and damage rolls. The aura increases in size and power based on the age category of the dragon; creatures subjected to the aura receive a saving throw bonus or a penalty as specified on the Dragon Table. All creatures with Hit Dice equal to or greater than those of the dragon are immune to the fear effect.
Gem dragons are not as inherently fearsome as other dragons, so saving throws against their fear auras receive bonuses; the bonuses appear in parenthesis in the Dragon Table.

**Dragon Hit Die Modifier:** Dragon Hit Dice vary between subspecies and are modified based on age category. Refer to individual dragon entries for the base Hit Dice for each species, and to the Dragon Table for the modifier based on age. The older a dragon gets, the more Hit Dice it has. For example, a black dragon has a base of 10 Hit Dice. A hatchling black dragon subtracts 6 dice, giving it a total of 4. A great wyrm black dragon adds 8 dice for a total of 18.
Dragons' saving throws are tied to their Hit Dice. Each dragon saves as a fighter equal in level to the dragon's Hit Dice. For example, a hatchling black dragon saves as a 4th-level fighter, while a great wyrm black dragon saves as an 18th-level fighter.

**Dragon Combat Modifier:** A dragon's combat modifier varies with age category. The bonus or penalty applies to damage rolls for each physical attack. It does not apply to a dragon's breath weapon. The combat modifier is also applied to the dragon's base spellcasting level (age category), to determine the actual level at which the dragon casts spells (thus, a great wyrm casts spells at 24th level of ability).

**Dragon Attacks:** All dragons have a claw/claw/bite attack form and a breath weapon. The latter can be used once every three rounds. Dragons also employ several other attack forms which are detailed in the following text. Dragons frequently divide their attacks between opponents, using the more dangerous attacks, such as the bite, against the foes they perceive to be the toughest.
A dragon's preferred attacks are usually, in order, breath weapon, magical abilities (or spells), and physical attacks. A dragon that breathes during a round of combat cannot also attack physically. Magical abilities (but not spells) can be used in addition to any attacks, except the breath weapon.
**Claws:** A dragon can use its claws to attack creatures to its front and sides. If the dragon kicks with one rear leg, it can attack with only one claw (the other must be used to maintain balance).
**Bite:** Because of a dragon's long neck, it can bite creatures to its back and sides.
**Snatch:** Only young adult and older dragons can snatch. This occurs when a flying dragon dives and attempts to grab a creature in one of its claws. A creature struck by this method is taken into the air. There is a 50% chance that a snatched creature has its arms pinned, and therefore cannot physically attack the dragon. Snatched creatures are sometimes taken to great heights and dropped. The snatched creature can be squeezed in the claw for automatic claw damage each round, or transferred to the

dragon's mouth (the transfer requires a successful attack roll). If the transfer succeeds, the victim automatically suffers bite damage each round; if it fails, the victim is dropped. Dragons of age old and older can carry a victim in each claw, and they can try to snatch two victims at once. Wyrms and great wyrms can carry three victims, but one of the first two snatched must be transferred from claw to mouth before the third can be snatched.

A dragon can snatch creatures two or more size categories smaller than itself. For example, a dragon that is 45' long is a Gargantuan creature, so the biggest creature it can snatch is a Large one (12' long).

**Plummet:** If the DM chooses to allow plummets, an airborne dragon, or a dragon jumping and descending from at least 30 feet above a target, can land on a victim. The dragon crushes and pins opponents using its claws and tail, inflicting damage equal to its bite. The dragon can crush as many creatures as its combat modifier. The dragon rolls a separate attack against each creature affected. Creatures that are missed are assumed to have escaped. Creatures that are crushed must roll successful saving throws vs. petrification or be pinned under the dragon, automatically suffering crushing damage during the next round unless the dragon moves off them. If the dragon chooses to maintain the pin, the victims must roll successful saving throws vs. petrification to get free. The dragon's combat modifier applies as a penalty to all saving throw vs. the crush. A dragon cannot take any other actions when plummeting or pinning.

**Kick:** Any dragon can kick creatures attacking it from behind. A kick delivers claw damage, and creatures struck must roll their Dexterity or less on 1d20 or be kicked back 1d6 feet,+1 foot per age category of the dragon. Those knocked back must make successful saving throws vs. petrification (adjusted by the dragon's combat modifier) or fall. If the dragon attacks with one claw, it can kick with only one hind leg (the other must be used for balance). It cannot slap its tail while kicking.

**Wing Buffet:** Young adult and older dragons can employ their wings in combat; targets must be at the dragon's sides. The damage inflicted is the same as a claw attack, and creatures struck must roll their Dexterity or less on 1d20 or be knocked prone.

**Tail Slap:** Adult and older dragons can use their tails to attack creatures to their rear and sides. A tail attack inflicts the same damage as two claw attacks and affects as many targets as the dragon's age category. The dragon rolls a separate attack against each creature. Creatures struck must roll successful saving throws vs. petrification (adjusted by the dragon's combat modifier) or be stunned for 1d4+1 minutes. A tail slap can smash a light wooden structure and even damage a cube of force (one charge per two points of combat modifier, round down).

**Stall:** Any dragon flying near the ground can halt its forward motion and hover for one round; it must land immediately thereafter. Once stopped, the dragon can attack with its bite and all four legs. It can use its breath weapon instead, but this rarely happens since dragons can breathe on the wing. If a dragon stalls in an area with lots of trees or loose earth, the draft from its wings creates a dust cloud with the same radius as its fear aura. Creatures within the cloud are blinded, and no spell casting is possible. The dust lasts for one round.

**Spells:** Dragons learn spells haphazardly over the years. The DM should randomly determine which spells any particular dragon knows. The dragon can cast each spell once per day, unless random determination indicates the same spell more than once, in which case the dragon can cast it more than once a day. Dragons to not use spell books or pray to deities; they simply sleep, concentrate when they awaken, and remember their spells. Dragon spells have only a verbal component; the spells have a casting time of 1, regardless of level. Dragons cannot physically attack, use their breath weapon, use their magical abilities, or fly (except to glide) while casting a spell.

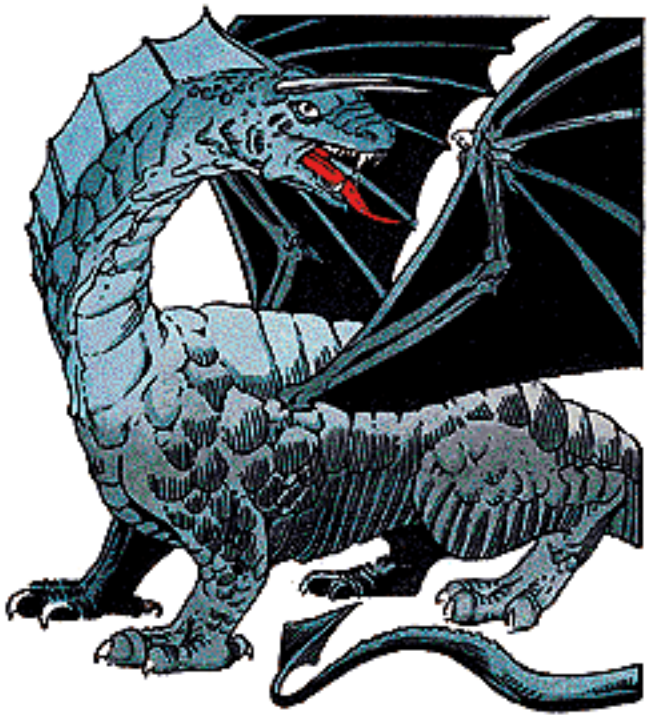
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |



Black dragons are abusive, quick to anger, and resent intrusions of any kind. They like dismal surroundings, heavy vegetation, and prefer darkness to daylight. Although not as intelligent as other dragons, black dragons are instinctively cunning and malevolent.

At birth, a black dragon's scales are thin, small, and glossy. But as the dragon ages, its scales become larger, thicker, and duller, which helps it camouflage itself in swamps and marshes. Black dragons speak their own tongue, a tongue common to all evil dragons, and 10% of hatchling black dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Black dragons prefer to ambush their targets, using their surroundings as cover. Their favorite targets are men, who they will sometimes stalk for several minutes in an attempt to gauge their strength and wealth before attacking. Against a band of men or a formidable creature, of the marsh can weaken the targets before the dragon joins the fight. Black dragons will also use their breath weapon before closing in melee. When fighting in heavily vegetated swamps and marshes, black dragons attempt to stay in the water or along the ground; the numerous trees and leafy canopies limit their flying maneuverability. When faced with an opponent which poses too much of a threat, a black dragon will attempt to fly out of sight, so it will not leave tracks, and hide in a deep pond or bog.

**Breath weapon/special abilities:** A black dragon's breath weapon is a 5' wide stream of acid that extends 60' in a straight line from the dragon's head. All creatures caught in this stream must save vs. breath weapon for half damage. A black dragon casts spells and uses its magical abilities at 5th level, plus its combat modifier.
Black dragons are born with an innate *water breathing* ability and an immunity to acid. As they age, they gain the following additional powers:

**Juvenile:** *darkness* three times a day in a 10' radius per age category of the dragon. **Adult:** *corrupt water* once a day. For every age category a dragon attains, it can stagnate 10 cubic feet of water, making it become still, foul, inert, and unable to support animal life. When this ability is used against potions and elixirs, they become useless if they roll a 15 or better on 1d20. **Old:** *plant growth* once a day. **Venerable:** *summon insects* once a day. **Great wyrm:** *charm reptiles* three times a day. This operates as a *charm mammals* spell, but is applicable only to reptiles.

**Habit/Society:** Black dragons are found in swamps, marshes, rain forests, and jungles. They revel in a steamy environment where canopies of trees filter out most of the sunlight, swarms of insects fill the air, and stagnant moss-covered ponds lie in abundance. Black dragons are excellent swimmers and enjoy lurking in the gloomy depths of swamps and bogs. They also are graceful in flight; however, they prefer to fly at night when their great forms are hidden by the darkness of the sky. Black dragons are extremely selfish, and the majority of those encountered will be alone. When a family of black dragons is encountered, the adults will protect their young. However, if it appears the adults' lives are in jeopardy they will abandon their young to save themselves.
They lair in large, damp caves and multi-chambered subterranean caverns. Older dragons are able to hide the entrance to their lairs with their *plant growth* ability. Black dragons are especially fond of coins. Older black dragons sometimes capture and question humans, before killing them, to find out where stockpiles of gold, silver, and platinum coins are kept.

**Ecology:** Black dragons can eat almost anything, although they prefer to dine primarily on fish, mollusks, and other aquatic creatures. They are fond of eels, especially the giant varieties. They also hunt for red meat, but they like to "pickle" it by letting it lie in ponds within their lair for days before eating it.

# Dragon, Chromatic Blue Dragon

| | |
|---|---|
| **Climate/Terrain:** | Arid deserts |
| **Frequency:** | Very rare |
| **Organization:** | Solitary or clan |
| **Activity Cycle:** | Any |
| **Diet:** | Special |
| **Intelligence:** | Very (11-12) |
| **Treasure:** | Special |
| **Alignment:** | Lawful evil |
| **No. Appearing:** | 1 (2-5) |
| **Armor Class:** | 0 (base) |
| **Movement:** | 9, Fl 30 (C), Br 4 |
| **Hit Dice:** | 14 (base) |
| **THAC0:** | 7 (base) |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 1-8/1-8/3-24 |
| **Special Attacks:** | Special |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | G (42'base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |

Blue dragons are extremely territorial and voracious. They love to spend long hours preparing ambushes for herd animals and unwary travelers, and they spend equally long hours dwelling on their success and admiring their trophies.

The size of a blue dragon's scales increases little as the dragon ages, although they do become thicker and harder. The scales vary in color from an iridescent azure to a deep indigo, retaining a glossy finish through all of the dragon's stages because the blowing desert sands polish them. This makes blue dragons easy to spot in barren desert surroundings. However, the dragons often conceal themselves, burrowing into the sand so only part of their heads are exposed.

Blue dragons love to soar in the hot desert air; usually flying in the daytime when temperatures are the highest. Some blue dragons nearly match the color of the desert sky and use this coloration to their

advantage in combat.
Blue dragons speak their own tongue, a tongue common to all evil dragons, and 12% of hatchling blue dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Blue dragons prefer to fight from a distance so their opponents can clearly witness the full force of their breath weapon and so little or no threat is posed to themselves. Often blue dragons will attack from directly above or will burrow beneath the sands until opponents come within 100 feet. Older blue dragons will use their special abilities, such as *hallucinatory terrain*, in concert with these tactics to mask the land and aid in their chances to surprise. Blue dragons will only run from a fight if they are severely damaged, since they view retreat as cowardly.

**Breath weapon/special abilities:** A blue dragon's breath weapon is a 5' wide bolt of lightning that streaks 100' in a straight line from the dragon's mouth. All creatures caught in this stream must save vs. breath weapon for half damage. Blue dragons cast spells and use their magical abilities at 7th level, adjusted by their combat modifier.
Blue dragons are born with an immunity to electricity. As they age, they gain the following additional powers: **Young:** *create or destroy water* three times per day. **Juvenile:** *sound imitation* at will. **Adult:** *dust devil* once a day. **Old:** *ventriloquism* once a day. **Venerable:** *hallucinatory terrain* once a day.

**Habit/Society:** Blue dragons are found in deserts; arid, windswept plains; and hot humid badlands. They enjoy the bleak terrain because there are few obstacles-only an occasional rock outcropping or dune-to interrupt the view of their territories. They spend hours looking out over their domains, watching for trespassers and admiring their property. Most of the blue dragons encountered will be alone because they do not want to share their territories with others. However, when a family is encountered the male dragon will attack ferociously, protecting his property-his mate and young. The female dragon also will join in the attack if the threat proves significant.
Blue dragons' enemies are men, who kill the dragons for their skin and treasure, and brass dragons, which share the same environment. If a blue dragon discovers a brass dragon in the same region, it will not rest until the trespassing dragon is killed or driven away.
Blue dragons lair in vast underground caverns in which they store their treasure. Although blue dragons will collect anything which looks valuable, they are fond of gems-especially sapphires.

**Ecology:** Blue dragons are able to consume nearly anything, and sometimes are forced to eat snakes, lizards, and desert plants to help sate their great hunger. However, they are particularly fond of herd animals, such as camels, and they will gorge themselves on caravans of the creatures which they cook with a *lightning bolt*.

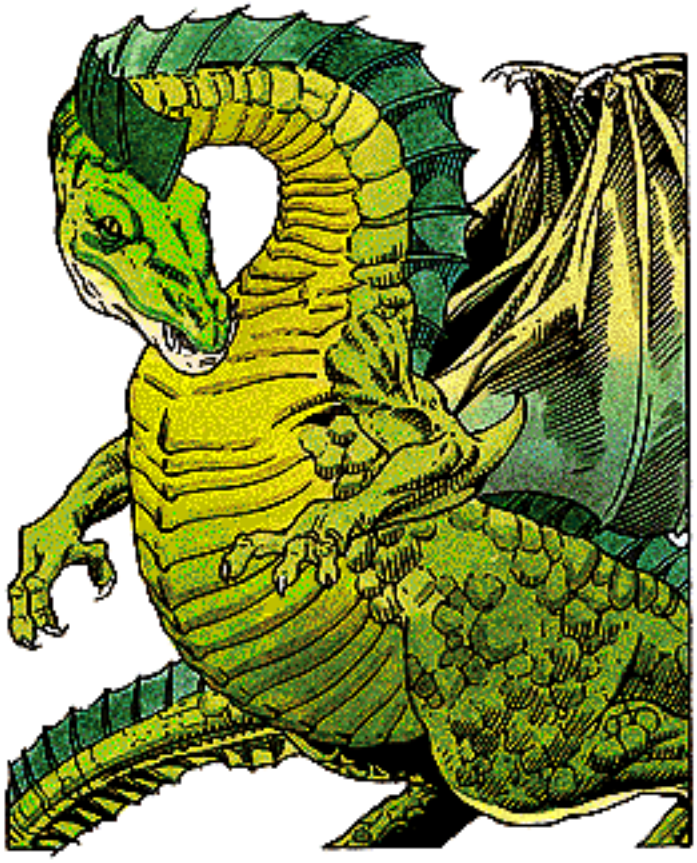
| **Movement:** | 9, Fl 30 (C), Sw 9 |
| **Hit Dice:** | 13 (base) |
| **THAC0:** | 7 (at 13 HD) |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 1-8/1-8/2-20 (2d10) |
| **Special Attacks:** | Special |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | G (36' base) |
| **Morale:** | Elite (15-16) |
| **XP Value:** | Variable |



Green dragons are bad tempered, mean, cruel, and rude. They hate goodness and good-aligned creatures. They love intrigue and seek to enslave other woodland creatures, killing those who cannot be controlled or intimidated.

A hatchling green dragon's scales are thin, very small, and a deep shade of green that appears nearly black. As the dragon ages, the scales grow larger and become lighter, turning shades of forest, emerald, and olive green, which helps it blend in with its wooded surroundings. A green dragon's scales never become as thick as other dragons', remaining smooth and flexible.

Green dragons speak their own tongue, a tongue common to all evil dragons, and 12% of hatchling green dragons have an ability to communicate with any intelligent creature. The chance to possess this ability

increases 5% per age category of the dragon.

**Combat:** Green dragons initiate fights with little or no provocation, picking on creatures of any size. If the target creature intrigues the dragon or appears to be difficult to deal with, the dragon will stalk the creature, using its environment for cover, until it determines the best time to strike and the most appropriate tactics to use. If the target appears formidable, the dragon will first attack with its breath weapon, magical abilities, and spells. However, if the target appears weak, the dragon will make its presence known quickly for it enjoys evoking terror in its targets. When the dragon has tired of this game, it will bring down the creature using its physical attacks so the fight lasts longer and the creature's agony is prolonged.
Sometimes, the dragon elects to control a creature, such as a human or demi-human, through intimidation and *suggestion.* Green dragons like to question men, especially adventurers, to learn more about their society, abilities, what is going on in the countryside, and if there is treasure nearby.

**Breath weapon/special abilities:** A green dragon's breath weapon is a cloud of poisonous chlorine gas that is 50' long, 40' wide, and 30 feet high. Creatures within the cloud may save versus breath weapon for half damage. A green dragon casts its spells at 6th level, adjusted by its combat modifier.
From birth, green dragons are immune to gasses. As they age, they gain the following additional powers: **Juvenile:** *water breathing*. **Adult:** *suggestion* once a day. **Mature adult:** *warp wood* three times a day. **Old:** *plant growth* once a day. **Very old:** *entangle* once a day. **Wyrm:** *pass without trace* three times a day.

**Habitat/Society:** Green dragons are found in sub-tropical and temperate forests, the older the forest and bigger the trees, the better. The sights and smells of the woods are pleasing to the dragon, and it considers the entire forest or woods its territory. Sometimes the dragon will enter into a relationship with other evil forest-dwelling creatures, which keep the dragon informed about what is going on in the forest and surrounding area in exchange for their lives. If a green dragon lives in a forest on a hillside, it will seek to enslave hill giants, which the dragon considers its greatest enemy. A green dragon makes its lair in underground chambers far beneath its forest.
The majority of green dragons encountered will be alone. However, when a mated pair of dragons and their young are encountered, the female will leap to the attack. The male will take the young to a place of safety before joining the fight. The parents are extremely protective of their young, despite their evil nature, and will sacrifice their own lives to save their offspring.

**Ecology:** Although green dragons have been known to eat practically anything, including shrubs and small trees when they are hungry enough, they especially prize elves. If the forest is on a hillside, hill giants will hunt the younger dragons, which they consider a delicacy.

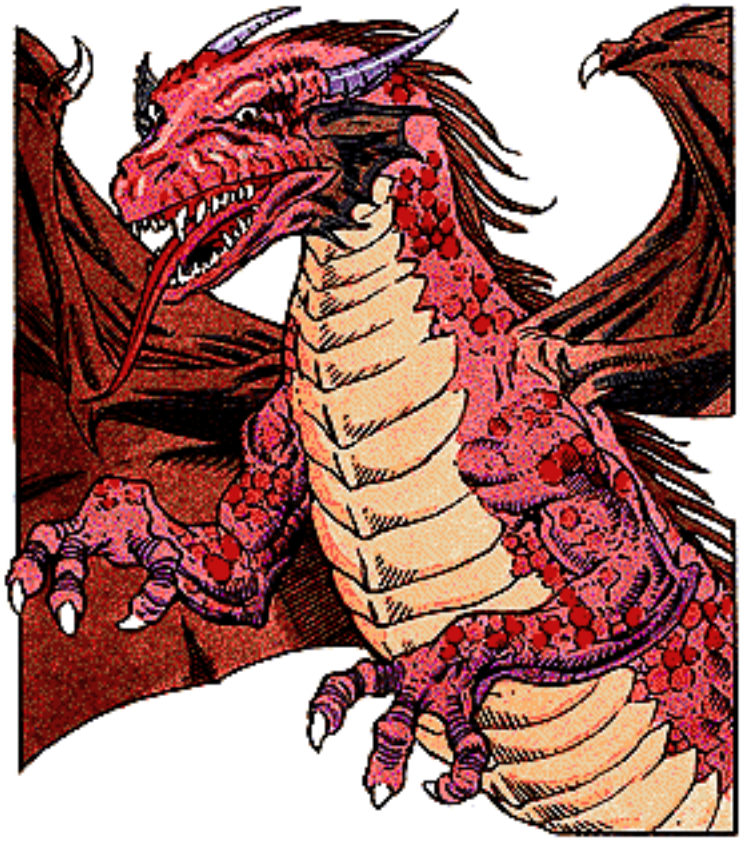
| **Magic Resistance:** | Variable |
| **Size:** | G (48' base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |



Red dragons are the most covetous and greedy of all dragons, forever seeking to increase their treasure hoards. They are obsessed with their wealth and memorize an inventory accurate to the last copper. They are exceptionally vain and self confident, considering themselves superior not only to other dragons, but to all other life in general.

When red dragons hatch, their small scales are a bright glossy scarlet. Because of this, they can be quickly spotted by predators and men hunting for skins, so they are hidden in deep underground lairs and not permitted to venture outside until toward the end of their young stage when their scales become turned a deeper red, the glossy texture has been replaced by a smooth, dull finish, and they are more able

to take care of themselves. As the dragon continues to age, they are more able to take care of themselves. As the dragon continues to age, the scales become large thick, and as strong as metal.
Red dragons speak their own tongue, a tongue common to all evil dragons, and 16% of hatchling red dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Because red dragons are so confident, they never pause to appraise an adversary. When they notice a target they make a snap decision whether to attack, using one of many "perfect" strategies worked out ahead of time in the solitude of their lairs. If the creature appears small and insignificant, such as an unarmored man, the dragon will land to attack with its claws and bite, not wanting to obliterate the creature with its breath weapon, as any treasure might be consumed by the flames. However, if a red dragon encounters a group of armored men, it will use its breath weapon, special abilities, and spells (if it is old enough to have them) before landing.

**Breath weapon/special abilities:** A red dragon's breath weapon is a searing cone of fire 90' long, 5' wide at the dragon's mouth and 30' at the base. Creatures struck by the flames must save versus breath weapon for half damage. Red dragons cast spells at 9th level, adjusted by their combat modifiers.
Red dragons are born immune to fire. As they age, they gain the following additional powers: **Young:** *affect normal fires* three times per day. **Juvenile:** *pyrotechnics* three times per day. **Adult:** *heat metal* once per day. **Old:** *suggestion* once per day. **Very old:** *hypnotism* once per day. **Venerable:** *detect gems, kind and number* in a 100' radius three times a day.

**Habitat/Society:** Red dragons can be found on great hills or on soaring mountains. From a high perch they haughtily survey their territory, which they consider to be everything that can be seen from their position. They prefer to lair in large caves that extend deep into the earth.
A red dragon enjoys its own company, not associating with other creatures, or even other red dragons, unless the dragon's aims can be furthered. For example, some red dragons who have *charm* spells will order men to act as the dragon's eyes and ears, gathering information about nearby settlements and sources of treasure. When a red dragon's offspring reach the *young adult* stage, they are ordered form the lair and the surrounding territory, as they are viewed as competition.
Red dragons are quick to fight all creatures which encroach on their territory, especially copper and silver dragons which sometimes share the same environment. The hate gold dragons above all else because they believe gold dragons are "nearly" as powerful as themselves.

**Ecology:** Red dragons are meat eaters, although they are capable of digesting almost anything. Their favorite food is a maiden of any human or demi-human race. Sometimes the dragons are able to *charm* key villagers into regularly sacrificing maidens to them.

# Dragon, Chromatic White Dragon

| | |
|---|---|
| **Climate/Terrain:** | Arctic plains, hills, mountains, and subterranean |
| **Frequency:** | Rare |
| **Organization:** | Solitary or clan |
| **Activity Cycle:** | Any |
| **Diet:** | Special |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | Special |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1 (2-5) |
| **Armor Class:** | 1 (base) |
| **Movement:** | 12, Fl 40 (C), Sw 12 |
| **Hit Dice:** | 11 (base) |
| **THAC0:** | 9 (at 11 HD) |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 1-6/1-6/3-16 (2d8) |
| **Special Attacks:** | Special |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | H (24'base) |
| **Morale:** | Elite (15-16) |
| **XP Value:** | Variable |

White dragons, the smallest and weakest of the evil dragons, are slow witted but efficient hunters. They are impulsive, vicious, and animalistic, tending to consider only the needs and emotions of the moment and having no foresight or regret. Despite their low intelligence, they are as greedy and evil as the other evil dragons.

The scales of a hatchling white dragon are a mirror-like glistening ground. As the dragons ages, the sheen disappears, and by the time it reaches the *very old* stage, scales of pale blue and light gray are mixed in with the white.

White dragons speak their own tongue, a tongue common to all evil dragons, and 7% of hatchling white dragons have an ability to communicate with any intelligent creature. The chance to possess this ability

increases 5% per age category of the dragon.

**Combat:** Regardless of a target's size, a white dragon's favorite method of attack is to use its breath weapon and special abilities before closing to melee. This tactic sometimes works to the dragon's detriment, as it can exhaust its breath weapon on smaller prey and then be faces with a larger creature it must attack physically. If a white dragon is pursuing creatures in the water, such as polar bears or seal, it will melee them in their element, fighting with its claws and bite.

**Breath weapon/special abilities:** A white dragon's breath weapon is a come of frost 70' long, 5' wide at the dragon's mouth, and 25' wide at the base. Creatures caught in the blast may Save versus Breath Weapon for half damage. A white dragon casts its spells and uses its magical abilities at 5th level, plus its combat modifier.
From their birth, white dragons are immune to cold. As they grow older, they gain the following additional abilities: **Juvenile:** *ice walking*, which allows the dragon to walk across ice as easily as easily as creatures walk across flat, dry ground. **Mature adult:** *gust of wind* three times a day. **Very old:** *wall of fog* three times a day, this produces snow or hail rather than rain. **Wyrm:** *freezing fog* three times a day. This obscures vision in a 100' radius and causes frost to form, creating a thin layer of glare ice on the ground and on all surfaces within the radius.

**Habit/Society:** White dragons live in chilly or cold regions, preferring lands where the temperature rarely rises above freezing and ice and snow always cover the ground. When temperatures become too warm, the dragons become lethargic. White dragons bask in the frigid winds that whip over the landscape, and they wallow and play in deep snow banks.
White dragons are lackadaisical parents. Although the young remain with the parents from hatchling to juvenile or young adult stage they are not protected. Once a dragon passes from it hatchling stage, it must fend for itself, learning how to hunt and defend itself, learning how to hunt and defend itself by watching the parents.
White dragons' lairs are usually icy caves and deep subterranean chambers; they select caves that open away from the warming rays of the sun. White dragons store all of their treasure within their lair, and prefer keeping it in caverns coated in ice, which reflect the gems, especially diamonds, because they are pretty to look at.

**Ecology:** Although white dragons, as all other dragons, are able to eat nearly anything, they are very particular and will consume only food which has been frozen. Usually after a dragon has killed a creature with its breath weapon it will fall to devouring it while the carcass is still stiff and frigid. It will bury other kills in snow banks until they are suitably frozen.
White dragons' natural enemies are frost giants who kill the dragons for food and armor and subdue them for guards and mounts.

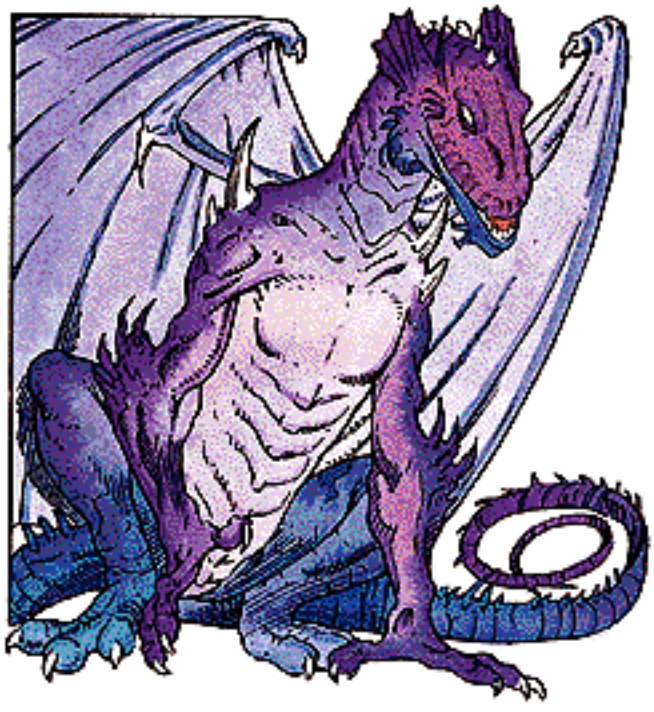
| **Special Attacks:** | Variable |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | G (30' base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |



Amethyst dragons are wise and regal, with a detached air, and ignore what they consider to be petty squabbles between good and evil, law and chaos. When hatched, amethyst dragons have lavender skin with small scales of a light, translucent purple. As they grow older, the scales gradually darken. Adults are a sparkling lavender in color.
Amethyst dragons speak their own tongue and the tongue common to all gem dragons, and 18% of hatchling amethyst dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Amethyst dragons prefer talking over combat. If parleying goes badly, the dragon attacks first

with its breath weapon, then with psionics and spells. They never hide or attempt ambush. Amethyst dragons consider retreat dishonorable, but do so if faced with death.

**Breath weapon/special abilities:** An amethyst dragon's breath weapon is a faceted, violet lozenge, which it can spit into the midst of enemies, up to 75 feet away. The lozenge explodes with concussive force, causing the indicated damage to all creatures within 60' of the impact (save vs. breath weapon for half damage). In addition, all creatures size huge and smaller must save vs. paralyzation or be knocked down. Any creature taking damage from the blast has a 50% chance of being knocked unconscious for one round per age level of the dragon, plus 1d8 rounds. An amethyst dragon casts spells and uses its magical abilities at 9th level, plus its combat modifier.
Amethyst dragons are born with an innate *water breathing* ability and an immunity to poisons. They are also immune to force attacks and effects, such as those from *beads of force, Bigby's hand* spells, *wall of force,* and *Otiluke's resilient sphere.* As they age, they gain the following additional powers: **Young:** *water walking* six times a day. **Juvenile:** *neutralize poison* six times a day. **Adult:** *shape change,* as a druid, into a reptile, bird, or mammal, three times a day, with each form usable only once per day. **Old:** *otiluke's resilient sphere* three times a day. **Very old:** *reflecting pool* once a day. **Venerable:** *control weather* once a day.

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| = HD | 3/3/5 | PB,EW,PsC/M-,TS,TW | = Int | 250 |

**Common powers** (most amethyst dragons prefer psychokinetic powers and many choose psychometabolism as an additional discipline):
**Psychokinesis - Sciences:** detonate, project force, telekinesis. **Devotions:** control body, inertial barrier, molecular agitation.
**Psychometabolism - Sciences:** complete healing, energy containment, metamorphosis. **Devotions:** cell adjustment, expansion, reduction.
**Telepathy - Sciences:** domination, mindlink, mindwipe. **Devotions:** contact, ESP, identity penetration, truthear.
**Metapsionics - Sciences:** empower, psychic surgery, ultrablast. **Devotions:** magnify, psionic sense, psychic drain.

**Habitat/Society:** Amethyst dragons live on the shores of isolated mountain lakes and pools, some in caves beneath the water. They are good parents, but believe their young should fend for themselves as soon as they become young adults. Amethyst dragons dislike red and white dragons, and consider silver and copper dragons to be foolish.

**Ecology:** Amethyst dragons prefer to eat fish and a large number of gems. They are not inherently enemies with any life form.

| **Special Attacks:** | Variable |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | L (12' base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |

Crystal dragons are the friendliest of the gem dragons, always curious about the world. Though they seldom seek out company, they willingly converse with visitors who do not try to steal from them.
At birth, crystal dragons have glossy white scales. As the dragons age, their scales become translucent. Moonlight and starlight causes their scales to luminesce, while bright sunlight lends them a dazzling brilliance which makes crystal dragons almost unbearable to look at.
Crystal dragons speak their own tongue and the tongue common to all gem dragons, and 10% of hatchling crystal dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Crystal dragons greatly prefer conversation to combat, and often use *charm person* early in any conversation. They do not initially hide, but if visitors become hostile, a crystal dragon will retreat immediately to observe its enemies with its special abilities, and plan an attack. Often, it uses its breath weapon first, to weaken and disorient enemies. Spells and other abilities are used as needed, with claws and bite a last resort.

**Breath weapon/special abilities:** This dragon's breath weapon is a cone of glowing shards; the cone is 60 feet long, 5 feet wide at the dragon's mouth, and 25 feet wide at the base. Creatures caught in the blast can save vs. breath weapon for half damage, and must make a second saving throw vs. breath weapon or be blinded by the dazzling shards for one turn per age level of the dragon. The shards shine as bright as daylight, and can be seen for miles. Creatures within 60 feet must save vs. breath weapon or be dazzled, incurring a penalty of -2 to attack rolls for one turn per age level of the dragon. A crystal dragon casts spells and uses magical abilities at 5th level, plus its combat modifier.
Crystal dragons are born immune to light-based attacks and normal cold, and able to cast *charm person* at will. As they age, they gain these additional powers: **Juvenile:** *color spray* three times a day. **Mature adult:** *suggestion* three times a day. **Very old:** *luckscale* once a day. This allows the dragon to enchant one of its scales as a *stone of good luck.* The enchantment lasts one hour per age category of the dragon. Such scales are given to friendly visitors. **Wyrm:** *control winds* three times a day.

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| = HD | 1/1/2 | EW/M- | = Int | 100 |

**Common powers:**
**Clairsentience - Sciences:** clairaudience, clairvoyance, precognition.
**Devotions:** any.

**Habitat/Society:** Crystal dragons prefer cold, open areas with clear skies, and they enjoy stargazing. They have been known to build snow forts, create beautiful snow sculptures, and throw balls of snow at various targets. They are fun-loving and mischievous. Crystal dragons are reasonably good parents, if somewhat irresponsible.
Crystal dragons are hunted by some white dragons. However, a rare crystal dragon will adopt a young white dragon, to teach it to be friendly. Though generally friendly, they bear great enmity towards all giants, who sometimes try to enslave them.

**Ecology:** Crystal dragons prefer gems and metal ores to all other foods.

| **XP Value:** | Variable |

Emerald dragons are very curious, particularly about local history and customs, but prefer to only observe. They are the most paranoid of the gem dragons, and do not like people get too close to their treasure.

Emerald dragons have translucent green scales at birth. As they age, the scales harden and take on many shades of green. They scintillate in light, and the dragon's hide seems to be in constant motion.

Emerald dragons speak their own tongue and the tongue common to all gem dragons, and 14% of hatchling emerald dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Emerald dragons usually set up traps and alarms around their lairs to warn them of visitors. They often hide from intruders, using special abilities to observe, and seldom come out to speak. If intruders attack or approach the dragon's treasure, the dragon burrows underneath to surprise its victims, then use breath weapon and claws, seeking to quickly disable as many as it can. If faced with superior forces, the dragon retreats, waiting years for revenge if necessary.

**Breath weapon/special abilities:** An emerald dragon's breath weapon is a loud, keening wail which sets up a sonic vibration affecting all creatures within 120 feet of the dragon's mouth. Those in the area can save vs. breath weapons for half damage from the painful vibrations. Victims must make a second saving throw vs. breath weapon or be stunned, unable to defend or attack, for three rounds per age level of the dragon, plus 1d4 rounds. Those who successfully save are deafened and disoriented instead, for a like amount of time, and at -1 to attack rolls. Deafness does not protect one from vibratory damage, but pre-vents stunning or additional deafness. An emerald dragon casts spells and uses its magical abilities at 6th level, plus its combat modifier.
Emerald dragons are born with an innate *flame walk* ability and an immunity to sound-based attacks. As they age, they gain the following additional powers: **Young:** *audible glamer* three times a day. **Juvenile:** *hypnotism* three times a day. **Adult:** *Melf's minute meteors* three times a day. **Mature adult:** *hold person* three times a day. **Venerable:** *animate rock* once a day. **Great wyrm:** *geas* once a day. *Hypnotism* and *geas* are effected by the dragon's skilled rippling movement of its scales.

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| = HD | 2/2/3 | PB,II/M-,TW | = Int | 180 |

Common powers (most emerald dragons prefer telepathic powers):
**Clairsentience - Sciences:** aura sight, object reading, precognition. **Devotions:** all-around vision, combat mind, danger sense.
**Telepathy - Sciences:** ejection, mindlink, probe. **Devotions:** contact, ESP, life detection, sight link, sound link.

**Habitat/Society:** Emerald dragons are reclusive, making lairs in the cones of extinct or seldom active volcanoes. These dragons are protective parents and prefer their young to stay in the lair as long as possible for mutual protection. Emerald dragons sometimes live near sapphire dragons, and they fear the voracious greed of red dragons.

**Ecology:** Emerald dragons will eat anything, but prefer lizards and giants. They are actively hostile towards fire giants.

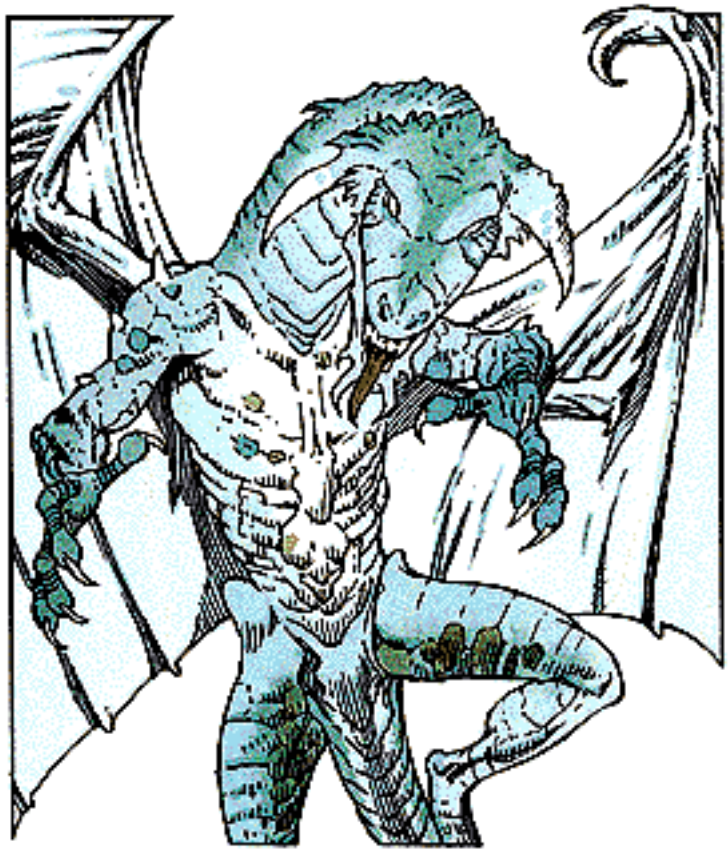
| **XP Value:** | Variable |



While not actively hostile, sapphire dragons are militantly territorial and initially distrustful of anyone who approaches.
These beautiful dragons range from light to dark blue, and sparkle in the light, even at birth. Sapphire dragons are often mistaken for blue dragons, unless someone recalls the latter's preferred arid environment.
Sapphire dragons speak their own tongue and the tongue common to all gem dragons, and 16% of hatchling sapphire dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Sapphire dragons generally observe intruders before deciding what to do with them, unless

known enemies such as drow or dwarves are present. If others are not actively hostile the dragon attempts conversation and spell use to determine their intentions and convince them to leave. If the dragon or its treasure is threatened, it attacks immediately with breath weapon, spells, and physical attacks. It uses psionics or other special abilities to escape if its life is in jeopardy.

**Breath weapon/special abilities:** This dragon's breath weapon is cone of high-pitched, almost inaudible sound, 75 feet long, 5 feet wide at the dragon's mouth, and 25 feet wide at the base. Creatures caught by the blast can save vs. breath weapon for half damage from the sound's disruption, and must make a second saving throw vs. breath weapon or be affected by fear, fleeing the dragon in panic for two rounds per age level of the dragon, plus 1d6 rounds. This is a metabolic effect, and creatures unaffected by magical *fear* still suffer from the effects if they fail their save. Deafness does not protect one from the breath weapon's damage, though it prevents fear effects. A sapphire dragon casts spells and uses magical abilities at 7th level, plus combat modifier.
Sapphire dragons are born with immunity to all forms of fear, as well as immunity to *web, hold, slow,* and *paralysis.* As they age, they gain the following additional powers: **Young:** *continual light* three times a day. **Juvenile:** *stone shape* three times a day. **Adult:** *anti-magic shell* once a day. **Mature adult:** *passwall* six times a day. **Venerable:** *wall of stone* three times a day. **Great wyrm:** *sunray* three times a day.

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| = HD | 2/2/4 | PB,EW/M-,IF | = Int | 200 |

Common powers (most sapphire dragons use psychoportive powers):
**Clairsentience - Sciences:** clairaudience, clairvoyance. **Devotions:** know direction, radial navigation.
**Psychokinesis - Sciences:** disintegrate, molecular rearrangement, telekinesis. **Devotions:** animate shadow, control light, molecular manipulation, soften.
**Psychoportation - Sciences:** any. **Devotions:** any.

**Habitat/Society:** Sapphire dragons live deep underground and often place their treasure in caverns accessible only through magic or psionics. They sometimes share territory with emerald dragons. Sapphire dragons treat their young well, but force them to leave and find their own territory as soon as they are young adults.

**Ecology:** Sapphire dragons consider giant spiders a great delicacy and often hunt them. Deep dragons, drow, dwarves, mind flayers, and aboleth are great enemies of sapphire dragons.

| **Size:** | H (15' base) |
| **Morale:** | Elite (15-16) |
| **XP Value:** | Variable |

Topaz dragons are unfriendly and selfish. Though not malevolent, they are seldom pleasant to deal with because of their erratic behavior. Topaz dragons neither seek company nor welcome it.
At hatching, topaz dragons are a dull yellow-orange in color. As they age and their scales harden, the scales become translucent and faceted. Adult topaz dragons sparkle in full sunlight.
Topaz dragons speak their own tongue and the tongue common to all gem dragons, and 12% of hatchling topaz dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Topaz dragons dislike intruders, but avoid combat, often conversing to hide psionics or magic use. If intruders are hostile, or the dragon tires of them, it attacks, psionically first if possible, using spells

as needed. They enjoy using teeth and claws, and usually save their breath weapon until wounded. The dragon may pretend to surrender to buy time, and retreats if greatly threatened. It usually makes one or more false retreats, attempting to come back and attack with surprise.

**Breath weapon/special abilities:** This dragon's breath weapon is a cone of dehydration, 70 feet long, 5 feet wide at the dragon's mouth and 25 feet wide at the base. When directed against liquids, a cubic foot of water dries up per hit point of damage. Creatures caught by the cone can make a saving throw vs. breath weapon for half damage from water loss. Those who fail to save lose 1d6+6 Strength points; those who succeed lose only 1d6 Strength points. Curative spells less powerful than *heal* or *regeneration* are ineffective against Strength loss, though victims who are carefully nursed back to health recover one Strength point per day. Any creature reduced to a Strength of zero or less dies instantly. A topaz dragon casts spells and uses magical abilities at 5th level, plus combat modifier.
At birth, topaz dragons can breathe water and are immune to cold. As they age, they gain the following powers: **Young:** *protection from evil or good* three times a day. **Juvenile:** *blink* three times a day. **Adult:** *wall of fog* three times a day. **Mature adult:** *airy water* three times a day, 10-foot radius per age category of the dragon. **Old:** *part water* once a day.

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| = HD | 1/1/3 | MT,II/M-,MB | = Int | 120 |

**Common powers** (most topaz dragons prefer psychometabolic powers):
**Psychokinesis - Sciences:** telekinesis. **Devotions:** animate object, control wind, molecular manipulation, soften.
**Psychometabolism - Sciences:** energy containment, life draining, metamorphosis. **Devotions:** biofeedback, body equilibrium, cause decay, chemical simulation.

**Habitat/Society:** Topaz dragons live by the sea, often building or claiming caves below the waterline; they keep their caves completely dry. These dragons enjoy sunning on rocky outcroppings, enjoying wind and spray. They like water little and swim only to hunt or attack. They are indifferent parents at best, and abandon young to protect themselves. They dislike bronze dragons and attack them on sight.

**Ecology:** Topaz dragons prefer to eat fish and other aquatic creatures, especially giant squid.

| **Special Attacks:** | Special |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | G (30' base) |
| **Morale:** | Fanatic (17 base) |
| **XP Value:** | Variable |

Brass dragons are great talkers, but not particularly good conversationalists. They are egotistical and often boorish. They oftern have useful information, but will divulge it only after drifting off the subject many times and after hints that a gift would be appreciated.
At birth, a brass dragon's scales are dull. Their color is a brassy, mottled brown. As the dragon gets older, the scales become more brassy, until they reach a warm burnished appearance.

**Combat:** Brass dragons would rather talk than fight. If an intelligent creature tries to take its leave of a brass dragon without talking to it at length, the dragon might have a fit of pique and try to force a conversation with *suggestion* or by giving the a dose of *sleep gas*. If the victim falls asleep it will awaken to find itself pinned under the dragon or buried to the neck in the sand until the dragon's thirst for small

talk is slaked. Before melee, brass dragons create a cloud of dust with *dust devil* or *control winds*, then charge or snatch. Brass dragons often use *control temperature* to create heat to discomfort their opponents. When faced with real danger, younger brass dragons will fly out of sight, then hide by burrowing. Older dragons spurn this ploy.

**Breath weapon abilities:** A brass dragon has two breath weapons: a cone of *sleep* gas 70' long, 5' wide at the dragon's mouth, and 20' wide at its end; or a cloud of blistering desert heat 50' long, 40' wide, and 20' high. Creatures caught in the gas, regardless of Hit Dice or level, must save vs. breath weapon for half. A brass dragon casts its spells and uses its magical abilities at 6th level, plus its combat modifier. At birth, brass dragons can *speak with animals* freely, and are immune to fire and heat. As they age, they gain the following additional powers:

**Young:** *create* or *destroy water* three times a day. **Juvenile:** *dust devil* once a day. **Adult:** *suggestion* once a day. **Mature adult:** *control temperature* three times a day in a 10' radius per age level. **Old:** *control winds* once a day. **Great wyrm:** *Summon djinni* once a week. The dragon usually asks the djinni to preform some service. Although the djinni serves willingly, the dragon will order it into combat only in extreme circumstances, as the dragon would be dismayed and embarrassed if the djinni were killed.

**Habit/Society:** Brass dragons are found in arid, warm climates; ranging from sandy deserts to dry steppes. They love intense, dry heat and spend most of their time basking in the sun. They lair in high caves, preferably facing east where the sun can warm the rocks, and their territories always contain several spots where they can bask and trap unwary travelers into conversation.
Brass dragons are very social. They usually are on good terms with neighboring brass dragons and sphinxes. Brass dragons are dedicated parents. If their young are attacked they will try to slay the enemy, using their heat breath weapons and taking full advantage of their own immunity.
Because they share the same habitat, blue dragons are brass dragons' worst enemies. Brass dragons usually get the worst of a one-on-one confrontation, mostly because of the longer reach of the blue dragon's breath weapon. Because of this, brass dragons usually try to evade blue dragons until they can rally their neighbors for a mass attack.

**Ecology:** Like other dragons, brass dragons can, and will, eat almost anything if the need arises. In practice, however, they eat very little. They are able to get nourishment from the morning dew, a rare commodity in their habitat, and have been seen carefully lifting it off plants with their long tongues.

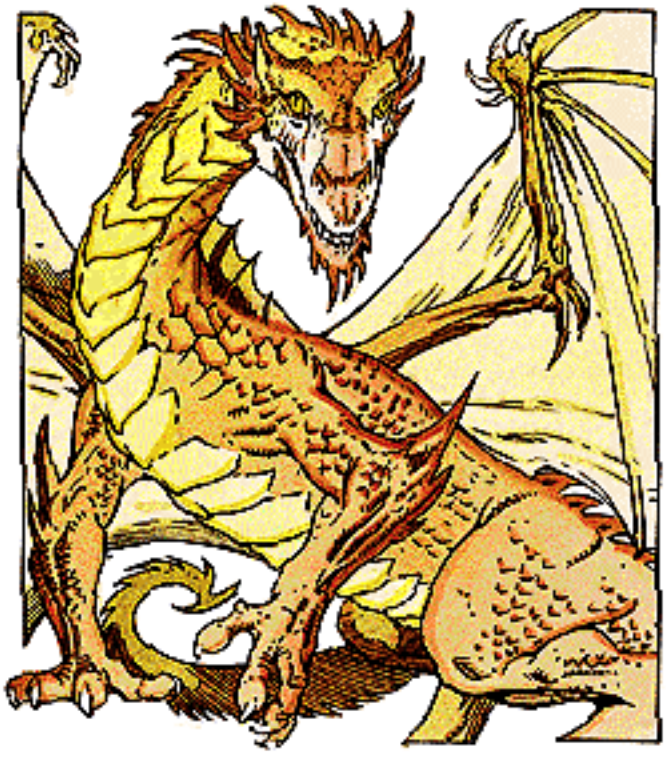
| **Magic Resistance:** | Variable |
| **Size:** | G (42' base) |
| **Morale:** | Fanatic (17 base) |
| **XP Value:** | Variable |



Bronze dragons are inquisitive and fond of humans and demi-humans. They enjoy *polymorphing* into small, friendly animals so they can unobtrusively observe humans and demi-humans, especially adventurers. Bronze dragons thrive on simple challenges such as riddles and harmless contests. They are fascinated by warfare and will eagerly join an army if the cause is just and the pay is good.
At birth, a bronze dragon's scales are yellow tinged with green, showing only a hint of bronze. As the dragon approached adulthood, its color deepens slowly changing to a rich bronze tone that gets darker as the dragon ages. Dragons from the very old stage on develop a blue-black tint to the edges of their scales, similar to a patina on ancient bronze armor or statues.

Bronze dragons speak their own tongue, a tongue common to all good dragons, and 16% of hatchling bronze dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Bronze dragons dislike killing creatures with animal intelligence and would rather bribe them (perhaps with food), or force them away with *repulsion*. When confronted with intelligent opponents bronze dragons use their *ESP* ability to learn their opponents' intentions. When attacking they blind their opponents with *wall of fog*, then charge. Or, if they are flying they will snatch opponents. When fighting under water, they use *airy water* to maintain the effectiveness of their breath weapons, and to keep away purely aquatic opponents. Against boats or ship they *summon* a storm or use their tail slap to smash the vessels' hulls. If the dragon is inclined to be lenient, seafaring opponents might merely find themselves becalmed, fog bound, or with broken masts.

**Breath weapon/special abilities:** A bronze dragon has two breath weapons: a stroke of *lightning* 100' long and 5' side or a cloud of *repulsion* gas 20' long, 30' wide, and 30' high. Creatures caught in the gas must save vs. breath weapon or move away from the dragon for two minutes per age level of the dragon, plus 1-6 minutes. Creature caught in the lightning take damage, save vs. breath weapon for half. A bronze dragon casts its spells and uses its magical abilities at 8th level, plus its combat modifier.
At birth, bronze dragons have a *water breathing* ability, can *speak with animals* at will, and are immune to electricity. As they age, they gain the following additional powers: **Young:** *create food and water and polymorph self* three times a day. (Each change in form lasts until the dragon chooses a different form. Reverting to the dragon's normal form does not count as a change.) **Juvenile:** *wall of fog* once a day. **Adult:** *ESP* three times a day. **Mature adult:** *airy water* three times a day in a 10' radius per age category of the dragon. **Old:** *weather summoning* once a day.

**Habitat/Society:** Bronze dragons like to be near deep fresh or salt water. They are good swimmers and often visit the depths to cool off or to hunt for pearls or treasure from sunken ships. They prefer caves that are accessible only from the water, but their lairs are always dry--they do not lay eggs, sleep, or store treasure under water.
Bronze dragons are fond of sea mammals, especially dolphins and whales. These animals provide the dragons with a wealth of information on shipwrecks, which the dragons love to plunder, and detail the haunts of large sharks. Bronze dragons detest pirates, disabling or destroying their ships.

**Ecology:** Bronze dragons eat aquatic plants and some varieties of seafood. They especially prize of shark meat. They also dine on an occasional pearl, and, like other dragons, can eat almost anything in a pinch. Evil, amphibious sea creatures (particularly sahuagin), who can invade their air filled lairs, are their greatest enemies.

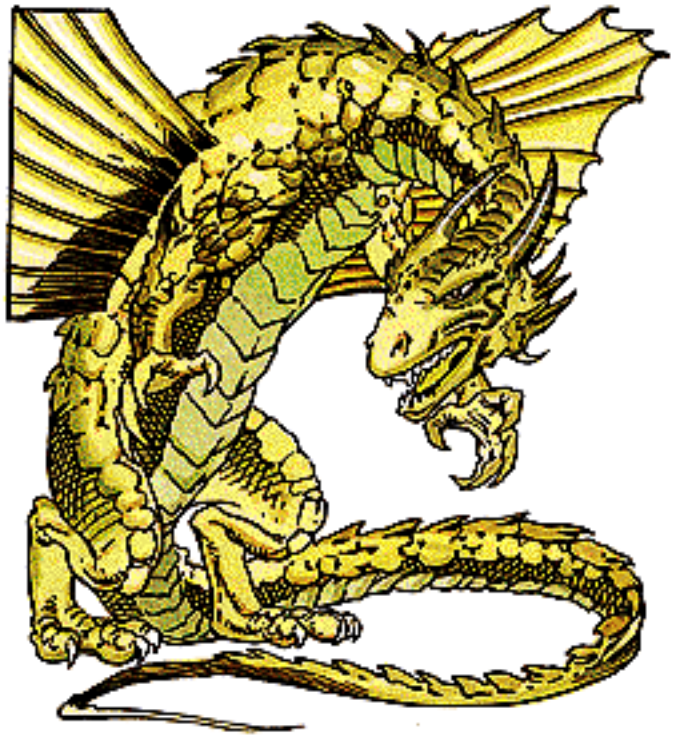
| **Morale:** | Elite (16 base) |
| **XP Value:** | Variable |



Copper dragons are incorrigible pranksters, joke tellers, and riddlers. They are prideful and are not good losers, although they are reasonable good winner. They are particularly selfish, and greedy for their alignment, and have an almost neutral outlook where wealth is concerned.

At birth, a copper dragon's scales have a ruddy brown color with a copper tint. As the dragon gets older, the scales become finer and more coppery, assuming a soft, warm gloss by the time the dragon becomes a young adult. Beginning at the venerable stage, the dragons' scales pick up a green tint.

Copper dragons speak their own tongue, a tongue common to all good dragons, and 14% of hatchling copper dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases to 5% per age category of the dragon.

**Combat:** Copper dragons like to taunt and annoy their opponents, hoping they will give up or become angry and act foolishly. Early in an encounter, a copper dragon will jump from one side of an opponent to another, landing on inaccessible or vertical stone surfaces. If there are no such places around a dragon's lair, the dragon will create them ahead of time using *stone shape*, *move earth*, and *wall of stone*. An angry copper dragon will mire its opponents using *rock to mud*, and will force victims who escape the mud, into it with kicks. Once opponents are trapped in the mud, the dragon will crush them with a *wall of stone* or snatch them and carry them aloft. When fighting airborne opponents, a dragon will draw its enemies into narrow, stony gorges where it can use its *spider climb* ability in an attempt to maneuver the enemy into colliding with the walls.

**Breath weapon/special abilities:** A copper dragon's breath is either a cloud of *slow* gas 30' long, 20' wide, and 20' high or a spurt of *acid* 70' long and 5' wide. Creatures caught in the gas must save vs. breath weapon or be *slowed* for three minutes per age level of the dragon. Creatures caught in the acid take damage, save vs. breath weapon for half. A copper dragon cast its spells and uses its magical abilities at 7th level, plus its combat modifier.
At birth, copper dragons can *spider climb* (stone surfaces only) and are immune to acid. As they age, they gain the following additional powers: **Young:** *neutralize poison* three times a day. **Juvenile:** *stone shape* twice a day. **Adult:** *forget* once a day. **Mature adult:** *rock to mud* once a day. **Old:** *move earth* once a day. **Great wyrm:** *wall of stone* once a day. A copper dragon can jump 30 yards forward or sideways, reaching heights up to 20' at mid jump. They can jump 30' straight up.

**Habitat/Society:** Copper dragons like dry, rocky uplands and mountains. They lair in narrow caves and often conceal the entrances using *move earth* and *stone shape.* Within the lair, they construct twisting mazes with open tops. These allow the dragon to fly or jump over intruders struggling through the maze. Copper dragons appreciate wit, and will usually leave good or neutral creatures alone if they can relate a joke, humorous story, or riddle the dragon has not heard before. They quickly get annoyed with creatures who don't laugh at their joked or do not accept the dragon's tricks and antics with good humor.
Because they often inhabit hills in sight of red dragons' lairs conflicts between the two subspecies often occur. Copper dragons usually run for cover until they can equal the odds.

**Ecology:** Copper dragons are determined hunters, the good sport a hunt provides is at least as important as the food they get. They are known to eat almost anything, including metal ores. However, they prize giant scorpions and other large poisonous creatures (they say the venom sharpens their wit). The dragon's digestive system can handle the venom safely, although injected venoms affect them normally.

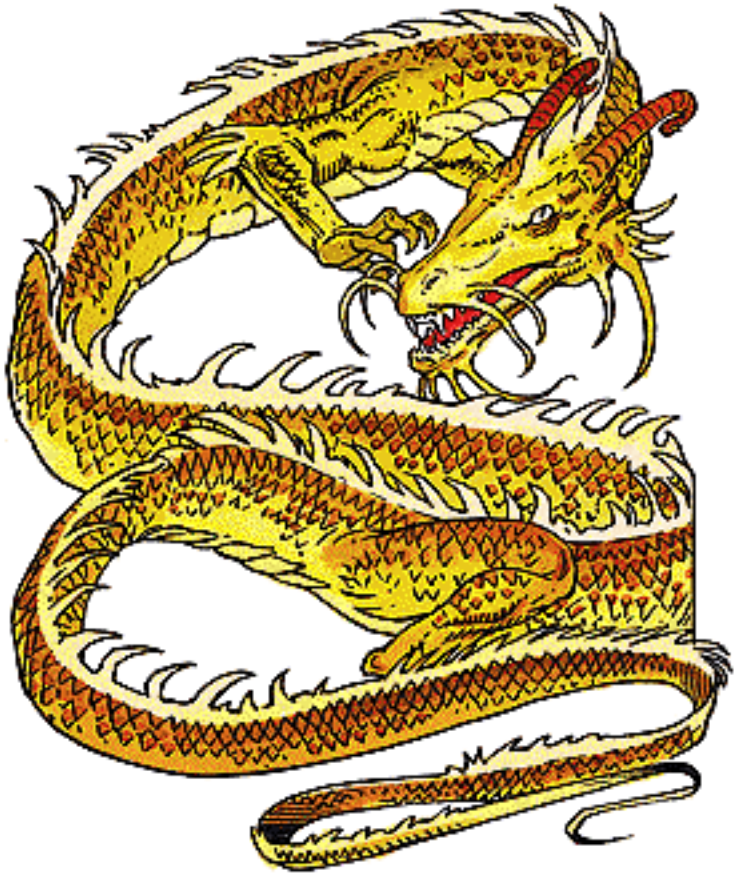
| **Special Attacks:** | Special |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | G (54' base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |



Gold dragons are wise, judicious, and benevolent. They often embark on self-appointed quests to promote goodness, and are not easily distracted from them. They hate injustice and foul play. A gold dragon frequently assumes human or animal guise and usually will be encountered disguised.
At birth, a gold dragon's scales are dark yellow with golden metallic flecks. The flecks get larger as the dragon matures until, at the adult stage, the scales grow completely golden.
Gold dragons speak their own tongue, a tongue common to all good dragons, and 18% of hatchling gold dragons have an ability to communicate with any intelligent creature. The chance to possess this ability increases 5% per age category of the dragon.

**Combat:** Gold dragons usually parley before combat. When conversing with intelligent creatures they use *detect lie* and *detect gems* spells to gain the upper hand. In combat, they quickly use *bless* and *luck bonus*. Older dragons use *luck bonus* at the start of each day if the duration is a day or more. They make heavy use of spells in combat. Among their favorites are *sleep, stinking cloud, slow, fire shield, cloudkill, globe of invulnerability, delayed blast fireball,* and *maze.*

**Breath weapon/special abilities:** A gold dragon has two breath weapons: a cone of *fire* 90' long, 5' wide at the dragon's mouth, and 30' wide at the end or a cloud of potent chlorine gas 50' long, 40' wide and 30' high. Creatures caught in either effect are entitled to a save versus breath weapon for half damage.
At birth, gold dragons have *water breathing* ability, can *speak with animals* freely, and are immune to fire and gas. They can also *polymorph self* three times a day. Each change form lasts until the dragon chooses a different form; reverting to the dragon's normal form does not count as a change. A gold dragon's natural form has wings. However, they sometimes choose a wingless form to facilitate swimming, gaining the higher swimming rate listed above. A gold dragon in any wingless form can fly at a speed of 6 (MC E).
As they age, they gain the following additional powers. **Young:** *bless* three times a day. **Juvenile:** *detect lie* three times a day. **Adult:** *animal summoning* once a day. **Mature adult:** *animal summoning* once a day. **Mature adult:** *luck bonus* once a day. **Old:** *quest* once a day, and *detect gems* three times a day. (This allows the dragon to know the number and kind of precious stones within a 30' radius, duration is one minute.
The *luck bonus* power of mature adults is used to aid good adventurers. By touch the dragon can enchant one gem to bring good luck. The gem is usually one which has been embedded in the dragon's hide. When the dragon carries the gem, it and every good creature in a 10' radius per age category of the dragon receives a +1 bonus to all Saving Throws and similar dice rolls, cf. *stone of good luck*. If the dragon gives a gem to another creature only the bearer gets the bonus. The enchantment lasts three hours per age category of the dragon. plus 1-3 hours. The enchantment ends if the gem is destroyed before its duration expires.

**Habit/Society:**Gold dragons can live anywhere. Their lairs are secluded and always made of solid stone, either caves or castles. These usually have loyal guards: either animals appropriate to the terrain, or storm or good cloud giants. The giants usually serve as guards through a mutual defensive agreement.

**Ecology:** Gold dragons can eat almost anything, however, they usually sustain themselves on pearls or small gems. Gold dragons who receive pearls and gems from good or neutral creatures will usually be favorably inclined toward the gift bringers, as long as the gift is not presented as a crass bribe. In the latter case, the dragon will accept the gift, but react cynically to any requests the giver makes.

| **Hit Dice:** | 15 (base) |
| **THAC0:** | 5 (at 15 HD) |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 1-8//1-8/5-30 (5d6) |
| **Special Attacks:** | Special |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | G (48' base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |

Silver dragons are kind and helpful. They will cheerfully assist good creatures if their need is genuine. They often take e the forms of kindly old men or fair damsels when associating with people.
At birth, a silver dragon's scales are blue-gray with silver highlights. As the dragon approaches adulthood, its color slowly lightens to brightly gleaming silver. An adult or older silver dragon has scales so fine that the individual scales are scarcely visible. From a distance, these dragons look as if they have been sculpted from pure metal.
Silver dragons speak their own tongue, a tongue common to all good dragons, and 16% of hatchling silver dragons have an ability to communicate with any intelligent creature. The chance to possess this

ability increases 5% per age category of the dragon.

**Combat:** Silver dragons are not violent and avoid combat except when faced with highly evil or aggressive foes. If necessary, they use *feather fall* to stop any missiles fired at them. They use *wall of fog* or *control weather* to blind or confuse opponents before making melee attacks. If angry, they will use *reverse gravity* to fling enemies helplessly into the air, where they can be snatched. When faced with flying opponents, a silver dragon will hide in clouds (often creating some with *control weather* on clear days), remain there using *cloud walking*, then jump to the attack when they have the advantage.

**Breath Weapon/Special Abilities:** A silver dragon has two breath weapons: a cone of *cold* 80' long, 5' wide at the dragon's mouth, and 30' wide at the end or a cloud of *paralyzation* gas 50' long, 40' wide, and 20' high. Creatures caught in the cold are allowed a save versus breath weapon for half damage. A silver dragon casts its spells and uses its magical abilities at 6th level, plus its combat modifier.
At birth, silver dragons are immune to cold and can *polymorph self* three times a day. Each change in form lasts until the dragon chooses a different form and reverting to their normal form does not count as a change. They also can *cloud walk*. This allows the dragon to tread on clouds or fog as though they were solid ground. The ability functions continuously, but can be negated or resumed at will. As they age, they gain the following additional powers: **Young:** *feather fall* twice a day. **Juvenile:** *wall of fog* once a day. **Adult:** *control winds* three times a day. **Mature adult:** *control weather* once a day. **Old:** *reverse gravity* once a day.

**Habitat/Society:** Silver dragons prefer aerial lairs on secluded mountain peaks, or amid the clouds themselves. When they lair in clouds there always will be an enchanted area with a sold floor for laying eggs and storing treasure.
Silver dragons seem to prefer human form to their own, and often have mortal companions. Frequently they share deep friendships with mortals. Inevitably, however, the dragon reveals its true form and takes its leave to live a dragon's life for a time.

**Ecology:** Silver dragons prefer human food, and can live on such fare indefinitely.
Because they lair in similar territories, silver dragons come into conflict with red dragons. Duels between the two species are furious and deadly, but silver dragons generally get the upper hand since they are more capable of working together against their foes and often have human allies.

| **Damage/Attack:** | 1-4//1-4/3-30 |
| **Special Attacks:** | See below |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | See below |
| **Size:** | G (54' base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |

Brown dragons, also known as great desert dragons, migrated from the desert. Raurin and now frequent much of the wastes in Eastern Mulhorand. Brown dragons are ferocious beasts; while they are intelligent, they view human beings as food, and believe it peculiar to talk with one's meal. They do not have wings and cannot fly.

Brown dragons have a coloration similar to that of desert sands, ranging from dim brown at hatchling stage to almost white at great wyrm stage. They have small, webbed claws that well developed for digging, and very large, long mouths. Their scales are leathery and not as hard as other dragon armors. Brown dragons speak their own tongue and the language of blue dragons. They have a 5% chance per age category of being able to communicate with any intelligent creature.

**Combat:** Brown dragons prefer to dig deep trenches in the sand and wait for prey to appear so they may ambush them. They have a 90% chance of hearing a man sized creature's footsteps on the desert sands from as far down as 500 feet.
Brown dragons breach the desert sand with incredible silence, imposing a -5 penalty to opponents' surprise rolls. Older brown dragons use illusions or even *invisibility* spells to conceal themselves.
When brown dragons grab their prey, they hold it in their jaws, taking in a 5-foot wide spray that extends in a straight line from the dragon's head up to 60 feet. All creatures caught in the spray can roll a saving throw vs. breath weapon for half damage.
Brown dragons use the spray against large numbers, but not against mounted foes, since they know that horses are good eating and don't put up as much struggle as humans. Brown dragons cast spells as 8th-level wizards.
They are born immune to acid and the effects of the desert heat. They may survive in airless environments nearly indefinitely.
As they age, brown dragons gain the following abilities:

| Age | Abilities |
|---|---|
| Young | Cast *create sand* to cover up the burrows |
| Juvenile | Cast *create water* once per day |
| Adult | Cast *sandstorm* (Mulhorandi spell) once per day |
| Venerable | Cast summon a 12-HD earth elemental |
| Great wyrm | Cast *disintegrate* once per day |

**Habitat/Society:** Brown dragons are found in desert, often close to settled areas. They typically dwell in deep burrows nearly 1,000 feet beneath the sand, where they carve out vast chambers.
The brown dragon mates and raises a family for only a short period of time; all parents encountered are in the mature adult stage of development. Many brown dragons do not mate.
Man is the main enemy of brown dragons. Humans hunt for them for their hides and treasure. Blue dragons also attack brown dragons.
Battles between brown and blue dragons are legendary for their ferocity. The people of the desert have a curious respect for the brown dragon, so tales often make the blue dragons more evil than the brown.

**Ecology:** Brown dragons are able to digest sand and other mineral materials to sustain themselves over long periods of time. However, meat is the preferred diet, with horseflesh a particular favorite.

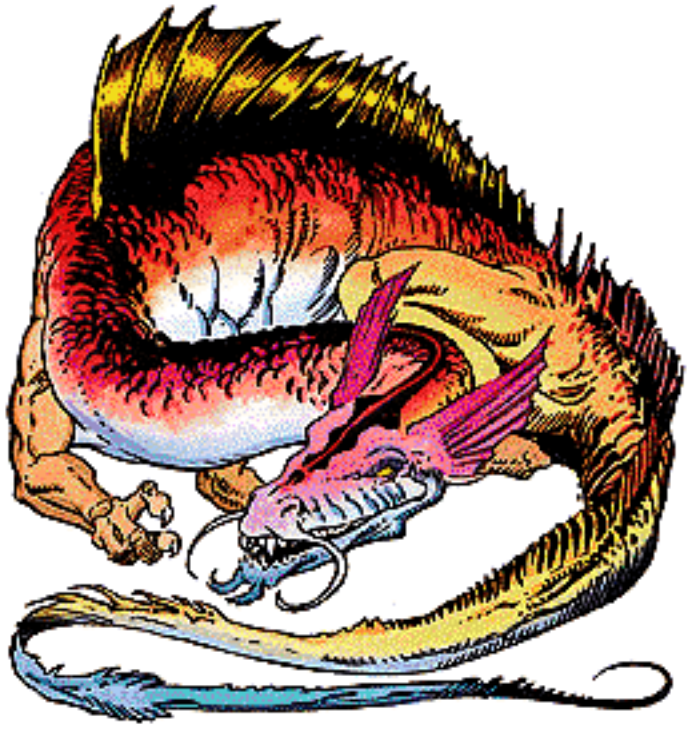
# Cloud Dragon

| | |
|---|---|
| **Climate/Terrain:** | Tropical, subtropical, and temperature/Clouds and mountains |
| **Frequency:** | Very rare |
| **Organization:** | Solitary or clan |
| **Activity Cycle:** | Any |
| **Diet:** | Special |
| **Intelligence:** | Genius (17-18) |
| **Treasure:** | Special |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 (2-5) |
| **Armor Class:** | 0 (base) |
| **Movement:** | 6, Fl 39 (C), Jp 3 |
| **Hit Dice:** | 14 (base) |
| **THAC0:** | 7 |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 1-10//1-10/3-36 |
| **Special Attacks:** | Special |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | G (66' base) |
| **Morale:** | Fanatic (17) |
| **XP Value:** | Variable |



Cloud dragons are reclusive creatures that dislike intrusions. They rarely converse, but if persuaded to do so they tend to be taciturn and aloof. They have no respect whatsoever for creatures that cannot fly without assistance from spells or devices.

At birth, cloud dragons have silver-white scales tinged with red at the edges. As they grow, the red spreads and lightens to sunset orange. At the mature adult stage and above, the red-orange color deepens to red gold and almost entirely replaces the silver.

Cloud dragons speak their own tongue and a tongue common to all neutral dragons. Also 17% of hatchling cloud dragons can speak with any intelligent creature. The chance to possess this ability

increases 5% per age category.

**Combat:** Cloud dragons are as likely to avoid combat (by assuming cloud form) as they are to attack. When attacking, they use their breath weapon to scatter foes, then cast *solid fog* and use their manipulation abilities to blind and disorient their foes. When very angry, they conjure storms with *control weather* spells, then they call lightning. They like to use *stinking cloud* and *control winds* spells against flying opponents.

**Breath Weapon/Special Abilities:** A cloud dragon's breath weapon is an icy blast of air that is 140 feet long, 30 feet high, and 30 feet wide. Creatures caught in the blast suffer damage from cold and flying ice crystals. Furthermore, all creatures three size classes or more smaller than the dragon are blown head over heels for 2d12 feet, plus 3 feet per age category of the dragon. Characters who can grab solid objects won't be carried away unless they fail. Strength checks; creatures with claws, suction cups, etc., can avoid the effect if they have a suitable surface to cling to.
A cloud dragon casts its spells and uses its magical abilities at 6th level plus its combat modifier.
Cloud dragons are immune to cold.
They can assume (or leave) a cohesive, cloud-like form at will, once per round. In this form, they are 75% unlikely to be distinguished from normal clouds; when in cloud form, their Armor Class improves by -3 and their magic resistance increases by 15%. Cloud dragons can use their spells and innate abilities while in cloud form, but they cannot attack physically or use their breath weapon. In cloud form, cloud dragons fly at a speed of 12 (MC:A).
As they age, cloud dragons gain the following additional powers. **Very young:** *solid fog* twice a day. **Young:** *stinking cloud* twice a day. **Juvenile:** *creature water* twice a day (affects a maximum of three cubic yards [81 cubic feet]). **Adult:** *obscurement* three times a day. **Mature adult:** *call lightning* twice a day. **Old:** *weather summoning* twice a day. **Very old:** *control weather* twice a day. **Ancient:** *control winds* twice a day.

**Habitat/Society:** Cloud dragons lair in magical cloud islands where there is at least a small, solid floor laying eggs and storing treasure. Very rarely, they occupy cloud-shrouded mountain peaks.
Cloud dragons are solitary 95% of the time. If more than one is encountered it is a single parent with offspring.

**Ecology:** Like all dragons, cloud dragons can eat just about anything. They seem to subsist primarily on rain water, hailstones, and the occasional bit of silver.
Because they inhabit in similar territories, cloud dragons come into conflict with silver dragons. Despite their higher intelligence, cloud dragons usually lose confrontation because of the silver dragons' secondary breath weapons and ability to muster allies.

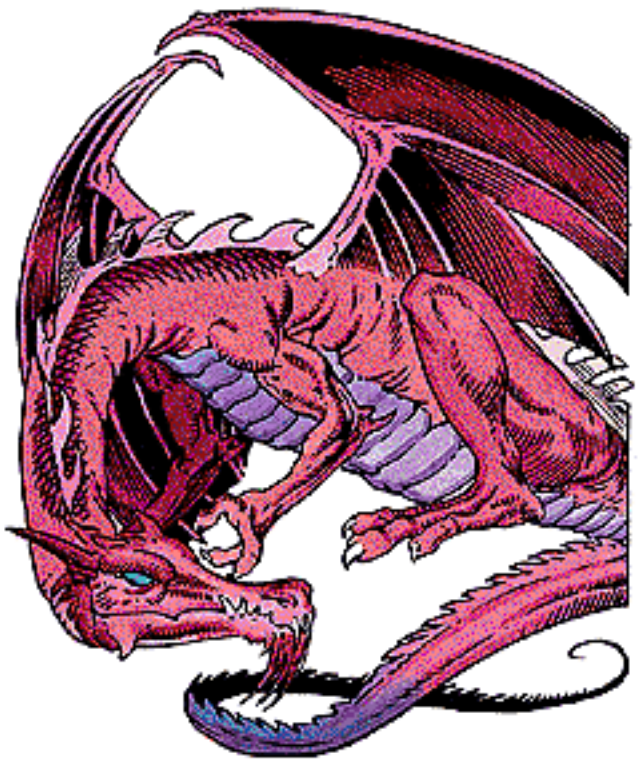
# Deep Dragon

| | |
|---|---|
| **Climate/Terrain:** | Hill and mountain caverns, subterranean |
| **Frequency:** | Rare |
| **Organization:** | Solitary or clan |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivorous |
| **Intelligence:** | Exceptional (15-16) |
| **Treasure:** | Special |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1 (2-5) |
| **Armor Class:** | 0 (base) |
| **Movement:** | 12, Fl 30 (C), Br 6, Sw 9 |
| **Hit Dice:** | 14 (base) |
| **THAC0:** | 7 (base) |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 3-12/3-12/3-24 |
| **Special Attacks:** | See below |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | H (24' base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |



Deep dragons are little known on the surface world. They are the hunters of the Underdark. Cunning and patient, they place their survival, followed by their joy of hunting, above all else. Deep dragons carefully amass and hide treasure in various caches, guarded with traps and magic. They are able to use most magical items.

Deep dragons are an iridescent maroon when they hatch, soft-scaled, and unable to change form. They keep to their birth-lair until they have mastered both of their other forms-a giant winged worm or snake and a human (or drow) form.

**Combat:** Deep dragons burrow and fight with powerful, stone-rending claws. They love to fight and

hunt prey through the lightless caverns of the Underdark, employing their various forms. In snake form, they are AC 6, MV 9, Fl 4(D), Sw 11, losing claw attacks, but gaining a constriction attack (attack roll required, inflicts 3d8 points of damage per round, hampers movement, spellcasting, and causes -1 on attack rolls and a 1-point AC penalty).

In human form, a deep dragon is AC 10, MV 12, Sw 12, and causes damage by spell or weapon type. Armor can be worn, but it is always destroyed (inflicting 2d4 points of damage to the dragon) in any transformation of shape. A deep dragon can alter its features to resemble any humanoid of roughly human size.. It is 66% likely to copy a specific being well enough to be mistaken for the actual creature.

A deep dragon's breath weapon is a cone of flesh-corrosive gas 50 feet long, 40 feet wide, ad 30 feet high. Creatures in the cloud can save vs. breath weapon for half damage (if they have dry, exposed skin, they save against the flesh-eating gas at -2). Cloth, metal, and wood are not affected. Leather is treated as dry, exposed skin.

Deep dragons cast spells at 9th level, adjusted by their combat modifiers. They are born with infravision, *true seeing*, and unerring *detect magic* abilities, and immunities to *charm*, *sleep*, and *hold* magic. Deep dragons are immune to extremes of heat and cold (-3 on each die of damage taken, to a minimum of 1 hp per die).

As deep dragons age, they gain the following additional powers:

| **Age** | **Ability** |
|---|---|
| Very young | assume snakeform 3 times/day |
| Young | assume "human" form 3 times/day |
| Juvenile | one more form change/day (each), regen. 1d4 hp/turn |
| Adult | regenerate 1d4 hp/6 rounds; *free action* at will |
| Mature adult | regenerate 1d4 hp/4 rounds; *levitate* 3 times/day |
| Old | *transmute rock to mud* and *telekinesis* 3 times/day |
| Very old | *move earth* 3 times/day |
| Venerable | *passwall* and *disintegrate* 2 times/day |
| Wyrm | one additional use/day of powers gained since Old age; *stone shape* 2 times/day, *tongues* once/day |
| Great wyrm | *repulsion* 3 times/day, affecting all except dragons. One additional use/day of *stone shape* and *tongues* |

**Habitat/Society:**Deep dragons roam the Underdark and are great explorers. Most often deep dragons are found in well-defended lairs in the Underdark. They often use their powers to reach caverns inaccessible to most creatures. Deep dragons often work with drow.

**Ecology:** Deep dragons have been known to eat almost anything, but they particularly prize the flesh of clams, fish, kuo-toa, and aboleth. They view cloakers and mind flayers as dangerous rivals in the Underdark. Deep dragons avoid confrontations with other dragons and never fight or steal from others of their own kind.

# Mercury Dragon

| | |
|---|---|
| **Climate/Terrain:** | Temperate and subtropical/Mountains |
| **Frequency:** | Very rare |
| **Organization:** | Solitary or clan |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Highly (13-14) |
| **Treasure:** | See below |
| **Alignment:** | Chaotic good |
| **No. Appearing:** | 1 (2-5) |
| **Armor Class:** | -1 (base) |
| **Movement:** | 15, Fl 36 (C), Jp 3 |
| **Hit Dice:** | 11 (base) |
| **THAC0:** | 9 (base) |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 2-8/2-8/2-20 |
| **Special Attacks:** | See below |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | See below |
| **Size:** | H (25' base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |

Mercury dragons are fast, highly-maneuverable creatures with relatively small bodies and long tails. Although good in alignment, they are very whimsical, making and changing decisions frequently.
At birth, a mercury dragon's scales are dull silver. As it ages, the scales become brighter and brighter, until at adult age they gain a brilliant mirror finish. Sunlight or other sources of light reflecting off the scales and wings of a mercury dragon can be blinding.
Mercuries speak the language of good dragons, but at high speed, so there's only a 75% chance of understanding a mercury dragon.

**Combat:** Mercury dragons are as unpredictable when it comes to combat, as they are in any other

situation. They may parley, they might attack instantly, or, perhaps, they may avoid combat entirely. They never attack good-aligned creatures unless sorely provoked.
Mercury dragons always use spells in combat, if possible. They are very creative, and can always figure out some innovative way of using virtually any spell to advantage in combat.
In addition to the breath weapon and the attack modes shared by all dragons, mercury dragons can curve the mirror-bright membranes of their wings to reflect and concentrate available light (as dim as full moonlight) into a beam of dazzling brightness. They can aim the beam at one enemy per round-at the expense of not being able to use their wing buffet, and the enemy must roll a successful saving throw vs. spell or be blinded for 1d4+1 rounds. If not using this technique as a weapon, they can use the beam much like a search-light.
A mercury dragon's breath weapon is a beam of brilliant, yellow light. The beam is 5 feet wide and extends 60 feet from the creature's mouth. Any creature caught in the beam receives damage from heat (saving throw for half damage). The heat of the beam is intense enough to ignite flammable objects that fail saving throws vs. magical fire.
A mercury dragon casts spells and uses magical abilities at the 10th level, plus its combat modifier. At birth, mercury dragons are immune to fire and all magical forms of blindness.
They also receive a +3 bonus to saving throws against light-based attacks. As they age, they gain the following additional powers:

| Age | Ability |
|---|---|
| Young | *gaze reflection* at will |
| Juvenile | *mirror image* three times per day |
| Adult | *polymorph self* twice per day |
| Old | *telekinesis* twice per day |
| Wyrm | *project image* once per day |

**Habitat/Society:** Mercury dragons are loners by nature. Their mating behavior is free-wheeling, fun loving, and generally irresponsible. If a female becomes impregnated, however, the male's protective instincts take over. Mercuries are very protective of their offspring, and will give their lives to save them. Offspring usually stay with their parents until they reach the juvenile age category.
Because of their unpredictable, sometimes almost irrational nature, mercuries very rarely have close relationships with other creatures in the area. For this reason, mercuries have to depend on magical and mechanical traps and guards to protect their lairs when they are away.

**Ecology:** Mercury dragons eat anything, but they prefer to feed on metal ores. Although they have no venom attacks, the flesh of mercury dragons is highly poisonous.

# Mist Dragon

| | |
|---|---|
| **Climate/Terrain:** | Tropical and subtropical/Forests, lake shores, sea shores, and river banks |
| **Frequency:** | Very rare |
| **Organization:** | Solitary or clan |
| **Activity Cycle:** | Any |
| **Diet:** | Special |
| **Intelligence:** | Exceptional (15-16) |
| **Treasure:** | Special |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 (2-5) |
| **Armor Class:** | 1 (base) or -2 (base) |
| **Movement:** | 12, Fl 39 (C), Sw 12 |
| **Hit Dice:** | 11 (base) |
| **THAC0:** | 9 (base) |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 2-5/2-5/2-24 |
| **Special Attacks:** | Special |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Nil or 15% |
| **Size:** | G (54' base) |
| **Morale:** | Champion (16 base) |
| **XP Value:** | Variable |

Mist dragons are solitary and philosophical. Their favorite activity is sitting quietly and thinking. They hate being disturbed and dislike conversation.

At birth, a mist dragon's scales are shiny blue-white. As the dragon ages, the scales darken, becoming blue-gray with metallic silver flecks that sparkle in sunlight.

Mist dragons speak their own tongue and a tongue common to all neutral dragons. Also, 15% of hatchling mist dragons can speak with any intelligent creature. The chance to possess this ability increases 5% per age category.

**Combat:** Mist dragons try to avoid encounters by assuming mist form. In combat, they quickly use their breath weapons, then assume mist form and hide in the vapor-where they launch a spell assault.

**Breath Weapon/Special Abilities:**A mist dragon's breath weapon is a cloud of scalding vapor that is 90 feet long, 30 feet wide, and 30 feet high. Creatures caught in vapor suffer can roll saving throws vs. breath weapon for half damage. In still air, the vapor persists for 1d4+4 rounds; on the second round, it condenses into a clammy, smothering for that blinds air-breathing creatures for 1d4 rounds and inflicts 3d4 points of drowning damage per round for as long as the creature remains in the cloud (a successful saving throw vs. breath weapon negates both effects).
A mist dragon casts its spells and uses its magical abilities at 6th level plus its combat modifier.
Mist dragons are immune to fire and heat.
Mist dragons can assume (or leave) a cohesive, mist-like form at will, once per round. In this form, they are 75% unlikely to be distinguished from normal mist; in mist form, their Armor Class improves by -3 and their magic resistance increases by 15%. They can use their spells and innate abilities while in mist form, but they cannot attack physically or use their breath weapon. Mist dragons in mist form can fly at a speed of 9 (MC: A).
As they age, they gain the following additional powers: **Very young:** *water breathing* twice a day. **Young:** *wall of fog* twice a day. **Juvenile:** *create water* twice a day (affects a maximum of three cubic yards [81 cubic feet]). **Old:** *solid fog* twice a day. **Very old:** *predict weather* twice a day. **Ancient:** *airy water* twice a day.

**Habitat/Society:** Mist dragons live near waterfalls, rapids, coastlines, or where rainfall is frequent and heavy. Their lairs are usually large natural caverns or grottoes that are mist-filled and damp.
Forest-dwelling mist dragons greatly resent the green dragons' advances before losing all patience and launching an all-out campaign mist dragons might have bronze dragons for neighbors. This, however, seldom leads to conflict as both dragons are content to leave the others alone.
Mist dragons are loners, and 90% of all encounters are with individuals. Group encounters are with parents and offspring.

**Ecology:** Mist dragons can eat almost anything, including woody plants and even mud. However, they draw most of their sustenance directly from natural mist or spray. They often lie in misty or foggy places, thinking and basking in the moisture.

Shadow dragons are sly and devious. They are instinctively cunning and are not prone to taking risks. At all ages, a shadow dragon's scales and body are translucent, so that when viewed from a distance it appears to be a mass of shadows.

Shadow dragons speak their own tongue and a tongue common to all evil dragons. Also, 17% of hatchling shadow dragons can speak with any intelligent creature. The chance to possess this ability increases 5% per age category.

**Combat:** Shadow dragons prefer to attack from hiding, usually employing invisibility or hiding in shadows. They use illusion/phantasm spells to confuse and misdirect foes. Older dragons are especially fond of their non-detection ability.

**Breath Weapon/Special Abilities:** A shadow dragon's breath weapon is a cloud of blackness that is 40 feet long, 30 feet wide, and 20 feet high. Creatures caught in the cloud are blinded for one melee round and lose ¾ (round up) of their life energy (levels or Hit Dice); a successful saving throw vs. breath weapon reduces the loss to ½ (round up). The life energy loss persists for a variable number of turns, shown on the table above. Negative plane protection spells prevent this life energy loss.
A character who is reduced to 0 or fewer levels lapses into a coma for the duration of the cloud's effect.
A shadow dragon casts spells and uses its magical abilities at 6th level plus its combat modifier.
Shadow dragons are born immune to energy draining and with the ability to hide in shadows with 40% chance of success; this ability increases 5% per age category to a maximum of 95%.
As they age, they gain the following additional powers: **Juvenile:** *mirror image* three times a day (1d4+1 images). **Adult:** *dimension door* twice a day. **Old:** *non-detection* three times a day. **Venerable:** *shadow walk* once a day. **Great wyrm:** *create shadows* three times a day. (This ability creates a mass of leaping shadows with a radius of 100 yards, duration one hour. All magical {and normal}light and darkness sources are negated for as long as they remain in the radius. Creatures able to hide in shadows can do so in these magical shadows even if under direct observation. Shadow dragons and other creatures from the plane of Shadow can move and attack normally while hiding in these shadows, effectively giving them improved invisibility. A successful *dispel magic* spell banishes the shadows.)

**Habitat/Society:** Shadow dragons hate both bright light and total darkness, preferring variegated lighting with patches of diffuse light and deep, inky shadows. On the Prime Material plane, their lairs are always places that provide shadowy light for most of the day. They prefer ancient ruins, where they can hide underground when the sun is bright and still find shadows above ground during dawn and twilight. In the plane of Shadow, they live in dense thickets of trees and brambles, fortified castles, or labyrinthine caves. In either plane, they prefer to locate their lairs near colonies of other creatures that can alert them to potential foes or victims. The dragons seldom actually cooperate with these allies, however, though the dragons commonly prey on them.
Shadow dragons love dark-colored, opaque gems, and especially prize black stones. They also collect magical items that produce shadows or darkness. They use these items to turn areas filled with total darkness or light into masses of shadows.

**Ecology:** Shadow dragons eat almost anything. Their favorite food is rotting carrion, though they often kill for sport. Slain victims are left to decay until they become suitably foul. These dragons are equally fond of frost-killed, waterlogged, or salt-poisoned plants.

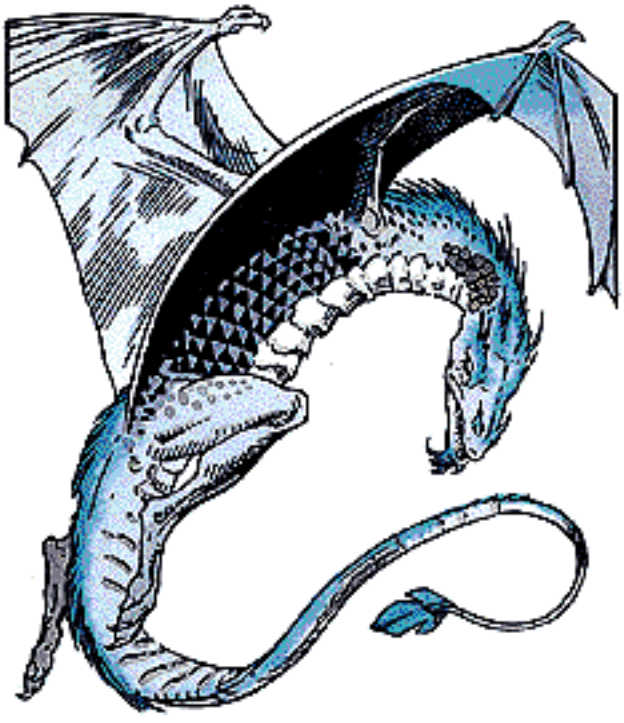
# Steel Dragon

| | |
|---|---|
| **Climate/Terrain:** | Temperate cities (rarely temperate hills, plains, and forests.) |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Special |
| **Intelligence:** | Supra-genius (19-20) |
| **Treasure:** | Special |
| **Alignment:** | Lawful neutral (good) |
| **No. Appearing:** | 1 |
| **Armor Class:** | 0 (base) |
| **Movement:** | 9, Fl 30(D), Sw 6 |
| **Hit Dice:** | 11 (base) |
| **THAC0:** | 9 (base) |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 1-10/1-10/3-30 |
| **Special Attacks:** | Special |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | Variable |
| **Size:** | H (25' base) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | Variable |



Steel dragons love to have human and demihuman companions, and they prefer to live amid the hustle and bustle of great cities. They often pose as sages, scholars, mages, or other intellectuals.

At birth, a steel dragon's scales are deep blue-gray with steely highlights. As the dragon approaches adulthood, its color slowly lightens to that of lustrous burnished steel. When these dragons take on human form, they always have one steel-gray feature-hair, eyes, nails, or sometimes a ring or other ornament.

Steel dragons speak their own tongue and a tongue common to all neutral dragons. Also, 19% of hatchling steel dragons can speak with any intelligent creature. This chance increases by 5% per age

category.

**Combat:** Steel dragons favor repartee over combat. If pressed, they usually begin with a spell assault and avoid melee. If seriously harmed or threatened, they resume dragon form and use their breath weapons. They breathe on any foe they plan to engage in melee, and they seek to keep their foes within the cloud until the gas loses its potency.
A steel dragon's breath weapon is a cube of toxic gas. The dragon can monitor the amount of gas released so closely that it can make the cube as small as it wishes or as large as shown in the table below (the a side of the cube). Creatures caught in the gas must roll successful saving throws vs. poison with a -2 penalty or die instantly. The gas is quickly absorbed through the skin and is just as lethal if inhaled. Coating all exposed skin with lard or grease offers some protection (saving throw penalty negated). Victims who succeed with the save suffer the indicated amount of damage. In still air, the gas stays active for two melee rounds. Steel dragons are immune to all poisons.
A steel dragon can *polymorph self* five times a day. Each change in form lasts until the dragon chooses a different form. Reverting to the dragon's normal form does not count as a change.
Steel dragons are immune to wizard spells of 1st to 4th levels and cast spells and use their special abilities at 8th level, plus their combat modifier. As they age, they gain the following additional powers:

| **Age** | **Abilities** |
|---|---|
| Young | *cantrip* twice a day |
| Juvenile | *friends* once a day |
| Adult | *charm person* three times a day |
| Mature adult | *suggestion* once a day |
| Old | *enthrall* once a day |

**Habitat/Society:** Steel dragons prefer human lodgings that are well equipped with strong rooms or vaults to protect their treasures.
Steel dragons prefer human form to their own, and they always have mortal companions. They are endlessly curious about human and demihuman art, culture, history, and politics. They always keep their true nature secret, but they are able to recognize each other.

**Ecology:** Steel dragons prefer human food. Unlike other form shifting dragons, they cannot live on such fare indefinitely, as they must eat enough to maintain their true bulk. Once or twice a month, they leave their adopted cities and go into the wilderness to hunt for food. They explain their absences in a way consistent with their human identities.
Steel dragons hate chaotic creatures who seek to disrupt life in cities or despoil their hunting grounds. In the city the dragons never hesitate to report troublemakers or to use their special abilities to hunt down criminals. In the wilderness, they prefer swifter forms of justice.

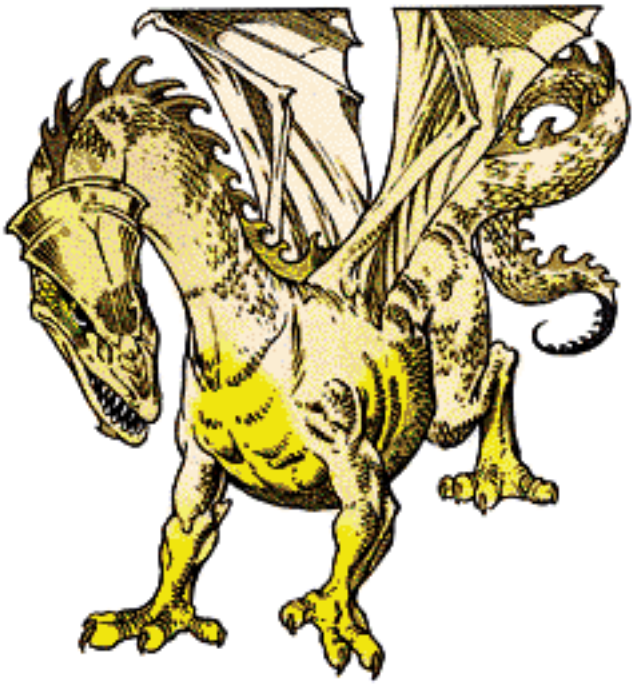
# Yellow Dragon

| | |
|---|---|
| **Climate/Terrain:** | Desert |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Very (11-12) |
| **Treasure:** | See below |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1 (1-4) |
| **Armor Class:** | 0 (base) |
| **Movement:** | 12, Fl 30 (C) |
| **Hit Dice:** | 13 (base) |
| **THAC0:** | 7 (base) |
| **No. of Attacks:** | 3+special |
| **Damage/Attack:** | 1-8/1-8/2-16 |
| **Special Attacks:** | See below |
| **Special Defenses:** | Variable |
| **Magic Resistance:** | See below |
| **Size:** | G (36' base) |
| **Morale:** | Champion (15-16) |
| **XP Value:** | Variable |



Although the existence of yellow dragons has long been predicted by sages (based on theories of primary colors), the first specimen was spotted only five or so years ago. The creatures are solitary and secretive, preferring to lay in wait for prey to stumble into carefully-prepared traps instead of hunting actively.

At birth, yellows have soft, tan scales. As they grow older, the scales harden and become lighter in color, eventually reaching the grayish yellow of desert sands. Their scales always have a dusty texture to them, giving them a finish that does not reflect light well. Even their teeth and claws have a similar finish. No part of the yellow dragon will glint in the sunlight, thereby giving away its position.

Yellow dragons speak their own tongue, which is quite different than that spoken by other evil dragons. Yellows have no interest in speaking with other races, and so they learn no other languages.

**Combat:** Although preferring guile to combat and ambush to attack, yellows are fierce and cunning fighters. Even if forced into a situation where direct combat is inevitable, they'll still use their spells and innate abilities so as to mislead, misdirect, and distract their opponents.

A favorite hunting tactic for a yellow is to dig a steep-walled, cone-shaped depression in the sand, and then bury itself at the bottom of this crater with just its eyes and nostrils showing. When a creature stumbles into the depression, the dragon moves its wings in the sand, causing the steep walls of the cone to collapse and drawing the prey straight to the dragon's mouth. A yellow dragon casts spells and uses magical abilities at 8th level, plus its combat modifier.

A yellow dragon's breath weapon is a high-velocity blast of scorching air mixed with sand. This affects an area 50 feet long, 40 feet wide, and 20 feet high. Creatures caught within this blast must roll successful saving throws vs. breath weapon for half damage. Regardless of the outcome of this roll, they must make another saving throw vs. breath weapon. Failure means that the abrasive sand in the breath blast has damaged their eyes, blinding them for 1d4+1 rounds.

Yellow dragons are immune to fire and heat and can cast *silence, 10' radius* at will. As they age, they gain the following additional powers:

| Age | Abilities |
|---|---|
| Young | *create or destroy water* three times per day |
| Juvenile | *dust devil* three times per day |
| Adult | *improved invisibility* twice per day |
| Old | *wind wall* three times per day |
| Wyrm | *enervation* three times per day |

**Habitat/Society:** Yellow dragons love deserts, preferring areas of sandy, windswept desolation. They are most comfortable in daytime temperatures of 105 degrees and up, although they can easily survive subfreezing temperatures at night. They share much the same territory as brasses; thus the species occasionally come into conflict.

Yellows are solitary, selfish creatures that form no close bonds with any other creature, including other yellows. They are highly territorial; the only time they'll let another yellow into their territory is to mate, which is actually quite rare. Immediately afterward, the dragons separate. The mother raises the offspring, but won't go out of her way to protect them from attackers. The young dragons usually leave home before they reach the juvenile age category. The main enemies of yellow dragons are brasses, which actively hunt the smaller creatures.

**Ecology:** Although able to eat anything, yellows favor fresh meat. (Demi)humans are considered a delicacy, as are the unhatched eggs of brass dragons. (Yellows rarely get to enjoy this latter feast.)

| **Magic Resistance:** | Nil |
| **Size:** | G (30' diameter shell) |
| **Morale:** | Fanatic (17) |
| **XP Value:** | 12 Hit Dice: 10,000 |
| | 13 Hit Dice: 11,000 |
| | 14 Hit Dice: 12,000 |

Dragon turtles are one of the most beautiful, awesome, and feared creatures of the water. With their deadly jaws and breath weapon, and their penchant for capsizing ships, dragon turtles are dreaded by mariners on large bodies of water, both fresh and salt.

When a dragon turtle surfaces, it is sometimes mistaken for the reflection of the sun or moon on the

water. The turtle's rough, deep green shell is much the same color as the deep water the monster favors, and the silver highlights that line the shell are patterned like light dancing on open water. The turtle's legs and tail are of a lighter green, and they are flecked with golden highlights. The coloration of the creature's head is similar to the legs and tail, but its crest spines are golden with dark green webbing connecting them. A dragon turtle's shell can reach to 30 feet in diameter, and an adult turtle can measure over 40 feet from its snout to the tip of its tail. Dragon turtles speak their own highly-developed language.

**Combat:** Though dragon turtles may be mistaken for the pleasant sight of light glinting off of water, that illusion is never maintained for long. Dragon turtles are fierce fighters and will generally attack any creature that threatens its territory or presents itself as a potential meal. In combat, dragon turtles will usually (90%) attack with their formidable claws and teeth first. Its shell provides the turtle with excellent protection, though once the dragon turtle strikes a victim, it rarely needs to rely upon this safeguard.

The dragon turtle's shell also provides the creature with a weapon to attack ships that foolishly pass through its territory uninvited. Sinking as deep as necessary, the dragon turtle will wait for the ship to pass over it and then rise up underneath the vessel, using all of its considerable bulk to capsize the unlucky target. Ships under 20 feet in length will be capsized by this attack 95% of the time, vessels from 20 to 60 feet long will be capsized 50% of the time, and ships over 60 feet will be capsized 20% of the time. Ships not capsized will sustain some damage.

In combat, when neither its bite nor its capsizing attack is enough to defeat an enemy, a dragon turtle will use its breath weapon. The turtle can belch forth a cloud of scalding steam that will cover an area 60 feet long, 40 feet wide, and 40 feet high. This attack causes 20-120 points of damage (20d6), and characters or creatures making a saving throw vs. breath weapon take half damage. Like true dragons, dragon turtles can use this deadly breath weapon three times a day.

**Habitat/Society:** Dragon turtles are extremely solitary creatures. Large, desolate sea caves and secret underground caverns that can be accessed only through the water are their favorite lairs. These lairs are difficult to find, but adventurers locating a dragon turtle's cave will find it filled with treasures of all types. The turtle gathers this treasure, which it will protect to the death, from the ships sunk in its territory.

A dragon turtle's territory is well-defined and may cover as much as fifty square miles of open water. Other dragon turtles are allowed into this area only during mating season, though turtles of the same sex will always fight to the death upon meeting. It is this hostility toward their own kind that keeps the number of dragon turtles relatively low.

Mariners of any experience recognize the territorial claims of dragon turtles and will often make extravagant tributes to the turtle controlling areas necessary for safe and speedy trade.

**Ecology:** Dragon turtles are carnivorous and will eat almost any creature, including humans or other dragon turtles, to satisfy their voracious appetite. Large fish seem to be the prefered food for dragon turtles, and the turtles can often be found lurking in the weeds and muck at the bottom of a lake or sea waiting for fish to pass. In particularly poor years for fish, dragon turtles have been known to use their breath weapon to kill large groups of sea birds that stray too close to the water for food.

Conflict often arises between dragon turtles and the many intelligent aquatic races, like the locathah or mermen, because of competition for ideal lairs. Like many of their land-based relatives, dragon turtles are considered treacherous and selfish by all creatures that share their domain.

Dragon turtle shells make outstanding shields and armor. Because of the shell's strength and natural resistance to the dragon turtle's own breath weapon, armor or a shield made out of this material gains +1 to its defensive rating. The shield or armor will also save as an item against destruction by fire or steam-based attacks at +4.

# Dragonet, Faerie Dragon

| | |
|---|---|
| **Climate/Terrain:** | Temperate, tropical, and Subtropical forests |
| **Frequency:** | Very rare |
| **Organization:** | Solitary or clan |
| **Activity Cycle:** | Any |
| **Diet:** | Herbivore |
| **Intelligence:** | Genius (17-18) |
| **Treasure:** | S, T, U |
| **Alignment:** | Chaotic good |
| **No. Appearing:** | 1-6 |
| **Armor Class:** | 5 (1 when invisible) |
| **Movement:** | 6, Fl 24 (A) |
| **Hit Dice:** | See below |
| **THAC0:** | 17 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-2 |
| **Special Attacks:** | Breath weapon, spells |
| **Special Defenses:** | Invisibility |
| **Magic Resistance:** | See below |
| **Size:** | T (1'-1 ½' long) |
| **Morale:** | Steady (11) |
| **XP Value:** | 3,000 |

A chaotic offshoot of the pseudodragon, the faerie dragon lives in peaceful, tangled forests and thrives on pranks, mischief, and practical jokes.

Faerie dragons resemble miniature dragons with thin bodies, long, prehensile tails, gossamer butterfly wings, and huge smiles. Their colors range through the spectrum, changing as they age, from the red of a hatchling to the black of a great wyrm (see chart). The hides of females have a golden tinge that sparkles in the sunlight; males have a silver tinge.

All faerie dragons can communicate telepathically with one another at a distance of up to 2 miles. They speak their own language, along with the language of sprites, pixies, elves, and the birds and animals in their area.

**Combat:** Faerie dragons can become invisible at will, and can attack, use spells, and employ breath weapons while invisible. They attack as 4-HD monsters, biting for 1-2 points of damage. Most (65%) faerie dragons employ wizard spells as a wizard of the level indicated on the accompanying chart; 35% employ priest spells of the following spheres: Animal, Plant, Elemental, and Weather. Almost all spells are chosen for mischief potential. The two most common spells of faerie dragons are *water breathing* and *legend lore;* other favorites include *ventriloquism, unseen servant, forget, suggestion, distance distortion, limited wish, obscurement, animal growth,* and *animate rock.*

A faerie dragon usually begins its attacks by turning invisible and using its breath weapon, a 2-foot-diameter cloud of euphoria gas. A victim failing a saving throw vs. breath weapon will wander around aimlessly in a state of bliss for the next 3d4 minutes, during which time he is unable to attack and his Armor Class is decreased by 2. Even though he is unable to attack, the victim can keep his mind on the situation if he succeeds on an Intelligence check (by rolling his Intelligence score or less on 1d20) each round; if he fails an Intelligence check, he completely loses interest in the matters at hand for the duration of the breath weapon's effect.

Faerie dragons avoid combat and never intentionally inflict damage unless cornered or defending their lairs. If attacked, however, they engage in spirited defense, ably supported by sprite and pixie friends, until the opponents are driven away.

**Habitat/Society:** Faerie dragons make their lairs in the hollows of high trees, preferably near a pond or stream, because they are quite fond of swimming and diving. They often live in the company of a group of pixies or sprites.

Faerie dragons take advantage of every opportunity to wreak mischief on passers-by, frequently using forest creatures to help them in their pranks. Though many of these pranks are spontaneous, months of preparation can go into a single, spectacular practical joke. A tell-tale giggle, which sounds like the tinkling of tiny silver bells, often alerts potential victims to the presence of invisible faerie dragons.

**Ecology:** Faerie dragons eat fruit, vegetables, nuts, roots, honey, and grains. They are especially fond of fruit pastries and have been known to go to great lengths to get a fresh apple pie.

| Age Category | Hit Points | Color | Magic Resist. | Wizard Level | Priest Level |

# Dragonet, Firedrake

| | |
|---|---|
| **Climate/Terrain:** | Temperate/Hills and mountains |
| **Frequency:** | Rare |
| **Organization:** | Familial lair |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore |
| **Intelligence:** | Semi- (2-4) |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **No. Appearing:** | 2-8 |
| **Armor Class:** | 5 |
| **Movement:** | 6, Fl 18(C) |
| **Hit Dice:** | 4 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 2-8 |
| **Special Attacks:** | Breath weapon |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | S (4' long) |
| **Morale:** | Average (9) |
| **XP Value:** | 420 |

Although frequently mistaken on first sighting for a young red dragon, the firedrake is neither as intelligent nor as powerful as its dragon cousin. It responds with flame to any stimulus.
This small dragonet -- 4' long, and a bit over 2' in height -- has the features and proportions of a miniature red dragon, but its scaly hide is thinner and more translucent than that of even the youngest of true dragons. The hide of the dragonet twitches and quivers almost imperceptibly, and is somewhat mottled in color, with mauve and burgundy splotches over the red undercolor. The wings beat slowly, even when the dragonet is on the ground. In this manner the firedrake provides air flow to itself, and wards off pesky insects. A shimmer of heat rises off of the dragonet at all times.

**Combat:** If a firedrake is disturbed, there is a 50% chance it will attack. Its primary attack is its breath weapon (fire), which it can use up to five times daily. The fire forms a cone from the snout of the dragonet to a 10' diameter circle at the extreme end of its 60' range, and causes 2-16 points on all affected (save vs. breath weapon for half damage). The firedrake's claws are not used in combat, but its bite will cause 2-8 points of damage.
The dragonet's blood burns fiercely in air, as there is a high phosphorous content to the blood. In fact, the fire-breathing of these creatures is actually the voluntary expelling of a jet of its pyrophoric blood. Because of the flammability of the dragon's blood, blunt weapons such as staves or clubs are less dangerous than those which cause blood loss. Any creature making a successful slashing or piercing attack on a firedrake must save vs. breath weapon, or take 1-2 points of fire damage.
In aerial combat, the firedrake is particularly fond of attacking airborne creatures from below and behind. The heat from the firedrake and its breath attack naturally radiates upwards, sometimes disrupting the maneuvers of creatures that depend on relatively smooth air currents for flying or gliding. The firedrake will sometimes simply ram smaller opponents in their soft underbelly in the hope of stunning them and causing them to plummet to their deaths.

**Habitat/Society:** Firedrakes are familial creatures, with a mated male and female taking up residence in a lair, which is generally a small cavelet or rocky shelf under a ledge or outcropping. Usually six to eight eggs are laid and tended by the pair, being kept warm by the ample heat of the bodies of the parents. The eggs, laid in early summer, take about 60 days to hatch. The young firedrakes learn to breathe fire even before they learn to fly, and are even more nervous than the adults, spouting flames several times a day in the lair or nearby during this period. Flight first occurs about 60 days after hatching.
The parents are very protective of their lair because of the young. Although firedrakes normally only range 1-2 miles from their lair, they may patrol up to twice that distance during the times at which their young are most vulnerable to attack.
Firedrakes leave the family lair early in the spring following their hatching, flying sometimes scores of miles before encountering a firedrake of the opposite sex willing to mate for life and establish a new lair. The rare mating fights that do occur are spectacularly fiery, although one male usually concedes and retreats before the battle becomes lethal.
Firedrakes gather no treasure, although they take no special care to remove the bones or effects of any that they defeat.

**Ecology:** Firedrakes have a short lifespan compared with their larger cousins, the dragons, usually living only 75 to 100 years.
Firedrake blood can be kept, in its liquid state, in a sealed and airtight container, or under water or some other inert liquid. It can then be used as a firebomb, equivalent to a torched flask of oil, or used to create flaming weapons. For instance, swords dipped in the blood immediately become flaming swords for 3-6 melee rounds, although the sudden, intense heat upon the blade creates a 2% cumulative chance per round of the sword breaking upon impact with each blow struck during the period in which flame engulfs it. After the flame ends, the sword is otherwise unaffected.
The blood of the firedrake actually burns within its veins, creating the shimmer of heat that always rises from these creatures. The burning of the blood also requires a high level of oxygen, hence the constant slow beating of the dragonet's wings, even at rest. If deprived of air, it will die of suffocation in about half the time of a similarly sized creature.

# Dragonet, Pseudodragon

| | |
|---|---|
| **Climate/Terrain:** | Temperate or subtropical forests and caves |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | Q (x10) |
| **Alignment:** | Neutral (good) |
| **No. Appearing:** | 1 (50% chance of 1-8 in nests) |
| **Armor Class:** | 2 |
| **Movement:** | 6, Fl 24 (B) |
| **Hit Dice:** | 2 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-3+special |
| **Special Attacks:** | Poison sting |
| **Special Defenses:** | Chameleon power |
| **Magic Resistance:** | 35% |
| **Size:** | T (1½' long) |
| **Morale:** | Champion (15) |
| **XP Value:** | 420 |

Pseudodragons are a species of small flying lizard that inhabits heavily forested wilderness areas. These playful, benign creatures have magical powers that they can share with others, so they are often sought as companions.

Pseudodragons resemble miniature red dragons. They have fine scales and sharp horns and teeth. A pseudodragon's coloration is red-brown as opposed to the deep red of red dragons. Its tail is about 2 feet long (longer than the pseudodragon itself), barbed, and very flexible.

Pseudodragons communicate via a limited form of telepathy. If one elects to take a human companion, it can transmit what it sees and hears at a distance of up to 240 yards. Pseudodragons can vocalize animal

noises such as a rasping purr (pleasure), a hiss (unpleasant surprise), a chirp (desire), or a growl (anger).

**Combat:** The pseudodragon can deliver a vicious bite with its small, dragonlike jaws, but its major weapon is its sting-equipped tail. The creature can move it with flashing speed and strikes at +4 on attack rolls. Any creature struck must save vs. poison or go into a state of catalepsy that lasts 1-6 days. The victim appears quite dead, but at the end of that time the character will either wake up unharmed (75% chance) or die (25% chance).
Pseudodragons have a chameleonlike power that allows them to alter their coloration to blend with their surroundings. They can blend into any typical forest background with an 80% chance of being undetected by creatures which cannot see invisible objects. Pseudodragons have infravision with a 60 foot range and can see invisible objects.
A pseudodragon is highly magic resistant and can transmit this magic resistance to its human companion via physical contact (a pseudodragon likes to be perched on the top of one's head or curled around the shoulders and upper back).

**Habitat/Society:** These forest-dwelling creatures place their lairs in the hollows of great trees or in large caves.
A pseudodragon will very rarely take a human or demihuman as its companion. Some view these pseudodragons as the human's pet; the pseudodragon will be sure to correct this misunderstanding. There are two ways to become a pseudodragon's companion; one is to use magic to summon it (a *find familiar* spell). Another way is to find the pseudodragon on an adventure and pursuade it to become a companion. The pseudodragon that searches for companionship will stalk a candidate silently for days, reading his thoughts via telepathy, judging his deeds to be good or evil. If the candidate is found to be good, the pseudodragon will present itself to the human as a traveling companion and observe the human's reaction. If the human seems overjoyed and promises to take *very* good care of it, the pseudodragon will accept. If not, it will fly away.
The personality of a pseudodragon has been described by some as catlike. A pseudodragon is willing to serve, provided that it is well-fed, groomed, and receives lots of attention. At times a pseudodragon seems arrogant, demanding, and less than willing to help. In order to gain its full cooperation, the companion must pamper the pseudodragon and make it feel as though it were the most important thing in his life. If the pseudodragon is mistreated or insulted it will leave, or worse, play pranks when least expected. Pseudodragons particularly dislike cruelty and will not serve cruel masters.

**Ecology:** Pseudodragons are omnivorous but prefer to eat meat. Their diet consists chiefly of rodents and small birds with occasional leaves, fruits, and berries. In the wild, pseudodragons live solitary lives, protecting small personal hoards in their nests. They gather to mate once per year, in early spring, when gatherings of dozens of pseudodragons are not uncommon. After mating, males and females separate; females lay speckled brown eggs in clutches of four to six which hatch in mid-summer; females raise the young by themselves. Pseudodragons hibernate in winter; the young leave the nest in spring to mate. Pseudodragons have a lifespan of 10-15 years. Like dragons, they are attracted to bright shiny objects. Pseudodragon eggs can be resold for up to 10,000 gold pieces while a hatchling is worth as much as 20,000 gold pieces.

# Dragonne

| | |
|---|---|
| **Climate/Terrain:** | Warm temperate to tropical/Hills and desert |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Dusk to dawn |

| **Magic Resistance:** | Nil |
| **Size:** | M (5' at shoulder) |
| **Morale:** | Champion (15) |
| **XP Value:** | 2,000 |

Possessing some of the most dangerous qualities of a lion and a brass dragon, the dragonne is a vicious and deadly hunter, and a threat to many who travel in warmer climates.

From a distance, a dragonne looks much like a giant lion, with the one very notable exception of the pair of small, brass-colored wings that stretch from the creature's shoulders. Upon closer inspection, other differences between the dragonne and its feline ancestor become apparent, too. The dragonne is covered with thick, brass-colored scales, much like a brass dragon, and its mane is much thicker and made of far coarser hair than a lion's. The beast also possesses huge claws and fangs, and large eyes, usually

brass-colored like its scales. Dragonnes do not have their own language. Instead, they speak the languages of brass dragons and sphinxes.

**Combat:** Dragonnes usually attack first with their front claws, inflicting 1d8 points of damage with each set, and their terrible jaws, inflicting 3d6 points of damage. This is usually enough to slay most of the creatures the dragonne encounters. If a dragonne is in combat with an especially deadly opponent, or is wounded in a battle with a lesser opponent, however, it will use its deadly roar.

A dragonne's roar causes *weakness* (due to fear) in all creatures within 120 feet of the monster, unless they roll successful saving throws vs. paralyzation. Those creatures that save are not affected, but those that fail to save lose 50% of their Strength for 2d6 rounds. Worse still, any creature within 30 feet of the dragonne when it roars are deafened for 2d6 rounds. No save is possible against the deafening aspect of the dragonne's roar, and all affected creatures cannot hear any sound and fight with a -1 penalty to attack rolls (due to disorientation).

The dragonne's roar is like a dragon's breath weapon in that it can only be used once every three rounds. Creatures within the range of the dragonne's roar must roll saving throws vs. fear each time they hear it. Once a creature is deafened, however, it cannot hear the dragonne's roar, and need not save against it, until the 2d6 rounds of temporary deafness are over.

Although a dragonne's wings are useful only for short periods of time, carrying the creature for only 1-3 turns at a time, the dragonne uses its wings very effectively in battle. If any creatures attempt to charge the dragonne or encircle it, the dragonne simply takes to the air and finds a more defensible position. The dragonne prefers not to fight in the air, as it is very slow and maneuvers poorly compared to most flying creatures. It can fight with its claws and bite, and even its roar, when airborne, so it remains almost as deadly in the air as on the ground.

**Habitat/Society:** Dragonnes prefer to dwell in rocky foothills and deserts. They take large, natural caves for their lairs and store their small amounts of treasure, usually taken from slain adventurers, in loose piles around their rocky homes. Their territories are usually very large, as they generally inhabit desolate areas.

They cannot bear the company of other dragonnes, and the creatures are found in pairs only during their brief mating season, late in the autumn. Dragonnes lay eggs, like their reptilian ancestors, and only one egg is produced a year by any dragonne. The female raises this young dragonne for one year, after which time even a mother and her young will be unfriendly if they meet. Male dragonnes are always antagonistic toward each other.

In fact, dragonnes get along with very few creatures, and are considered a menace by most sentient races. More than anything, however, dragonnes wish to be left alone to hunt.

**Ecology:** The dragonne prefers herd animals like goats for food, especially since they don't fight back as fiercely as humans. It only attacks a human or demihuman for food if no other game is available. Dragonnes are not necessarily aggressive toward strangers, and the creature's reputation as a mindless devourer of helpless travelers is more the product of ignorance than well-researched fact. A dragonne will almost always attack any creature that invades its lair or threatens its territory. This means that adventurers who stumble across a dragonne's cave or settlers who decide to build in a dragonne's territory are often subject to fierce and immediate attack. Creatures not threatening the dragonne's lair or simply passing through its territory are usually left alone. Though the dragonne's intelligence is low, it can tell the difference between a harmless traveler and a potentially troublesome settler.

# Dryad

| | |
|---|---|
| **Climate/Terrain:** | Secluded oak groves |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Herbivore |

| **Special Attacks:** | Charm |
| **Special Defenses:** | See below |
| **Magic Resistance:** | 50% |
| **Size:** | M (5' tall) |
| **Morale:** | Steady (12) |
| **XP Value:** | 975 |

Dryads are beautiful, intelligent tree sprites. They are as elusive as they are alluring, however, and dryads are rarely seen unless taken by surprise -- or they wish to be spotted.

The dryad's exquisite features, delicate and finely chiseled, are much like an elf maiden's. Dryads have high cheek bones and amber, violet, or dark green eyes. A dryad's complexion and hair color changes with the seasons, presenting the sprite with natural camouflage. During the fall, a dryad's hair turns golden or red, and her skin subtly darkens from its usual light tan to more closely match her hair color. This enables her to blend with the falling leaves of autumn. In winter, both the dryad's hair and skin are white, like the snows that cover the oak groves. When encountered in a forest during fall or winter, a

dryad is often mistaken for an attractive maid, probably of elvish descent. No one would mistake a dryad for an elf maid during the spring and summer, however. At these times of year, a dryad's skin is lightly tanned and her hair is green like the oak leaves around her.
Dryads often appear clothed in a loose, simple garment. The clothing they wear is the color of the oak grove in the season they appear. They speak their own tongue, as well as the languages of elves, pixies, and sprites. Dryads can also speak with plants.

**Combat:** Dryads are shy, nonviolent creatures. They rarely carry weapons, but they sometimes carry knives as tools. Though a dryad can use this as a weapon in a fight, she will not resort to using a knife unless seriously threatened.
Dryads have the ability to throw a powerful *charm person* spell three times a day (but only once per round). This spell is so powerful that targets of the spell suffer a -3 penalty to their saving throws. A Dryad always uses this spell if seriously threatened, attempting to gain control of the attacker who could help her most against his comrades. Dryads will only attempt to charm elves as a last resort because of their natural resistance to this type of spell.
The dryad's use of her ability to charm is not limited to combat situations, however. Whenever a dryad encounters a male with a Charisma of 16 or more, she usually tries to charm him. Charismatic victims of a dryad's attentions are taken to the tree sprite's home, where the men serve as amorous slaves to their beautiful captors. There is a 50% chance that a person charmed and taken away by a dryad will never return. If he does escape from the dryad's charms, it will be after 1d4 years of captivity.
This tree sprite also has two other powers that are very useful in defense. Unless surprised, a dryad has the ability to literally step through a tree and then *dimension door* to the oak tree she is part of. She can also speak with plants (as the 4th-level priest spell). This enables the dryad to gather information about parties traveling near her tree, and even to use vegetation to hinder potential attackers.

**Habitat/Society:** Some legends claim that dryads are the animated souls of very old oak trees. Whether this is really the case, it is true that dryads are attached to a single, very large oak tree in their lifetimes and cannot, for any reason, go more than 360 yards from that tree. If a dryad does wander farther away, she becomes weak and dies within 6d6 hours unless returned to her home. The oak trees of dryads do not radiate magic, but someone finding a dryad's home has great power over her. A dryad suffers damage for any damage inflicted upon her home tree. Any attack on a dryad's tree will, of course, bring on a frenzied defense by the dryad.
Although dryads are generally very solitary, up to six have been encountered in one place. This is rare, however. All this really means is that a number of dryad oaks are within 100 yards of one another and the dryads' paths cross. These dryads may come to each other's aid, but never really gather socially. Any treasure owned by a tree sprite is hidden close to her home tree. The gold and gems that make up a dryad's treasure are almost always the gifts of charmed adventurers.
These tree sprites realize that most humans and demihumans fear them for their ability to charm, so dryads only deal with strangers on rare occasions. When approached carefully, however, dryads have been known to aid adventurers. They are a useful source of information, too, as they know a great deal about the area in which they live.

**Ecology:** Dryads are staunch protectors of the forest and groves in which they reside. Any actions that harm the area, and especially its plant life, are met with little tolerance.

Dwarves are a noble race of demihumans who dwell under the earth, forging great cities and waging massive wars against the forces of chaos and evil. Dwarves also have much in common with the rocks and gems they love to work, for they are both hard and unyielding. It's often been said that it's easier to make a stone weep than it is to change a dwarf's mind.

Standing from four to 4½ feet in height, and weighing 130 to 170 pounds, dwarves tend to be stocky and muscular. They have ruddy cheeks and bright eyes. Their skin is typically deep tan or light brown. Their hair is usually black, gray, or brown, and worn long, though not long enough to impair vision in any way. They favor long beards and mustaches, too. Dwarves value their beards highly and tend to groom them very carefully. Dwarves do not favor ornate stylings or wrappings for their hair or their beards.

Dwarven clothing tends to be simple and functional. They often wear earth tones, and their cloth is considered rough by many other races, especially men and elves. Dwarves usually wear one or more pieces of jewelry, though these items are usually not of any great value or very ostentatious. Though dwarves value gems and precious metals, they consider it in bad taste to flaunt wealth.

Because dwarves are a sturdy race, they add 1 to their initial Constitution ability scores. However, because they are a solitary people, tending toward distrust of outsiders and other races, they subtract 1 from their initial Charisma ability scores. Dwarves usually live from 350 to 450 years.

Dwarves have found it useful to learn the languages of many of their allies and enemies. In addition to their own languages, dwarves often speak the languages of gnomes, goblins, kobolds, orcs, and the common tongue, which is frequently used in trade negotiations with other races.

**Combat:** Dwarves are courageous, tenacious fighters who are ill-disposed toward magic. They never use magical spells or train as wizards, though they can become priests and use the spells of this group. Because of their nonmagical nature, in fact, they get a special bonus to all saving throws against magical wands, staves, rods, and spells. Dwarves receive a +1 bonus to saving throws against these magical attacks for every 3½ points of Constitution score they have. See Table 9Player's Handbook for specific bonuses.

A dwarf's nonmagical nature can also cause problems when he tries to use a magical item. In fact, if a dwarf uses a magical item that is not specifically created for his class, there is a 20% chance the item malfunctions. For example, if a dwarven fighter uses a *bag of holding* -- which can be used by any class, not just fighters -- there is a 20% chance each time the dwarf uses it that the bag does not work properly. This chance of malfunction applies to rods, staves, wands, rings, amulets, potions, horns, jewels, and

miscellaneous magic. However, dwarves have learned to master certain types of magical items -- because of an item's military nature. These objects -- specifically weapons, shields, armor, gauntlets, and girdles -- are not subject to magical malfunction when used by a dwarf of any class.

As with magical attacks, dwarves are unusually resistant to toxic substances. Because of their exceptionally strong Constitution, all dwarves roll saving throws against poisons with the same bonus (+1 for every 3½ points of Constitution score) that applies to saves vs. magical attacks.

In the thousands of years that dwarves have lived in the earth, they have developed a number of skills and special abilities that help them to survive. All dwarves have infravision that enables them to see up to 60 feet in the dark. When underground, dwarves can tell quite a bit about their location by looking carefully at their surroundings. When within 10 feet of what they are looking for, dwarves can detect the grade and slope of a passage (1-5 on 1d6), new tunnel construction (1-5 on 1d6), sliding/shifting walls or rooms (1-4 on 1d6), and stonework traps, pits, and deadfalls (1-3 on 1d6). Dwarves can also determine their approximate depth underground (1-3 on 1d6) at any time.

During their time under the earth, dwarves have also developed an intense hatred of many of the evil creatures they commonly encounter. Thus, in melee, dwarves always add 1 to their attack rolls to hit orcs, half-orcs, goblins, and hobgoblins. The small size of dwarves is an advantage against ogres, trolls, ogre magi, giants, and titans; these monsters always subtract 4 from their attack rolls against dwarves because of that size difference and the dwarves' training in fighting such large foes.

Dwarven armies are well-organized and extremely well-disciplined. Dwarven troops usually wear chain mail and carry shields in battle. They wield a variety of weapons. The composition of a typical dwarven army by weaponry is axe and hammer (25%), sword and spear (20%), sword and light crossbow (15%), sword and pole arm (10%), axe and heavy crossbow (10%), axe and mace (10%), or hammer and pick (10%).

For every 40 dwarves encountered, there is a 2nd- to 6th-level fighter who leads the group. (Roll 1d6 to determine level, with a roll of 1 equalling 2.) If there are 160 or more dwarves encountered, there are, in addition to the leaders of the smaller groups, one 6th-level fighter (a chief) and a 4th-level fighter (lieutenant) commanding the troops. If 200 or more dwarves are encountered, there is a fighter/priest of 3rd- to 6th-level fighting ability and 4th-to 7th-level priest ability. If a dwarven army has 320 or more troops in it, the following high-level leaders are in command of the group: an 8th-level fighter, a 7th-level fighter, a 6th-level fighter/7th-level priest, and two 4th-level fighter/priests.

The commanders of the dwarven troops wear plate armor and carry shields. In addition, the fighters and fighter/priests leading the dwarven troops have a 10% chance per level of fighting ability of having magical armor and/or weapons. The fighter/priests who lead the troops also have a 10% chance per level of priest ability of having a magical item specific to priests (and thus not subject to malfunction).

If encountered in its home, a dwarven army has, in addition to the leaders noted above, 2d6 fighters of from 2nd- to 5th-level (1d4+1 for level), 2d4 fighter/priests of from 2nd- to 4th-level (in each class), females equal to 50% of the adult males, and children equal to 25% of the adult males. Dwarven women are skilled in combat and fight as males if their homes are attacked.

**Habitat/Society:** Usually constructed around profitable mines, dwarven cities are vast, beautiful complexes carved into solid stone. Dwarven cities take hundreds of years to complete, but once finished they stand for millennia without needing any type of repair. Since dwarves do not leave their homes often and always return to them, they create their cities with permanence in mind. Troops guard dwarven cities at all times, and sometimes (60% chance) dwarves also use animals as guards -- either 2d4 brown bears (75% chance) or 5d4 wolves (25% chance).

Dwarven society is organized into clans. A dwarven clan not already attached to a city or mine travels until it finds an outpost where it can begin to ply a trade. Clans often settle close together since they usually need the same raw materials for their crafts. Clans are competitive, but usually do not war against one another. Dwarven cities are founded when enough clans move to a particular location.
Each dwarven clan usually specializes in a particular craft or skill; young dwarves are apprenticed at an early age to a master in their clan (or, occasionally, in another clan) to learn a trade. Since dwarves live so long, apprenticeships last for many years. Dwarves also consider political and military service a skilled trade, so soldiers and politicians are usually subjected to a long period of apprenticeship before they are considered professionals.
To folk from other races, life within these cities might seem as rigid and unchanging as the stone that the dwarven houses are wrought from. In fact, it is. Above all, dwarves value law and order. This love of stability probably comes from the dwarves' long life spans, for dwarves can watch things made of wood and other mutable materials decay within a single lifetime. It shouldn't be surprising, then, that they value things that are unchanging and toil ceaselessly to make their crafts beautiful and long-lived. For a dwarf, the earth is something to be loved because of its stability and the sea a thing to be despised -- and feared -- because it is a symbol of change.
Dwarves also prize wealth, as it is something that can be developed over a long period of time. All types of precious metal, but particularly gold, are highly prized by dwarves, as are diamonds and other gems. They do not value pearls, however, as they are reminders of the sea and all it stands for. Dwarves believe, however, that it is in poor taste to advertise wealth. Metals and gems are best counted in secret, so that neighbors are not offended or tempted.
Most other races see dwarves as a greedy, dour, grumpy folk who prefer the dampness of a cave to the brightness of an open glade. This is partially true. Dwarves have little patience for men and other short-lived races (since man's concerns seem so petty when seen from dwarven eyes). Dwarves also mistrust elves because they are not as serious-minded as dwarves and waste their long lives on pastimes the dwarves see as frivolous. However, dwarves have been known to band together with both men and elves in times of crisis, and long-term trade agreements and alliances are common.
Dwarves have no mixed feelings about the evil races that dwell below ground and in the Underdark, however. They have an intense hatred of orcs, goblins, evil giants, and drow. The dire creatures of the Underdark often fear dwarves, too, for the short, stout folk are tireless enemies of evil and chaos. It is a goal of the dwarves to wage constant and bitter war against their enemies under the earth until either they or their foes are destroyed.

**Ecology:** Since much of their culture is focused on creating things from the earth, dwarves produce a large amount of useful, valuable trade material. Dwarves are skilled miners. Though they rarely sell the precious metals and rough gems they uncover, dwarven miners have been known to sell surpluses to local human communities. Dwarves are also skilled engineers and master builders -- though they work almost exclusively with stone -- and some dwarven architects work for humans quite frequently.
Dwarves most often trade in finished goods. Many clans are dedicated to work as blacksmiths, silversmiths, goldsmiths, armorers, weapons makers, and gem cutters. Dwarven products are highly valued for their workmanship. In human communities, these goods often demand prices up to 20% higher than locally forged items. Many people are still willing to pay a high price for a suit of dwarven mail or a dwarven sword. Humans know that the dwarf who forged the item made it to last a dwarven lifetime, so they'll never need to worry about it wearing out in theirs.

## Mountain Dwarves

Similar in most ways to their cousins, the hill dwarves, these demihumans prefer to live deep inside mountains. They tend to be slightly taller than hill dwarves (averaging 4½ feet tall) and more hearty (having 1+1 Hit Dice). They usually have slightly lighter skin and hair than their hill-dwelling relatives. In battle, mountain dwarf armies are likely to have more spears (30% maximum) and fewer crossbows (20% maximum) than hill dwarf armies. Mountain dwarves have the same interests and biases as hill dwarves, though they are even more isolationist than their cousins and sometimes consider even hill dwarves to be outsiders. Mountain dwarves live for at least 400 years.

Derro are a degenerate race of dwarven stature. They have been skulking in the Underdark for ages, but they were discovered by the mind flayers only five centuries ago, and by the drow but shortly before that. The derro have made a name for themselves by their marked cruelty. It is said that a derro lives for just two things: to witness the slow, humiliating death of surface demihumans, and especially humans; and the perversion of knowledge to their own dark ends.

Derro are short, with skin the color of an iced over lake (white, with bluish undertones), sickly, pale yellow or tan hair (always straight), and staring eyes that have no pupils. Their features remind dwarves of humans, and vice versa. Derro have rough skin, spotted with short coarse tufts of hair. Most derro wear a loose costume woven from the hair of underground creatures and dyed deep red or brown. Their armor is leather, studded in copper and brass. Leaders wear tougher, kather armors, made from the hides of beasts far more rugged than cattle.

**Combat:** Derro are one of the most dexterous of humanoid races (averaging 15-18), and their Armor Class must be adjusted for this. Normally, a derro party is well-equipped with weapons and spells. All derro carry small, ornamental blades, called *secari*, which can be treated as daggers, but most use other weapons as well.

Half of all encountered derro carry a repeating light crossbow (12 maximum range, two shots each round, six-bolt capacity, 1d3 points of damage). Derro crossbowman usually coat their bolts with poison. If a derro wants to simply bring down his prey, he uses a poison that causes an additional 2d6 points of damage (successful saving throw for no additional damage). If he desires to prolong his target's suffering, he uses a poison that has the same effects as a *ray of enfeeblement* spell (asuccessful saving throw indicates no poison damage).

Twenty-five percent of derro carry a hook-fauchard, a long (6'+) pole arm that causes 1d4 points of impaling damage and can pull a man-sized or smaller creature off-balance 25% of the time. It takes one round to regain balance.

Fifteen percent of derro use only a spiked buckler. This small shield, improves the derro's AC by 1 against any one opponent. It is armed with a central spike, which can be wielded as a second weapon (no

penalty because of the derro's high Dexterity) for 1d4 points of impaling damage. The derro will also have a hooked aklys, a short, heavy club that can be thrown for 1d6 points of crushing damage. It is attached to a thick leather thong so that it can be retrieved. Thanks to the hook, the aklys also pulls an opponent off-balance but it has only a 1-8 chance. These derro are considered brave by their fellows; they are awarded the rarer, heavier armors (AC 4).
The remaining 10% of the derro are the sons and daughters of derro leaders. They are given heavier armor and trained in the use of the spear and the military pick. They use bucklers (sans spikes) when not using the spear with both hands.
For every three derro encountered, there is one with 4 Hit Dice. For every six derro, there is one with 5 Hit Dice. If 10 or more, there is a 7 Hit Die leader with a 6 Hit Die lieutenant. If a party encounters 25 derro, they would be accompanied by eight 4 Hit Die derro, four of 5 Hit Die, one with 6 Hit Dice, and one with 7. The leaders always wear the thicker armor and usually wield well-made (and occasionally magical) weapons.
If 20 or more are encountered, they are accompanied by a savant and two students. Savant derro are able to use any sort of magical item or weapon. Savants know 1d4+5 of the following spells, learned at random: *affect normal fires, anti-magic shell, blink, cloudkill, ESP hypnotic pattern, ice storm, invisibility, levitate, light, lightning bolt, minor creation, paralyzation, repulsion, shadow magic, spider climb, ventriloquism, wall of fog, wall of force.* Savants have 5-8 Hit Dice, and carry two or three useful magical items. Typical magical items are any potion, any scroll, *rings of fire resistance, invisibility, protection,* and *spell storing,* any wand, *studded leather armor* +1, shields, weapons up to +3, *bracers of defense, brooches of shielding, cloaks of protection,* and so on. Savants can instinctively *comprehend languages* and *read magic* (as the spells).
Savants are capable of acting as sages in one to three areas of study. Derro raids are often inspired by a savant's research.
Student savants know only 1-3 spells, have 4-7 Hit Dice, they know only one field of study, and one minor magical item.
In combat, derro fight cunningly, with good tactics. They keep spellcasters from effectively using magic, and inflict minor wounds until they eventually kill their opponents. Savants use their powers to confuse and frustrate, rather than to simply kill. Derro have poor infravision (30-foot range) but keen hearing (treat as the blind-fighting, nonweapon proficiency).
Derro keep slaves and attempt to capture intelligent opponents, when possible.

**Habitat/Society:** Derro live in large underground complexes, nearer the surface than the kuo-toans and drow, but deeper than goblins and trolls. They never expose themselves to direct sunlight; it nauseates them. Sunlight will kill a derro if he is exposed to it for several days. Still, derro do visit the surface at night, raiding for humans or carrying out a savant's plans.
Derro are never encountered singly. From their combat tactics to their choice of spells, derro demonstrate a mob mentality. A lone derro is a desperate derro, seeking at all costs to return to his home.
Derro lairs always have 3d4+30 normal derro, plus leaders. The members of the lair are led by the resident savants (1-3 in number) and their apprentices (2-5 students). Derro obey without question the puzzling, even suicidal, dictates from their savant leaders.
Also to be found in a derro lair are 5d6+10 human slaves. If any of the lair's savants or students know the *charm person* spell, each slave has a 90% chance of being charmed. Derro hate humans more than any other race; they use humans for the most demeaning manual labor, and for breeding.
Derro do not appear to worship any powers, but the savants treasure knowledge and the rest seem to worship the savants.

Derro usually scour their territory for magical items, stealing them, or, if necessary, purchasing them from more powerful creatures. Derro do not share the love of gold common to their dwarven relatives, and they have been known to pay exorbitant prices for a few potions or for a magical item with a missing command word.
Every 20 years or so, the derro mount an all-out war against the other creatures of the Underdark. This is known as the Uniting War, and no savant really expects it to be won. The War is a means of winnowing out the weakest of the derro lairs, a focal point for racial identity, and a chance to really create some terror in the Underdark. It also serves the purpose of starting rumors. Humans will certainly hear that a war is being fought in the Underdark, and they will send hundreds of scouting and adventuring parties to the underground to investigate. The derro welcome this new source of slaves.

**Ecology:** Derro can live on a diet of underground fungi, but use it only for spice. They seek out other sustenance whenever possible. A derro hunting party usually pursues large, dangerous prey that will feed an entire lair, rather than smaller, simpler food. The derro tendency to torment prey also holds when for hunting food. They also raid other races for food.

## Duergar

Duergar, or gray dwarves, are a malevolent breed that exist at extreme depths underground. Duergar may be fighters, priests, thieves, or multi-classed fighter/priests, fighter/thieves, or priest/thieves. Thieves are proficient in the use of poison.
Duergar appear to be emaciated, nasty-looking dwarves. Their complexions and hair range from medium to dark gray. They prefer drab clothing designed to blend into their environment. In their lairs, they may wear jewelry, although such pieces are kept dull.
Duergar have infravision to 120 feet. They speak the duergar dialect of the dwarven tongue, "undercommon" (the trading language of subterranean cultures), and the silent speech employed by some subterranean creatures. Intelligent duergar may speak other languages as well.

**Combat:** For every four, single HD duergar encountered outside a lair, there is one with 2 HD+4 hp. If a band of nine are encountered outside a lair, there will be a tenth, with 3 HD+6 hp or 4 HD+8 hp always leads the group.
Duergar are armed as follows:

**1st level:** pick, hammer, spear, chain mail, and shield;
**2nd level**: pick, light crossbow, chain mail, and shield;
**3rd-6th level:** hammer, short sword, plate mail, and shield;
**7th-9th level:** hammer*, short sword*, plate mail*, and shield*;
**3rd-6th/3rd-6th-level priest/thief:** any usable*/any usable*;
**7th-9th/7th-9th-level priest/thief:** any usable*/any usable*
***** 5% chance/level for magical item; for multi-class, add one-half of lower level (round up) to the higher level in order to find the appropriate multiplier.

There are noncombatant, duergar children equal to 10% of the total number of duergar fighters encountered.
The duergar's stealth imposes a -2 penalty to opponents' surprise rolls; the duergar are surprised only on a 1 on 1dl0. Their saving throws vs. magical attacks gain a +4 bonus. They are immune to paralysis, illusion/phantasm spells and poisons.

All duergar possess innate magical abilities of *enlargement* and *invisibility*. They can use these spells as wizards of a level equal to their hit points. Duergar can use *enlargement* to either grow or shrink themselves, as well as anything they are wearing or carrying.
Daylight affects the duergar as follows: their enhanced ability to gain surprise is negated, Dexterity is reduced by 2, attacks are made with a -2 penalty to the attack roll, and opponents' saving throws are made with a +2 bonus. If the encounter occurs when the duergar are in darkness, but their opponents are brightly illuminated, the duergar's surprise ability and Dexterity are normal, but they still suffer a -1 penalty to their attack rolls while their opponents gain a +1 bonus to saving throws against attacks.
Duergar are not adversely affected by the light given off by torches, lanterns, magical weapons, or *light* and *faerie fire* spells.
There is a 10% chance that any duergar are accompanied by 2d4 giant steeders, used as mounts (see Spiders).

**Habitat Society:** Duergar society is similar to that of other dwarven cultures, although life is much harsher because of the hostile environment deep underground. They do not venture to the surface except at night or on gloomy days. Duergar life spans can reach 400 years.

# Elemental, Generic Information

Elementals are sentient beings that can possess bodies made of one of the four basic elements that make up the Prime Material plane -- air, earth, fire, or water. They normally reside on an elemental Inner Plane and will only be encountered on the Prime Material plane if they are summoned by magical means. (See *Manual of the Planes* for more information on the nature of the various elemental planes.) Each elemental must adopt a shell in the Prime Material composed of the basic element it represents. and once this shell is destroyed, the elemental will return to its native plane. While there are many more powerful and more intelligent residents of the elemental planes, the common elemental is the easiest to contact, and therefore the most frequently summoned.

Their magical nature gives elementals great protection from attacks on the Prime Material plane. Elementals are not harmed by any nonmagical weapons or magical weapons of less than +2 bonus. Creatures with under four Hit Dice and without any magical abilities cannot harm an elemental either. (Magical abilities include such characteristics as breath weapons, poisons, paralysis, or even being immune to normal weapon attacks.) Orcs, for example, are powerless against a conjured elemental unless one happens to possess a weapon with +2 or better bonus to hit.

Though elementals do enjoy protection from many nonmagical attacks in the Prime Material plane, like all extraplanar and conjured creatures, elementals are affected by *protection from evil* spells. An elemental cannot strike a creature protected by this spell and must recoil from the spell's boundaries. However, the elemental can attack creatures protected by the spell as long as it doesn't touch them. For example, a fire elemental could set the ground on fire around the creature and wait for the blaze to spread.

Each of the four types of common elemental has its own particular strengths and weaknesses, attack modes and method of movement, depending on its plane of origin. These will be covered individually, by elemental type, in the next few pages. All common elementals share one major characteristic, however. They are basically stupid. This low intelligence makes it difficult for the elemental to resist a magical summons. But even the common elemental is bright enough to know it does not like being taken off of its home plane and held in the Prime Material plane.

**Summoning an Elemental**: There are three basic ways to call an elemental to this plane, and the strength of the conjured elemental depends on the method used to summon it:

| | |
|---|---|
| Conjured by spell | 8, 12, 16, or 21-24 Hit Dice |
| Conjured by staff | 16 Hit Dice |
| Conjured by summoning device | 12 Hit Dice |

Obviously, the type of wizard or priest spell used to contact an elemental will greatly effect the size of the creature on this plane. (See Player's Handbook Each individual's use of any spell, staff, or device in contacting the elemental planes produces a unique call. This unique summons will only be answered by the inhabitants of a particular plane once per day. Therefore, each of the methods of summoning

elementals -- spell, device, and staff -- can be used by one person to call only one of any specific type of common elemental per day. If a staff is used four times in one day, for example, all four types of elementals must be called once.
The only exception to this is a character using more than one method to call elementals. Then, the conjurer can call a number of elementals of the same type equal to the number of methods he or she uses. This means a person with a device and a staff can summon two earth elementals. However, a person with two staffs can still summon only one elemental of any specific type in one day.

**Controlling an Elemental**: Because the elemental will be furious at being summoned to this plane, concentration in conjuring the creature is vital. In calling an elemental, a person must remain perfectly still and focus all of his attention on controlling the being. Any distraction to the summoner, either mental or physical, will result in a failure to control the elemental when it arrives on the Prime Material plane. Elementals that are uncontrolled and acting upon their own desires are called *free-willed*. If the party is lucky, a free-willed elemental will immediately return to its plane. However, this occurs only 25% of the time.
In most cases (75% of the time), an uncontrolled elemental will immediately attack the person or party who conjured it, also destroying anything that stands between it and its enemies. There is no way to gain control of the elemental once it is lost, and there is nothing the objects of the elemental's wrath can do but defend themselves. The elemental's intense dislike of being away from its home plane is the only safeguard those conjuring an elemental can rely upon if the elemental runs wild. Because remaining on the Prime Material plane is painful to any common elemental, the uncontrolled elemental will always return to its plane of origin three turns after control is lost, whether it has destroyed the creatures responsible for calling it away from its elemental abode or not.
There is always a 5% chance per round that an elemental is in the Prime Material (beginning with the second round) that the creature will break control and attack the person who summoned it. Also, if a person is wounded, killed, or loses concentration while controlling an elemental, the creature will become free-willed. The elemental will first attack the person who summoned it and then destroy any living thing it can find during the three turns after control is lost. The creature will then return to its home in the Inner Planes. A free-willed elemental can be sent to its home plane if a *dismissal* spell is cast upon it, but there is only a 50% chance of success for the spell in this situation.
A successfully controlled elemental will stay on the Prime Material only for the duration of the spell that summoned it, and it can be controlled from a distance up to 30 yards per level of the person who summoned it. If under control, an elemental can be dismissed by the summoner when its task is complete.

**Stealing Control of an Elemental**: Control of a conjured elemental can be stolen from the person who summoned it by casting *dispel magic* specifically at the magical control over the creature (not the elemental itself or the person controlling it). Most of the normal rules for dispelling magic apply ( Player's Handbook If control of the elemental is stolen, the creature will follow the wishes of the new person controlling it as if he or she summoned it in the first place. If the *dispel magic* fails, the elemental will immediately be strengthened to its maximum 8 hit points per die and the conjurer's ability to control the elemental will be greatly enhanced, making any new attempts to steal control of the creature impossible. Also, the elemental will recognize the person who sought to take control of its will as a threat. If the person currently guiding the creature loses control, the elemental will immediately attack the person who attempted to steal control of its will -- even before attacking the person who first summoned it.

| | 16 Hit Dice: 11,000 | 16 Hit Dice: 10,000 |

Air elementals can be conjured in any area of open air where gusts of wind are present. The common air elemental appears as an amorphous, shifting cloud when it answers its summons to the Prime Material plane. They rarely speak, but their language can be heard in the high-pitched shriek of a tornado or the low moan of a midnight storm.

**Combat:** While air elementals are not readily tangible to the inhabitants of planes other than its own, they can strike an opponent with a strong, focused blast of air that, like a giant, invisible fist, does 2-20 points of damage. The extremely rapid rate at which these creatures can move make them very useful on vast battlefields or in extended aerial combat. In fact, the air elemental's mastery of its natural element gives it a strong advantage in combat above the ground. In aerial battles, they gain a +1 to hit and a +4 to the damage they inflict.
The most feared power of an air elemental is its ability to form a whirlwind upon command. Using this form, the air elemental appears as a truncated, reversed cone with a 10 foot bottom diameter and 30 foot top diameter. The height of the whirlwind depends on the Hit Dice of the elemental. An air elemental of 8 Hit Dice will produce a whirlwind standing 40 feet tall; a 12 Hit Dice elemental produces a whirlwind standing 60 feet tall; and a 16 Hit Dice elemental produces a whirlwind standing 80 feet tall. It takes one full turn to form and dissipate this cone.
This whirlwind lasts for one melee round, sweeps away and kills all creatures under 3 Hit Dice in the area of its cone, and does 2-16 points of damage to all creatures it fails to kill outright. If, because of overhead obstructions, the whirlwind fails to reach its full height, it can only sweep up creatures under 2 Hit Dice and do 1-8 points of damage to all others in its cone.

Earth elementals can be conjured in any area of earth or stone. This type of common elemental appears on the Prime Material plane as a very large humanoid made of whatever types of dirt, stones, precious metals, and gems it was conjured from. It has a cold, expressionless face, and its two eyes sparkle like brilliant, multifaceted gems. Though it has a mouth-like opening in its face, an earth elemental will rarely speak. Their voices can be heard in the silence of deep tunnels, the rumblings of earthquakes, and the

grinding of stone on stone.
Though earth elementals travel very slowly, they are relentless in the fulfillment of their appointed tasks. An earth elemental can travel through solid ground or stone with no penalty to movement or dexterity. However, these elementals cannot travel through water: they must either go around the body of water in their path or go under it, traveling in the ground. Earth elementals prefer the latter as it keeps them moving, more or less, in a straight line toward their goal.

**Combat:** Earth elementals will always try to fight on the ground and will only rarely be tricked into giving up that advantage. Because of their close alliance to the rock and earth, these elementals do 4-32 points of damage (4d8) whenever they strike a creature that rests on the ground.
Against constructions with foundations in earth or stone, earth elementals do great damage, making them extremely useful for armies sieging a fortification. For example, a reinforced door, which might require a few rounds to shatter using conventional methods, can be smashed with ease by an earth elemental. They can even level a small cottage in a few rounds.
An earth elemental's effectiveness against creatures in the air or water is limited; the damage done by the elemental's fists on airborne or waterborne targets is lessened by 2 points per die (to a minimum of 1 point of damage per die).

# Elemental, Fire/Water

| | Fire | Water |
|---|---|---|
| **Climate/Terrain:** | Any dry land | Large areas of water |

| **Morale:** | 8-12 Hit Dice: | 8-12 Hit Dice: |
| | Champion (15-16) | Champion (15-16) |
| | 16 Hit Dice: | 16 Hit Dice: |
| | Fanatic (17) | Fanatic (17) |
| **XP Value:** | 8 Hit Dice: 2,000 | 8 Hit Dice: 2,000 |
| | 12 Hit Dice: 6,000 | 12 Hit Dice: 6,000 |
| | 16 Hit Dice: 10,000 | 16 Hit Dice: 10,000 |

Fire elementals can be conjured in any area containing a large open flame. To provide a fire elemental with an adequate shell of Prime Material flame, a fire built to house an elemental should have a diameter of at least six feet and reach a minimum of four feet into the air.
On the Prime Material Plane, a fire elemental appears as a tall sheet of flame. The fire elemental will always appear to have two armlike appendages, one on each side of its body. These arms seem to flicker back into the creature's flaming body, only to spring out from its sides seconds later. The only facial features of a fire elemental are two large glowing patches of brilliant blue fire, which seem to function as eyes for the elemental. Like all common elementals, fire elementals rarely speak on the Prime Material plane, though their voices can be heard in the crackle and hiss of a large fire.

**Combat:** Because they resent being conjured to this plane, fire elementals are fierce opponents who will attack their enemies directly and savagely, taking what joy they can in burning the weak creatures and objects of the Prime Material to ashes. In combat, a fire elemental lashes out with one of its ever-moving limbs, doing 3-24 points of damage. Any flammable object struck by the fire elemental must save versus magical fire at a -2 or immediately begin to burn.
Fire elementals do have some limitations on their actions in the Prime Material plane. They are unable to cross water or non-flammable liquids. Often, a quick dive into a nearby lake or stream is the only thing that can save a powerful party from certain death from a fire elemental. Also, because their natural abilities give them some built-in resistance to flame-based attacks, creatures with innate fire-using abilities, like red dragons, take less damage from a fire elemental's attack. The elemental subtracts 1 point from each die of damage it does to these creature (to a minimum of 1 point of damage per die).
Water elementals can be conjured in any area containing a
large amount of water or watery liquid. At least one thousand cubic feet of liquid is required to create a shell for the water elemental to inhabit. Usually a large pool serves this purpose, but several large kegs of wine or ale will do just as well.
The water elemental appears on the Prime Material Plane as a high-crested wave. The elemental's arms appear as smaller waves, one thrust out on each side of its main body. The arms ebb and flow, growing

longer or shorter as the elemental moves. Two orbs of deep green peer out of the front of the wave and serve the elemental as eyes. Like all other common elementals, water elemental rarely speak on the Prime Material Plane, but their voices can be heard in the crashing of waves on rocky shores and the howl of an ocean gale.

**Combat:** In combat, the water elemental is a dangerous adversary. It prefers to fight in a large body of water where it can constantly disappear beneath the waves and suddenly swell up behind its opponent. When the elemental strikes, it lashes out with a huge wave-like arm, doing 5-30 points of damage. Water elementals are also a serious threat to ships that cross their paths. A water elemental can easily overturn small craft (one ton of ship per hit die of the elemental) and stop or slow almost any vessel (one ton of ship per hit point of the elemental). Ships not completely stopped by an elemental will be slowed by a percentage equal to the ratio of ship's tons over the hit points of the attacking elemental.
Though the water elemental is most effective in large areas of open water, it can be called upon to serve in a battle on dry land, close to the body of water from which it arose. However, the movement of the water elemental on land is the most restricted of any elemental type: a water elemental cannot move more than 60 yards away from the water it was conjured from, and 1 point of damage is subtracted from each die of damage they inflict out of the water (to a minimum of 1 point of damage per die).

Sylphs are beautiful, humanoid women with wings like dragonflies. Their wings are 4-5 feet long and translucent, clear, or spotted with iridescent color. Their long, bright, hair may be any "normal" color, or blue, purple, or green. They wear flowing, diaphanous robes which accent their wings or hair.
Sylphs are related to air elementals and to nymphs, perhaps originating as a cross-breed between nymphs and aerial servants. They speak Common and their own musical language. Sylphs are friendly and may (20%) befriend adventurers and give them aid in exchange for a favor.

**Combat:** Sylphs defend themselves only with magical abilities. A sylph can cast spells as a 7th-level wizard, and most prefer spells of elemental air. In addition, the sylph can become *invisible at will* and summon an air elemental once each week.

**Habitat/Society:** Sylphs rarely touch ground in the lowlands. They are fond of travel, and it is rare to find one near its home.
Sylph nests are highly individualistic, some formed from whatever materials are available, others are elaborate retreats perched in tall trees or carved into mountains. Sylphs prefer simple and light possessions, keeping only gems and magical items as treasure. They often trade wealth for furnishings, such as light draperies, silks, and pillows.
There is a 1% chance that a sylph's home holds an egg or a child. All sylphs are female and mate with humanoid males, preferring elves, but sometimes accepting a human or halfling mate. Three months after conception, the sylph lays a pearly egg in a special nest, and summons an air elemental to guard it. Six months later, the egg hatches a baby girl with wing buds. The child grows at the same rate as a human child, gaining magical abilities at age five, and full flight by age 10.
The sylph has the innate ability to levitate; wings are needed only to provide thrust. If a sylph's wings are injured, it can only glide or hover. Anti-magical attacks may ground a sylph by negating its power of *levitation*. Sylphs live for up to 1,000 years, retaining their youthful looks throughout their lives.
Every 28 years, all sylphs gather in a grand meeting to trade, share news, renew friendships, and welcome young sylphs.

**Ecology:** Sylphs usually maintain their distance from the more mundane humanoid races, but associate freely with nymphs and dryads. Aerial monsters occasionally feed on them, but they are in greater danger from evil humanoid males who attempt to capture them for dark purposes.

## Aerial Servant

This creature is a form of air elemental native to the plane of elemental Air, as well as the Ethereal and Astral planes, and can be summoned to the Prime Material plane by clerics.

Normally invisible, if seen on their home plane, they resemble legless humanoids of sparkling blue smoke, with empty eyes, a slash for a mouth, and long, four-fingered hands.

Aerial servants try to avoid combat on their native planes. It has a Strength of 23 and attacks by grabbing and strangling opponents, causing damage with the hit, and in each round, until the victim breaks free. A character with exceptional Strength receives a percentage chance equal to the percentage of exceptional Strength. Creatures with 18/00 Strength and above break free easily. Creatures with more hit points than the aerial servant can likewise break its grasp. Aerial servants penalize opponents surprise rolls by -5 when invisible.

A cleric who summons an aerial servant will be attacked unless behind a *protection from evil*, because the servants resent being summoned. Otherwise, the servant will complete any duty for the cleric, except fighting, as fast as possible. If the servant is prevented from completing its mission, it goes insane and returns to kill the summoning cleric.

Aerial servants are wanderers drawn to areas of extreme weather. If caught in a storm, there is a 5% chance it will be blown in two; this is the only way it can reproduce.

Aerial servants must feed on winds of their home planes at least once per month, or suffer 1d8 damage per day over 30 that they go without feeding.

The pech are creatures of the plane of elemental Earth, though some have extensive mines in the deepest regions of the Prime Material plane. They dwell in dark places and work stone.
Pech are thin and have long arms and legs. Their broad hands and feet are excellent for bracing and employing tools to work stone. They have pale, yellowish skin and red or reddish brown hair. Their flesh is nearly as hard as granite. Their eyes are large and have no pupils. Pech have infravision to 120 feet.

**Combat:** The pech use picks and peat hammers (treat as war hammers) for work and armament, and are usually equipped with equal numbers of each. Pech have 18/50 Strength.
Each pech can cast four *stone shape* and four *stone tell* spells per day. Four pech can band to together to cast a *wall of stone* spell as a 16th-level mage. Eight together can cast a *stone to flesh* spell. Group spells can be cast but once per day by any group. Pech are immune to petrification.
When fighting lithic monsters such as stone golems, gargoyles, or galeb duhr, pech are quite capable of knocking them to rubble, as their knowledge of stone allows them full attack capability against such creatures, even with nonmagical weapons. Each successful strike does maximum damage.

**Habitat/Society:** Pech are basically good and peaceful creatures that want to be left to themselves. They hate bright light and open skies, and they are quick to ask others to douse lights. Their lairs are constructed with numerous choke points so that *walls of stone* can quickly stop intruders. Their lair holds 10-40 individuals, with equal numbers of females and males, and young equal to 20-50% of the females.

**Ecology:** The pech home plane is hostile, so many travel to the Prime Material plane to search for a better life. They have few enemies there. Pech do not save large amounts of treasure; they mine for things to trade with others for food or services. They do sometimes create simple, unobtrusive ornamental objects for everyday use. A pech lair may contain 50-100 trade gems plus 5-30 dishes and utensils worked from stone and raw metal. These items are not very valuable, averaging 150 gp each.

## Sandling

These creatures are composed of silicates and originated on the elemental plane of Earth. They look like piles of sand and can vary color to blend with backgrounds. Sandlings have the same temperature as their

surroundings, and are immune to *sleep, charm, hold,* and other mind-affecting spells or attacks. They claim territories with boundaries recognizable only by them.

Sandlings are not aggressive unless provoked, but guard their territories from intruders. If stepped on, a sandling reflexively lunges upward, trapping 1-2 man-sized opponents; opponents receive a -2 penalty to surprise rolls when attacked in this manner. If the sandling hits its targets, they are unable to attack or defend for 1d4 rounds. Sandlings also attack by slashing with an abrasive pseudopod. If at least 10 gallons of water are poured on a sandling, it is affected as if by a *slow* spell, and its attacks cause only half normal damage.

Sandlings have no society, and their fierce defense of their territories usually precludes cooperation, even with other members of their own race. They live on minerals, but despise organic matter, always moving several hundred yards from any place they have killed an intruder.

A sandling grows until it reaches its full size, 10 feet in diameter, then reproduces by budding. Sandling buds split from their parent when they are about 2 inches long, and an adult's territory may swarm with thousands of these creatures. When an infant grows to at least 6 inches in diameter, it either moves off to find its own territory, or is hunted and killed by the parent. A group of immature sandlings forms a surface with myriad tiny bumps, which may trip the unwary.

Sandlings have little effect on an ecosystem, taking only a fraction of the minerals in any parcel of land. Dwarves sometimes seek them in hopes of finding a rich mineral deposit. They are said to be excellent ingredients for mortar, but they and many druids object to this treatment.

| **XP Value:** | 2,000 | 120 |

Salamanders are natives of the elemental plane of Fire, and thus they thrive in hot places. These cruel, evil creatures come to the Prime Material plane for reasons known only to them.
The head and torso of a salamander is copper-colored and has a human-like appearance. Most of the time (80%), this aspect is a male, with flaming beard and moustache. The female version has flowing, fiery red hair. Both aspects have glowing yellow eyes that sometimes switch to fluorescent green. All aspects carry a shiny metal spear, resembling highly polished steel.
The lower torso is that of a large snake, with orange coloring shading to dull red at the tail end. The entire body is covered with wispy appendages that appear to burn but are never consumed.

**Combat:** A salamander typically attacks with its metal spear, which inflicts 1d6 points of damage plus a like amount for the spear's heat. At the same time, it can lash out and coil around an opponent with its snake-like tail, constricting for 2d6 points of damage, plus an additional 1d6 points of damage from the heat of its body. While fire-resistant creatures do not suffer from the salamander's heat damage, they are still subject to the spear and constriction damage.
Salamanders can be affected only by magical weaponry or by creatures of a magical nature or those of 4+1 or more Hit Dice. They are impervious to all fire-based attacks. *Sleep*, *charm*, and *hold* spells are ineffective against them. Cold-based attacks cause an additional 1 point of damage per die of damage.
The head and upper body of the salamander has an AC of 5, while the lower body is AC 3.
A favorite salamander tactic, if the creature is encountered in a lava pit or roaring fire, is to grab its opponents and hurl them into the flames. The victim would naturally take damage from contact with the salamander, then take even more from being thrown inside a roaring conflagration.

**Habitat/Society:** Salamanders are native to the elemental plane of Fire. They come to the Prime Material plane for reasons known only to them, though it is rumored that powerful wizards and priests of certain religions can summon them for a short time. Salamanders hate cold, preferring temperatures of 300 degrees or more; they can abide lower temperatures for only a few hours. Their lairs are typically at least 500 degrees. Any treasure found there is the sort that can survive this heat, such as swords, armor, rods, other ferrous items, and jewels. Things of a combustible nature, such as parchment and wood, soft metals such as gold and silver, and liquids, which quickly boil away, are never found in salamander lairs.
Having a nasty disposition and an evil bent, salamanders respect only power, either the ability to resist their fire or the capability to do great damage. Anyone else is dealt a painful, slow, burning death. It is rumored that they have some sort of dealings with the efreeti.
When encountered on the Prime plane, salamanders can be found playing in forest fires, lava flows, fire pits, and other areas of extreme heat. They usually appear on the Prime plane for a purpose, and if in the middle of a task they do not take kindly to being interrupted.

**Ecology:** These fiery creatures' ichor is useful in the creation of *potions of fire resistance*, and the metal of their spears can be used to create *rings of fire resistance*.

### Fire Snake

Some sages say that fire snakes are larval salamanders. Fire snakes, colored in shades from blood-red to orange, are always found in fires. Some large permanent fires contain 1d6 of these creatures, though in smaller, temporary fires like fire pits and oil bowls, there may be but one snake. The only treasure the snakes have is the gems they often accumulate.

Since their color matches their surroundings, they can surprise opponents easily (-4 penalty to opponents' surprise rolls). Their bite inflicts 1d4 points of damage and injects a mild venom that causes paralyzation of the victim for 2d4 turns unless a saving throw vs. poison is successful.

| **XP Value:** | 975 | 420 |

These creatures from the elemental plane of Water, sometimes called "honeyed ones," are unpredictable and playful; half are chaotic neutral, and others tend toward good or evil. Using disguise, nereids lead sailors to their dooms.

Nereids are transparent in water, 95% undetectable except as froth and golden seaweed. Upon contact with air, they assume human form, usually as voluptuous young females with long, golden hair, pearly white skin, and sparkling green eyes. Their voices and songs are lovely. A nereid always carries a white shawl, either in its hands or over head and shoulders, and is lightly clad in white and gold. If confronted by only females, the nereid appears in a male guise, but a woman has a 65% chance to see through the disguise. All males who see a nereid are incapable of harming it (no saving throw).

**Combat:** Nereids can spit venom 20 feet, blinding a target for 2d6 rounds if it hits; the venom can be washed away with water. A blinded victim's attack rolls, saving throws, and AC are all worsened by 4 until the effects wear off.

Nereids can *control water* within 30 feet; it can use waves to slow movement to ¼ normal, increase chances of drowning by 10%, or crash with a roar that deafens characters within 60 feet for 3d4 rounds if precautions are not taken. Nereids can also form the water to look like a water weird, and cause it to strike as a 4 HD monster and inflict ld4 points of damage.

A nereid is 85% likely to have a pet for protection, with equal chances for a giant eel, giant otter, giant poisonous snake, giant octopus, giant squid, dolphin, giant leech, or sting ray.

If the nereid makes a successful saving throw vs. poison, she can flow like water, avoiding weapon damage or escaping a captor. The nereid's kiss causes a man to drown, unless he makes a successful saving throw vs. breath weapon, with a -2 penalty. If he lives, he finds ecstacy.

The nereid protects its shawl at all costs, for it contains the nereid's essence; if it is destroyed, the nereid dissolves into formless water. Possession of a nereid's shawl gives a character control over the creature, which will accept commands to avoid damage to the shawl. Stories tell of forlorn nereids who follow the ships of a powerful foes who have stolen their shawls. A nereid will lie and attempt anything short of violent action to regain its soul-shawl.

**Habitat/Society:** A nereid found on the Prime Material plane has either escaped or been exiled from its home plane. Though usually solitary, a small group of nereids with the same alignment sometimes live together, led by the eldest.

Polluted waters drain nereids' vigor, and even good nereids may attack those who pollute their lairs.

Nereids do not value metals, but save any magical treasure they gain. The nereid has no goals or ambitions other than cavorting in water.

**Ecology:** Nereid shawls command handsome sums, but are seldom sold and are very rare. One who holds a shawl can use the enslaved nereid as a guide on the plane of Water.

### Water Weird

These strange creatures from the plane of Water are hostile when encountered on the Prime Material plane, as they are usually magically kept from going home. If communication is achieved, a bargain can sometimes be struck with the creature.

Water weirds appear to be common water; a *detect invisibility* reveals something amiss, but not the nature of the threat. When a water weird detects a living being, it assumes serpentine form (this takes two rounds). It attacks as a 6 HD creature; those hit must make a successful saving throw vs. paralyzation, or be pulled into the water. Each round spent in the water requires another saving throw; failure indicates death by drowning, which releases energy that the water weird consumes. A water weird that comes in contact with a normal water elemental has a 50% chance to usurp control of it.

Water weirds take only 1 hp damage from piercing and slashing weapons. The take half damage from fire, none if they make a successful saving throw. Intense cold acts as a *slow* spell on water weirds. If reduced to 0 hp or less, a water weird is disrupted, and it reforms in two rounds. A *purify water* spell will instantly kill a single water weird.

The tempest is a living storm which appears as a dark storm cloud of comparatively small size. Human or bestial features can often be seen in the roiling vapors of the tempest. Silver veins extend across the creature and carry the electrical impulses that maintain the storm's energy.
Tempests have no language that humans may learn. They can communicate with air and water elementals and their kin, and genies, through subtle wind buffets and spatterings of precipitation. A few, perhaps 10%, have learned to speak a few words of Common. Their voices are very soft and sibilant, with a hint of malice behind the words.

**Combat:** Tempests are territorial and consider any violation of their airspace to be a direct challenge. They feed on moisture from animals and often hunt in and around their territories. They have a number of innate abilities which they can use to make life miserable for other creatures. Unless otherwise specified, all special abilities are used as if the tempest were a 9th-level wizard. A tempest can make two attacks each round, one using its wind powers and one using its lightning power.
Once per round, a tempest can use *wind wall* or *gust of wind*, or may attack with a strong wind buffet for 2-16 points of damage. Alternately, it may create a small whirlwind, which is conical in shape, 10 feet in diameter at the bottom, and 30 feet in diameter at the top. The whirlwind can be up to 50 feet high, and must connect to the tempest's main body.
The tempest takes one full round to create the whirlwind, which can cover an area of 100 square feet per round. Within that area, it automatically sweeps away and kills all creatures with less than 2 Hit Dice, and causes 2d6 points of damage to all creatures which it fails to kill outright.
Tempests may also use their powers over the air to penalize missile attacks by -6, or to batter down flying creatures, causing falling damage to flying creatures that fail to make a successful saving throw vs. paralyzation.
A tempest can also cast a *lightning bolt* once per round, at one victim. The *lightning bolt* causes one die of damage per Hit Die of the tempest. A victim of a lightning attack can make a saving throw vs. spells;

if successful, the victim takes only half damage. The tempest's *lightning bolt* is like the 3rd-level wizard spell in other respects, having a length of 80 feet, setting fire to combustibles, melting metals, and shattering barriers. An exceptionally hungry or perturbed tempest may use lightning to destroy an entire building to reach the creatures inside.
Tempests can also use a chilling wind to affect opponents, causing damage as a *chill touch* spell, 1d4 points of damage and the loss of 1 point of Strength, unless the victim makes a successful saving throw vs. spells. This attack takes the place of either an electrical attack or another wind attack.
A tempest can produce up to 20 gallons of rain per round if it concentrates and forgoes other attacks while raining. While precipitation is usually evenly distributed throughout its area, the tempest can concentrate the fall to fill a hole, wash out a bridge, or otherwise harm its victims.
Tempests are immune to wind, gas, and water attacks, and take only half damage from electrical or cold-based attacks. They are immune to all weapons of less than +2 enchantment.

**Habitat/Society:** There is much speculation about the origin of these beings, who are apparently related to elementals and to genie-kind. Tempests are composed of all four basic elements, fire, earth, air, and water; fire in the form of lightning, earth in their silver "circulatory system," air in their winds, and water in the form of rain. They may be summoned accidentally when a spellcaster tries to summon an elemental, especially one of air or water. At the DM's option, when a summoning is interfered with, the caster may be given a 10%-50% chance to summon a tempest. These beings may also be attracted by a *weather summoning* spell, with a 1% (non-cumulative) chance of appearing each time a spell is cast.
Some sages believe these creatures are jann that have been injured in some way and cannot retain human form. Whatever their origin, they do breed and reproduce as storms. Though "male" and "female" do not truly describe the different types of tempests, there are two genders. When living storms of different genders meet, they have a brief, tempestuous affair, causing a great conflagration that may last more than a week. Hurricanes or tornadoes are produced irregularly from the mass, to wreak havoc upon the surrounding area.
When the storm finally breaks, the two tempests leave the area, and the residue they leave behind forms 1d4 infant tempests. These infant storms, sometimes referred to as tantrums, often travel together until they reach maturity, one year after birth. The young storms have 6 Hit Dice each, and can use only the *gust of wind* power, besides producing rain.
Most tempests quite naturally seem to have very stormy dispositions. Their hunger for animal life goes beyond their need for the moisture contained in animal bodies. Some sages speculate that their physical form, or possibly some event in their history, causes them to hate animal life. It is quite possible that the electrical impulses produced by animal brains cause pain to the tempest.
Tempests may be related to skriaxits, the living sandstorms of some worlds' deserts. No tempest has ever been known to encounter a skriaxit, and their relationship and possible interactions are completely unknown.

**Ecology:** Tempests feed on the moisture found in animal bodies. Though unable to cause harm to living creatures by draining their moisture, they hover close to the ground after a battle to suck the water from dead opponents, as well as any water they may have precipitated during the battle. They are sometimes found scavenging after great battles between humans. By removing water from a corpse, they render it inviable to return to life via a *raise dead* spell, though *resurrection* and other spells work normally.
When a tempest is killed, a silver residue rains down from its form. If carefully gathered, this residue provides a mass of silver equivalent to 3d6 silver pieces. Though valuable as a precious metal, the silver can also be used as a component in making a *wand of lightning* or casting a weather-related spell. Bits of

the silver are also useful for making other weather or elemental related magical items.
Genies and elementals are enemies of tempests; they often attack them, and tempests respond in like manner. However, some genies, especially djinn and marids, keep tempests as pets, training them as guards and to attack.
Tempests can be quite devastating to a local ecology if annoyed, and can cause great damage with wind, rain, and other attack forms. Living storms are never found inside buildings or underground.

### Skriaxit

Skriaxits, also called blackstorms or living sandstorms, are the most feared creatures in many deserts. Spirits of retribution summoned millennia ago by ancient gods, blackstorms combine the elements of earth and air to dangerous effect. They are, fortunately, only rarely active. They speak the tongue of air elementals and their own language, a howling, shrieking tongue that frightens most humans who hear it. Much like very large versions of the *dust devils* created by the wizard's spell, blackstorms take the sand and the dust of the desert and whirl it to create their 10-foot-tall conical forms. At rest, a skriaxit appears to be a wind-scattered pile of black dust. As a pack, they create their greatest terror, generating high winds and a fierce sandstorm that can render a human fleshless in minutes.

**Combat:** Skriaxits move by generating a large vortex of wind that propels them at high speeds. If there are 1-6 skriaxits together, their speed is 12; 7-12 skriaxits have a speed of 18; if there are 13 or more skriaxits, their speed is 24. The skriaxit vortex creates a sandstorm in a 200-yard radius around them; those caught in this storm suffer 1 point of damage per round per skriaxit (so if there are 12 skriaxits in a pack, victims take 12 points of damage per round.
Within this sandstorm, the skriaxit pack constantly dispels magic as a 16th-level wizard.
Each skriaxit can form its winds into razor sharp lashes, inflicting 2d10 points of damage on a successful strike.
Though they were originally summoned from the elemental plane of Air, they have merged with earth, and the Prime Material plane is now their home. Thus, they cannot be sent to an elemental plane by a holy word or similar magic. No known magic can control them, though they are susceptible to wards against air elementals.
Each skriaxit pack is led by a Great Skriax, the most evil member of the pack. This creature has 24+24 Hit Dice and gains a +4 bonus to attack and damage rolls.

**Habitat/Society:** Skriaxits are highly intelligent, but extremely evil, elementals, combinations of the elements of air and earth. They hate and fear nothing, but simply delight in destruction. They feed on terror and destruction; once they have caused enough catastrophe, they sleep for 1d3 centuries. While asleep, they cannot be affected in any way by any being. They reawaken when hungry. They view humans, demihumans, and humanoids as playthings, with the same sadistic attitude as a human child playing with a fly. They may amuse themselves by listening to humans bargain with them, but humans have nothing of interest to offer them.

**Ecology:** Skriaxits feed upon the emotions of terror and fear they generate in those they destroy and kill.

### Arctic Tempest

This is a variety of tempest found only in arctic regions and some of the colder temperate lands. While they are similar to tempests in most respects, their special powers differ. They cannot use the whirlwind or *lightning bolt* powers of the standard tempest. Instead, they can either cause snow to fall or cast *ice*

*storm* spells. The arctic tempest usually uses a hail form of *ice storm*, but may use sleet instead. It can cause very cold snow to fall, inflicting 9d4+9 points of cold damage to those beneath it. Victims who make a successful saving throw vs. spells suffer only half damage from the attack.
Like the standard tempest, the arctic variety can make only two attacks per round, one using a wind power, such as *gust of wind* or *wind wall*, and one using a cold-based power, such as *ice storm* or *cause snow*. It may also substitute an electrical attack for either of its normal attacks, causing damage as a *shocking grasp* spell for 1d8+9 points of damage.

### Black Cloud of Vengeance

This living storm, usually found in deserts, combines the elements of fire and air. It unleashes a fiery rain which causes 7d10 damage to all beneath it, though a successful saving throw vs. breath weapon halves the damage. It then fans the flames, and will they continue to burn as long as there is fuel.

Elephants have thick, baggy hides, covered with sparse and very coarse tufts of gray hair. The elephant's most renowned feature is its trunk, which it uses as a grasping limb.

**Combat:** An elephant can make up to five attacks at one time in a battle. It can do stabbing damage of 2-16 points (2d8) with each of its two tusks; constricting damage of 2-12 points with its trunk; and 2-12 points of trampling damage with each of its front feet. No single opponent can be subject to more than two of these attacks at any one time. However, the elephant can battle up to six man-sized opponents at one time.
Creatures larger than ogre-sized are not subject to the elephant's trunk attack. Also, an elephant will never attempt to grasp anything that might harm its trunk -- like an object covered with sharp spikes. Elephants greatly fear fire.

**Habitat/Society:** Elephants are peaceful herbivores that travel in a herd. The herd is made up of both male and female elephants, as well as their young. If a herd of 10 or more elephants is encountered, there will be 1-4 young, from 20% to 70% mature, with the group. In the herd, a clear hierarchy exists, with the older males in a clear position of dominance.
Occasionally, an older male elephant will be beaten by a rival in the herd. The defeated elephant must then leave the group, at which point it becomes a violent "rogue." Rogue elephants encountered alone are 90% likely to attack, and will have no fewer than 6 hit points per hit die.

**Ecology:** Elephants are commonly captured when young and trained. They make good beasts of burden, but are often used in warfare as mounts and living battering rams, as well.
Elephant tusks are worth 100 to 600 hundred gold pieces each, or about 4 gp per pound. In areas heavily populated by elephants, a substantial trade in this ivory will be common.

**Mammoths:** This ancestor of the elephant was common during the Pleistocene era. Mammoths are covered with thicker, woolier hair than the modern elephant, and they are considerably larger. Mammoths are much more aggressive than elephants and will attack with less provocation. Because they are heavier, a mammoth's tusks are worth 50% more than an elephant's. Mammoths are rare when encountered outside of a Pleistocene campaign, and will only be found in subarctic plains.

**Mastodons:** Like the mammoth, the mastodon is an ancestor of the elephant that was common in the Pleistocene era, when they roamed from subarctic to tropical plains. They are larger than the modern elephant, hairier, and somewhat greater in length. Encountered outside of a Pleistocene campaign, mastodons are rare, and found only in subarctic plains.

**Oliphants:** The oliphant is a modern-day mastadon, with shaggy hair and tusks that curve down. The oliphant's trunk is too short to be used in combat. This limits the number of man-sized opponents an oliphant can attack at one time to four. Oliphants are more intelligent than elephants and do not share its cousins' unreasoning fear of fire. They are also very aggressive, and when properly trained and fed, oliphants grow to greater bulk (10+5 Hit Dice) than their wild counterparts. These trained oliphants are excellent for combat duty and have a morale of 10. An oliphant's tusks are worth 100 to 400 gold pieces each, or about 4 gp per pound, but are smaller than an elephant's.

# Elf

| | |
|---|---|
| **Climate/Terrain:** | Temperate to subtropical forest |
| **Frequency:** | Uncommon |
| **Organization:** | Any |
| **Intelligence:** | High to Supra- (14-20) |

| **Magic Resistance:** | 90% resistance to sleep and all charm-related spells |
| **Size:** | M (5'+tall) |
| **Morale:** | Elite (13) |
| **XP Value:** | 420 |

Though their lives span several human generations, elves appear at first glance to be frail when compared to man. However, elves have a number of special talents that more than make up for their slightly weaker constitutions.

High elves, the most common type of elf, are somewhat shorter than men, never growing much over than 5 feet tall. Male elves usually weigh between 90 and 120 pounds, and females weigh between 70 and 100 pounds. Most high elves are dark-haired, and their eyes are a beautiful, deep shade of green. They posses infravision up to 60 feet. The features of an elf are delicate and finely chiseled.

Elves have very pale complexions, which is odd because they spend a great deal of time outdoors. They tend to be slim, almost fragile. Their pale complexion and slight builds are the result of a constitution that is weaker than man's. Elves, therefore, always subtract 1 point from their initial Constitution score.

Though they are not as sturdy as humans, elves are much more agile, and always add 1 point to their initial Dexterity scores. Elven clothing tends to be colorful, but not garish. They often wear pastel colors, especially blues and greens. Because they dwell in forests, however, high elves often wear greenish grey cloaks to afford them quick camouflage.
Elves have learned that it is very important to understand the creatures, both good and evil, that share their forest home. Because of this, elves may speak the tongues of goblins, orcs, hobgoblins, gnolls, gnomes, and halflings, in addition to common and their own highly-developed language. They will always show an interest in anything that will allow them to communicate with, and learn from, their neighbors.

**Combat:** Elves are cautious fighters and always use their strengths to advantage if possible. One of their greatest strengths is the ability to pass through natural surroundings, woods, or forests, silently and almost invisibly. By moving quietly and blending into vegetation for cover, elves will often surprise a person or party (opponents have a surprise modifier of -4). As long as they are not attacking, the elves hiding in the forest can only be spotted by someone or something with the ability to see invisible objects. The military value of this skill is immense, and elven armies will always send scouts to spy on the enemy, since such spies are rarely caught-or even seen.
Although their constitutions are weak, elves posses an extremely strong will, such strong wills, in fact, that they have a 90% immunity to all *charm* and *sleep* spells . And even if their natural resistance to these spells fails, they get a normal saving throw-making it unlikely an elf will fall victim to these spells very often.
Elves live in the wild, so weapons are used for everything from dealing with the hostile creatures around their camps, to such mundane tasks as hunting for dinner. The elves' rigorous training with bows and swords, in addition to their great dexterity, gives them a natural bonus of +1 to hit when fighting with a short or long sword, or when using a bow of any kind, other than a crossbow. Elves are especially proficient in the use of the bow. Because of their agility, elves can move, fire a bow, and move again, all in the same round. Their archers are extremely mobile, and therefore dangerous.
Because of limitations of horses in forest combat, elves do not usually ride. Elves prefer to fight as foot soldiers and are generally armed as such. Most elves wear scale, ring, or chain mail, and almost all high elves carry shields. Although elves have natural bonuses when they use bows and swords, their bands carry a variety of weapons. The weapons composition of a band of elves is: spear 30%; sword 20%; sword and spear 20%; sword and bow 10%; bow 15%; two-handed sword 5%.
Elven fighters and multi-class fighters have a 10% chance per level to possess a magical item of use to his or her class. This percentage is cumulative and can be applied to each major type of magical item that character would use-for each class in the case of multi-class characters. (For example, a fighter/priest of level 4 or 5 would have a 40% chance to have a magical item useful to fighters and a 50% chance of having an item useful to priests.) In addition, if above 4th level, elven mages gain the same percentage chance to gain items, but gain 2-5 magical items useful to them if a successful roll is made.
For every 20 elves in a group, there will be one 2nd- or 3rd-level fighter (50% chance of either). For every party of 40 elves, and in addition to the higher level fighter, there will be a 1st- or 2nd-level mage (again, 50% chance of either). If 100 or more elves are encountered, the following additional characters will be present: two 4th-level fighter; one 8th-level mage; and a 4th-level fighter/4th-level mage/4th-level thief. Finally, if over 160 elves are encountered, they will be led by two 6th-level fighter/6th-level mage/6th-level thief. These two extremely powerful leaders will have two retainers each-a 4th-level fighter/5th-level mage, and a 3rd-level fighter/3rd-level mage/3rd-level thief. All of these are in addition to the total number of elves in the band.

Elven women are the equal of their male counterparts in all aspects of warfare. In fact, some bands of elves will contain units of female fighters, who will be mounted on unicorns. This occurs rarely (5% chance), and only 10-30 elf maidens will be encountered in such a unit. However, the legends of the destruction wrought by these elven women are rampant among the enemies of the elves.

**Habitat/Society:** Elves value their individual freedom highly and their social structure is based on independent bands. These small groups, usually consisting of no more than 200, recognize the authority of a royal overlord, who in turn owes allegiance to a king or queen. However, the laws and restraints set upon elven society are very few compared to human society and practically negligible when compared to dwarven society.

Elven camps are always well-hidden and protected. In addition to the large number of observation posts and personnel traps set around a camp, high elves typically set 2-12 giant eagles as guardians of their encampments (65% of the time). For every 40 elves encountered in a camp, there will be the following high level elves, as well as the leaders noted above: a 4th-level fighter, a 4th-level cleric, and a 2nd-level fighter/2nd-level mage/2nd-level thief. A 4th-level fighter/7th-level mage, a 5th-level fighter, a 6th-level fighter, and a 7th-level cleric will also be present. Females found in a camp will equal 100%, children 50%, of the males encountered.

Because elves live for several hundred years, their view of the world is radically different from most other sentient beings. Elves do not place much importance on short-term gains nor do they hurry to finish projects. Humans see this attitude as frivolous; the elves simply find it hard to understand why everyone else is always in such a rush.

Elves prefer to surround themselves with things that will bring them joy over long periods of time-things like music and nature. The company of their own kind is also very important to elves, since they find it hard to share their experiences or their perspectives on the world with other races. This is one of the main reasons elven families are so close. However, as friendship, too is something to be valued, even friends of other races remain friends forever.

Though they are immune to a few specific spells, elves are captivated by magic. Not specific spells, of course, but the very concept of magic. Cooperation is far more likely to be had from an elf, by offering an obscure, even worthless, (but interesting) magical item, than it is with two sacks of gold. Ultimately, their radically different perspective separates the elves from the rest of their world. Elves find dwarves too dour and their adherence to strict codes of law unpleasant. However, elves do recognize dwarven craftsmanship as something to be praised. Elves think a bit more highly of humans, though they see man's race after wealth and fleeting power as sad. In the end, after a few hundred years, all elves leave the world they share with dwarves and men, and journey to a mysterious land where they live freely for the rest of their extremely long lives.

**Ecology:** Elves produce fine clothes, beautiful music, and brilliant poetry. It is for these things that other cultures know the folk of the forest best. In their world within the forest, however, elves hold in check the dark forces of evil, and the creatures that would plunder the forest and then move on to plunder another. For this reason alone, elves are irreplaceable.

### Grey Elves (Faerie)

Grey elves have either silver hair and amber eyes, or pale golden hair and violet eyes (the violet-eyed ones are known as faerie elves). They favor bright garments of white, gold, silver, or yellow, and wear cloaks of deep blue or purple. Grey elves are the rarest of elves, and they have little to do with the world

outside their forests. They value intelligence very highly, and, unlike other elves, devote much time to study and contemplation. Their treatises on nature are astounding.
Grey elves value their independence from what they see as the corrupting influence of the outside world, and will fight fiercely to maintain their isolation. All grey elves carry swords, and most wear chain mail and carry shields. For mounts, grey elves will ride hippogriffs (70%) or griffons (30%). Those that ride griffons will have 3-12 griffons for guards in their camps, instead of giant eagles.

### Wood Elves

Also called *sylvan elves,* wood elves are the wild branch of the elf family. They are slightly darker in complexion than high elves, their hair ranges in color from yellow to coppery-red, and their eyes are light brown, light green, or hazel. They wear clothes of dark browns and greens, tans and russets, to blend in with their surroundings. Wood elves are very independent and value strength over intelligence. They will avoid contact with strangers 75% of the time.
In battle, wood elves wear studded leather or ring mail, and 50% of their band will be equipped with bows. Only 20% of wood elves carry swords, and only 40% use spears. Wood elves prefer to ambush their enemies, using their ability to hide in the forest until their foes are close at hand. In most cases (70%), wood elf camps are guarded by 2-8 giant owls (80% ) or by 1-6 giant lynx (20%). These elves speak only elf and the languages of some forest animals, and the treant. Wood elves are more inclined toward neutrality than good, and are not above killing people who stumble across their camps, in order to keep their locations secret.

### Half-Elves

Half-elves are of human stock, and have features of both the elf and human parents. They are slightly taller than common elves, growing as tall as 5 ½ feet and weighing up to 150 pounds. Though they do not gain the natural sword or bow bonuses from their elven relatives, but they do have normal elven infravision.
A half-elf can travel freely between most elven and human settlements, though occasionally prejudice will be a problem. The half-elf's life span is their biggest source of grief, however. Since a half-elf lives more than 125 years, he or she will outlive any human friends or relatives, but grow old too quickly to be a real part of elven society. Many half-elves deal with this by traveling frequently between the two societies, enjoying life as it comes; the best of both worlds. Half-elves may speak common, elf, gnome, halfling, goblin, hobgoblin, orc, and gnoll.

# Elf, Aquatic

| **Morale:** | Elite (13) |
| **XP Value:** | 420 |

Beneath the crashing waves of wild coastlines lives the sea-elf, aquatic cousin of the woodland elves in conduct and outlook.

Aquatic elves live for many centuries, and their eyes often show the effects of such great age. Otherwise, sea elves show little evidence of aging. They have gill slits on either side of their throats, and greenish-silver skin. Their hair is usually stringy, and emerald green to deep blue in color. Males usually wear their hair short, but females allow their hair to reach as much as 4 feet in length. Unlike mermen, aquatic elves have legs and usually wear clothes woven from underwater plants and reeds. Their dress is quite intricate, most often of greens, blacks, and browns woven in subtle, swirling designs. Sea elves

speak elvish, sahuagin, and an oddly accented common.

**Combat:** Sea elves are a peaceful culture. It is a rare sight to see an aquatic elf launch an attack, and rarer still for an entire band to prepare for war. Sea elves will leave their homes to go to battle only when the entire community is in danger, or against great enemies. When forced to war, they impress all opponents with their fierce bravery and skill.

If given their choice of battlefield, aquatic elves would prefer to fight in a bed of seaweed, or on the reefs, where their natural coloration and stealth skills can give them the chance to hide from their enemies. They can become as invisible in seaweed as their woodland cousins can in the forests, imposing a -5 penalty to their opponent's surprise roll. Sea elves enjoy the ability to move unhindered through seaweed, giving them tremendous advantages in maneuverability. While they lack the infravision of their land-based cousins, they can see clearly at amazing distances. An aquatic elf can count the troops of an enemy at distances of up to 1 mile.

Their preferred weapons are the trident and the spear. These are used for hunting as well as for combat. The trident and spear are wielded so well by sea elves, that they receive a + 1 bonus to their attack roll when using them. They will also use combat nets against their enemies. These off-hand weapons will bind an opponent if the wielder rolls a successful attack against AC 6. (Because of their great Dexterity, aquatic elves do not suffer a penalty to the attack roll for the nets.) Half the time, only a victim's weapon (including natural weapons, like a shark's teeth) will be entangled in the net. The rest of the time, the victim is trapped. A netted victim must either break the net (a bend bars roll) or disentangle himself (a Dexterity check with at a -3 penalty) to get free. Magical gestures are impossible in a net.

On some worlds, sea elves are unable to cast spells. The reasons for this are unknown, but there is a legend among these non-magical sea elves that the drow stole this ability from them, long ages ago.

Like their surface counterparts, aquatic elves demonstrate strong resistance to *sleep* and *charm* spells. Aquatic elves also have a 90% immunity against *charm person* spells. And even if their natural resistance to *sleep* and *charm* spells fails, aquatic elves still get a normal saving throw.

In combat, leadership is divided according to the size of the war party. For every 20 elves in a band, there is an additional 3rd-level fighter. For every 40 elves, there is an additional 4th-level fighter. In a force numbering over 100, there will be an 8th-level fighter and two 5th-level lieutenants (in addition to the 3rd- and 4th-level fighters above). A combat unit of more than 160 elves are accompanied by a 9th-level fighter and a 6th-level thief, in addition to their original numbers.

Sea elves befriend dolphins and employ them as companions and comrades-in-arms. In any party of at least 20 sea elves, there's a 50% chance for them to be accompanied by 1d3 dolphins. The dolphins are companions, however, they are neither pets nor cannon fodder. When danger threatens, dolphins join the combat as willing allies.

Battle tactics of the sea elves differ from one band to another, but common strategies include the following:

A charge from directly beneath an opponent. This is particularly effective against unwanted visitors from the surface, who are unaccustomed to being attacked from below. If the elf launched this attack from a bed of seaweed, he might well escape back to cover before his opponents could react.

A beaching, usually by more than one elf. Sea elves can survive on land for a few minutes at a time, though in a state of growing discomfort. Many of their opponents, like sharks, cannot. Several elves may attempt to wrestle an opponent to the beach, taking it well away from the ocean.

Traps. Beds of seaweed and coral reefs are excellent staging areas for all manner of spring-loaded booby-traps, nets, and perhaps magical entrapments designed and built by surface elves in return for

favors. Predators have often decided to turn toward easier prey after encountering a sea elf band's defenses.

**Habitat/Society:** Small communities of 3d100+100 normal inhabitants are the rule of aquatic elven lifestyle. These communities are often found in heavy weed beds in sheltered waters, though the aquatic elves may fashion homes in caverns in lagoon bottoms and coral reefs. Sea elf communities keep in touch with each other through an elaborate and inefficient custom of wandering herald/messengers who travel from one band to another, much like postal carriers transmitting oral messages. In each community, there are several leader-types, as outlined earlier, ruled over by a fighter of 10th-12th level, with a personal guard of eight 7th-level elf fighters. Magical weapons would be carried by the leader or one of his guards.

Aquatic elves are an anti-social race. They avoid air-breathers as well as other races that dwell beneath the waves. Their cities are usually carved from the rock beneath beds of seaweeds, practically invisible to non-elves. A character has the same opportunity to find a sea elf community as he has to detect a secret door.

As independent as the freedom-loving elves are of each others' communities, they live in even greater isolation from the rest of the undersea races, whom they would rather not deal with. Although the aquatic elves see nothing wrong with the mermen, the tritons, and other good-aligned undersea races, the elves see no reason to involve themselves in the problems of such transitory peoples. It is part of the elven philosophy to let others go about their business with a minimum of interruption; aquatic elves would prefer it if others returned the favor.

Those aquatic elves who are willing to deal with non-elves are highly insulted if the non-elves expresses any lack of confidence in the sea elf's word. An aquatic elf who makes a promise will carry out his obligation unto death. Should he be killed before he can succeed, his entire band will work to see that the promise is fulfilled. On the other hand, aquatic elves do not accept promises from non-elven characters. The sea elves know that they are the only race with the honor to carry out the duties of its dead members. And, besides, only elves live long enough to guarantee that they will have the time to fulfill a vow.

A HREF="MM00050.htm#baa5737b">Dolphins are one of the few creatures the sea elves genuinely like. There are 3d6+2 dolphins swimming about most aquatic elf bands, providing one of the few clues as to where the elven cities are located. Aquatic elves are also fairly fond of land elves. It is uncertain how closely related the two races are, although matings between land elves and aquatic elves produce elves with the coloring of high elves, but with greenish hair. As they have hidden gill slits that open up when they dive under the surface, these elves can breathe either air or water indefinitely. The attitudes and abilities of these half-breeds depend upon whether they were reared in the forests or the rich kelp beds, with individuals inclined (65%) to follow the lifestyles of their mothers.

Sea elves have an outlook on the world that comes from long lives among quiet natural beauty. Even with magical assistance to enable them to breathe air, aquatic elves are uncomfortable above the waves, and so very few have seen the forests that the high elves speak of with such enthusiasm. But there are few aquatic elves who would not like to take the impossible trip overland to see the wonders of a forest first-hand.

Sea elves hate sahuagin. This isn't much of a surprise, as almost every undersea race, with the exception of the perverse ixitxachitls, hates the sea-devils. But sea elves generate a passion for conflict with the sahuagin that surprises even themselves. Aquatic elves leave their sheltered bands in war parties if they have reason to suspect that sahuagin are dwelling nearby. Should a party of sea elves encounter sahuagin, the former nearly always attack if they outnumber their hated foes. Aquatic elves also make it a point to

kill any great sharks in their territory.
Sea elves have no other major enemies, but they dislike surface-dwelling fishermen, due to the numbers of sea elves snared in nets, or mistakenly killed as sahuagin by these ignorant humans.
The sea elves have legends that speak of far-away undersea elves who have learned to shapechange into sea otters or dolphins. There have been search parties motivated by these tales, but no such elves have ever been found.

**Ecology:** Each band of sea elves is self-sufficient, raising their kelp and hunting fish when necessary. Sea elves scavenge. They are enchanted by the idea of magic, but they realize that land elves are more equipped to deal with it. They often trade rare or decorative items they have found to the high elves in exchange for metal weapons and tools, which they cannot forge underwater.
Aquatic elves are valuable sources of information regarding the lands beneath the sea. Their scavenging parties have uncovered artifacts and tidbits of knowledge from a vast collection of underwater ruins and sunken ships. Sea elf traders remember the histories of other races back beyond the imaginings of the current generation. The trick is to get them to reveal this information.

## Malenti

There is a bond between aquatic elves and their hated enemies, the sahuagin, that neither race openly acknowledges. If sea elves are present within a mile or so of a sahuagin encampment, then approximately one out of every hundred sahuagin births resembles an aquatic elf rather than a sea-devil. Most of the time, these offspring, known as malenti, are eaten by their parents. Once in a great while, a malenti is allowed to live to adulthood because its physical resemblance to an aquatic elf, in combination with its sahuagin upbringing and attitude, make it an ideal spy in elven communities. Indeed, malenti often develop the ability to sense the presence and position of any aquatic elves within 120 feet, an invaluable skill for either a spy or a scout for an invading sahuagin force.
Few aquatic elves believe in the existence of malenti, as they suggest some disturbing possibilities about sahuagin origins.
Malenti do exist, however, and are identical to aquatic elves in most ways. They age much faster, though, with a life span of only 170 years or so. Although the sea elves themselves have a difficult time discerning malenti spies, dolphins might (20%) sense one of the changelings. malenti, understandably, aren't fond of dolphins.
It is possible for sahuagin and Malenti to breed, the issue invariably being malenti. In this way, whole sahuagin communities have vanished, replaced by malenti. These extraordinarily rare bands resemble aquatic elves in nearly every way (except life span, known languages, and other obvious aspects), but they are just as evil as their sahuagin parents. They often fight in that style, and they worship the same evil powers as the sahuagin.

These dreaded, evil creatures were once part of the community of elves that still roam the world's forests.

Now these dark elves inhabit black caves and winding tunnels under the earth, where they make dire plans against the races that still walk beneath the sun, on the surface of the green earth.
Drow have black skin and pale, usually white hair. They are shorter and more slender than humans, seldom reaching more than 5 feet in height. Male drow weigh between 80 and 110 pounds, and females between 95 and 120 pounds. Drow have finely chiseled features, and their fingers and toes are long and delicate. Like all elves, they have higher Dexterity and lower Constitution than men.
Drow clothing is usually black, functional, and often possesses special properties, although it does not radiate magic. For example, drow cloaks and boots act as if they are *cloaks of and boots of elvenkind*, except that the wearer is only 75% likely to remain undetected in shadows or to surprise enemies. The material used to make drow cloaks does not cut easily and is fire resistant, giving the cloaks a +6 bonus to saving throws vs. fire. These cloaks and boots fit and function only for those of elven size and build. Any attempt to alter a drow cloak has a 75% chance of unraveling the material, making it useless.
In the centuries they've spent underground, drow have learned the languages of many of the intelligent creatures of the underworld. Besides their own tongue, an exotic variant of elvish, drow speak both common and the subterranean trade language used by many races under the earth. They speak the languages of gnomes and other elves fluently.
Drow also have their own silent language composed of both signed hand movements and body language. These signs can convey information, but not subtle meaning or emotional content. If within 30 feet of another drow, they can also use complex facial expressions, body movements, and postures to convey meaning. Coupled with their hand signs, these expressions and gestures give the drow's silent language a potential for expression equal to most spoken languages.

**Combat:** The drow's world is one in which violent conflict is part of everyday life. It should not be surprising then, that most drow encountered, whether alone or in a group, are ready to fight. Drow encountered outside of a drow city are at least 2nd-level fighters. (See Society note below.)
Drow wear finely crafted, non-encumbering, black mesh armor. This extremely strong mail is made with a special alloy of steel containing adamantite. The special alloy, when worked by a drow armorer, yields mail that has the same properties of *chain mail +1* to *+5*, although it does not radiate magic. Even the lowliest drow fighters have, in effect, *chain mail +1*, while higher level drow have more finely crafted, more powerful, mail. (The armor usually has a +1 for every four levels of experience of the drow wearing it.)
Dark elves also carry small shields (bucklers) fashioned of adamantite. Like drow armor, these special shields may be +1,+2, or even +3, though only the most important drow fighters have +3 bucklers.
Most drow carry a long dagger and a short sword of adamantite alloy. These daggers and swords can have a +1 to +3 bonus, and drow nobles may have daggers and swords of +4 bonus. Some drow (50%) also carry small crossbows that can be held in one hand and will shoot darts up to 60 yards. The darts only inflict 1-3 points of damage, but dark elves commonly coat them with poison that renders a victim unconscious, unless he rolls a successful saving throw vs. poison, with a -4 penalty. The effects last 2d4 hours.
A few drow carry adamantite maces (+1 to +5 bonus) instead of blades. Others carry small javelins coated with the same poison as the darts. They have a range of 90 yards with a short range bonus of +3, a +2 at medium, and a +1 at long.
Drow move silently and have superior infravision (120 feet). They also have the same intuitive sense about their underground world as dwarves do, and can detect secret doors with the same chance of success as other elves. A dark elf can only be surprised by an opponent on a roll of 1 on ldl0.
All dark elves receive training in magic, and are able to use the following spells once per day: *dancing*

*lights*, *faerie fire*, and *darkness*. Drow above 4th level can use *levitate*, *know alignment*, and *detect magic* once per day. Drow priests can also use *detect lie*, *clairvoyance*, *suggestion*, and *dispel magic* once per day. (See also Wizard Spells, Player's Handbook)

Perhaps it is the common use of magic in drow society that has given the dark elves their incredible resistance. Drow have a base resistance to magic of 50%, which increases by 2% for each level of experience. (Multi-classed drow gain the bonus from only the class in which they have the highest level.) All dark elves save vs. all forms of magical attack (including devices) with a +2 bonus. Thus, a 5th-level drow has a 60% base magic resistance and a +2 bonus to her saving throws vs. spells that get past her magic resistance.

Drow encountered in a group always have a leader of a higher level than the rest of the party. If 10 or more drow are encountered, a fighter/mage of at least 3rd level in each class is leading them. If 20 drow are encountered, then, in addition to the higher level fighter/mage, there is a fighter/priest of at least the 6th level in both classes. If there are more than 30, up to 50% are priests and the leader is at least a 7th-level fighter/8th-level priest, with a 5th-level fighter/4th-level mage for an assistant, in addition to the other high level leaders.

Dark elves do have one great weakness - bright light. Because the drow have lived so long in the earth, rarely venturing to the surface, they are no longer able to tolerate bright light of any kind. Drow within the radius of a *light* or *continual light* spell are 90% likely to be seen. In addition, they lose 2 points from their Dexterity and attack with a -2 penalty inside the area of these spells. Characters subject to spells cast by drow affected by a *light* or *continual light* spell add a +2 bonus to their saving throws. If drow are attacking a target that is in the area of effect of a *light* or *continual light* spell, they suffer an additional -1 penalty to their attack rolls, and targets of drow magical attacks save at an additional +1. These penalties are cumulative (i.e., if both the drow and their targets are in the area of effect of a *light* spell, the drow suffer a -3 penalty to their attack rolls and the targets gain a +3).

Because of the serious negative effects of strong light on the drow, they are 75% likely to leave an area of bright light, unless they are in battle. Light sources like torches, lanterns, magical weapons, or *faerie fire* spells, do not affect drow.

**Habitat/society:** Long ago, dark elves were part of the elven race that roamed the world's forests. Not long after they were created, though, the elves found themselves torn into rival factions - one following the tenets of evil, the other owning the ideals of good (or at least neutrality). A great civil war between the elves followed, and the selfish elves who followed the paths of evil and chaos were driven into the depths of the earth, into the bleak, lightless caverns and deep tunnels of the underworld. These dark elves became the drow.

The drow no longer wish to live upon the surface of the earth. In fact, few who live on the surface ever see a drow. But the dark elves resent the elves and faeries who drove them away, and scheme against those that dwell in the sunlight.

Drow live in magnificently dark, gloomy cities in the underworld that few humans or demihumans ever see. They construct their buildings entirely out of stone and minerals, carved into weird, fantastic shapes. Those few surface creatures that have seen a dark elf city (and returned to tell the tale) report that it is the stuff of which nightmares are made.

Drow society is fragmented into many opposing noble houses and merchant families, all scrambling for power. In fact, all drow carry brooches inscribed with the symbol of the merchant or noble group they are allied with, though they hide these and do not show them often. The drow believe that the strongest should rule; their rigid class system, with a long and complicated list of titles and prerogatives, is based on the idea.

They worship a dark goddess, called Lolth by some, and her priestesses hold very high places in society. Since most drow priests are female, women tend to fill nearly all positions of great importance.
Drow fighters go through rigorous training while they are young. Those who fail the required tests are killed at the program's conclusion. That is why dark elf fighters of less than 2nd level are rarely seen outside a drow city.
Drow often use giant lizards as pack animals, and frequently take bugbears or troglodytes as servants.
Drow cities are havens for evil beings, including mind flayers, and drow are allied with many of the underworld's evil inhabitants. On the other hand, they are constantly at war with many of their neighbors beneath the earth, including dwarves or dark gnomes (svirfneblin) who settle to close to a drow city.
Dark elves frequently keep slaves of all types, including past allies who have failed to live up to drow expectations.

**Ecology:** The drow produce unusual weapons and clothing with quasi-magical properties. Some scribes and researchers suggest that it is the strange radiation around drow cities that make drow crafts special. Others theorize that fine workmanship gives their wonderfully strong metals and superior cloth its unique attributes. Whatever the reason, it's clear that the drow have discovered some way to make their clothing and weapons without the use of magic.
Direct sunlight utterly destroys drow cloth, boots, weapons, and armor. When any item produced by them is exposed to the light of the sun, irreversible decay begins. Within 2d6 days, the items lose their magical properties and rot, becoming totally worthless. Drow artifacts, protected from sunlight, retain their special properties for ld20+30 days before becoming normal items. If a drow item is protected from direct sunlight and exposed to the radiations of the drow underworld for one week out of every four, it will retain its properties indefinitely.
Drow sleep poison, used on their darts and javelins, is highly prized by traders on the surface. However, this poison loses its potency instantly when exposed to sunlight, and remains effective for only 60 days after it is exposed to air. Drow poison remains potent for a year if kept in an unopened packet.

## Driders

These strange creatures have the head and torso of a drow and the legs and lower body of a giant spider. Driders are created by the drow's dark goddess. When a dark elf of above-average ability reaches 6th level, the goddess may put him or her through a special test. Failures become driders.
Driders are able to cast all spells a normal drow can use once per day. They also retain any magical or clerical skills they had before transformation. A majority of driders (60%) were priests of 6th or 7th level before they were changed, all other driders were mages of 6th, 7th, or 8th level.
Driders always fight as 7 Hit Die monsters. They often use swords or axes, though many carry bows. Driders can bite for ld4 points of damage, and those bitten must save vs. poison with a -2 penalty or be paralyzed for 1-2 turns.
Because they have failed their goddess's test, driders are outcasts from their own communities. Driders are usually found alone or with 2d6 huge spiders (10% chance), rather than with drow or other driders. They are violent, aggressive creatures that favor blood over all types of food. They stalk their victims tirelessly, waiting for the right chance to strike.

# Ettercap

| | |
|---|---|
| **Climate/Terrain:** | Heavily wooded forest |
| **Frequency:** | Rare |
| **Organization:** | Solitary or pairs |

| **Alignment:** | Neutral evil |
| **No. Appearing:** | 1-2 |
| **Armor Class:** | 6 |
| **Movement:** | 12 |
| **Hit Dice:** | 5 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 3 |
| **Damage/Attack:** | 1-3/1-3/1-8 |
| **Special Attacks:** | Poison |
| **Special Defenses:** | Traps (see below) |
| **Magic Resistance:** | Nil |
| **Size:** | M (6' tall) |
| **Morale:** | Elite (13) |
| **XP Value:** | 650 |

Ettercaps are ugly bipedal creatures that get along very well with all types of giant spiders. These creatures of low intelligence are exceedingly cruel, very cunning, and are skilled in setting traps -- very deadly traps -- much like the spiders that often live around them.

Ettercaps stand around six feet tall, even with their stooping gait and hunched shoulders. The creatures have short, spindly legs, long arms that reach nearly to their ankles, and large pot-bellies. The hands of ettercaps have a thumb and three long fingers that end in razor sharp claws. Their bodies are covered by tufts of thick, wiry, black hair, and their skin is dark and thick. Ettercaps' heads are almost equine in shape, but they have large reptilian eyes, usually blood-red in color, and large fangs, one protruding downward from each side of the mouth. The mouth itself is large and lined with very sharp teeth.

Ettercaps do not have a formal language. They express themselves through a combination of high-pitched chittering noises, shrieks, and violent actions.

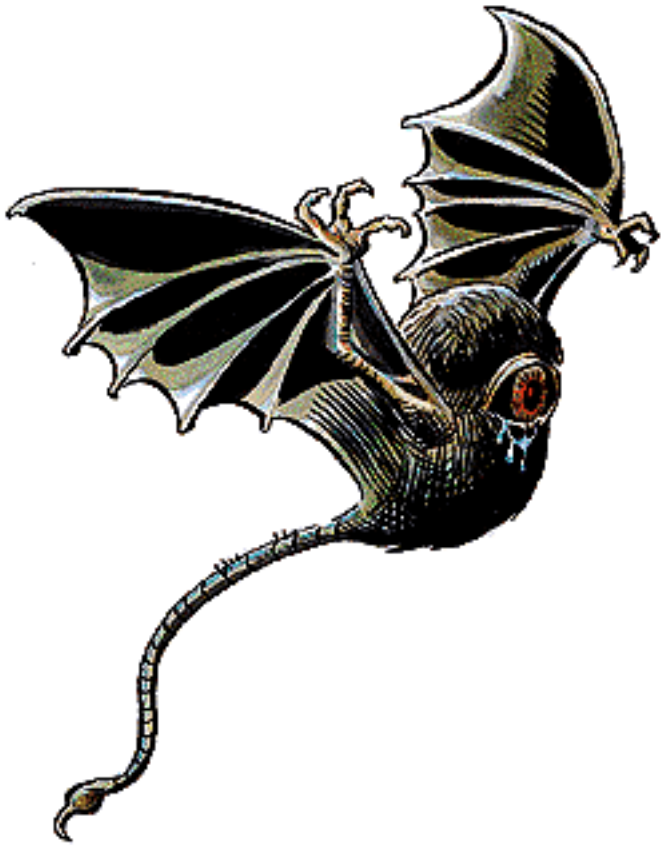
**Combat:** If caught in a battle, an ettercap first strikes with its claws, causing 1-3 points of damage with each set. The creature then tries to bite its opponent, inflicting 1d8 points of damage with its teeth and powerful jaws. A successful bite attack by an ettercap enables the monster to inject its victim with a powerful poison from the glands above the ettercap's fangs.
The poison secreted by an ettercap is highly toxic and very similar to the poison of giant spiders. A creature injected with it must immediately roll a saving throw vs. poison. A failed roll means that the creature dies within 1d4 turns when the toxigen paralyzes the victim's heart.
Many adventurers never get the chance to raise a sword against ettercaps because of the devious traps they use for protection. Ettercaps prefer to ambush unwary travelers and lead them into traps rather than fight them face to face.
Like spiders, ettercaps have silk glands located in their abdomen. The thin, strong strands of silvery silk-like material these glands secrete are used by ettercaps to construct elaborate traps made up of nets, trip wires, garottes, and anything else the monsters can make out of the strands. The traps are designed so that they often immobilize the adventurer who stumbles into it. If this is the case, ettercaps never hesitate to attack that character first, trying to poison the victim before he escapes. Different ettercaps prefer different trap designs, so encounters with different ettercaps should expose the adventurer to new traps each time.

**Habitat/Society:** Ettercaps prefer to dwell in the deepest part of a forest, near paths that are frequented by game or travelers. The creatures' nests are made of a frame of strands filled with rotting leaves and moss. The lairs are often located on the ground, but can also be found up in large, sturdy trees. No treasure is to be found in ettercap lairs, but occasionally items dropped by adventurers who have fallen into ettercap traps are found nearby.
Though usually only one ettercap is encountered at any time, on rare occasions a pair of ettercaps can be found together. The pairs encountered are always mated couples, though the female and male appear to be identical. Ettercap young are abandoned as soon as they are born, so adults are never encountered with young.

**Ecology:** An ettercap eats any meat, regardless of the type of creature from which it comes. Upon capturing a victim, the ettercap poisons it so it cannot escape; once the creature is dead, the ettercap immediately devours as much of the corpse as possible. Typically, an ettercap can consume an entire deer or a large humanoid in a single sitting. Anything remaining after the ettercap has gorged itself is left for scavengers.
Often (40%), 2d4 spiders of some monstrous type are found cooperating with an ettercap. The ettercap uses any giant spider webs available when it designs its traps. Creatures killed by an ettercap in the web of a giant spider are shared with the spider instead of being devoured entirely by the ettercap.
Ettercap poison is highly valued, partly because of its extreme toxicity and partly because it is rather difficult to obtain. An ettercap's poison glands hold only one ounce of poison at any time, but this ounce is worth up to 1,000 gp on the open market.

# Eyewing

| | |
|---|---|
| **Climate/Terrain:** | The Abyss (preferred) |
| **Frequency:** | Rare |
| **Organization:** | Band |
| **Activity Cycle:** | Any |
| **Diet:** | None known |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | Nil |
| **Alignment:** | Lawful evil |
| **No. Appearing:** | 1-20 |
| **Armor Class:** | 4 |
| **Movement:** | Fl 24 (B) |
| **Hit Dice:** | 3 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 3 or 1 |
| **Damage/Attack:** | 1-6/1-6/1-4 or eyewing tears |
| **Special Attacks:** | Tears |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | L (15' wingspan) |
| **Morale:** | Steady (12) |
| **XP Value:** | 650 |



Eyewings are loathsome inhabitants of the Abyss. They are obedient, loyal, and dumb -- perfect servitors for the dark gods and their more powerful minions.

An eyewing's body is a fat, egg-shaped ball covered with matted black fur. The 5-foot-wide body is supported by a pair of five-foot-long leathery bat wings. Each wing is tipped with a set of three razor-sharp talons. An 8-foot-long rat's tail dangles from the back of the body. The tail ends in a small, sharp spur. It has no feet and has never been known to land.

The body is dominated by the single, bulging, 4-foot-wide eyeball. The eyeball is black with a blood-red pupil. A vile blue fluid continuously leaks from the eye, soiling its fur. Great leathery eyelids squeeze this fluid out and away from the creature. The stench is unbelievable. It gives off an acidic smell that

scorches the sensitive tissues in other creatures' noses and mouths.

**Combat:** An eyewing has two main forms of attack. The most common form is to use its claws and tail to strike its opponents. It can either swoop down on them, or hover and slash. Its second form of attack is to bomb its enemies with a large eyewing tear that is squeezed out of the large eyeball by the leathery eyelid. It has amazing control over the release of the tear -- it has the same chance to hit with a tear as with its melee attacks. It releases a tear when it is within 100 feet of its target. It can deliver this attack while hovering or diving.

An eyewing tear is a one-foot-diameter ball of poisonous blue fluid. The attack roll determines if the target dodged the tear. If the tear hits, the victim must roll a successful saving throw vs. poison or suffer 2d6 points of damage (success means only 1d6 points of damage). The tears may also splash onto anyone within ten feet of the target. The attack roll for the splash attack is made with a -2 penalty. If someone is splashed, a saving throw vs. poison must be rolled; those who fail suffer 2d4 points of damage, while those who succeed suffer 1d4 points of damage.

A tear hardens into a rubbery lump within 2d6 hours after being shed. The exact time depends upon the humidity, temperature, etc. Anybody handling a hardened tear must roll a successful saving throw vs. poison or suffer 1 point of damage.

Eyewings have extremely acute vision that enables them to see with perfect accuracy for up to 25 miles. They also have infravision out to 120 feet. They are immune to all cold-based attack forms, as are their tears.

**Habitat/Society:** Eyewings are supernatural creatures that exist only to serve their dark masters. When left without orders they become sluggish and listless. This should not be taken to mean that they are any less dangerous. This listlessness is their expression of boredom, but nothing relieves eyewing boredom quite like tearing apart innocent creatures.

Eyewings have no society as such. They do not have a culture. Their simple language consists of shrill squeaks. They understand other spoken languages, but cannot speak them. When in the Abyss they are found only on layers that allow for flying. Their immunity to cold makes them at home on any of the icy layers as well.

**Ecology:** Eyewings are sexless creatures that are not a part of nature. They kill even when they're not ordered to, just for the pleasure of it. Eyewings have been encountered on the moon, where there is no air to breathe and no water to drink. It is assumed that they do not need air or water. They have never been seen to eat; it is assumed by most who have studied them that they are sustained by magic. The more powerful creatures of the Abyss have no qualms about an eyewing snack should one be nearby, but they are not the natural prey of any creature.

# Feyr

| | Feyr | Great Feyr |
|---|---|---|

| **XP Value:** | 975 | 13,000 |

Feyrs (pronounced "fears") are created from the remnants of ordinary nightmares, mixed with residual magical energies, and unknowingly brought to life by the strong emotions of a large group of people. They are most commonly found in large cities that have a good number of mages, priests, and other spell-casters. Normal feyrs stalk the streets at night, seeking nothing more than to create havoc. Great feyrs, on the other hand, are the combination of lesser feyrs, and may be found anywhere, though they a much rarer than the common feyrs.

Common feyrs appear as humped, hunchbacked creatures, grim and inhuman in appearance. Their hide is

mottled and warped like the surface of the human brain. The creature is supported by two main tentacles which act as legs, and by a handful of other tentacled limbs. Massive horizontal jaws line its underside, and the forepart of the beast has 1-5 eyes, usually the color of melted gold. The feyr's hide is a sickly rainbow of shades, like light reflected off an oil slick. There are dull blues and blacks along the body, pale reds and magentas toward the head, and deathly greens and yellows along the belly.

**Combat:** The horizontal jaws of the feyr slung beneath its belly are the creature's prime form of attack, inflicting 1d4 points of damage for common feyrs, 2d6 points for great feyrs. The feyr does not use its jaws to eat, but rather to strike terror into the hearts of those who witness its savage and bloody attacks. Those who witness the attack of either type of feyr must make a successful saving throw vs. *spells* or be consumed by *fear* (as the spell of the same name). This *fear* acts for 1d4 rounds for common feyrs, and 2d6 rounds for great feyrs. This form of *fear* only applies when the creature attacks. Merely sighting a common feyr does not inspire *fear*.

The great feyr has an additional power that can affect the emotions similar to the 4th-level wizard spell *emotion*. The range of this attack is 100 yards, may affect a 20-foot by 20-foot area, and the intended victim must make a successful saving throw vs. *spells* at -2 or be affected. Only the negative emotions of *fear*, *hate*, *hopelessness*, and *sadness* may be cast by the great feyr. The great feyr may cast this spell and retain its *invisibility*.

Common feyrs are slain by direct sunlight, though they have no fear of it themselves, and do not seek shelter with the coming sun, nor hesitate to venture out if they are still alive after sun-up. Common feyrs can use a saving throw vs. spells against sunlight created by magic spells, such as *continual light*, in addition to their standard magic resistance. Greater feyrs are unaffected by sunlight.

**Habitat/Society:** Individual common feyrs are slain by the morning light. There are occasions when several common feyrs combine to form a great feyr, which in addition to being immune to the effects of the sun, is much more intelligent. The greater feyr seeks to inspire even stronger emotions, which it may then use to stay alive. While common feyrs do not travel far from their point of origin, great feyrs may undertake long trips, lured by strong emotional states.

While a common feyr merely slouches through the evening shadows and fogs, looking for a collection of victims to terrorize and thereby enrich itself on their emotions, a great feyr chooses to attack while *invisible*, playing the emotions of others, heightening emotional states already present, and driving mortal beings mad with terror and fear. While the great feyr is not banished by daylight, it prefers to work at night, and seeks to retreat into a hidden lair during daylight hours, preferably some abandoned area such as an old house, cavern, or underground structure.

**Ecology:** Common feyrs are created by the emotions of large masses of people, and great feyrs by compilations of lesser feyrs. The raw materials for such creatures may be found in any urban settlement, and when there is additional tension in the air, the feyrs stalk at night. Cities under siege, towns divided by rivalries or civil wars, oppressed peoples, and settlements baking under a merciless summer heat are all possible breeding grounds of feyrs. Guard and watch units are usually more than sufficient to handle the common feyrs, as those feyrs attack anything that moves. But the more dangerous great feyrs must be dealt with by a wizard or similar high-level individual, who can both withstand the attack of the feyr and dispatch it.

Giant fish are a diverse group of creatures with varying attack and defense capabilities. Many of these

creatures are able to swallow victims whole. Swallowed victims take normal bite damage. Victims take 1 point of damage per round from the fish's digestive juices and have a 5% cumulative chance per round of suffocating. To escape the fish's stomach, a victim can cut free with a sharp-edged weapon. The victim may be rescued by cutting or tearing from the outside. When the fish has lost 50% of its hit points, the victim breaks free.

### Barracuda

The first clue that a barracuda is in the area might be a sudden pain in the foot, as the marauder swims by and bites off a few tender toes. They are found in warm salt waters.

### Carp, Giant

Giant carp attack by biting, inflicting 2-20 points of damage with their sharp, curved teeth. Additionally, if an attack causes 12 or more points of damage, the carp swallows its victim.

### Catfish, Giant

A giant catfish bites for 3d4 points of damage. It swallows it prey if its attack roll is 4 points more than it needed. The fish can employ its feelers as weapons by whipping its head back and forth. These feelers secrete a toxin that causes 2d4 points of damage. A save vs. poison limits the damage to 1d4 points. Two additional opponents can be attacked if they are within range of the feelers.

### Dragonfish

Dragonfish bite for 1-6 points of damage. However, most adventurers stumble across these creatures. These encounters cause 1d6 of the fish's spines to penetrate boots, causing 1 point of damage apiece before snapping off in the wound. The spines' poison is slow-acting, and creatures injected with the toxin must make a saving throw vs. poison at a -4 or dies. If successful, the character suffers a -2 penalty on all attack rolls for the next 1d12+4 hours.

### Eel, Electric

An attacking eel discharges a jolt of electricity with a 15-foot-radius range. Creatures less than 5 feet from the eel suffer 3d8 points of damage, creatures 5 to 10 feet away receive 2d8 points, and all others in range suffer 1d8 points. An eel must recharge itself for an hour between attacks. It is immune to electrical effects.

### Eel, Giant

Giant eels have no electrical discharge attack. Instead, they attack with their teeth. Since they strike with amazing speed, giant eels receive a +1 bonus to initiative rolls.

### Eel, Marine

Marine eels have an electrical discharge with a range of 15 feet; creatures less than 5 feet from the eel suffer 6d6 points of damage, those 5 to 10 feet away receive 4d6 points, and all others in range suffer 2d6 points. Victims must roll a saving throw vs. paralyzation or be stunned for a number of rounds equal to the damage they sustained from the electrical shock. This eel, too, is immune to electrical effects.

### Eel, Weed

The bite of the weed eel is poisonous; victims failing a saving throw vs. poison die in 1d4 rounds. Weed eels are at home in both fresh and salt water, 25 to 40 feet deep. Each colony has a lair consisting

of a central cave, roughly 30 feet long and 20 feet wide and high. The floor of the central cave is covered with small stones, coins, and gems that the eels have scavenged. Radiating from this central cave are a series of 6-foot-diameter tunnels, which in turn lead to a network of 6 to 8-inch-diameter holes. These are the homes of the individual eels that make up the colony. Weed eels are fiercely protective of their lairs, especially the central cave where their young are raised.

### Gar, Giant

The gar attacks with its teeth, inflicting 8d4 points of damage. On a score of 20, the gar swallows its victim whole. On average, a giant gar can swallow an object up to 5 feet long. Giant gars are found in deep, freshwater lakes and rivers.

### Lamprey

The lamprey feeds by biting its victims, and fastening itself by its sphincter-like mouth. Once attached, the lamprey drains 2 hit points per Hit Die of blood on the next and successive rounds. Sea lampreys are especially susceptible to fire, making their saving throws against fire-based attacks with a -2 penalty.

### Lamprey, Land

Land lampreys feed as do aquatic ones. Once attached (a hit for 1 point of damage), it drains blood for three rounds, unless killed or removed, for 1 point of damage per round. In addition, while attached to a character, each lamprey encumbers an individual; this is equivalent to a loss of 1 point of Dexterity per lamprey attached.

### Manta Ray

If the manta's attack roll is 2 or more greater than the number needed to hit, it swallows its prey. A manta ray can swallow one man-sized creature or three small-sized creatures. If opponents attack its rear, it uses its stinger for 2-20 points of damage; victims must save vs. paralyzation or be stunned for 2-8 rounds.

### Pike, Giant

Because of its speed and natural camouflage, a pike's opponents suffer a -2 penalty to their surprise roll. Giant pike inhabit deep, freshwater lakes.

### Piranha

Piranhas travel in schools of 5-50. There is a 75% chance that at least one will attack any creature that swims or wades near the school. If they attack and blood is drawn, the entire school goes berserk and each piranha attacks twice per melee round. Up to 20 piranhas can attack a single, man-sized individual simultaneously.

### Piranha, Giant

Giant piranhas behave like their smaller counterparts, but only 10 can attack a single, man-sized individual simultaneously.
Giant piranhas are sometimes called sky-eaters; once per round they can charge at full speed and leap out of the water at heights of up to 10 feet; they often use this attack on water fowl that fly low over the water, but they sometimes use it against humans.

### Pungi Ray

Any creature stepping on a pungi must save vs. poison or die. A footstep on a pungi ray equals one

attack; if a creature fell on a pungi ray it would suffer 2-8 spinal attacks. If attacked, it swims away.

### Quipper
Quippers are freshwater piranhas that live in colder waters.

### Seahorse, Giant
A sea horse attacks with a head butt, but a sea horse trained as a steed can use its long tail to constrict and restrain enemies. A captured opponent can free itself with a open doors roll made with a -1 penalty. The tail of a giant sea horse is so long it can attack the same opponent its head butts, or the one its rider is attacking. The constriction causes no damage, but the sea horse can still butt the helpless victim.

### Shark
Sharks attack mercilessly at the scent of blood, which they can detect a mile away. The scent of blood and the thrill of the kill sends sharks into a feeding frenzy. Since sharks move up, take a bite of flesh, and retreat, 10 normal-sized sharks can attack a man-sized opponent.

### Shark, Giant
The huge megalodons (giant sharks) never reach a frenzy, since they can swallow most creatures whole on an attack roll 4 greater than minimum number needed to hit.

### Sting Ray
If a creature steps on a sting ray, it lashes out with its tail spine. The creature must save vs. poison or be paralyzed for 5-20 turns.

**Giant Frogs:** Giant frogs resemble their more common relatives in everything but size. Their enormous size means that they consider larger creatures as a source of food, making small creatures and even demihumans possible prey. A giant frog can range from 2 to 6 feet in length and weigh between 50 and 250 pounds (a 2-foot frog weighs 50 pounds, adding 50 pounds for each additional foot of length). Frogs with 1 Hit Die are 2 feet long, while those 2 to 4 feet long have 2 Hit Dice, and those over 4 feet long have 3 Hit Dice.
The distance that a giant frog can jump is based upon its weight, with the maximum jumping distance for a 50-pound frog being 180 feet. Subtract 20 feet for every additional 50 pounds the frog weighs. A giant frog cannot jump backward or directly to either side, but can leap 30 feet straight up.

**Combat:** Because of its camouflaging color, a giant frog surprises opponents easily (-3 penalty to opponents' surprise rolls) when in its natural habitat. A giant frog uses its long, sticky tongue to entrap its victim. The tongue is equal in length to three times the frog's length and strikes with a +4 bonus to the attack roll. The tongue inflicts no damage when it hits.
Once a victim is caught by the frog's tongue, it has one chance to hit the tongue before the frog attempts to reel it in. If the tongue is hit, the frog releases the victim and does not attack that creature again. Otherwise, the victim is reeled in.
If the victim weighs less than the frog, it is dragged into the frog's mouth in the same round it attacked and missed striking the tongue. If the creature weighs more than the frog, an extra round is required for the frog to draw the creature in. This grants the victim another opportunity to hit the tongue. Any creature weighing more than twice the frog's weight cannot be pulled by the frog and is released on the third round after it was caught, even if the tongue is never struck.
Once the victim has been drawn to the frog's mouth, the frog attempts to eat it. If the giant frog successfully bites its victim in the first round the creature is in range, it automatically scores maximum damage. Frogs with 1 Hit Die bite for 1-3 points of damage, those with 2 Hit Dice l-6 points, and those with 3 Hit Dice inflict 2-8 points of biting damage.
On an attack roll result of 20, the frog can swallow whole any creature shorter than 3 feet long. Any

creature swallowed whole has a chance to cut its way out of the frog with a sharp-edged weapon, but must roll an attack roll result of 18 or better. A victim has only three rounds to escape before asphyxiating. A successful escape kills the frog. Any damage inflicted upon a frog that has swallowed a creature whole has a 33% chance of also being inflicted on the swallowed victim.
Giant frogs fear fire and always retreat from it.

**Habitat/Society:** Giant frogs live in groups but don't have any real social structure. They are aggressive hunters and eat insects, fish, and small mammals. Large aquatic predators such as giant fish and giant turtles often prey upon them.

**Killer Frogs:** This smaller version of the giant frog attacks with sharp teeth and front talons. While it does not swallow victims whole, the killer frog is a vicious hunter and is especially fond of the taste of human flesh.

**Poisonous Frogs:** A rare type of normal frog, this breed secretes a contact poison from its skin, as well as with its bite. The weakness of the poison gives all victims a +4 bonus to their saving throws. Due to its weakness and the difficulty of collecting it, there is no market for this poison.

Fungi are simple plants that lack chlorophyll, true stems, roots, and leaves. Fungi are incapable of photosynthesis and live as parasites or saprophytes.

## Ordinary Fungi

Ordinary fungi are well known to man: molds, yeast, mildew, mushrooms, and puffballs. These plants include both useful and harmful varieties.

**Combat:** Ordinary fungi do not attack or defend themselves, but they are prolific and can spread where unwanted.
Adventurers who have lost rations to mold or clothing to mildew have had unpleasant encounters with fungi.

**Habitat/Society:** The bodies of most true fungi consist of slender cottony filaments. Anyone who wishes to see this for himself need only leave a damp piece of bread in a cupboard for a day or two. Examining the black mold on the bread with a magnifying glass will show off not only the filaments, but also the spore bodies at the top of these. The spores are what gives mold its color.
Most fungi reproduce asexually by cell division, budding, fragmentation, or spores. Those that reproduce sexually alternate a sexual generation (gametophyte) with a spore-producing (sporophyte) one.
Fungi grow best in dark, damp environments, which they can find all too easily in a kitchen cupboard, backpack, or boot. A warm environment is preferred by some, such as yeasts and certain molds, but excessive heat kills fungi.
Proper storage and cleanliness can be used to avoid most ordinary fungi.

**Ecology:** Fungi break down organic matter, thus playing an important part in the nitrogen cycle by decomposing dead organisms into ammonia. Without the action of mushrooms and bracket fungi, soil renewal could not take place as readily as it does.
Fungi are also useful to man for many purposes. Yeasts are valuable as fermenting agents, raising bread and brewing wines, beers, and ales. Certain molds are important for cheese production. The color in blue cheese is a mold that has been encouraged to grow in this semisoft cheese.
Many fungi are edible, and connoisseurs consider some to be delicious. Pigs are used to hunt for truffles, an underground fungus that grows near tree roots and gives food a piquant flavor. No one has as yet managed to cultivate truffles -- an enterprising botanist could make a mint by learning to grow these.
Mushrooms, the fruiting body of another underground fungus, can sometimes be eaten, but can be so poisonous that the novice mushroom hunter is allowed but one mistake in picking. The mycelium producing a single mushroom might extend beneath the ground for several feet in any direction.
Medicinally, green molds (such as penicillium) can be used as folk remedies for various bacterial infections.
An alchemist expert in the ways of fungi can produce a variety of useful substances from their action on

various materials.

### Violet Fungus

Violet fungus growths resemble shriekers, and are usually (75%) encountered with them. The latter are immune to the touch of violet fungi, and the two types of creatures complement each other's existence.

**Combat:** Violet fungi favor rotted animal matter to grow upon. Each fungus has one to four branches with which it flails out if any animal comes within range (see following). The excretion from these branches rots flesh in one round unless a successful saving throw vs. poison is rolled or a *cure disease* spell is used. The branch length of this fungi depends upon the fungi's size. Violet fungi range from four to seven feet tall, the smallest having one-foot-long branches, the five-foot-tall fungi having two-foot-long branches, and so on. Any sized growth can have up to four branches.

### Shrieker

Shriekers are normally quiet, mindless fungi that are ambulatory. They are dangerous to dungeon explorers because of the hellish racket they make.

**Combat:** Light within 30 feet or movement within 10 feet causes a shrieker to emit a piercing shriek that lasts for 1-3 rounds. This noise has a 50% chance of attracting wandering monsters each round thereafter.

**Habitat/Society:** They live in dark places beneath the ground, often in the company of violet fungi. When the shriekers attract curious dungeon dwellers by their shrieking, the violet fungi are able to kill them with their branches, leaving plenty of organic matter for these saprophytic life forms to feed on.

**Ecology:** Purple worms and shambling mounds greatly prize shriekers as food, and don't seem to mind the noise while eating.
Shrieker spores are an important ingredient in potions of plant control.

### Phycomid

The algae-like phycomids resemble fibrous blobs of decomposing, milk-colored matter with capped fungi growing out of them. They exude a highly alkaline substance (like lye) when attacking.

**Combat:** These fungoid monsters have sensory organs for heat, sound, and vibrations located in several clusters. When phycomids attack, they extrude a tube and discharge the alkaline fluid in small globules that have a range of 1d6+6 feet.
In addition to alkaline damage, the globs that these creatures discharge might also cause victims to serve as hosts for new phycomid growth. If a victim fails a saving throw vs. poison, the individual begins to sprout mushroom-like growths in the infected area. This occurs in 1d4+4 rounds and inflicts 1d4+4 points of damage. The growths then spread throughout the host body, killing it in 1d4+4 turns, and turning it into a new phycomid. A *cure disease* spell will stop the spread through the host.

### Ascomoid

Ascomoids are huge, puffball-like fungi with very thick, leathery skin. They move by rolling.

**Combat:** At first, an ascomoid's movement is slow -- 3 for the first round, 6 the next, then 9, then finally 12 -- but they can keep it up for hours without tiring.

Ascomoids attack by rolling into or over opponents. Small- and medium-sized opponents are knocked down and must rise during the next round or remain prone.
The creature's surface is covered with numerous pocks which serve as sensory organs. Each pock can also emit a jet of spores to attack dangerous enemies. Large opponents or those who have inflicted damage upon the ascomoids are always attacked by spore jets. The stream of spores is about one foot in diameter and 30 feet long. Upon striking, the stream puffs into a cloud of variable diameter (five to 20 feet). The creatures under attack must roll a successful saving throw vs. poison or die from infection in their internal systems in 1d4 rounds. Even those who save are blinded and choked to such an extent that they require 1d4 rounds to recover and rejoin melee. Meanwhile, they are nearly helpless, and all attacks upon them gain a +4 bonus to attack rolls with no shield or Dexterity bonuses allowed.
Different types of weapons affect the ascomoid differently. Piercing weapons, such as spears, score double damage. Shorter stabbing weapons do damage as if against a small-sized opponent. Blunt weapons do not harm ascomoids; slashes and cuts from edged weapons cause only 1 point of damage. An ascomoid saves against magical attacks, such as magic missiles, fireballs, and lightning, with a +4 bonus to the saving throw; damage is only 50% of normal. (Cold-based attacks are at normal probabilities and damage.) As these fungi have no minds by ordinary standards, all spells affecting the brain (*charm, ESP*, etc.), unless specific to plants, are useless.

### Gas Spore

At any distance greater than 10 feet, a gas spore is 90% likely to be mistaken for a beholder. Even at close ranges there is a 25% possibility that the creature is seen as a beholder, for a gas spore has a false central eye and rhizome growths atop it that strongly resemble the eye stalks of a beholder.

**Combat:** If the spore is struck for even 1 point of damage it explodes. Every creature within a 20-foot radius suffers 6d6 points of damage (3d6 if a saving throw vs. wands is successful).
If a gas spore makes contact with exposed flesh, the spore shoots tiny rhizomes into the living matter and grows through the victim's system within one round. The gas spore dies immediately. The victim must have a *cure disease* spell cast on him within 24 hours or die, sprouting 2d4 gas spores.

# Galeb Duhr

| | 9 HD: 9,000 |
| | 10 HD: 10,000 |

The galeb duhr is a curious boulder-like creature with appendages that act as hands and feet. These intelligent beings are very large and slow-moving. They live in rocky or mountainous areas where they can feel the earth power and control the rocks around them.
A typical galeb duhr is from 8 to 12 feet tall. When not moving it looks like part of the terrain it lives in.

**Combat:** Galeb duhr are fairly solitary creatures, preferring to live with a few of their own kind, and

none of any other kind, including earth elementals. When approached, a galeb duhr is liable to avoid the encounter by disappearing into the ground. If chased or otherwise irritated, however, a galeb duhr does not hesitate to fight the intruder.
Galeb duhr can cast the following spells as 20th-level mages, once per day: *move earth*, *stone shape*, *passwall*, *transmute rock to mud*, and *wall of stone*. They can cast *stone shape* at will.
They can animate 1-2 boulders within 60 yards of them (AC 0; MV 3; HD 9; Dam 4d6) as a treant controls trees. Galeb duhr suffer double damage from cold-based attacks and save with a -4 penalty against these attacks. They are not harmed by lightning or normal fire, but suffer full damage from magical fire (though they save with a +4 bonus against fire attacks).

**Habitat/Society:** Galeb duhr, thought to be native to the elemental plane of Earth, are sometimes encountered in small family groups in mountainous regions of the Prime Material plane.
It is not known how (or whether) galeb duhr reproduce, but "young" galeb duhr have occasionally been reported -- those specimens encountered being a smaller size than normal.
While galeb duhr seem to have no visible culture above ground, they are known to collect gems, which they find through their passwall ability. They sometimes have small magical items in their possession, evidently taken from those who attacked them to take their gems.
The “music” of the galeb duhr often provides the first evidence that these creatures are near -- and usually the only evidence, as the unsociable galeb duhr are quick to pass into the ground when they feel the vibrations of approaching visitors.
Sitting together in groups, the galeb duhr harmonize their gravelly voices into eldritch tunes; some sages speculate that these melodies can cause or prevent earthquakes. Others argue that the low rumbling produced by these creatures is a form of warning to others in the group, but there is no conclusive evidence either way.

**Ecology:** Galeb duhr have no natural enemies, other than those who crave the gems they collect. Galeb duhr eat rock, preferring granite to other types, and disdaining any sedimentary type. The rocks they eat become part of the huge creatures; such a meal need take place only once every two or three months.
Besides the gems that they carry with them, galeb duhr are likely to know where many other gems are, as well as veins of precious metals, such as gold, silver, and platinum, though galeb duhr seem to have no interest in these minerals for themselves. A few powerful mages have been able to bargain with the galeb duhr for this information. This is a difficult agreement to consummate, for the galeb duhr are valiant fighters, and usually have no difficulty in escaping from any harm if they are inclined to do so. Further, the galeb duhr are territorial, and would be irritated at any attempt to make use of this knowledge in their vicinity.
In some strange way, galeb duhr feel responsible for the smaller rocks and boulders around them, in much the same way that a treant feels responsible for trees in its neighborhood. A traveler who disturbs the area near a galeb duhr does so at his own peril.

Gargantua are truly monstrous species, both in size and ferocity. Whether they are throwbacks to another age, aberrations of natural processes, or results of crazed magical experiments is unknown.
Gargantua appear in many different forms, but most resemble gigantic humanoids, insects, and reptiles. Of these three types, the most common is also the largest and most dangerous: the reptilian gargantua.
The reptilian gargantua is so immense that it dwarfs virtually all of the world's creatures. Some reptilian gargantua move on all fours. Most, however, are bipedal, supported by two massive legs rivaling the width of the largest tree trunks. The creature's body is thick and bulky. Rocky scales -- usually dark green with black accents -- cover it from head to toe. Its smooth belly is a lighter shade of green. Certain rare types have mottled scales in shades of brown, gray, and yellow.
Its hands are almost human, though each of its four, long fingers ends in a hooked claw. Its feet are flat and broad, with webbed toes. The toes also end in hooked claws, but they're shorter and thicker than those on its fingers. A bony ridge stretches from the base of its neck, down along its spine, and extending the length of its immense tail.
The head of the reptilian gargantua is somewhat small in proportion to its body. It has two glaring eyes, usually gold or bright red. Its nostrils are flush with its head, and its ears are twin triangular projections resembling tiny wings. Its mouth is a wide slash that nearly bisects its entire head and is lined with rows of long fangs.
The reptilian gargantua cannot speak, but it emits deafening roars that sound like the trumpeting of a bull elephant amplified a thousandfold. It can breathe both air and water.

**Combat:** Although it has some degree of intelligence, the actions of the reptilian gargantua -- along with the actions of most gargantua -- are those of mindless brutes bent on destruction for destruction's sake. It attacks with sweeping rakes of its front claws and lunging bites from its powerful jaws. If moving upright, it can trample victims for 10-100 (10d10) hit points of damage. It continually sweeps the ground it with its massive tail, swinging 90 feet behind it and to each side. Any creature within range of the tail must make a successful saving throw vs. death or suffer 8-80 (8d10) hit points of damage.
A rampaging reptilian gargantua is all but oblivious to its surroundings, crushing everything -- and everyone -- in its path. The ground trembles under its weight when it walks. Since quaking earth always foreshadows its appearance, it never can surprise its prey. When swimming, a reptilian gargantua is similarly handicapped, as its appearance is always preceded by swirling waters or crashing waves. Additionally, its immense size makes it easy to spot from a distance. Furthermore, the squealing roars that accompany its every action make it virtually impossible to ignore.
The reptilian gargantua's tough hide gives it an Armor Class of 2, forming a strong defense against most physical attacks. When it does suffer damage, the creature can regenerate 4 hit points per round.

Fortunately, reptilian gargantua seldom bother humans. But their memories are long, and their appetite for revenge is nearly limitless. Humans who attack reptilian gargantua, disturb their lairs, or otherwise provoke the creatures will find themselves relentlessly pursued -- even it means the gargantua must cross thousands of miles of ocean. This creature's hunger for revenge is seldom satisfied until it has thoroughly ravaged its attackers' villages. Sometimes, entire provinces will be laid to ruin.
The surest way to provoke the wrath of a reptilian gargantua is to threaten its offspring. Adult gargantua have remarkable mental bonds with their young, enabling them to locate their young with pinpoint accuracy at an unlimited range.
In spite of their reputation as mindless destroyers, reptilian gargantua actually possess a simple empathy that enables them to sense the emotions and desires of others, albeit on a primitive level. They seem to instinctively know which creatures bear them ill will, and direct their attacks accordingly.

**Habitat/Society:** A few reptilian guargantua make their home on the floors of subtropical oceans. Most, however, live on remote tropical islands, far from civilized lands. Such islands are scattered throughout the oceans of Kara-Tur, with most of them uncharted. The most notable exception is the Isle of Gargantua, one of the Outer Isles off the southwestern tip of Wa. This island is inhabited entirely by gargantua of various types.
Explorers in the arctic regions of Kara-Tur once found a maturing reptilian gargantua frozen in a block of ice. The explorers built a massive sled to haul their discovery back to civilization. The ice began to thaw en route, reviving the creature. The gargantua shattered the melting ice block, crushed his captors, and lumbered into the mountains.
Any grotto or cave that provides shelter, privacy, and sufficient room to house a reptilian gargantua can serve as its lair. Fiercely territorial, a reptilian gargantua and its family usually claim an area of several square miles as their personal property, defending it against
any and all intruders. Since their eyes are sensitive to bright light, the creatures spend most of the day sleeping in their lairs, becoming active at night to search for food and patrol their territory. Their thunderous roars make their presence known to all. Reptilian gargantua do not collect treasure or any other items.
Reptilian gargantua live several hundred years. They choose mates within a few years of reaching maturity, and remain with them for the rest of their lives. A female reptilian gargantua gives birth to a single offspring once per century. The birth of a reptilian gargantua is marked by shattering thunderstorms that rock the skies over the territory of its parents for 101 days.
An immature reptilian gargantua stands about 20-40 feet tall. It also has 10 HD (THAC0 11) and a movement rate of 12 (Sw 9). A youngling's claws inflict 1-10 hit points of damage each, and its bite inflicts 2-24 (2d12) hit points of damage. Its tail -- not nearly as formidable as an adult's -- sweeps the ground in an arch reaching 20 feet behind and to both sides, inflicting 3-18 (3d6) points of damage to all victims who fail their save vs. death.

**Ecology:** The reptilian gargantua is an omnivore. It primarily eats plants, swallowing whole trees in a single gulp. But it also enjoys living prey of all varieties. It can even dine on minerals, gems, and other inorganic substances in times of scarce vegetation and game.
Reptilian gargantua shun the company of other creatures. They especially dislike other types of gargantua, which sometimes compete with their reptilian cousins for the same territory.
Reptilian gargantua have two properties useful to humans:
The petal of any flower that grows in the footprint of a reptilian gargantua can serve as a component for a *potion of growth*. Such a flower must grow naturally in the footprint; it cannot have been planted there by

a human or other intelligent being.
As noted above, thunderstorms occur when a reptilian gargantua is born. If a dead creature of any kind is struck by a lightning bolt from such a storm, the bolt acts as *resurrection* spell.

### Humanoid Gargantua

Humanoid gargantua are the least intelligent type. They resemble gigantic humans, somewhat anthropoid facially, with stooped shoulders, long arms, and jutting jaws. Long, greasy hair dangles about their shoulders, though a few humanoid gargantua are completely bald. They stand 80 to 100 feet tall and are sometimes covered with black, brown, or golden fur. Their skin color ranges from pale pink to dull yellow to deep black. They have blunt noses, huge ears, and bright eyes, which are usually brown or red. Single-eyed humanoid gargantua also are rumored to exist.
Humanoid gargantua have no language of their own, but because of their strong empathy with humans, they are able to comprehend short phrases of human languages 25% of the time. The movements and other actions of humanoid gargantua are typically accompanied by thunderous bellowing and grunting.
The creature attacks with its two fists for 4-40 (3d10) hit points of damage each. It seldom uses weapons or tools, since its blunt fingers manipulate these objects with difficulty. However, reports exist of humanoid gargantua wielding trees like clubs. The creatures also can make trampling attacks on anyone (or anything) who comes underfoot, causing 10-100 (10d10) points of damage. Humanoid gargantua regenerate hit points at the rate of 4 per round.
Like reptilian gargantua, humanoid gargantua possess a simple empathy that enables them to sense the basic emotions and desires of others. Unless hungry, they tend to avoid creatures who intend them no harm, while actively seeking out and pursuing those with hostile intentions.
Humanoid gargantua live in valleys, in suitably sized caves in remote, jagged mountains, or on their own islands, far from civilized regions. They collect no treasure, spending most of their time eating and sleeping.
They live for several centuries, and mate for life. Once every hundred years or so, a female humanoid gargantua gives birth to 1-2 offspring. An immature humanoid gargantua is about 20-30 feet tall. It has 8 HD (THAC0 13) and a movement rate of 15. Its fists inflict 1-10 points of damage each. It cannot make trampling attacks.
These monsters peacefully coexist with other creatures in their environment, but humanoid gargantua compete fiercely with rival gargantua, and violent conflicts often result. Many such conflicts continue until one of the gargantua is dead.
Humanoid gargantua eat all types of game and vegetation, preferring deer, bears, horses, and similar game.

### Insectoid Gargantua

Adult insectoid gargantua resemble immense moths. Their bodies are covered with fine fur, usually gray or black, and their wings bear colorful patterns in brilliant blue, red, yellow, and green. Their movements and other actions are accompanied by a piercing screech that sounds like a warning siren.
The insectoid gargantua begins life as a gigantic egg, which hatches to reveal a gigantic larva. This larval form has 20 HD. As a larva, the insectoid gargantua can shoot a strand of cocoon silk to a range of 60 feet. This silk is exceptionally strong and sticky, adhering to whatever it hits. With this silken strand, the larva can entangle and immobilize victims. A strand can be severed in three ways: with 20 points of damage from an edged weapon, a successful "bend bars/lift gates" roll, or by monsters of 10 HD or more.
The larval insectoid gargantua grows at a phenomenal rate, increasing 1 HD per week. Upon attaining 25 HD, the larva spins a cocoon and enters the pupal stage. It remains a pupa for 2-8 (2d4) weeks, finally

emerging as an immense moth with 30 HD. In this form, the creature can no longer spin silk. However, by flapping its wings, it can create a huge windstorm, 60 feet wide and extending 240 feet ahead. To remain safe, everyone and everything within the path of the storm must be solidly anchored (e.g., tied to a boulder). Unanchored victims must make a saving throw vs. death with a -4 penalty. Those who fail their saving throw are blown back 10 to 40 feet, suffering 1d6 hit points of damage for every 10 feet blown.

Insectoid gargantua establish lairs in the valleys and caverns of warm, mountainous regions. They live for several hundred years. Females lay a single egg every decade, but there is only a 20% chance that any given egg is fertile.

These mothlike creatures eat all types of game and vegetation. They prefer mulberry trees, and in just a few hours, a hungry insectoid gargantua can consume an entire grove of them.

The silk of insectoid gargantua larvae can be woven into cloth from which magical robes are created.

These monsters are ferocious predators of a magical nature, typically found amid ruins or dwelling in underground caverns. They have their own guttural language.

**Combat:** Gargoyles attack anything they detect, regardless of whether it is good or evil, 90% of the time. They love best to torture prey to death when it is helpless.
These winged creatures are excellent fighters with four attacks per round. Their claw/claw/bite/horn combination can inflict up to 16 points of damage, while their naturally tough hide protects them from victim's attacks.
Gargoyles favor two types of attack: surprise and swooping. Counting on their appearance as sculptures of some sort, gargoyles sit motionless around the rooftop of a building, waiting for prey to approach. Alternatively, a gargoyle may pose in a fountain, or a pair of the horrid beasts sit on either side of a doorway. When the victim is close enough, the gargoyles suddenly strike out, attempting only to injure the victim rather than to kill it all at once. (To a gargoyle, inflicting a slow, painful death is best.)
When on the move, gargoyles sometimes use a "swoop" attack, dropping down suddenly from the sky to make their attacks in an aerial ambush. In this case, they can make either two claw attacks or one horn attack. To make all four of their attacks, they must land.

**Habitat/Society:** Gargoyles live in small groups with others of their kind, interested in little more than finding other creatures to hurt. Smaller animals are scarcely worth the trouble to these hideous monsters, who prefer to attack humans or other intelligent creatures.
Gargoyles often collect treasure from human victims. Individuals usually have a handful of gold pieces among them, with the bulk of their treasure hidden carefully at their lair, usually buried or under a large stone.

**Ecology:** Originally, gargoyles were carved roof spouts, representing grotesque human and animal figures. They were designed in such a way that water flowing down gutters would be thrown away from the wall, so as to prevent stains and erosion. Later, some unknown mage used a powerful enchantment to bring these horrid sculptures to life. The race of gargoyles has flourished, spreading throughout the world.
Gargoyles do not need to eat or drink, so they can stand motionless for as long as they wish almost anywhere. The damage they do to other creatures is not for sustenance, but only for their distorted sense of pleasure.
Because they are fairly intelligent and evil, they will sometimes serve an evil master of some sort. In this case, the gargoyles usually act as guards or messengers; besides some gold or a few gems, their unsavory payment is the enjoyment they get from attacking unwanted visitors.
The horn of the gargoyle is the more common active ingredient for a *potion of invulnerability* and can

also be used in a *potion of flying*.

### Kapoacinth

This creature is a marine variety of gargoyle that uses its wings to swim as fast as the land-dwelling gargoyle flies. Kapoacinth conform in all respects to a normal gargoyle. They dwell in relatively shallow waters, lairing in undersea caves.
Like gargoyles, kapoacinth are eager to cause pain to others, and mermen, sea elves, and human visitors are all equally qualified candidates for this.

### Margoyle

Margoyles are a more horrid form of gargoyle. They are found mainly in caves and caverns. Their skin is so like stone that they are only 20% likely to be seen when against it. They attack with two claws, a pair of horns, and a bite. They speak their own language and that of gargoyles. They are 20% likely to be found with the latter, either as leaders or masters.

Genies come from the elemental planes. There, among their own kind, they are have their own societies. Genies are sometimes encountered on the Prime Material plane and are often summoned specifically to perform some service for a powerful wizard or priest. All genies can travel to any of the elemental planes, as well as the Prime Material and Astral planes. Genies speak their own tongue and that of any intelligent beings they meet through a limited form of telepathy.

### Djinni

The djinn are genies from the elemental plane of Air. It should be noted that "djinn" is the plural form of their name, while "djinni" is the singular.

**Combat:** The djinn's magical nature enables them to do any of the following once per day: *create nutritious food* for 2d6 persons and *create water* or *create wine* for 2d6 persons; *create soft goods* (up to 16 cubic feet) or *create wooden items* (up to 9 cubic feet) of a permanent nature; *create metal,* up to 100 pounds weight with a short life span (the harder the metal the less time it lasts; gold has about a 24 hour existence while djinni steel lasts only one hour); *create illusion* as a 20th-level wizard with both visible and audible components, which last without concentration until touched or magically dispelled; use *invisibility, gaseous form,* or *wind walk.*

Once per day, the genie can create a whirlwind, which the it can ride or even direct at will from a distance. The whirlwind is a cone-shaped spiral, measuring up to 10 feet across at its base, 40 feet across at the top, and up to 70 feet in height (the djinni chooses the dimensions). Its maximum speed is 18, with maneuverability class A. The whirlwind's base must touch water or a solid surface, or it will dissolve. It takes a full turn for the whirlwind to form or dissolve. During that time, the whirlwind inflicts no damage and has no other effect. The whirlwind lasts as long as the djinni concentrates on it, moving at the creature's whim.

If the whirlwind strikes a non-aerial creature with fewer than 2 Hit Dice, the creature must make a saving throw vs. breath weapon for each round of contact with the whirlwind, or be swept off its feet, battered, and killed. Hardier beings, as well as aerial or airborne creatures, take 2d6 points of damage per round of contact with the whirlwind.

A djinni can ride its whirlwind and even take along passengers, who (like the djinni) suffer no damage from the buffeting winds. The whirlwind can carry the genie and up to six man-sized or three genie-sized companions.

Airborne creatures or attacks receive a -1 penalty to attack and damage rolls against a djinni, who also receives a +4 bonus to saving throws against gas attacks and air-based spells.

Djinn are nearly impossible to capture by physical means; a djinni who is overmatched in combat usually takes to flight and uses its whirlwind to buffet those who follow. Genies are openly contemptuous of those life forms that need wings or artificial means to fly and use *illusion* and *invisibility* against such enemies. Thus, the capture and enslavement of djinn is better resolved by the DM on a case-by-case basis. It is worth noting, however, that a good master will typically encourage a djinni to additional effort and higher performance, while a demanding and cruel master encourages the opposite.
Djinn are able to carry up to 600 pounds, on foot or flying, without tiring. They can carry double that for a short time: three turns if on foot, or one turn if flying. For each 100 pounds below the maximum, add one turn to the time a djinni may walk or fly before tiring. A fatigued djinni must rest for an hour before performing any additional strenuous activity.

**Habitat/Society:** The djinn's native land is the elemental plane of Air, where they live on floating islands of earth and rock, anywhere from 1,000 yards to several miles across. They are crammed with buildings, courtyards, gardens, fountains, and sculptures made of elemental flames. In a typical djinn landhold there are 3dl0 djinn of various ages and powers, as well as 1d10 jann and 1d10 elemental creatures of low intelligence. All are ruled by the local sheik, a djinn of maximum hit points.
The social structure of Djinn society is based on rule by a caliph, served by various nobles and officials (viziers, beys, emirs, sheiks, sheriffs, and maliks). A caliph rules all the djinn estates within two days' travel, and is advised by six viziers who help maintain the balance of the landholdings.
If a landhold is attacked by a large force, a messenger (usually the youngest djinni) is sent to the next landhold, which sends aid and dispatches two more messengers to warn the next landholds; in this fashion the entire nation is warned.

### Noble Djinn

Some djinn (1%) are "noble" and are able to grant three *wishes* to their masters. Noble djinn perform no other services and, upon granting the third *wish* are freed of their servitude. Noble djinn are as strong as efreet, with 10 Hit Dice. They strike for 3d8 points of damage, and the whirlwinds they create cause 3d6 hit points of damage.

### Dao

A dao is a genie from the elemental plane of Earth. While they are generally found on that plane (though even there they are uncommon), the dao love to come to the Prime Material plane to work evil. Dao speak all of the languages of the genies, as well as Common and the tongue of earth elementals.

**Combat:** The dao's magical abilities enable them to use any of the following magical powers, one at a time, once each per day: *change self, detect good, detect magic, gaseous form, invisibility, misdirection, passwall, spectral force,* and *wall of stone.* They can also fulfill another's *limited wish* (in a perverse way) once each day. Dao can use *rock to mud* three times per day and *dig* six times per day. Dao perform all magic as 18th-level spellcasters.
A dao can carry up to 500 pounds without tiring. Double weight will cause tiring in three turns, but for every 100 pounds of weight under 1,000, the dao may add one turn to the duration of its carrying ability. After tiring, a dao must rest for one hour. Dao can move through earth (not worked stone) at a burrowing speed of 6. They cannot take living beings with them, but can safely carry inanimate objects.
Dao are not harmed by earth-related spells, but holy water has twice its normal effect upon these monsters.

**Habitat/Society:** The dao dwell in the Great Dismal Delve on their own plane and in deep caves, caverns, or cysts on the Prime Material plane. Dao settle pockets of elemental matter on their own plane, bending those

pockets to their will and desire. A dao mazework contains 4d10 dao, as well as 8d10 elemental and non-elemental slaves. Each mazework is ruled by an ataman or hetman who is advised by a seneschal. The loyalty of a mazework's ataman to the Great Dismal Delve is always questionable, but the seneschals are chosen by the khan of the dao, and their loyalty is to him alone.
The khan of the dao lives at the center of the great mazework called the Great Dismal Delve. The land within the delve is said to be larger than most Prime Material continents. The Great Dismal Delve is linked to all manner of elemental pockets, so the khan can call forth whatever powers he needs. The population of dao in the delve is unknown, as is the number of slaves that constantly work the tunnels and clear away damage caused by the quakes which frequently shake it.
Dao dislike servitude as much as efreet and are even more prone to malice and revenge than their fiery counterparts.

**Ecology:** The dao manage a thriving business of trade, driven by a desire for more power and access to precious gems. High on their list of hatreds are most other genies (except efreet, with whom they trade worked metals for minerals). They also have little use for other elemental creatures; the dao value these only if they can exploit them in some fashion.

## Efreet

The efreet (singular: efreeti) are genies from the elemental plane of Fire. They are enemies of the djinn and attack them whenever they are encountered. A properly summoned or captured efreeti can be forced to serve for a maximum of 1,001 days, or it can be made to fulfill three *wishes.* Efreet are not willing servants and seek to pervert the intent of their masters by adhering to the letter of their commands.
The efreet are said to be made of basalt, bronze, and solid flames. They are massive, solid creatures.

**Combat:** An efreeti is able to do the following once per day: grant up to three *wishes;* use *invisibility, gaseous form, detect magic, enlarge, polymorph self,* and *wall of fire*; create an *illusion* with both visual and audio components which will last without concentration until magically dispelled or touched. An efreeti can also produce flame or use *pyrotechnics* at will. Efreet are immune to normal fire-based attacks, and even an attack with magical fire suffers a -1 penalty on all attack and damage rolls.
Efreet can carry up to 750 pounds on foot or flying, without tiring. They can also carry double weight for a limited time: three turns on foot or one turn aloft. For each 150 pounds of weight under 1500, add one turn to either walking or flying time permitted. After tiring, the efreeti must rest for one hour.

**Habitat/Society:** Efreet are infamous for their hatred of servitude, desire for revenge, cruel nature, and ability to beguile and mislead. The efreet's primary home is their great citadel, the fabled City of Brass, but there are many other efreet outposts throughout the plane of Fire.
An efreet outpost is a haven for 4dl0 efreet and is run as a military station to watch or harass others in the plane. These outposts are run by a malik or vali of maximum normal hit points. There is a 10% chance that the outpost is also providing a temporary home for 1d4 jann or 1d4 dao (the only other genies efreet tolerate). Outpost forces are usually directed against incursions from the elemental plane of Air, but they can be directed against any travelers deemed suitable for threats, robbery, and abuse.
Efreet are neutral, but tend toward organized evil. They are ruled by a grand sultan who makes his home in the City of Brass. He is advised by a variety of beys, amirs, and maliks concerning actions within the plane, and by six great pashas who deal with efreet business on the Prime Material plane.
The City of Brass is a huge citadel that is home to the majority of efreet. It hovers in the hot regions of the plane and is often bordered by seas of magma and lakes of glowing lava. The city sits upon a hemisphere of golden, glowing brass some 40 miles across. From the upper towers rise the minarets of the great bastion of

the Sultan's Palace. Vast riches are said to be in the palace of the sultan. The city has an efreet population that far outnumbers the great cities of the Prime Material plane. The sultan wields the might of a Greater Power, while many of his advisors are akin to Lesser Powers and Demi-Powers.

**Ecology:** Fire elementals tend to avoid the efreet, whom they feel are oppressive and opportunistic. Djinn hate them, and there have been numerous djinn-efreet clashes. Efreet view most other creatures either as enemies or servants, a view that does not endear them to other genies.

## Marid

The marids are said to be born of the ocean, having currents for muscles and pearls for teeth. These genies from the elemental plane of Water are the most powerful of all genies. They are also the most individualistic and chaotic of the elemental races, and only rarely deign to serve others.
On their own plane they are rare; marids travel so seldom to the Prime Material plane that many consider marids to be creatures of legend only.

**Combat:** Marids perform as 26th-level spellcasters, and can use any of the following magical powers, one at a time, twice each per day: *detect evil, detect good, detect invisibility, detect magic, invisibility, liquid form* (similar to *gaseous form*), *polymorph self,* and *purify water.* Marids can use any of the following up to seven times per day: *gaseous form, lower water, part water, wall of fog,* or *water breathing* (used on others, lasting up to one full day). Once per year a marid can use *alter reality.*
Marids can always *create water,* which they may direct in a powerful jet up to 60 yards long. Victims struck by the jet take 1d6 points of damage and must make a successful saving throw vs. breath weapon or be blinded for 1d6 rounds. Marids also have the innate ability to *water walk* (as the ring).
A marid can carry 1,000 pounds. Double weight causes tiring in three turns. For every 200 pounds under 2,000, add one turn to the time the marid can carry before tiring. A tired marid must rest for one hour.
Marids swim, breathe water, are at home at any depth, and have infravision. They are not harmed by water-based spells. Cold-based spells grant them a +2 bonus to saving throws and -2 to each die of damage. Fire inflicts +1 per die of damage, with saving throws at a -1 penalty. Steam does not harm them.

**Habitat/Society:** Marids live in a loose empire ruled by a padisha. Each marid lays some claim to royalty; they are all shahs, atabegs, beglerbegs, or mufti at the very least. There have often been several simultaneous "single true heirs" to the padisha's throne through the eons.
A marid household numbers 2d10 and is located around loosely grouped elemental pockets containing the necessities for marid life. Larger groups of marids gather for hunts and tournaments, where individual effort is heavily emphasized.
Marids are champion tale-tellers, although most of their tales emphasize their own prowess, and belittle others. When communicating with a marid, one must attempt to keep the conversation going without continual digression for one tale or another, while not offending the marid. Marids consider it a capital offense for a lesser being to offend a marid.
Marids are both fiercely independent and extremely egoistical. They are not easily forced to perform actions; even if convinced through flattery and bribery to obey, they often stray from their intended course to seek some other adventure that promises greater glory, or to instruct lesser creatures on the glories of the marids. Most mages skilled in summoning and conjuration consider marids to be more trouble than they are worth, which accounts for the great lack of items of marid control (as opposed to those affecting efreet and djinn). Marids can travel the Ethereal plane, in addition to those planes to which all genies can travel.

**Ecology:** Marids tolerate their genie relatives, putting up with jann and djinn like poor cousins, while they

have an aversion to efreet and dao. Their attitude toward the rest of the world is similar; most creatures from other planes are considered lesser beings, not fit to be bothered with unless one lands in the feast hall at an inopportune time.

## Janni

The jann are the weakest of the elemental humanoids known collectively as genies. Jann are formed out of all four elements and must therefore spend most of their time on the Prime Material plane. In addition to speaking Common and all the languages of genies, jann can speak with animals.

**Combat:** Jann often wear chain mail armor (60% chance), giving them an effective AC of 2. They typically use great scimitars which inflict 2d8 damage to small and medium creatures, and 4d4 points of damage to larger opponents. They also use composite long bows. Male jann have exceptional Strength scores; roll percentile dice for their Strengths. For female jann, roll percentile dice and subtract 50; anything above 0 indicates percentage Strength equal to that number, while anything below indicates 18 Strength.
Jann can use one the following magical powers each round: *enlarge* or *reduce,* twice each per day; *invisibility* three times per day; *create food and water* once per day as a 7th-level priest; and *etherealness* (as the armor) once per day for a maximum of one hour. Jann perform at 12th-level ability, except as noted.

**Habitat/Society:** Jann favor forlorn deserts and hidden oases, where they have both privacy and safety. Jann society is very open, and males and females are regarded as equals. A tribe is made up of ld20+10 individuals and is ruled by a sheik and one or two viziers. Exceptionally powerful sheiks are given the title of amir, and in times of need they gather and command large forces of jann (and sometimes allied humans).
Many jann tribes are nomadic, traveling with flocks of camels, goats, or sheep from oasis to oasis. These itinerant jann appear human in every respect, and are often mistaken for them, unless they are attacked. Jann are strong and courageous, and they do not take kindly to insult or injury. The territory of a jann tribe can extend hundreds of miles in any direction.
While traveling, male jann live in large, colorful tents with their wives and married male children, and their families. Married daughters move away to live with their new husbands. When a family eventually grows large enough that it can no longer reside comfortably in the tent, a new tent is built, and a son takes his wife and family with him to this new dwelling. At permanent oases, the jann live not only in tents, but also in elegantly styled structures built from materials brought from any of the elemental planes.
Jann are able to dwell in air, earth, fire, or water environments for up to 48 hours. This includes the elemental planes, to which any janni can travel, even taking up to six individuals along if those others hold hands in a circle with the janni. Failure to return to the Prime Material plane within 48 hours inflicts 1 point of damage per additional hour on the jann, until the jann dies or returns to the Prime Material plane. Travel to another elemental plane is possible, without damage, providing at least two days are spent on the Prime Material plane immediately prior to the travel.

**Ecology:** Jann are suspicious of humans, dislike demihumans, and detest humanoids. Jann accept djinn, but shun dao, efreet, and marids. They sometimes befriend humans or work with them for a desired reward, like potent magical items.
One ethic the jann share with other nomads is the cultural demand for treating guests with honor and respect. Innocent visitors (including humans) are treated hospitably during their stay, but some day might be expected to return the favor.

**Jann Leaders:** Jann leaders have 17-18 Intelligence, and 10% have 19 Strength. Sheiks have up to 8 Hit Dice, amirs up to 9. Viziers have 17-20 Intelligence and the following magical powers, each usable three

times per day at 12th-level spellcasting ability: *augury*, *detect magic*, and *divination.*

# Ghost

| **Size:** | M (5'-6' tall) |
| **Morale:** | Special |
| **XP Value:** | 7,000 |

Ghosts are the spirits of humans who were either so greatly evil in life or whose deaths were so unusually emotional they have been cursed with the gift of undead status. Thus, they roam about at night or in places of darkness. These spirits hate goodness and life, hungering to draw the living essences from the living.

**Combat:** As ghosts are non-corporeal (ethereal), they are usually encountered only by creatures in a like state, although they can be seen by non-ethereal creatures. The supernatural power of a ghost is such, however, that the mere sight of one causes any humanoid being to age 10 years and flee in panic for 2-12 (2d6) turns unless a saving throw versus spell is made. Priests above 6th level are immune to this effect, and all other humanoids above 8th level may add +2 to their saving throws.

Any creatures within 60 yards of a ghost is subject to attack by *magic jar*. If the ghost fails to *magic jar* its chosen victim, it will then semi-materialize in order to attack by touch (in which case the ghost is Armor Class 0). Semi-materialized ghosts can be struck only by silver (half damage) or magical weapons (full damage). If they strike an opponent it ages him 10-40 (1d4x10) years. Note that ghosts can be attacked with spells only by creatures who are in an ethereal state. Any human or demi-human killed by a ghost is drained of its life essence and is forever dead.
If the ghost fails to become semi-material it can only be combatted by another in the Ethereal plane (in which case the ghost has an Armor Class of 8).
Ghosts can be turned by clerics after reaching 7th level and can be damaged by holy water while in their semi-material form.

**Habitat/Society:** In most cases, a ghost is confined to a small physical area, which the ghost haunts. Those who have heard stories of a haunted area can thus attempt to avoid it for their own safety.
A ghost often has a specific purpose in its haunting, sometimes trying to "get even" for something that happened during the ghost's life. Thus a woman who was jilted by a lover, and then committed suicide, might become a ghost and haunt the couple's secret trysting place. Similarly, a man who failed at business might appear each night at his storefront or, perhaps, at that of a former competitor.
Another common reason for an individual to become a ghost is the denial of a proper burial. A ghost might inhabit the area near its body, waiting for a passerby to promise to bury the remains. The ghost, in its resentment toward all life, becomes an evil creature intent on destruction and suffering.
In rare circumstances, more than one ghost will haunt the same location. The classic example of this is the haunted ship, a vessel lost at sea, now ethereal and crewed entirely by ghosts. These ships are most often encountered in the presence of St. Elmo's fire, an electrical discharge that causes mysterious lights to appear in the rigging of a ship.
In many cases, a ghost can be overcome by those who might be no match for it in combat simply by setting right whatever events led to the attainment of the ghost's undead status. For example, a young woman who was betrayed and murdered by someone who pretended to love her might be freed from her curse if the cad were humiliated and ruined. In many cases, however, a ghost's revenge will be far more demanding, often ending in the death of the offender.

**Ecology:** The dreadful fear caused by the ghost, which ages a victim 10 years, is not well understood by the common man, who often ascribes it to the fact that a ghost is "dead." If this were the case, then certainly skeletons and zombies would have the same effect, which they do not.
Common folklore further confuses this fact by relating details of the ghost's physical form: the classic example of which is the headless horseman, thought by many to be particularly frightening simply because he had no head. Under this belief, one could face a ghost if only one had the courage to stand up to him. Such a mistaken impression has cost many lives over the years. Actually, the fear is caused by the supernatural power of the ghost, and has nothing whatsoever to do with courage.

| **XP Value:** | 175 | 175 | 650 |

Ghouls are undead creatures, once human, who now feed on the flesh of corpses. Although the change from human to ghoul has deranged and destroyed their minds, ghouls have a terrible cunning which enables them to hunt their prey most effectively.
Ghouls are vaguely recognizable as once having been human, but have become horribly disfigured by their change to ghouls. The tongue becomes long and tough for licking marrow from cracked bones, the teeth become sharp and elongated, and the nails grow strong and sharp like claws.

**Combat:** Ghouls attack by clawing with their filthy nails and biting with their fangs. Their touch causes humans (including dwarves, gnomes, half-elves, and halflings, but excluding elves) to become rigid unless a saving throw versus paralyzation is successful. This paralysis lasts for 3-8 (2+1d6) rounds or until negated by a priest.
Any human or demi-human (except elves) killed by a ghoulish attack will become a ghoul unless blessed (or blessed and then resurrected). Obviously, this is also avoided if the victim is devoured by the ghouls. Ghoul packs always attack without fear.
These creatures are subject to all attack forms except *sleep* and *charm* spells. They can be turned by priests of any level. The magic circle of *protection from evil* actually keeps ghouls completely at bay.

**Habitat/Society:**Ghouls and ghasts are most frequently encountered around graveyards, where they can find plenty of corpses on which to feed.

**Ecology:** Ghouls (and ghasts, as described later) delight in revolting and loathsome things -- from which we draw our adjectives "ghoulish" and "ghastly."

### Lacedon

The lacedon is a marine form of the ghoul. Lacedons are sometimes found near marine ghosts, particularly ghost ships. Lacedons are less common than ghouls because of the fewer corpses available for them to feed on, but they can often be found swarming around recent shipwrecks in rivers, lakes, and oceans.

### Ghast

These creatures are so like ghouls as to be completely indistinguishable from them, and they are usually found only with a pack of ghouls. When a pack of ghouls and ghasts attacks it will quickly become

evident that ghasts are present, for they exude a carrion stench in a 10' radius which causes retching and nausea unless a saving throw versus poison is made. Those failing to make this save will attack at a penalty of -2.

Worse, the ghast shares the ghoulish ability to paralyzation, and their attack is so potent that it will even affect elves. Paralysis caused by a ghast lasts for 5-10 (4+1d6) rounds or until negated by a priest's *remove paralysis* spell.

Ghasts, like ghouls, are undead class and thus *sleep* and *charm* spells do not affect them. Though they can be struck by any sort of weapon, cold iron inflicts double normal damage. Clerics can turn them beginning at 2nd level. The circle of *protection from evil* does not keep them at bay unless it is used in conjunction with cold iron (such as a circle of powdered iron or an iron ring).

Cloud giants consider themselves above all other giants, save storm giants, whom they consider equals. They are creative, appreciate fine things, and are master strategists in battle.
Cloud giants have muscular human builds and handsome, well-defined features. The typical cloud giant is 24 feet tall and weighs 11,500 pounds. Female cloud giants can be 1 to 2 feet shorter and 1,000 to 2,000 pounds lighter. Cloud giants' skin ranges in color from a milky-white tinged with blue to a light sky blue. Their hair is silvery white or brass and their eyes are an iridescent blue. Cloud giants can live to be 400 years old.
A cloud giant's natural Armor Class is 0. Although they will wear no armor, these giants prize magical protection devices, and one in 20 will have such a device. Cloud giants dress in clothing made of the finest materials available and wear jewelry. Many of the giants consider their appearance an indication of their station; the more jewelry and the better the clothes, the more important the giant. Cloud giants also appreciate music, and the majority of giants are able to play one or more instruments (their favorite is the harp). Unlike most other giant races, cloud giants leave their treasure in their lairs, carrying with them only food, throwing rocks, 10-100 (10d10) coins, and a musical instrument.
Cloud giants speak their own tongue and the language of all other giants. In addition, 60% of all cloud giants speak common.

**Combat:** Cloud giants fight in well-organized units, using carefully developed battle plans. They prefer to fight from a position above their opponents. A favorite tactic is to circle the enemy, barraging them with rocks while the giants with magical abilities assault them with spells. Cloud giants can hurl rocks to a maximum of 240 yards, causing 2-24 (2d12) points of damage. Their huge morningstars do 6-24 (6d4) +11 points of damage, three times normal (man-sized) damage plus their strength bonus. One in 10 cloud giants will have a magical weapon.

**Habitat/Society:** Cloud giants live in small clans of no more than six giants. However, these clans know the location of 1-8 other clans and will band together with some of these clans for celebrations, battles, or to trade. These joined clans will recognize one among them to be their leader -- this is usually an older cloud giant who has magical abilities. One in 10 cloud giants will have spells equivalent to a 4th level wizard, and one in 20 cloud giants will be the equivalent of a 4th level priest. A cloud giant cannot have both priest and wizard abilities.
If encountered in a lair, half will be immature giants. To determine a giant's maturity, roll 1d4. A roll of 4 indicates an infant with no combat ability and hit points of ogre. Rolls of 1-3 indicate older progeny with hit dice, damage, and "to hit" rolls equal to that of a fire giant.
The majority of cloud giants live on cloud-covered mountain peaks in temperate and sub-tropical areas. These giants make their lairs in crude castles. Only 10% of good cloud giants live in castles on enchanted clouds. All giants dwelling there are able to *levitate* their own weight plus 2,000 pounds three times a day, create a *fog cloud* three times a day, and create a *wall of fog* once a day. These abilities are performed as a 6th level wizard.
There is a 60% chance a cloud giant mountain lair will be guarded by 1-4 spotted lions, 2-5 (1d4+1) owl bears, or 2-5 (1d4+1) griffons (1-2 wyverns for evil cloud giants). In addition, there is a 50% chance the lairs of evil cloud giants will contain 1-20 human and demi-human slaves. There is an 80% chance that a cloud island lair will be guarded by 2-5 (1d4+1) griffons, 2-8 (2d4) hippogriffs, or 2-5 (1d4+1) giant

eagles.
Cloud lairs are fantastic places with giant-sized gardens of fruit trees. According to legend, some giants mine their cloud islands for small chunks of the purest silver.

**Ecology:** Cloud giants prefer food that is carefully prepared with spices and sauces, and they relish fine, aged wines.
Good cloud giants trade with human and demi-human communities for food, wine, jewelry, and cloth. Some cloud giant clans will establish good relations with such communities, and will come to the communities' aid if they are endangered. Evil cloud giants raid human and demi-human communities to get what they want.

# Giant, Cyclops

| | Cyclopskin | Cyclops |
|---|---|---|
| **Climate/Terrain:** | Temperate/Hills and mountains | |
| **Frequency:** | Rare | Very rare |

| **Special Defenses:** | Nil | Nil |
| **Magic Resistance:** | Nil | Nil |
| **Size:** | L (7½' tall) | H (20' tall) |
| **Morale:** | Very steady (13) | Elite (16) |
| **XP Value:** | 270 | 4,000 |

A diminutive relative of true giants, cyclopskin are single-eyed giants that live alone or in small bands. The typical cyclopskin weighs around 350 pounds, and stands 7½ feet tall. A single large, red eye dominates the center of its forehead. Shaggy black or dull, deep blue hair falls in a tangled mass about its head and shoulders, its skin tone varies from ruddy brown to muddy yellow, and its voice is rough and

sharp. Cyclopskin commonly dress in ragged animal hides and sandals. They smell of equal parts dirt and dung.

**Combat:** Cyclopskin are armed with either a club or a bardiche. Each will also carry a heavy hurling spear (1d6 damage) and a sling of great size (1d6 damage). They never wear armor or use shields, for their tough hide gives them ample protection from most attacks.
Cyclopskin do not bother with strategy or tactics in combat. If their opponents are out of reach, they use slings or hurl heavy spears. They can not throw boulders like their larger cousins. Since the single eye of the cyclopskin gives them poor depth perception, they suffer a -2 penalty to all missile attack rolls, but not to damage. If the opponents are close, the cyclopskin rush in to fight with their clubs or bardiches.

**Habitat/Society:** The single-eyed humanoids shy away from organized settlements. If left alone, they tend to leave armed groups alone, though they are not above attacking a much weaker force if they stumble across one. Cyclopskin have no regard for any form of life other than themselves. Captives are either enslaved or eaten. This doesn't happen very often, since the cyclopskin tend to live in remote rocky places. They rarely wander more than 10 miles from their caves.
Being poor hunters, most cyclopskin clans keep small herds of goats or sheep. Some clans are nomadic, while others stay put in their caves. Each spring, regional clans meet to exchange goods and slaves and to select mates. On rare occasions a charismatic cyclopskin will arise and bring together several clans to form a wandering tribe. The largest known tribe numbered around 80 fighting cyclopskin. Such a band will aggressively raid outlying areas with a boldness uncommon in a single clan. All group decisions are made by the strongest and toughest cyclopskin in the group, usually through intimidation. This in turn leads to brawls and fist fights. There are no rules in such fights, and they can lead to permanent injury or death for the loser.
A cyclopskin cave is sealed with boulders and there is but one entrance. Inside, if size permits, there will be wooden pens to house both animals and slaves. The pens always have roofs of either wooden bars or the natural cave ceiling.
At night, a large boulder or stout wooden gate is placed at the entrance of the cave to protect the cyclopskin from predators. There are no interior fire pits, since cyclopskin use fire infrequently, and then only outside their lairs. Any cyclopskin treasure will be kept in a sack in the cave.

**Ecology:** Cyclopskin can survive on almost any animal or plant diet. They enjoy meat of all sorts and prize it above vegetable foods. While they live off the land, they do not live with it. They have absolutely no sanitary practices, and rarely even cook their meals. They take no care to preserve their environment while hunting, and are considered to be one of the easiest creatures of their size to track.
The life of a cyclopskin is hazardous, and hence they have a short life expectancy. Besides human adventurers, there are many predators, such as tigers, giants, wyverns, and trolls, that are not above attacking a small group of these giants. However, mountain dwarves actually go out of their way to hunt cyclopskin, receiving the dwarven bonus against giants.

**Cyclops:** These larger versions of their slightly more common cousins are usually found in the extreme wilds or on isolated islands, where they scratch out a meager existence by shepherding their flocks of giant sheep. Cyclopes can hurl boulders up to 150 yards away, inflicting 4d10 points of damage.

# Giant, Desert

| | |
|---|---|
| **Climate/Terrain:** | Desert |
| **Frequency:** | Very rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |

| **Special Attacks:** | Hurling spears |
| **Special Defenses:** | Camouflage |
| **Magic Resistance:** | Nil |
| **Size:** | H (17' tall) |
| **Morale:** | Elite (14) |
| **XP Value:** | 5,000 |

Desert giants were once numerous in the scrub plains and deserts of the Land of Fate, but they have fallen victim to a divine curse which transforms them slowly but inexorably into stone. They always wander the land in the company of their cattle and their mounts. Their great civilization has long since vanished under the sands.

The weathered and craggy faces of the desert giants are scored with wrinkles. Even the youngest of desert giants are somewhat wrinkled, though this is not visible in the women, as they wear the veil. The dark hair and swarthy skin of the desert giants make their blue eyes all the more remarkable. However, it is considered a clear sign of impending fossilization when the eyes of a desert giant turn from blue to brown. The typical desert giant is 17' tall and weighs 7,000 pounds, though fossilizing giants may weigh twice that. Desert giants may live to be 400 years old.

**Combat:** Desert giants fight mounted when they can, though steeds of a size to suit them are rare. Battle mounts include gigantic lizards, enormous insects, huge undead horses of shifting bone, and even rocs. In the past, some desert giants took service as bodyguards and mercenaries with the most powerful of sultans. The sight of a squad of desert giants wheeling about in preparation for a charge has caused more than one desert legion to break and run.

Desert giants do not hurl rocks. Indeed, they wander many areas where there is often no ready supply of boulders, and carrying such heavy objects would tire even the strongest nomadic giant. However, they do make large throwing spears from wood they find when they pass near jungle lands. These spears are kept and cherished as heirlooms over generations. The spears have a range of 3/6/9 and cause 2-12 +7 points of damage. Desert giant chieftains sometimes carry great scimitars given to their ancestors for outstanding military service. These weapons cause 2-16 +7 when wielded by anyone with a Strength of 19 or better. On occasion, a desert giant will attack with one of its huge fists, causing 1-10 points damage on a successful attack

Some desert giants are gifted with the ability to call back their ancestors from the stones; they are called sand-shifters because of the way the summoned giants throw aside the sands when they rise again. Sand-shifters are not priests or mages; they have no other special spell abilities. One in every 10 desert giants can bring back giants who have assumed the form of stone and can command them to fight once more. Once per week, a desert giant can summon 1-6 giants from the rocks for 2-12 turns; the summoning takes one turn. These giants crumble back to rock and powder when slain. Desert giant children gifted this way can summon 2-20 stony mounts for their elders to ride into battle. Adult sand-shifters can summon 3-30 mounts instead of 1-6 giants if they so choose.

Desert giants' skin is so similar to sand and rock that they can camouflage themselves very effectively, if given one turn to prepare. This ability allows them to ambush foes and prey alike. (Desert giants who lose their herds often use this ability to become effective bandits, and the numbers of these gigantic brigands have increased as the race dwindles.) A giant so camouflaged increases chances of a surprise attack to 1-4 on a d10 and decreases the chance of being seen by search parties or soldiers to 1 in 10.

**Habitat/Society:** Desert giants are nomadic herdsmen and are rarely found far from their herds. Though they are responsible for stripping entire river valleys bare in fertile areas, they do not reimburse farmers or herdsmen on the edge of those territories for any damage they might do. They see the lands as theirs for the taking, and they make no apology for overgrazing or even for grazing their herds on crops. Few sultanates attempt to force them off cropland; most attempt to lure the desert giants away with promises of employment as mercenaries. Some will promise rich gifts of salt, cloth, spices, and metal if only the desert giants will return to the empty quarters of the desert.

**Ecology:** Desert giants wander hundreds of miles following the rains with their herds. When the rains fail, the scrub withers, and the herds and their giants starve. At these times young males among the desert giants may take up mercenary work and use the money they obtain to support the entire tribe. If a drought goes on for years, more and more giants are driven into the cities, though their absolute numbers are still tiny compared to the numbers of humans and other smaller races.

# Giant, Ettin

| | |
|---|---|
| **Climate/Terrain:** | Subarctic to temperate/Hills and mountains |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Night |
| **Diet:** | Carnivore |
| **Intelligence:** | Low (5-7) |

Ettins, or two-headed giants, as they are often called, are vicious and unpredictable hunters that stalk by night and eat any meat they can catch.

An ettin at first appears to be a stone or hill giant with two heads. On closer inspection, however, the creature's vast differences from the relatively civilized giant races become readily apparent. An ettin has pink to brownish skin, though it appears to be covered in a dark brown hide. This is because an ettin never bathes if it can help it, and is therefore usually encrusted with a thick layer of dirt and grime. Its skin is thick, giving the ettin its low Armor Class. An ettin's hair is long, stringy, and unkempt; its teeth are large, yellowing, and often rotten. The ettin's facial features strongly resemble those of an orc -- large watery eyes, turned-up piggish snout, and large mouth.

An ettin's right head is always the dominant one, and the right arm and leg will likely appear slightly more muscular and well-developed than the left. An ettin wears only rough, untreated skins, which are dirty and unwashed. Obviously, ettins smell very bad, due to their complete lack of grooming habits -- good or bad.
Ettins do not have a true language of their own. Instead, they speak a mish-mash of orc, goblin, giant dialects, and the alignment tongue of chaotic evil creatures. Any adventurer who speaks orcish can understand 50% of what an ettin says.

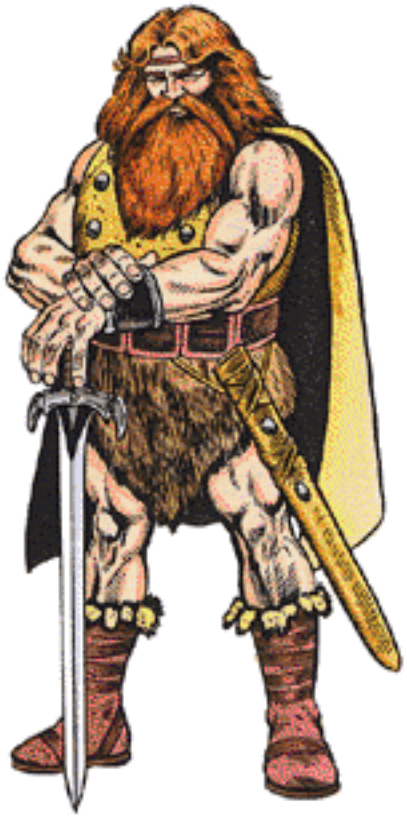
**Combat:** Having two heads is definitely an advantage for the ettins, as one is always alert, watching for danger and potential food. This means that an ettin is surprised only on the roll of a 1 on 1d10. An ettin also has infravision up to 90 feet, which enables it to hunt and fight effectively in the dark.
Though ettins have a low intelligence, they are cunning fighters. They prefer to ambush their victims rather than charge into a straight fight, but once the battle has started, ettins usually fight furiously until all enemies are dead, or the battle turns against them. Ettins do not retreat easily, only doing so if victory is impossible.
In combat, an ettin has two attacks. Because each of its two heads controls an arm, an ettin does not suffer an attack roll penalty for attacking with both arms. An ettin always attacks with two large clubs, often covered with spikes. Using these weapons, the ettin causes 2d8 points of damage with its left arm, and 3d6 points of damage with its right. If the ettin is disarmed or unable to use a weapon, it attacks empty-handed, inflicting 1d10 points of damage with its left fist and 2d6 points with its right.

**Habitat/Society:** Ettins like to establish their lairs in remote, rocky areas. They dwell in dark, underground caves that stink of decaying food and offal. Ettins are generally solitary, and mated pairs only stay together for a few months after a young ettin is born to them. Young ettins mature very quickly, and within eight to ten months after they are born, they are self-sufficient enough to go off on their own.
On rare occasions, however, a particularly strong ettin may gather a small group of 1d4 ettins together. This small band of ettins stays together only as long as the leader remains alive and undefeated in battle. Any major defeat shatters the leader's hold over the band, and they each go their separate ways.
Ettins collect treasure only because it can buy them the services of goblins or orcs. These creatures sometimes serve ettins by building traps around their lairs, or helping to fight off a powerful opponent. Ettins have also been known to occasionally keep 1-2 cave bears in the area of their lairs.
The sloppy caves of ettins are a haven for parasites and vermin, and it isn't unusual for the ettins themselves to be infected with various parasitic diseases. Adventurers rummaging through ettin lairs for valuables will find the task disgusting, if not dangerous.

**Ecology:** Because ettin society is so primitive, they produce little of any value to civilized creatures. Ettins tolerate the presence of other creatures, like orcs, in the area of their lair if they can be useful in some way. Otherwise, ettins tend to be violently isolationist, crushing trespassers without question.

# Giant, Firbolg

| | |
|---|---|
| **Climate/Terrain:** | Temperate/Hills and forests |
| **Frequency:** | Very rare |
| **Organization:** | Clan |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Average to genius (8-18) |
| **Treasure:** | E, Y (M x 10, Q) |
| **Alignment:** | Neutral (chaotic good) |
| **No. Appearing:** | 1-4 or 4-16 |
| **Armor Class:** | 2 |
| **Movement:** | 15 |
| **Hit Dice:** | 13+7 |
| **THAC0:** | 9 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-10 (weapon) +7 (Str bonus) |
| **Special Attacks:** | Spells |
| **Special Defenses:** | Swat away missiles |
| **Magic Resistance:** | 15% |
| **Size:** | L (10½' tall) |
| **Morale:** | Champion (16) |
| **XP Value:** | 8,000 |
| | Shaman: 9,000 |



Of all the giant-kin, the firbolg is the most powerful, due to natural intelligence and considerable magical power.
Firbolgs appear to be normal humans, except that they are over 10 feet tall and weigh over 800 pounds. They wear their hair long and keep great, thick beards. Their skin is a normal fleshy pink, with any shade of hair color, although blonde and red are most common. The flesh and skin of firbolgs are unusually dense and tough. Their voices are a smooth, deep bass, thick with rolling consonants.

**Combat:** Firbolgs can use any large size weapons; they disdain the use of armor or shields. Of manmade

weapons, they prefer two-handed swords and halberds, both of which they may use in one hand without penalty. Weapons of their own make are double size equivalents of human weapons, for which they get a Strength bonus (19 Strength, +7 damage). However, when used with both hands, these huge weapons inflict double their normal damage, plus the Strength bonus.

If a firbolg has one hand free, it can bat away up to two missiles per round. Large missiles, such as boulders, or those with long shafts, such as javelins and spears, can be caught if desired. A catch or bat is successful 75% of the time (6 or better on 1d20). A caught weapon may be thrown at any opponent on the next round with a -2 penalty to the attack roll, for using its off hand.

All firbolgs have the following magical powers, usable once per day, on any round they are not engaged in melee combat: *detect magic, diminution* (as double the potion), *fools' gold, forget,* and *alter self.* There is a 5% cumulative chance per member of a group that one of the firbolgs is a shaman of 1st through 7th level.

Firbolgs are cautious and crafty. They have learned to distrust and fear humans and demihumans. If possible they avoid an encounter, either by hiding or with deception. If forced to fight, they do so with great strategy, utilizing the terrain and situation to best effect. They operate as a group, not a collection of individuals. Ten percent of all encounters is a large group of 4d4 members en route to an enclave of some sort.

**Habitat/Society:** Firbolgs live in remote forests and hills. These giant-kin distrust most other civilized races, and stay well away from them. They keep on even terms with druids and the faerie creatures, including elves, neither asking nor giving much, but avoiding insult or injury. Strangers are met with caution, frequently in illusionary disguise as one of their own race. They do not attack or kill without reason, but do enjoy pranks, particularly those that relieve strangers of treasure.

Firbolg society is close-knit and centered around the family or clan. Each clan has 4d4 members and frequently a shaman. The level of the shaman is determined by rolling 2d4-1 if the DM doesn't wish to choose it himself. The clans live apart from each other, existing as gatherers and sometimes nomads. Their homes are huge, single-storey, wooden houses with stout walls and a central fireplace opening in several directions in the common room. When great decisions are needed, the clans involved meet in an enclave. This happens at least once a year at the fall solstice, just to celebrate if nothing else. The shamans preside over these events, and settle any disputes between clans.

**Ecology:** Firbolgs live off the land and with it. Their homes are built from trees cleared from around the house. The clan does keep a field for harvest, but only enough to supplement their diet. They trade tasks involving great strength for food, usually with other peaceful folk in the forests or hills. The rest of their food is obtained by gathering and hunting an area up to 20 miles from their homestead. Meat is used in small quantities for most meals, although major celebrations always include a large roast of some sort.

Although many creatures are capable of killing a firbolg, none hunt them exclusively. They are stronger than most forest beasts, and intelligent creatures know better than to mess with them. They avoid true giants, except storm giants, and aggressively repel other giant- kin from their lands.

# Giant, Fire

| | |
|---|---|
| **Climate/Terrain:** | Any temperate, subtropical, tropical |
| **Frequency:** | Rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivorous |

| **Size:** | H (18') |
| **Morale:** | Champion (15-16) |
| **XP Value:** | 8,000 |
| Infant | Nil |
| Juvenile, -3 | 120 |
| Juvenile, -2 | 3,400 |
| Juvenile, -1 | 5,000 |
| Shaman/Witch doctor, | 1st level spells 9,000 |

| | | |
|---|---|---|
| Shaman/Witch doctor, | 2nd level spells | 10,000 |
| Shaman/Witch doctor, | 3rd level spells | 10,000 |
| Shaman/Witch doctor, | 4th level spells | 12,000 |

Fire giants are brutal, ruthless, and militaristic.
They are tall, but squat, resembling huge dwarves. An adult male is 18 feet tall, has a 12 foot chest, and weighs about 7,500 pounds. Fire giants have coal black skin, flaming red or bright orange hair, and prognathous jaws that reveal dirty ivory or yellow teeth. They can live to be 350 years old.
A fire giant's natural Armor Class is 5. Warriors usually wear banded mail and round metal helmets (AC -1). They carry their belongings in huge sacks. A typical fire giant's sack contains 2-5 (1d4+1) throwing rocks, the giant's wealth, a tinderbox, and 3-12 (3d4) common items. Everything they own is battered, filthy, and smelly, making it difficult to identify valuable items.
All fire giants can speak the language of all giants and their own tongue.

**Combat:** Fire giants are immune to nonmagical fire and heat, as well as red dragon breath. They are resistant to all types of magical fire; such attacks inflict -1 hit point per die of damage. Adult fire giants can hurl rocks for 2-20 (2d10) points of damage. Their minimum range is 3 yards while their maximum is 200 yards. They can catch similar large missiles 50% of the time. They usually fight in disciplined groups, throwing rocks until they run out of ammunition or the opponent closes. Fire giants often wait in ambush at lava pools or hot springs, hurling heated rocks at victims for an extra 1-6 points of damage.
Warriors favor huge two-handed swords. A fire giant's oversized weapons do double normal (man-sized) damage to all opponents, plus the giant's strength bonus. Thus, a fire giant two-handed sword does 2-20 (2d10) +10 points of damage.

**Habitat/Society:** Fire giants live in well organized military groups, occupying large castles or caverns. When encountered in their lair there will be 13-20 (1d8+12) giants, half of whom will be immature giants. To determine a giant's maturity, roll 1d4. A roll of 4 indicates an infant with no combat ability and the hit points of an ogre while rolls of 1-3 indicate older progeny with Hit Dice, damage, and attack rolls reduced by 1, 2 or 3, respectively.
Their lairs are always protected by vigilant watchmen, and sometimes by traps. Fire giants favor deadfalls that can crush intruders for 5-30 (5d6) points of damage, and large crossbow devices that fire one, two, or three huge bolts for 2-16 (2d8) points of damage each.
Particularly intelligent fire giant leaders will command groups three or four times normal size. One who commands 30 or more giants usually will call himself a king. Kings always will have better than normal armor and a magical weapon of +1 to +3.
There is a 20% chance that any band of fire giants will have a shaman (80%) or witch doctor (20%). If the group is lead by a king, there is an 80% chance of a spell caster. Fire giant shamans are priests of up to 7th level. A shaman can cast normal or reversed spells from the Elemental, Healing, Charm, Protection, Divination, or Combat spheres. Fire giant witch doctors are priest/wizards of up to 7th/3rd level; they prefer spells that can detect or thwart intruders.
Fire giants often capture and tame other creatures as guards. There is a 50% chance that a fire giant lair will contain 1-4 hell hounds. Larger than normal groups check once for every 10 giants. Bands with 30 or more giants have a additional 30% chance to have 2-5 (1d4+1) trolls, larger groups check once for every 20 giants. A king's group has a 20% chance to have 1-2 red dragons of age category 2-5 (1d4+1) in

addition to other guards. Fire giants frequently take captives to hold for ransom or use as slaves. There is a 25% chance that a lair will contain 1-2 captives, larger bands check once per 10 giants.

**Ecology:** Fire giants live wherever there is a lot of heat. They prefer volcanic regions or areas with hot springs. Frequently they share their lairs with other fire-dwelling creatures such as salamanders or fire elementals.

Fire giants prefer to eat meat and bread, they can hunt and kill their own meat, but raid human and demi-human settlements for grain, captives, and treasure.

# Giant, Fog

| | |
|---|---|
| **Climate/Terrain:** | Temperate/Swamps, marshes, boggy forests, and coastal regions |
| **Frequency:** | Very rare |
| **Organization:** | Clan, Hunting Group |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |
| **Intelligence:** | Average (8-10) to highly (13-14) |
| **Treasure:** | E, R |
| **Alignment:** | Neutral (good 50%, evil 50%) |
| **No. Appearing:** | 1-4 (rarely 1-6) |
| **Armor Class:** | 1 |
| **Movement:** | 15 |
| **Hit Dice:** | 14 |
| **THAC0:** | 7 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-10, or by weapon (3-18+11) |
| **Special Attacks:** | Rock hurling |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | H (24' tall) |
| **Morale:** | Very steady (14) |
| **XP Value:** | 5,000 |

Cousins to the cloud giants, these large rock-hurlers are more intelligent and stealthy than portrayed in story or song.

Fog giants are huge and husky, with tree-trunk sized legs, and over-developed arms muscled by constant throwing games and exercises. They have milk-white skin which aids their natural ability to blend into fog (80% chance) and gives their foes a -5 penalty to their surprise rolls when attacking in fog or mist.

Their hair is silvery white and flowing, with ample hair on the arms, legs, and chest. They grow no facial hair whatsoever. They prefer to wear no armor, counting on their high natural Armor Class. However, they occasionally wear leather armor (AC -2), and at least one band wears armor made from white dragon hides studded with silver. They love massive, ornate clubs made from bleached and polished wood or bone. Fog giants speak their own tongue and Cloud Giant, and 30% speak Common.

**Combat:** Fog giants generally hunt in groups of 2-5 males, although they sometimes join with a cloud giant or two to form a hunting party of 3-7. They prefer to attack from cover (fog is most preferred). After some ranged rock-hurling to scatter their opponents, they will charge into melee with fists and swords flying. Adult fog giants can hurl rocks up to 3-240 yards, inflicting 2-20 points of damage to anyone struck. They also have a 45% chance of catching hurled weapons of similar size, but cannot catch fired weapons such as arrows, bolts, and sling-stones. In melee they generally fight with clubs and fists, though tales of sword-armed fog giants are common.
Because of their keen hearing and highly-developed sense of smell, fog giants are seldom surprised (+2 on surprise rolls). Access to their caves and regular hunting camps are often protected by deadfalls of rocks or logs, which can be released by a carefully thrown rock at the first sign of an attack against them.

**Habitat/Society:** Fog giants are proud of their strength and fighting skills, often playing games when on hunting forays in an attempt to best one another. Their favorite such game is called "copsi" and consists of the giants pairing off to toss larger and larger boulders to their partners until one of the pairs misses its throw.
The fog giant families live in caves, canyons, or thickets, in the most inaccessible areas of marsh, swamp, forest, or coast. The men usually hunt in groups, ranging up to a dozen miles from their homes. The groups generally are formed of giants of similar alignment.
By tradition, a young giant may not mate until he has obtained at least one large ornament of silver. Usually, the young giant joins with several others in a quest to find one (or acquire enough treasure to buy one).
Fog giants do not often mix well with other creatures or races, although they can often be persuaded to perform services for a fee, or barter goods with groups of similar alignment. Fog giants will happily barter goods and services for refined silver.
Territorial disputes sometimes flare up between groups, especially in times of bad hunting. Friendly disputes can sometimes be resolved by a game of copsi or an arm-wrestling match. Fog giants fighting amongst themselves will generally throw rocks and fist-fight, rather than use swords.
Fog giants are fond of all sorts of cooked meats, particularly hoofed creatures such as horses, cows, deer, elk, and centaur. They often cook meat by building a large fire, then impaling chunks of meat on their swords and holding them over the open flame. Fog giants prefer fruits and sweets for dessert, and will also down large quantities of spirits if available to them. They do not distill their own spirits or liquors. They also sometimes smoke fresh milkweed pods in wooden pipes, though the taste is too bitter for humans and demihumans to enjoy.

**Ecology:** Because of their size, fog giants consume a large quantity of food, and require a considerable territory per hunting group to support themselves. The giants will often place territorial markers of boulders and logs to define the boundaries between their hunting territories. They do not look kindly on anyone who tears down or moves these markers. Their regular pathways are hard to hide, and are instead trapped with deadfalls of rocks and logs to discourage trespassers.

# Giant, Fomorian

| | |
|---|---|
| **Climate/Terrain:** | Any mountain and subterranean |
| **Frequency:** | Uncommon |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | D, Q x 10 |
| **Alignment:** | Neutral evil |
| **No. Appearing:** | 1-4 |
| **Armor Class:** | 3 |
| **Movement:** | 9 |
| **Hit Dice:** | 13+3 |
| **THAC0:** | 9 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 2 x weapon, +8 (Str bonus) |
| **Special Attacks:** | Surprise |
| **Special Defenses:** | Only surprised on a 1 |
| **Magic Resistance:** | Nil |
| **Size:** | H (13½' tall) |
| **Morale:** | Elite (14) |
| **XP Value:** | 6,000 |

Fomorians are the most hideous, deformed, and wicked of all giant-kin.
The fomorian giants are all grossly deformed behemoths. Each has a different set of deformities, which must be determined by the DM. A partial list of deformations includes misplaced limb, misshapen limb, misplaced facial feature, hunchbacked, bulging body part, drooping flesh, body part too big or too small, flapping ears, huge snout, large feet on short legs. Their thick, hairy hides, combined with the pelts and odd metal bits they wear for protection, give an effective AC of 3. They have scattered patches of hair as tough as wire on their pale white skin. Large warts and other growths are scattered across their bodies. There is no single odor associated with fomorians; some smell strongly due to overactive sweat glands, others have no smell. Their voices are also each different due to their unique deformities.

**Combat:** Fomorians use all manner of clubs and other blunt instruments. Regardless of the weapon, it inflicts double damage plus 8 points for Strength, while their fists alone inflict 2d4+8 points of damage. Their deformities prevent them from hurling boulders as true giants. They work any bits of metal they can find and scavenge into their clothing, to aid their Armor Class. The typical fomorian is AC 3, while a particularly well-armored one, or one with a shield, might get an AC as good as 1, but no better.
Typical fomorian strategy is too sneak up on an opponent and hit him as hard as it can. It works well for them since their opponents suffer a -2 penalty to their surprise rolls, because the fomorians move slowly and carefully. These giant-kin are only surprised on a 1 on the 1d10 surprise roll, because they tend to have eyes and ears in odd places on their heads. If the fomorian bothers to keep an opponent alive, he is crudely tortured until dead, and then eaten.

**Habitat/Society:** Fomorians live in mountain caves, abandoned mines, or other subterranean realms. They rarely modify their homes, but adapt to what is already there. These deformed giants wander throughout the underground complex, for almost any distance, stopped only by hazards they do not want to challenge. A fomorian clan picks a small, (to them) defensible alcove for a lair. Their territories are sometimes marked by the bodies of their enemies. Their treasure consists only of stolen items from enemies. Pieces of armor are added to their own patchwork protection. Since they do not care for it, this armor quickly deteriorates and becomes worthless.
Their society is ruled by depravity and wickedness. The strongest and cruelest giant rules over all the others within reach, which is usually a small number. The women and children are treated as slaves. Acts of violence are common among fomorians, sometimes resulting in permanent injury or death.
Fomorian giants have been known to work with other creatures for evil causes. Usually the other creatures must completely dominate the fomorians, or be capable of it, to form the alliance. Such an agreement lasts only as long as the fomorians fear their cohorts. Once their interests no longer coincide or the fomorians no longer feel threatened, they double-cross their partners, as quickly as possible.

**Ecology:** These twisted giants can live for weeks on little or no food. This is good, because their underground dwellings do not provide an abundance of it. They can eat almost any organic material, including fungi, lichens, plants of all sorts, bats, mice and fish. They particularly savor the taste of large mammals, especially those that beg not to be eaten. Preparing a meal usually involves torture rather than any efforts to improve its taste.

# Giant, Frost

| | |
|---|---|
| **Climate/Terrain:** | Arctic lands |
| **Frequency:** | Very rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivorous |
| **Intelligence:** | Low to average (5-10) |
| **Treasure:** | E |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1-8 |
| **Armor Class:** | 0 (5) |
| **Movement:** | 12 (15) |
| **Hit Dice:** | 14 + 1-4 hit points |
| **THAC0:** | 7 or 5 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-8, or by weapon (2-16+9) |

| Infant | Nil |
| Juvenile, -3 | 270 |
| Juvenile, -2 | 975 |
| Juvenile, -1 | 4,000 |
| Shaman/Witch doctor, 1st | 8,000 |
| Shaman/Witch doctor, 2nd | 8,000 |
| Shaman/Witch doctor, 3rd | 8,000 |

Shaman/Witch doctor, 4th+ 10,000

Like all evil giants, frost giants have a reputation for crudeness and stupidity. This reputation is deserved, but frost giants are crafty fighters.
Frost giants have muscular, roughly human builds. The typical adult male is 21' tall and weighs about 8,000 pounds. Females are slightly shorter and lighter, but otherwise identical to males. Frost giants have snow-white or ivory skin. Their hair is light blue or dirty yellow, with matching eyes. They can live to be 250 years old.
A frost giant's natural Armor Class is 5. Warriors usually wear chain mail and metal helmets decorated with horns or feathers (AC 0). They also wear skins and pelts, along with any jewelry they own.
Frost giants carry their belongings in huge sacks. A typical frost giant's sack contains 2-5 (1d4+1) throwing rocks, the giant's wealth, and 3-12 (3d4) mundane items. Everything in a giant's bag is old, worn, dirty, and smelly, making the identification of any valuable items difficult.
Frost giants speak their own language and the language common to all giants.

**Combat:** Frost giants are immune to cold. Adult frost giants can hurl rocks for 2-20 (2d10) points of damage. Their minimum range is 3 yards while their maximum is 200 yards. They can catch similar large missiles 40% of the time. They usually will start combat at a distance, throwing rocks until they run out of ammunition, or the opponent closes. One of their favorite strategies is to ambush victims by hiding buried in the snow at the top of an icy or snowy slope where opponents will have difficulty reaching them.
Warriors favor huge battle axes. A frost giant's oversized weapons do double normal (man-sized) damage to all opponents, plus the giant's strength bonus. Thus, a frost giant battle axe does 2-16 (2d8) +9 points of damage.

**Habitat/Society:** Frost giants live in small bands consisting of a chief, his henchmen, and their camp followers. A band usually will occupy a crude castle or frigid cavern. When encountered in their lair there will be 9-16 1d8+8) giants; half of whom will be immature. To determine a giant's maturity, roll 1d4. A roll of 4 indicates an infant with no combat ability and hit points of ogre; rolls of 1-3 indicate older progeny with hit dice, damage, and attack rolls equal to that of a stone giant.
Particularly strong or intelligent frost giant chieftains will command bands three or four times normal size. A chieftain who commands 20 or more giants is called a jarl. Jarls always will have better than normal armor and a weapon of +1 to +3 enchantment.
There is a 20% chance that any band of frost giants will have a shaman (80%) or witch doctor (20%). If the group is led by a jarl, there is an 80% chance for a spell caster. Frost giant shamans are priests of up to 7th level. A shaman can cast normal or reversed spells from the *healing, charm, protection, divination,* or *weather* spheres. Frost giant witch doctors are priest/wizards of up to 7th/3rd level; they prefer spells that can bewilder and confound other giants. Favorite spells include: *unseen servant, shocking grasp, detect magic, ventriloquism, deeppockets, ESP, mirror image,* and *invisibility.*
Frost giants often capture and tame other creatures as guards. There is a 50% chance that a frost giant lair will contain 1-6 winter wolves. Larger than normal groups check once for every eight giants. Bands with 20 or more giants have a additional 30% chance to have 1-4 yeti, larger groups check once for every 16 giants. A jarl's band has a 20% chance to have 1-2 subdued white dragons in addition to other guards. The dragons will be age category 2-5 (1d4+1). Frost giants also take captives to hold for ransom or use as

slaves. There is a 15% chance that a lair will contain 1-2 captives, larger bands check once per eight giants. Captives can be of any race.

**Ecology:** Frost giants live in frigid, arctic lands with glaciers and heavy snowfall. Frost giants eat mostly meat, which they can hunt and kill themselves. They raid human and demi-human settlements for foodstuffs and other booty.

# Giant, Hill

| | |
|---|---|
| **Climate/Terrain:** | Any hills and mountains |
| **Frequency:** | Rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivorous |
| **Intelligence:** | Low (5-7) |

| **Morale:** | Elite (13-14) |
| **XP Value:** | 3,000 |
| Infant | Nil |
| Juvenile, -3 | 270 |
| Juvenile, -2 | 650 |
| Juvenile, -1 | 2,000 |

Hill giants are selfish, cunning brutes who survive through hunting and by terrorizing and raiding nearby communities. Despite their low intelligence, they are capable fighters.
Hill giants are oddly simian and barbaric in appearance, with overly long arms, stooped shoulders, and low foreheads. Even though they are the smallest of the giants, their limbs are more muscular and massive than those of the other giant races. The average hill giant is 16 feet tall and weighs about 4,500

pounds. Females have the same builds as males. Their skin color ranges from a light tan to a deep ruddy brown. Their hair is brown or black, and their eyes are black. Hill giants can live to be 200 years old.
Hill giants' natural Armor Class is 5. This is reduced to an Armor Class of 3 when they wear crudely-sewn animal hides, which are the equivalent of leather armor. Nearly all hill giants wear these hides, which are a symbol of esteem in some hill giant communities -- the more hides a giant has, the more large kills to his credit. Only a few (5%) of the giants fashion metal armor from the armor of men they have defeated. These giants have an Armor Class of 0. Like other races of giants, hill giants carry their belongings with them in huge hide sacks. A typical hill giant's bag will contain 2-8 (2d4) throwing rocks, the giant's wealth, and 1-8 additional common items.
Hill giants speak their own language and a tongue common to all giants. In addition, 50% also speak ogre.

**Combat:** Hill giants prefer to fight their opponents from high rocky outcroppings where they can pelt their targets with rocks and boulders while limiting the risks posed to themselves.
Hill giants' favorite weapons are oversized clubs which do 2-12 +7 points of damage (double the damage of a man-sized club plus their strength bonus). They hurl rocks for 2-16 (2d8) points of damage. Their targets for such attacks must be between 3 and 200 yards away from the giant. They can catch rocks or other similar missiles 30% of the time.

**Habitat/Society:** A hill giant lair will have 9-16 (1d8+8) giants; usually an extended family. Sometimes these families will accept lone hill giants into their folds. If six or more giants are encountered in a lair, half of them will be male, one quarter will be female, and the remainder will be immature giants. To determine a giant's maturity, roll 1d4. A roll of 4 indicates an infant with no combat ability and hit points of gnoll; rolls of 1-3 indicate older progeny with hit dice, damage, and attack rolls equal to that of an ogre.
Occasionally a hill giant with an average intelligence can be found. Such a giant is capable of rallying bands of his peers so 2, 3, or 4 times the number of giants usually appearing can be encountered. These "giant kings," as they call themselves, stage raids on human towns or against other races of giants.
Although hill giants prefer temperate areas, they can be found in practically any climate where there is an abundance of hills and mountains. They lair in caves, excavated dens, or crude huts. Those who live in colder climates have developed more skills with preparing and using skins to keep themselves warm and to keep the harsh winds out of their lairs.
There is a 50% chance a band of hill giants will have guards in their lairs, and the guarding creatures will be 2-8 (2d4) dire wolves(50%), 1-3 giant lizards> (30%), or a group of 2-8 (2d4) ogres (20%).
The majority of hill giants are suspicious of magic and will seek to destroy magic items they acquire as treasure. They ceremonially kill mages.

**Ecology:** Hill giants' main diet consists of meat, which they obtain by hunting. The flesh of young green dragons is considered a delicacy, and frequently giants who live on hills and mountains covered with forests will organize hunting parties in search of green dragon lairs. In turn, green dragons have been known to hunt hill giants.
Sometimes bands of hill giants will trade with each other or with bands of ogres to get foodstuffs and trinkets.

# Giant, Jungle

| | |
|---|---|
| **Climate/Terrain:** | Tropical/jungle |
| **Frequency:** | Uncommon |
| **Organization:** | Tribal/cooperative |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore |
| **Intelligence:** | Average to High (8-14) |
| **Treasure:** | Q (A) |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 or 1-6 |
| **Armor Class:** | 3 |
| **Movement:** | 15, Cl 6 |
| **Hit Dice:** | 11 |
| **THAC0:** | 9 |
| **No. of Attacks:** | 1 or 2 |
| **Damage/Attack:** | 2-16 +9 or 2-12 +9/2-12 +9 |
| **Special Attacks:** | Surprise, arrows |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | H (18' tall) |
| **Morale:** | Champion (16) |
| **XP Value:** | 6,000 |

Powerful, lanky, and strictly carnivorous, jungle giants are a terror to all the animals of the tropical forests. They are great hunters and stalkers, able to clear a huge tract of forest of all game and then move on.

A typical jungle giant stands 18' tall yet weighs only 3,000 pounds -- very thin for a giant. Females are generally taller than males. They can live to be 200 years old.

Jungle giants always carry everything they need with them: tools for making and maintaining their weapons, fire-starters, tinder, and spare bits of leather and sinew used to repair clothing. They also carry their valuables, and every adult jungle giant carries a quiver of arrows.

Jungle giants speak their own language and the languages of tribes of nearby humans and humanoids.

Thin and very tall, jungle giants easily blend into the vertical landscape of the tropical forest. Their wavy

hair is pale green, and their skin is a rich muddy yellow, like sunlight on the forest floor. They rarely wear more clothing than strictly necessary, as they prefer complete freedom of movement when hunting. Many groups of jungle giants use ritual tattooing, colorful feather headdresses, and even filed teeth to show their fierceness. They sometimes decorate themselves with mud, sticks, and leaves when stalking especially large or wary game.

**Combat:** Jungle giants use 15' long bows crafted to take advantage of their tremendous size and strength. These giants are very quick with their huge bows and can fire two arrows each round. They will use poisoned arrows to bring down their prey more quickly. If these arrows are used in combat, opponents must save vs. paralyzation at -2 or be rendered immobile for 2-12 turns. Even humanoid creatures with the strength to pull a jungle giant bow cannot use it, because the arrows are over 6' long (2d6 +9 damage). Jungle giants will occasionally use the trunk of a dead tree as a club, doing 2d8 +9 points damage.

Jungle giants prefer to take their prey from ambushes, firing their bows from the treetops and then swinging down sturdy branches or thick ropes to finish off their prey. Camouflaged giants cause a -1 penalty on opponents' surprise rolls. When setting up a blind, they can camouflage themselves in jungle terrain with a 60% chance of success. Setting up a blind or decorating themselves with jungle camouflage takes three turns.

**Habitat/Society:** Jungle giants are friendlier than most other races of giants, and they will often cooperate with human jungle tribes on hunts. The giants provide strength and raw power, and the humans provide the numbers and skill to drive animals into ambushes.

Jungle giants have absolutely no compunctions about eating any form of meat -- mammal, reptile, amphibian, or avian. They know how to stalk, kill, and prepare everything from eggs to full-grown animals, and from scavengers to predators. Their villages reflect this carnivorous tendency; the huts are made from wooden posts with roofs of greased animal hides stitched together with intestines. The smell of smoking meats and butchery hang in the air, and huge quantities of dragonflies and other insects swarm around the villages. A jungle giant village is 50% likely to shelter 1-6 giant dragonflies.

**Ecology:** Jungle giants think of most creatures as prey, but those they accept as fellow hunters they respect as equals, regardless of their size. Although they much prefer the jungle terrain they know so well, they are often forced to leave the trees for the savanna when their numbers become too great to survive in the jungle. They think nothing of eating every snake, antelope, cat, warthog, ostrich, and elephant they come across. Jungle giants on the savannah often return to the forest, because their great height makes stealthy hunting difficult for them on open ground.

# Giant, Mountain

| | |
|---|---|
| **Climate/Terrain:** | Any/Mountains |
| **Frequency:** | Very rare |
| **Organization:** | Family |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | E |
| **Alignment:** | Chaotic neutral |
| **No. Appearing:** | 1-4 |
| **Armor Class:** | 4 |
| **Movement:** | 12 |
| **Hit Dice:** | 15+3 |
| **THAC0:** | 5 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-8 or by weapon (4d10+10) |
| **Special Attacks:** | Hurling rocks for 2-20 |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | H (14' tall) |
| **Morale:** | Champion (15-16) |
| **XP Value:** | Normal: 7,000 |
| | Infant: Nil |
| | Juvenile: 3,000 |
| | Shaman: 8,000 |
| | Shaman, 3rd: 9,000 |

Mountain giants are huge humanoids that live in remote mountain caverns.
Standing 14 feet tall and weighing 2,000 pounds, mountain giants are impressive foes. They greatly resemble hill giants. Their skin color is a light tan to reddish brown with straight black hair. The males have heavy beards but no mustaches, and they have large pot bellies. They are typically clothed in rough hides or skins and carry huge clubs as weapons. The stale reek of a mountain giant can be detected

several hundred feet downwind.

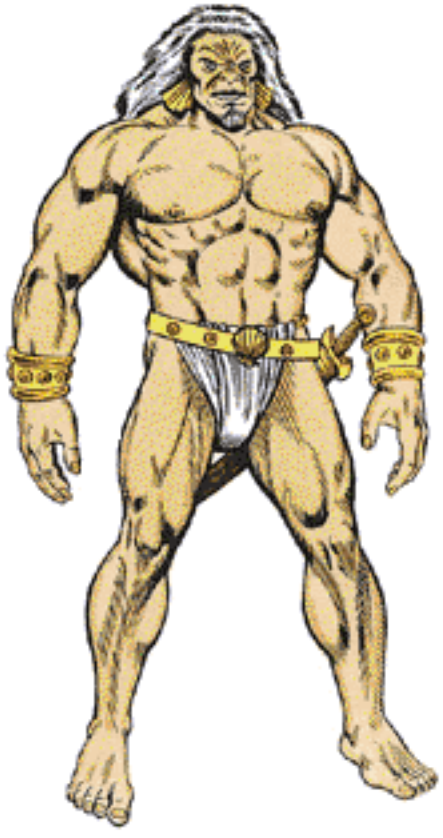
**Combat:** Mountain giants always attack in a straight-forward manner, not by ambush or deceit. They love to get into a high, unassailable spot with lots of boulders. When in such a position, mountain giants rarely take cover, but stand in the open to fling their missiles. They can hurl boulders down on their opponents for 2d10 points of damage each. They can catch similar missiles 30% of the time.
In melee they use huge clubs that cause 4d10+10 points of damage, including their Strength bonus. These clubs are usually just large tree limbs or logs. They usually keep several such weapons around. Mountain giants are as strong as fire giants (22).
A mountain giant can summon and control other monsters. This summoning takes a full turn to perform and 1d6 hours pass before the creatures appear. A summoning results in either 1d10+5 ogres (70%), 1d6+3 trolls (20%), or 1d4 hill giants (10%), although the giant has no idea in advance of what he will get. The control is very loose, not absolute domination. The mountain giant can give a broadly defined command and the monsters obey as they see fit. The summoned monsters stay with and fight for the mountain giant, but they value their own lives over that of the giant. The summoned creatures stay with the giant until killed, sent away, or another summoning is made.

**Habitat/Society:** The home of a family of mountain giants is often in a large rock cavern in a mountain. Frequently there are unexplored passages leading out of the giants' home. They rarely have any interest in anything beyond their cavern. There is a 75% chance of summoned creatures acting as guards and underlings in the cavern.
The females and young are rarely seen, since they stick close to the cavern. Mountain giants are polygamous, usually one female living with several males. Three quarters of the young are male, which accounts for their low population. If two or more mountain giants are in a lair, there is a 50% chance of a female and a 25% chance of a child. Roll 1d4 to determine the age of the child. If it is a 4, it is a helpless infant or small child. A roll of 1-3 indicates older children or teens that have the Hit Dice, damage, and attack rolls of hill giants.
There is a 20% chance that one of the giants in a family is a shaman. Roll 1d6 to determine the level of spell use, 1-4 meaning 1st level, 5-6 indicating 2nd level. This shaman can cast from the spheres of All, Animal, Charm, Combat, Elemental, and Healing. He has an innate ability to find caves and cavern entrances within half a mile, unless these are magically hidden.
While only one family is found in a given lair, several families make up a loose tribe scattered over a mountain or range. Each tribe has a 3rd-level shaman as its leader. He presides over the extremely rare gatherings of the tribe and counsels those willing to travel to talk to him. The shaman always lives with a group of summoned monsters, but never with other mountain giants.

**Ecology:** Mountain giants are foragers and hunters. Their favorite food is mountain sheep. They also eat nuts, tubers, and other edible mountain plants. Nothing hunts mountain giants, but sometimes they pick the wrong cave in which to set up housekeeping. Since they tend not to fully explore all the back tunnels, nasty things from underground have been known to attack and devour sleeping giants.
Since these giants are neither good nor evil, it is possible to set up peaceful relations with them. However, they are suspicious of and reluctant to deal with outsiders.

# Giant, Reef

| | |
|---|---|
| **Climate/Terrain:** | Tropical or subtropical ocean/reef |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |
| **Intelligence:** | Very (11-12) |
| **Treasure:** | Z (A) |
| **Alignment:** | Neutral good |
| **No. Appearing:** | 1 or 1-4 |
| **Armor Class:** | 0 or -4 |
| **Movement:** | 15, Sw 12 |
| **Hit Dice:** | 18 |
| **THAC0:** | 5 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-10 or by weapon (typically 2-20 +10) |
| **Special Attacks:** | Boulders, whirlpool |
| **Special Defenses:** | Immune to water-based attacks |
| **Magic Resistance:** | Nil |
| **Size:** | H (16' tall) |
| **Morale:** | Fanatic (17) |
| **XP Value:** | 13,000 |



Reef giants are the loners of giant-kind, although they often live in remarkably well-appointed mansions that seem to be no more than huts from the outside. They sometimes become sailors, but their huge mass limits them to the largest of vessels. Reef giants are typically 16' tall and weigh 4,000 pounds. Reef giants can live to be 600 years old.

Reef giants speak their own language as well as the giantish trade tongue and the languages of storm and cloud giants. In addition, 40% of the giants also speak the common tongue.

Reef giants have burnished coppery skin and pale white hair. They are barrel-chested and

powerfully-muscled from the exertion of forcing their huge bodies through water. Reef giants have a Strength of 22. Reef giants wear skins or garments made of braided hair when ashore, but swim wearing no more than a belt for knives and pouches.

**Combat:** Reef giants prefer to fight in or under water, and they are fierce fighters when angered. They suffer no penalties when fighting in or under water. They cannot be harmed by water- or ice-based attack forms. They typically attack with giant tridents for 2-20 +10 points of damage, but have been known to lash out with a huge fist (1d10 points damage) now and again.
Once per day, a reef giant can form a whirlpool. Unless a successful Strength ability check is made, creatures within 10 yards of the giant are sucked into the whirlpool and suffer 2-16 points of battering damage plus 2-20 points drowning and choking damage (unless the creatures are able to breathe water, in which case only the battering damage applies). The whirlpool is not powerful enough to draw in ships.
Reef giants can throw boulders up to 350 yards for 3-30 (3d10) points of damage. They prefer to use thrown boulders to sink unwelcome ships. Boulders are not used against individual opponents.

**Habitat/Society:** Reef giants are often solitary for long periods of time, although they mate for life. When their children reach puberty, they are sent out on their own to seek an island or reef habitat to make their home.
The mansions of reef giants are sometimes built into the hills and gorges of the islands, and they are always stocked with furniture and decorations collected over generations. These mansions are passed on from one giant to another; the eldest daughter is generally reared to provide for her parents as they grow old and is usually given the mansion and all its goods upon their death. These well-dowried daughters are the objects of much competition between reef giant suitors, each of whom seeks to both prove himself to the new mistress of the mansion and undo his competitors by any means available. Diving, surfing, and fishing competitions are common in reef giant courtship.

**Ecology:** Reef giants are scavengers who fish and forage coral reefs for a hundred different sources of food. They can net entire schools of fish, and as accomplished divers they can retrieve hoards of pearls, sponges, and coral. Their enormous strength allows them to swim for hours at a time without tiring. In this way reef giants can amass huge amounts of goods to trade for other items.
Some reef giants keep flocks of goats or sheep on their island homes, but these giants are generally elderly and not as capable of foraging successfully.
Reef giants frequently enter into contracts or trade agreements with humans and other mercantile races. In exchange for pearls and other valuables from the sea, they are given cloth, sweets, and metal goods. The reef giants willingness to plunder the sea has made them the enemies of merfolk, tritons, and other ocean-dwelling races.

# Giant, Stone

| | |
|---|---|
| **Climate/Terrain:** | Sub-tropical and temperate mountains |
| **Frequency:** | Rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivorous |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | D |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-10 |
| **Armor Class:** | 0 |
| **Movement:** | 12 |
| **Hit Dice:** | 14 + 1-3 hit points |
| **THAC0:** | 7 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-8 or by weapon (2-12+8) |
| **Special Attacks:** | Hurling rocks for 3-30 (3d10) |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | H (18' tall) |
| **Morale:** | 16 |
| **XP Value:** | 7,000 |
| Infant | Nil |
| Juvenile, -3 | 975 |
| Juvenile, -2 | 3,000 |
| Juvenile, -1 | 6,000 |
| Elder | 9,000 |
| Spell caster | 9,000 |

Stone giants are lean, but muscular. Their hard, hairless flesh is smooth and gray, making it easy for them

to blend in with their mountainous surroundings. Their gaunt facial features and deep, sunken black eyes make them seem perpetually grim.
The typical stone giant is 18' tall and weighs 9,000 pounds because of its dense flesh. Females are a little shorter and lighter. The giants' natural Armor Class is 0. They do not wear armor to augment that, preferring to wear stone-colored garments. Stone giants can live to be 800 years old.
Stone giants, like several other giant races, carry some of their belongings with them. They leave their more valuable items in their lairs, however. A typical stone giant's bag will contain 2-24 (2d12) throwing rocks, a portion of the giant's wealth, and 1-8 additional common items.
Stone giants speak their own language, as well as those of hill giants, cloud giants, and storm giants. In addition, 50% of the giants also speak the common language of man.

**Combat:** When possible, stone giants fight from a distance. They are able to hurl rocks a minimum distance of 3 yards to a maximum distance of 300 yards, doing 3-30 (3d10) points of damage with each rock. These giants are able to catch stones and similar missiles 90% of the time. A favorite tactic of stone giants is to stand nearly motionless against rocks, blending in with the background, then moving forward to throw rocks, surprising their foes. Many giants set up piles of rocks near their lair which can be triggered like an avalanche when intruders get too close.
When stone giants are forced into melee combat, they use large clubs chiseled out of stone which do 2-12 (2d6) +8 points of damage; double normal (man-sized) club damage plus the giant's strength bonus.

**Habitat/Society:** Stone giants prefer to dwell in deep caves high on rocky, storm-swept mountains. They normally live in the company of their relatives, though such a clans usually include no more than 10 giants. Clans of giants do locate their lairs near each other, however, for a sense of community and protection. A mountain range commonly has 2-8 clans lairing there.
Stone giants are crude artists, painting scenes of their lives on the walls of their lairs and on tanned hide scrolls. Some giants are fond of music and play stone flutes and drums. Others make simple jewelry, fashioning painted stone beads into necklaces.
If eight or more giants are encountered in a clan's lair, one quarter will be female, one quarter male, and the remainder offspring. To determine a giant's maturity, roll 1d4. A roll of 4 indicates an infant with no combat ability and hit points of an ogre; rolls of 1-3 indicate older progeny with hit dice, damage, and attack rolls equal to those of a hill giant.
One in 20 stone giants develop special abilities related to their environment. These giant elders are able to *stone shape, stone tell,* and *transmute rock to mud* (or mud to rock) once per day as if they were 5th level mages. One in 10 of these exceptional giants can also cast spells as if he were a 3rd level wizard. Their spells can be determined randomly or chosen to fit a specific encounter as desired. Frequently these giants are able to rise to positions of power and are considered the leaders of several clans.
Stone giants are usually found in mountain ranges in temperate and sub-tropical areas. Stone giants are fond of cave bears and 75% of their lairs will have 1-8 of them as guards. The few stone giants living in cold areas use polar bears as guards.
Stone giants are playful, especially at night. They are fond of rock throwing contests and other games that test their might. Tribes of giants will often gather to toss rocks at each other, the losing side being the giants who are hit more often.

**Ecology:** Stone giants are omnivorous, but they will eat only fresh food. They cook and eat their meat quickly after it has been killed. They use the skins of the animals for blankets and trade what they do not need with nearby human communities in exchange for bolts of cloth or herd animals which they use for

food. Many stone giant bands keep giant goats in and near their lairs so they will have a continuous supply of milk, cheese, and butter.

# Giant, Storm

| | |
|---|---|
| **Climate/Terrain:** | Special (see below) |
| **Frequency:** | Very rare |
| **Organization:** | Solitary or Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivorous |
| **Intelligence:** | Exceptional (15-16) |
| **Treasure:** | E, Qx10, S |
| **Alignment:** | Chaotic good |
| **No. Appearing:** | 1 (2-4) |
| **Armor Class:** | -6 (0) |
| **Movement:** | 15, Sw 15 |
| **Hit Dice:** | 19+2-7 hit points |
| **THAC0:** | 3 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-10 or by weapon (3-30+12) |
| **Special Attacks:** | See below |
| **Special Defenses:** | Impervious to electricity |
| **Magic Resistance:** | Nil |
| **Size:** | G (26' tall) |
| **Morale:** | Fanatic (17-18) |
| **XP Value:** | 14,000 |
| Infant | Nil |
| Juvenile, -3 | 1,400 |
| Juvenile, -2 | 4,000 |
| Juvenile, -1 | 7,000 |
| Spell caster, 1st | 15,000 |
| Spell caster, 2nd | 15,000 |
| Spell caster, 3rd | 15,000 |
| Spell caster, 4th+ | 17,000 |

Storm giants are gentle and reclusive. They are usually tolerant of others, but can be very dangerous when angry.
Storm giants resemble well-formed humans of gargantuan proportions. Adult males and females are about 26' tall and weigh about 15,000 pounds. Storm giants have pale, light green or (rarely) violet skin. Green-skinned storm giants have dark green hair and glittering emerald eyes. Violet-skinned storm giants have deep violet or blue-black hair with silvery gray or purple eyes. Storm giants can live to be 600 years old.
A storm giant's garb usually is a short, loose tunic belted at the waist, sandals or bare feet, and a headband. They wear a few pieces of simple, but finely crafted jewelry: anklets (favored by bare-footed giants), rings, or circlets being most common.
Storm giants usually carry pouches attached to their belts. These hold only a few tools, necessities, and a simple musical instrument -- usually a panpipe or harp. Other than the jewelry they wear, they prefer to leave their wealth in their lairs.
They speak their own language as well as cloud giant, the tongue common to all giants, and the common tongue of humankind.

**Combat:** All storm giants are immune to electricity and lightning. They use weapons and special abilities instead of hurling rocks, but can catch large missiles 65% of the time.
Storm giants are born with *water breathing* ability, and can move, attack, and use magic under water as if they were on land. Juvenile and adult storm giants can cast *control weather* and levitate spells lifting their own weight and as much as 4,000 additional pounds twice a day. Adult storm giants also can *call lightning* (3 bolts of 15 8-sided dice each), *lightning bolt* (1 bolt of 15 6-sided dice), *control winds*, and use *weather summoning* once a day. A storm giant uses its magical abilities at 15th level. An angry storm giant usually will *summon* a storm and *call lightning.*
They employ gigantic two-handed swords in battle. A storm giant's oversized weapons do triple normal (man-sized) damage to all opponents, plus the giant's strength bonus. Thus, a storm giant's two-handed sword does 3-30 (3d10) +12 points of damage. They also use massive composite bows which have a 300 yard range and do 3-18 (3d6) points of damage. There is a 10% chance that any storm giant will have enchanted weapons.
A storm giant's natural Armor Class is 0. In battle, storm giants usually wear elaborate bronze plate mail (AC -6).

**Habitat/Society:** Storm giants are retiring and solitary, but not shy. They live in castles built on cloud islands (60%), mountain peaks (20%), or underwater (10%). They live quiet, reflective lives and spend their time musing about the world, composing and playing music, and tilling their land or gathering food. Land-and air-dwelling storm giants usually are on good terms with neighboring silver dragons and good cloud giants, and cooperate with them for mutual defense. Aquatic storm giants have similar relationships with mermen and bronze dragons.
When two or more storm giants are encountered in lair they will be a mated couple and their children. To determine each young giant's maturity, roll 1d4. A roll of 4 indicates an infant with no combat ability and hit points of ogre; rolls of 1-3 indicate older progeny with hit dice, damage, and attack rolls equal to that of a cloud giant.
There is a 20% chance that an adult storm giant is also a priest (70%) or priest/wizard (30%). Storm giants can attain 9th level as priests and 7th level as wizards. Storm giant priests can cast regular spells from the Animal, Charm, Combat, Creation, Guardian, Healing, Plant, Weather, and Sun spheres. Storm

giant wizards are generalists, and typically know spells from the Alteration, Invocation/Evocation, Conjuration/Summoning, and Abjuration schools.
Storm giant lairs are always protected by guards. Land or aerial lairs have 1-2 rocs (70%), which also serve a mounts, or 1-4 griffons (30%). Underwater lairs have 2-8 (2d4) sea lions.

**Ecology:** Storm giants live off the land in the immediate vicinity of their lairs. If the natural harvest is not enough to sustain them, they create and carefully till large areas of gardens, fields, and vineyards. They do not keep animals for food, preferring to hunt.

# Giant, Verbeeg

| | |
|---|---|
| **Climate/Terrain:** | Temperate and arctic/Hills |
| **Frequency:** | Uncommon |
| **Organization:** | Tribe |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Average to very (8-12) |
| **Treasure:** | B (K, L, M x 5) |
| **Alignment:** | Neutral (evil) |
| **No. Appearing:** | 1-6 or 5-30 |
| **Armor Class:** | 4 or better |
| **Movement:** | 18 |
| **Hit Dice:** | 5+5 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | 1-6 (weapon) +3 to +6 (Str bonus) |
| **Special Attacks:** | Nil |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | L (8½' to 10' tall) |
| **Morale:** | Elite (13) |
| **XP Value:** | 270 |

Known as "human behemoths, these human giants inhabit areas infested with hill giants and ogres. Verbeeg vary in height from 8½ to 10 feet tall, and weigh between 300 and 400 pounds. They are unusually thin for their height, although this does not inhibit their fighting ability. Some have minor deformities, such as club foot, uneven eyes, hair lips, etc. In all other respects they appear human, including skin, hair, and eye color. They wear as much protective clothing and armor as they can obtain, which isn't much. Usually they wear furs and hides with pieces of metal armor stitched into strategic places. They almost always carry shields and have the best weapons they can steal. Typically this means clubs and spears.

**Combat:** Verbeeg are smart enough to let others soften up the enemy first. This does not mean that they are cowards, only selfish and practical. Since they are commonly found with hill giants and ogres, in the first few rounds of combat verbeeg drive their less intelligent companions before them into battle. This is accompanied by many curses, oaths, and highly descriptive accounts of the giants' and ogres' parentage. Once the battle has begun, the verbeeg take on the stragglers and use their missile weapons, usually spears. The Strength of the giant determines how much further than normal the weapons can be hurled. Whatever their weaponry, the verbeeg get a Strength bonus for damage. Each giant must have his Strength determined individually (or once for the whole group, at the DM's option) by rolling 1d10 and consulting the following table. Armor is always at least the equivalent of AC 4, and sometimes better, although never better than AC 1.

### Special Bonus With Spears

| D10 Roll | Strength | Damage Bonus | Add to Spear Range |
|---|---|---|---|
| 1-2 | 18/51-75 | +3 | 30 yards |
| 3-6 | 18/76-90 | +4 | 40 yards |
| 7-9 | 18/91-99 | +5 | 50 yards |
| 10 | 18/00 | +6 | 60 yards |

**Habitat/Society:** Verbeeg are found in the same climates as ogres and hill giants. These human behemoths are never found wandering alone. Thirty percent of wandering verbeeg encounters find 1d6 of these giant-kin with 1d4 hill giants or ogres (equal chance), which also share their lair; 50% of the time 1d6 verbeeg are with 1d6 wolves or worgs (in polar climes winter wolves or polar bears); the rest of the time (20%) 1-2 of them are encountered with a normal sized group of wandering monsters found in that area (DM must use reasonable judgment in this case).
A verbeeg lair is usually an underground place, such as a cave or inside old ruins. There 5d6 of them can be found, an equal number of females (equal to males in combat), and 2d6 young. Half the young fight as bugbears, the other half fight as goblins. A lair usually includes 2d4 wolves (75% chance) or 1d4 worgs (25% chance). In arctic climes substitute 1-2 polar bears for wolves, and 1-3 winter wolves for wargs. There is a 2% cumulative chance per giant of a shaman with the tribe. The verbeeg are jointly ruled by the shaman (if there is one) and a warrior chieftain. The shaman can be up to 7th level. The warrior chieftain always has 18/00 Strength and no fewer than 40 hit points. The chieftain is responsible for all activities involving hunting, war and negotiations with strangers. The shaman is responsible for all activities inside the tribe, dispensing judgments concerning law and all magic. Any magical items in the tribe belong to the shaman; he has a 90% chance of knowing how to use these. Most magical items that he does not understand are thrown into the tribal refuse heap before too long.

**Ecology:** Verbeeg eat almost anything, but they love flesh of all sorts. They maintain a mutually beneficial relationship with the giants and ogres that share their lair. The verbeeg provide the intelligence and direction that these giant types lack, and the giants provide protection by their greater fighting prowess. To watch a group in action can be hilarious, so long as you are not their intended victim. Hill

giants and ogres are too stupid to think much on their own. They tend to follow directions too literally. This usually infuriates the verbeeg. They hop back and forth from foot to foot screaming insults at the befuddled giants that tower over them in height and size, as even the simplest instructions are misinterpreted by these denser humanoids.

# Giant, Wood (Voadkyn)

| | |
|---|---|
| **Climate/Terrain:** | Temperate and subtropical/Forests |
| **Frequency:** | Very rare |
| **Organization:** | Clan |
| **Activity Cycle:** | Day |
| **Diet:** | Herbivore |
| **Intelligence:** | High to exceptional (13-16) |
| **Treasure:** | E |
| **Alignment:** | Chaotic good |
| **No. Appearing:** | 1-4 |
| **Armor Class:** | 8 (5 in armor) |
| **Movement:** | 12 |
| **Hit Dice:** | 7+7 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-10 (weapon) +3 to +6 (Strength bonus) |
| **Special Attacks:** | -4 penalty to opponents' surprise rolls |
| **Special Defenses:** | Resistant to some spells |
| **Magic Resistance:** | Nil |
| **Size:** | L (9½' tall) |
| **Morale:** | Steady (11-12) |
| **XP Value:** | 1,400 |

Wood giants (also known as voadkyn) are one of the smallest of the minor races of giants, looking somewhat like giant-sized wood elves. They are flighty, frivolous, and good friends with wood elves. Standing 9½ feet tall, wood giants weigh around 700 pounds. They have the physical proportions of humans, which makes them thin and light for giants. They are completely devoid of facial and body hair, including eyebrows. Their heads seem overly large for their bodies, especially the jaws, chin, and mouth. Their ears are placed higher than on a human, almost completely above the line of the eyes.
Wood giants can be almost any shade of brown, mixed with yellow or green. They are fond of leather

armor and ring mail. A wood giant carries two weapons -- a two-handed sword and a giant-sized long bow with quiver. A special sheath for the sword is steel tipped, enabling it to be used as a walking stick. This does not in any way disguise the sword.
They wrap their ankles in leather strips almost up to the knee, although the foot itself is mostly bare. The only garments they wear are loose trousers or a short kilt. A wood giant always wears a leather forearm sheath to protect his arm from the bowstring. All of these items are frequently stained in forest colors of green and brown.

**Combat:** Voadkyn do not fight unless forced to defend themselves or allies. Their favorite weapon is their huge, non-magical long bow. They get a +1 bonus to attack rolls and 50% better range because of its unusual size. The matching arrows are over four feet long and cause 1d8 points of damage. Wood giants do not hurl rocks or boulders. If pressed into melee, they wield their two-handed swords with one hand.
When encountered, the Strength of the voadkyn must be determined by rolling percentile dice. The resulting number is the 18/(roll) value for their strength. This gives them a +3 to +6 damage bonus. They do not receive any attack roll bonus for Strength. These giant-kin are usually in the company of 1d4 wood elves (60%), 1d4 dire wolves (30%), or both (10%).
Wood giants are 90% resistant to *sleep* and *charm* spells; they have infravision up to 90 feet.
The only magical skill voadkyn have is the ability to polymorph into any humanoid figure, from 3 to 15 feet in height. They cannot become a specific individual, only a typical specimen of that race. They have been known to use this ability to join a party and trick it out of treasure.
Wood giants can move silently in a forest, despite their great height, thus imposing a -4 penalty to opponents' surprise rolls. They can blend into forest vegetation, becoming effectively invisible. Only creatures able to detect invisible objects can see them. Although they are not invisible while attacking, they are extremely quick (Dexterity 16) and can move out of hiding, launch an arrow, and move back into hiding in the same round. These arrows seem to come from nowhere unless the target is looking at the wood giants' hiding spot.

**Habitat/Society:** Wood giants inhabit the same forests as wood elves. They have no lairs, choosing to live under the stars or with the wood elves for a time. Wood giants encountered in the forest are mostly male (90%). Female wood giants usually remain at a makeshift camp or with the wood elves at their lair. Offspring are rare, as each female gives birth to only 1d4 children in her lifetime. The young are born and raised deep in the woods among the wood elves, away from prying eyes.
The strong bond between wood elves and wood giants goes back further than either race can remember. This may account for the elven abilities of the giants. They do not mix or treat with any other intelligent creatures, although they tolerate any good elf. Like the elves, wood giants are fond of finely cut gems and well-crafted magical items.
Humans who have had contact with wood giants describe them as friendly enough, but flighty and frivolous, and never in a great hurry to do anything other than eat and drink large amounts of wine. Treants (with whom they occasionally converse) consider them irrational, foolish, and occasionally obnoxious, but enjoyable company.

**Ecology:** The jaw of the voadkyn is large because of the oversized grinding teeth in it. These teeth are completely unsuited for eating meat, but they are perfect for vegetables and other plants. Wood giants can eat the leaves and roots of many plants that are inedible to humans. They especially enjoy nuts and

seeds.

# Gibberling

| | |
|---|---|
| **Climate/Terrain:** | Temperate/Forest, subterranean |
| **Frequency:** | Uncommon |
| **Organization:** | Herd |
| **Activity Cycle:** | Night (but see below) |
| **Diet:** | Carnivore |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | Nil |
| **Alignment:** | Chaotic neutral |
| **No. Appearing:** | 40-400 |
| **Armor Class:** | 10 |
| **Movement:** | 9 |
| **Hit Dice:** | 1 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-8 (weapon) |
| **Special Attacks:** | Mass assault |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | S-M (4'-5' tall) |
| **Morale:** | Irregular (5) |
| **XP Value:** | 35 |

They come screaming, jabbering, and howling out of the night. Dozens, maybe hundreds, of hunchbacked, naked humanoids swarm unceasingly forward, brandishing short swords. They have no thought of safety, subtlety, or strategy, leaving others with no hope of stopping their mass assault. And then, having come and killed, the gibberlings move on randomly back into the night.

The first impression of gibberlings is of a writhing mass of fur and flesh in the distant moonlit darkness. The pandemonium is actually a mass of pale, hunchbacked humanoids, with pointed canine ears, black manes surrounding their hideous, grinning faces. Their eyes are black, and shine with a maniacal gleam. They carry short swords in their overly long arms as they lope ever faster forward.

**Combat:** Gibberlings attack in great numbers, uttering ghastly howls, clicks, shrieks, and insane chattering noises which cause even the boldest hirelings to check morale each round. PCs need only make a morale check if it is appropriate to their character. The screaming mob is completely disorganized in form, and random in direction.
The gibberlings attack with common swords, but such is their skill and practice in using these weapons that they are +1 to hit. Their forward motion slows only long enough to kill anything moving, then continues forward, their bloodlust apparently unabated. They always fight to the death. All food in their path is devoured, including the fallen among their own number, and any unfortified building or objects are generally wrecked.
The only true hope of survival, should a herd of gibberlings be encountered, is to take strategic advantage of their fear and detestation of bright light. The gibberlings generally frequent only dense forests and subterranean passages, loathing bright light of all kinds, and are particularly afraid of fire. Although their mass attacks would quickly overwhelm someone wielding a torch, a bright bonfire or magical light of sufficient intensity will hold them at bay or deflect their path.

**Habitat/Society:** It is difficult to imagine a gibberling social structure. It can be roughly compared to the social structure of lemmings throwing themselves into the sea, or of a school of pirhana in a feeding frenzy. There is no sense, no organization, and no individuality. Though they clearly have a primitive means of communicating among themselves, they have no discernable language.
Gibberlings traveling above-ground invariably burrow into the ground to hide during the daytime, and it is at such time that they are most vulnerable. They can easily be tracked by the path of chaos and destruction they leave, and can be quickly dispatched while they lie dormant just beneath the surface of the ground. If uncovered, they awake, but generally cower in fear at the bright light surrounding them, and so are easy prey. Subterranean gibberlings may burrow into the ground, or may simply lie down in a curled, fetal posture at times of rest. They awake suddenly, as a group, and burst in unison out of the ground, howling and gibbering in a most frightful way.
If captured, these strange creatures speak only their own incomprehensible gibberish, and show neither the patience nor the inclination to learn other languages or communicate whatsoever with their captors. Instead, they beat against their cages and fling themselves at barred windows and doorways in pitiful attempts to escape their captivity.
It is unclear how or when or even if gibberlings procreate.

**Ecology:** Attempts to find the gibberlings' lairs have inevitably led back to subterranean passages, where the trail is eventually lost in the deepest rock-floored recesses of the caverns.
Gibberlings require a prodigious amount of food to support their manic nocturnal existence, stripping to the bone anyone or anything that should fall in their path. Their fur is commonly infested with lice and other pests picked up during their burrowed slumber. Their hides are vile and worthless. Gibberlings carry no treasure or other useful items.Their swords are of the commonest variety, with no markings or decoration, and are often pitted and dull. In short, gibberlings serve no purpose and no known master, save random death in the night.

# Giff

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Rare |
| **Organization:** | Platoon |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |
| **Intelligence:** | Low (7) |
| **Treasure:** | Nil |
| **Alignment:** | Lawful neutral |
| **No. Appearing:** | 11-20 |
| **Armor Class:** | 6 (2) |
| **Movement:** | 6 |
| **Hit Dice:** | 4 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 2 or 1 |
| **Damage/Attack:** | 1-6 +7 or by weapon +7 |
| **Special Attacks:** | Head butt |
| **Special Defenses:** | Can call on other giff |
| **Magic Resistance:** | 10% |
| **Size:** | L (9' tall) |
| **Morale:** | Elite (14) |
| **XP Value:** | 420 |

The giff are a race of powerfully muscled mercenaries. They are civilized, though they lack mages among their own race. Giff hire on with various groups throughout the universe as mercenaries, bodyguards, enforcers, and general legbreakers.
The giff is humanoid, with stocky, flat, cylindrical legs and a humanoid torso, arms, and fingers. Its chest is broad and supports a hippopotamus head with a natural helmet of flexible, chitinous plates. Giff come in colors ranging from black to gray to a rich gold, and many have colorful tattoos that leave their bodies a patchwork record of past victories. Giff speak their own language and the Common tongue.

**Combat:** The giff are military-minded, and organize themselves into squads, platoons, companies, corps, and larger groups. The number of giff in a platoon varies according to the season, situation, and level of

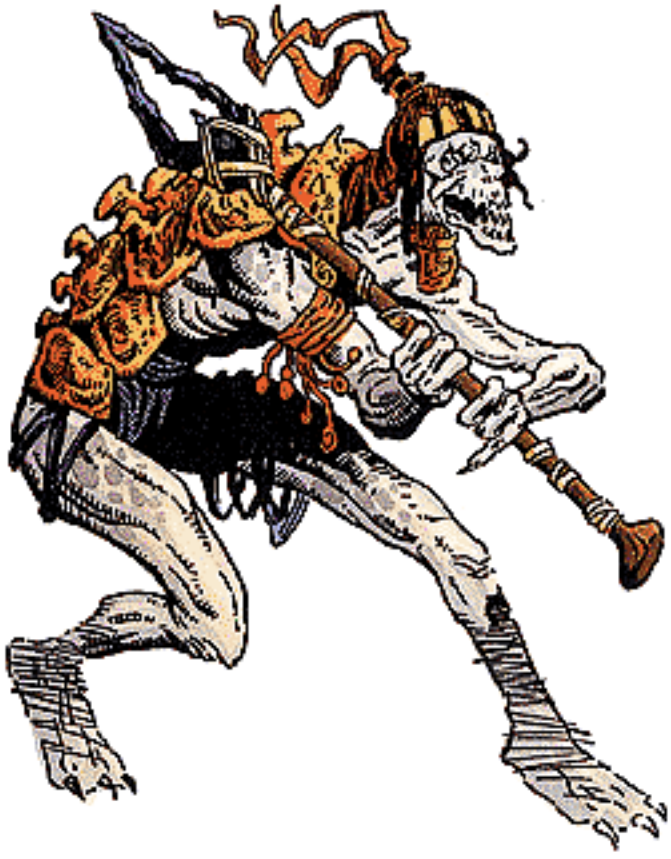
danger involved. A giff "platoon" hired to protect a gambling operation may number two, while a platoon hired to invade an illithid stronghold may number well over a hundred.
The giff pride themselves on their weapon skills, and any giff carries a number of swords, daggers, maces, and similar tools on hand to deal with troublemakers.
A giff's true love in weaponry is the gun. Any giff has a 20% chance of having an arquebus and sufficient smoke powder for 2d4 shots. A misfiring weapon matters little to the giff (occasional fatalities are expected), the flash, noise, and damage is what most impresses them.
Even unarmed, the giff are powerful opponents. They are as strong as a hill giant (+7 damage adjustment for Strength). They will wade into a brawl just for the pure fun of it, tossing various combatants on both sides around to prove themselves the victors. Once a weapon is bared, the giff consider all restrictions off -- the challenge is to the death.
The top of the giff's head and snout are plated with thick, chitinous plates, flexible enough to permit motion, but giving the creature a natural helmet. The giff can charge using a head butt, inflicting 2d6 points of damage.
The giff prize themselves as mercenaries, and to that end have made elaborate suits of armor (AC 2). These include full helms with other monsters on the crests, inlaid with ivory and bone along the large plates. Armor repair is a major hobby among the giff.
Finally, giff are somewhat magic resistant. They are deeply suspicious of magic, magicians, and magical devices.

**Habitat/Society:** Giff of both sexes serve in their platoons, and both fight equally well. Giff young are raised tenderly until they are old enough to survive an exploding arquebus, then are inducted fully into the platoon. Every giff, male, female, and giffling, has a rank within society, which can be changed only by someone of a higher rank. Within these ranks are sub-ranks and within those sub-ranks are color markings and badges. The highest-ranking giff gives the orders, the others obey. It does not matter if the orders are foolish or even suicidal -- following them is the purpose of the giff in the universe. A quasi-mystical faith among the giff mercenaries confirms that all things have their place, and the giff's is to follow orders.
Giff mercenaries are usually paid in smoke powder, though they often will accept other weapons and armor. It is purely a barter system, but to hire one giff for one standard week requires seven charges of smoke powder (one per day).
Giff are fierce fighters, despite their somewhat comical appearance and mania for weapons. They will not, however, willingly fight other giff. If forced into such a situation on a battlefield, both groups retire for at least a day of drinking and sorting out ranks. There is a 10% chance that one platoon will join another in this case, but it is more likely that both will quit their current hiring and look for work elsewhere.

**Ecology:** Giff live about 70 years, but do not age gracefully. As a giff grows older and begins to slow down, he is possessed with the idea of proving himself still young and vital, usually in battle. As a result, there are very, very few old giff.

# Gith

| | |
|---|---|
| **Climate/Terrain:** | Arid tablelands and mountains |
| **Frequency:** | Uncommon |
| **Organization:** | Tribal |
| **Activity Cycle:** | Day or night |
| **Diet:** | Carnivore |
| **Intelligence:** | Average (10) |
| **Treasure:** | M (I) |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 10-100 |
| **Armor Class:** | 8 |
| **Movement:** | 10 |
| **Hit Dice:** | 3 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 1 or 2 |
| **Damage/Attack:** | By weapon or 1d4/1d4 |
| **Special Attacks:** | Springing |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | M |
| **Morale:** | Steady (12) |
| **XP Value:** | 175 |



The gith are a race of grotesque humanoids that appear to be a peculiar mixture of elf and reptile. They are extremely gaunt and lanky, with long gangling arms and spindly legs. Their hands have three fingers with no opposable thumbs, yet they are able to use tools and wield weapons. Their fingers and toes end in sharp claws. If one could get a gith to stand up straight, he would measure close to 7 feet tall. However, most gith appear to be no more than 5 feet tall, for they always stand hunched over at the shoulders, in a permanent slouch.

**Combat:** If possible, the gith attack in mass, usually starting with a psionic attack by one of their leaders. Then the entire party charges quickly into melee. Their main charge is often accomplished by *springing*

up to 20 feet in one giant leap to close with their enemies. When they employ this spring, it gives them a +2 attack bonus on the first round of combat.
The gith are usually armed with large, wicked-looking spears that have giant, razor-sharp heads of polished obsidian (1d6-1 damage). Although these spears look like thrusting weapons, they are used primarily to slash or chop. The gith often armor themselves, and especially their vulnerable backs, with inix-shell armor (AC 6) of their own manufacture.

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| 5 | 2/3/10 | II, MT/M-,TW,MB | 16 | 80 |

Gith have the following psionic powers:
**Telepathy—Sciences:** tower of iron will, project force. Devotions: id insinuation, mind thrust, contact, mind blank, mental barrier.
**Psychokinesis—Sciences:** telekinesis. Devotions: animate object, animate shadow, ballistic attack, control body, control flames.

Note: Only leaders commanding 25 or more gith have psionic powers. The psionics listed above are representative of these leaders, but their powers do vary greatly. Gith with more Hit Dice have correspondingly greater powers.

**Habitat/Society:** The gith live in tribal organizations. The individual with the most powerful psionics generally acts as the leader. All other social positions are distributed at his pleasure.
For every twenty-five gith, there will be a 5 HD leader, for every fifty, a 6 HD leader, and for every tribe of 100 or more a 7 HD leader. In addition to having hit points and THAC0 numbers appropriate to their HD, these leaders will have psionic powers approximately equal to a psionicist of an equivalent level. Some of these leaders are priests. While little is known of the gith religion, shamans up to the 4th level are known to accompany and sometimes lead gith tribes. There have also been reports of gith wizards (defilers) ranked at the 6th level. Even if true, 6th level would be unusual for gith, but wizards of up to 4th level have been reported by reliable witnesses.
Not much is known about the reproductive cycle of the gith. It is known that they are egg layers; females lay approximately 1d6 eggs in a clutch. It is rumored that the gith operate hatcheries containing hundreds (some say thousands) of nests.

**Ecology:** Mountain gith live in underground lairs, claiming a particular canyon or valley as their territory. Gith inhabiting tablelands tend to organize their society more along the lines of a nomadic hunting clan, going wherever the game takes them. They do not hesitate to attack human or demihuman groups, for they view humans and demihumans as a choice food supply, preferring it over other flesh. They will even attack thri-kreen, if they are hungry enough, but the insectoids taste bad, and usually escape gith raiders.

# Gith, Pirate

| | |
|---|---|
| **Climate/Terrain:** | Wildspace |

| **Size:** | M (6'-7' tall) |
| **Morale:** | Champion (16) |
| **XP Value:** | Special |

When the githyanki, under their liberator, Gith, freed themselves from the yoke of mindflayer slavery, this branch of the race fled not to the Astral plane, but to arcane space.
Tall, emaciated beings, the pirates of Gith appear as almost skeletal humanoids with skin varying from dirty gray to dull yellow. Long, dingy-brown hair flows down their backs and over the ornate, bejeweled arms and armor they prefer to use.

**Combat:** The pirates of Gith can operate as fighters, mages, or fighter/mages, with limits of 11 in each class. Typically, the highest-level fighter captains the ship. This frees all the mages (single-and multiclassed) for spelljamming or combat duty.
Clerics of Gith are occasionally encountered as well (limit of 11th level). Rarely, a fighter/cleric is

encountered, almost always as the captain of its ship.
When closing with a foe, the pirates use spells and any armament their ship possesses. In melee, they use a variety of weapons, with swords predominating.
Operating from small bases hidden on asteroids, the pirates strive to capture any ship that is larger, faster, or better armed than theirs. They feverishly attempt to capture any elven-made ships that come their way (see below). As a result, many elven armadas post large bounties on the heads of Gith pirates.
The pirates' greatest fury is reserved for the illithids, however. The pirates of Gith spare no expense to kill all mindflayers they find. No Gith pirate ever uses a captured illithid ship.
A ship's complement varies, but these numbers are a general guideline:

1 Captain (highest-level fighter or fighter/cleric)
1 Mate (highest-level fighter/mage or cleric)
1 Chief Spelljammer or Warlock (highest-level mage)

The rest of the crew is evenly divided among the three common class possibilities.

**Habitat/Society:** The pirate philosophy carries over into all aspects of life. The strongest take what they want. Each ship is very important to its crew, as it is the primary factor in determining the pecking order in a settlement. This explains the pirates' constant quest for better ships. Each settlement is ruled by force by its best ship, or a coalition of the best ships.
Extreme isolationists, the pirates of Gith live with no other races -- they may even try to commit genocide on a race that settles too close to them. Over all, despite being pirates, these Gith live a structured, militaristic lifestyle.
Every adult member of this race possesses the following magical abilities, each usable three times a day: *astral spell*, *plane shift*, and *ESP*. All function as the spell of the same name (as cast by the lowest-level caster possible). These inherent abilities also enable the pirates to pilot ships with series helms. These abilities function only in wildspace, not in the phlogiston.
The most dangerous aspect of this race is the combination of the above abilities, the properties of major and minor spelljamming helms, and the unique organic structure of the elven-made ships. When a Gith pirate is at the helm of an elven-made ship (flitter, etc.), he may use his *plane shift* and *astral spell* abilities to shunt the entire ship, and all its contents, to the Astral plane (this uses up that pirate's *astral spell* and *plane shift* abilities for the day). This gives the pirates an escape route, and it enables them to wait in known shipping lanes, astrally hidden, before returning to the Prime Material plane to launch an attack. The Gith pirates can use only elven-made ships of less than 50 tons in this manner.
This special maneuver only works in wildspace, not in the phlogiston. That is certainly the reason the Gith pirates never pursue prey into that medium.

**Ecology:** The Gith pirates are carnivores, pure and simple. They do not care what state, short of putrefied, the meat is in. Some of the pirate bands also engage in cannibalism.

# Githyanki

| | |

## Psionics Summary

| Level | Dis/Sci/Dev | Attack/Defense | Power Score | PSPs |
|---|---|---|---|---|
| = HD | per level | All/All | = Int | 1d100+150 |

Githyanki are an ancient race descended from humans. They dwell upon the Astral plane but will often leave that plane to make war on other races. They are engaged in a lengthy war with the githzerai. Githyanki are strongly humanoid in appearance. They are approximately of human height but tend to be

much more gaunt and long of limb. They have rough, yellow skin and gleaming black eyes that instantly betray their inhumanness. Like many demihuman races, their ears have sharp points and are serrated at the back. Dress for the githyanki is always an elaborate affair. Their baroque armor and weapons of war are decorated with feathers, beads, and precious metals and gems.
Githyanki speak their own tongue, and no others.

**Combat:** The githyanki have had long years to perfect the art of war. Their very existence attests to their battle prowess. Each individual githyanki has a character class and level from which are derived such things as THAC0, armor class, spell use, etc.

| Class | | Level | |
|---|---|---|---|
| 01-40 | Fighter | 01-20 | 3rd |
| 41-55 | Mage | 21-30 | 4th |
| 56-80 | Fighter/Mage | 31-40 | 5th |
| 81-85 | Illusionist | 41-60 | 6th |
| 86-00 | Knight | 61-80 | 7th |
| | | 81-90 | 8th |
| | | 91-95 | 9th |
| | | 96-98 | 10th |
| | | 99-00 | 11th |

The armor for each githyanki varies according to class. Mages and illusionists have AC 10. Fighters and fighter mages have differing armor -- AC 5 to AC 0 (6-1d6). Knights have AC 0.
Githyanki have Hit Dice according to their class and level, and their hit points are rolled normally. Their THAC0 is determined per class and level, as well. Fighters, fighter/mages, and knights may receive more than one attack per round -- other githyanki have one attack per round.
Githyanki knights are evil champions who take up the causes of the githyankis' mysterious lich-queen. Githyanki knights are very powerful and highly revered in their society. Githyanki knights have all of the powers and abilities of a human paladin except these are turned toward evil (e.g. *detect good* instead of *detect evil*, *command undead* instead of turning undead, etc.).
Githyanki mages, fighter/mages, and illusionists will receive all the spells available at their level of experience. Spells should be determined randomly, keeping in mind that they are by nature creatures of destruction—offensive spells should be favored.
The githyanki soldiers use arms and armor similar to humans, however these are normally highly decorated and have become almost religious artifacts. A githyanki would likely show greater care for his weapons and armor than he would toward his mate. Half of the githyanki fighters, fighter/mages, or knights that progress to 5th level receive a magical *two-handed sword +1*, the remainder using normal two-handed swords. Githyanki fighters of 7th level and above are 60% likely to carry a *long sword +2*. Knights of 7th level and above will always carry a *silver sword* -- a *two-handed sword +3* that, if used astrally, has a 5% chance per hit of cutting an opponent's silver cord (see The Astral Plane , *DMG*, page 132), but *mind barred* individuals are immune. A supreme leader of a lair will carry a special *silver*

*sword* that is +5 with all the abilities of a *vorpal weapon* that also affects *mind barred* individuals. Githyanki will never willingly allow a *silver sword* to fall into the hands of a nongithyanki. If a special *silver sword* should fall into someone's hands, very powerful raiding parties will be formed to recover the sword. Failure to recover one of these highly prized weapons surely means instant death to all the githyanki involved at the hands of their merciless lich-queen.
All githyanki have the natural ability to *plane shift* at will. They will rarely travel anywhere besides back and forth from the Astral plane to the Prime Material plane.

**Habitat/Society:** History provides some information on the githyanki -- their race is both ancient and reclusive. Sages believe they once were humans that were captured by mind flayers to serve as slaves and cattle. The mind flayers treated their human slaves cruelly and the people harbored a deep resentment toward the illithids. For centuries these humans increased their hatred but could not summon the strength necessary to break free. So they waited for many years, developing their power in secret, waiting for an opportunity to strike out against their masters. Finally, a woman of power came forth among them, a deliverer by the name of Gith. She convinced the people to rise up against their cruel masters. The struggle was long and vicious, but eventually the people freed themselves. They had earned their freedom and become the githyanki, (which, in their tongue, means sons of Gith).
These astral beings progress through levels exactly as a human would. However, there has never been a githyanki that has progressed beyond the 11th level of experience and very few progress beyond 9th. When a githyanki advances to 9th level, he is tested by the lich-queen. This grueling test involves survival in one of lower planes for a number of weeks. Failure quite obviously results in death. Githyanki that reach 12th level of experience are immediately drawn out of the Astral plane and into the presence of the lich-queen where their life force is drawn to feed the ravenous hunger of the cruel demi-goddess.
Githyanki dwell in huge castles on the Astral plane. These ornately decorated castles are avoided by all other dwellers on the Astral plane for the githyanki are infamous for being inhospitable to strangers.
A githyanki stronghold will be ruled by a supreme leader. This leader will be a fighter/mage of 10th/8th level or 11th/9th level. The supreme leader is the undisputed overlord of the castle with the power of life and death over all who dwell there. A typical leader will be equipped with 2-8 random magical items in addition to the weapons described above.
All castles have a retinue of 20-80 knights of 9th level that serve as the supreme leader's elite shock troops. They are fanatically loyal. There will also be up to 1,000 githyanki of lesser status.
Githyanki, having the ability to *plane shift* at will, often travel to the Prime Material plane. These treks across the planes often lead to the formation of underground lairs used to mount surface raids, though their hatred is more often directed against mind flayers. Outside the war with the githzerai, these raids are conducted largely for the perverse pleasure of the kill.
A typical githyanki lair on the Prime Material plane will contain the following:

| | |
|---|---|
| One supreme leader | 11th-level fighter or 7th/8th-level fighter/mage |
| Two captains | 8th-level fighter and 7th/6th-level fighter/mage |
| One knight | 8th level |
| Two warlocks | mages of 4th/7th level |
| Three sergeants | fighters of 4th/7th level |
| Two `gish' | fighter/mages of 4th/4th level |

| | |
|---|---|
| 20-50 lower levels | determined randomly using the table above, of 1st-3rd level |

On the Prime Material plane, githyanki have a pact with a group of red dragons. These proud creatures will act as mounts and companions to the githyanki. When encountered on the Prime Material plane and outside their lair, a githyanki group will typically consist of the following:

| | |
|---|---|
| One captain | 8th-level fighter |
| One warlock | 4th to 7th-level mage |
| Five lower githyankis | fighters of 1st-3rd level |

Such a group will have two red dragons as steeds, transporting between four and six githyanki per dragon. The dragons will fight for the safety and well-being of the githyanki but will not directly risk their lives, fleeing when the battle is turned against them. Just what the githyanki offer the red dragons in return for these services is unknown.
An interesting aspect of githyanki society is the apparent bond between military leaders and their subordinates. This bond allows a leader to give his men short, almost senseless commands (to human standards) and actually relay complex and exacting messages. Although this has no actual affect during the melee round, it often leads to more effective ambushes and attacks and allows complex military decisions to be relayed quickly.

**Ecology:** Githyankis have similar ecology to that of humans. However, the Astral plane does not offer the same type of environments as the Prime Material plane, so their cultural groups are much different. In a society where farmers and tradesmen are unnecessary, more unique, specialized groups have evolved.
**G''lathk:** The g"lathk, (admittedly nearly unpronounceable in human tongues) are the equivalent of farmers. Due to the barrenness of the Astral plane, the githyanki are forced to grow food in vast, artificial chambers. They rely upon a variety of fungi and other plants that require no sunlight to grow. The g"lathk are also experts in aquatic plantlife, sometimes tending gigantic water-gardens.
**Mlar:** Not all magic-using githyanki ever attain the power and self-discipline necessary to become wizards. Some use their magical talents in the field of architecture and construction. The mlar are such individuals, focusing their creative energies toward designing and constructing the buildings and structures used in day-to-day life in githyanki society. The mlar have developed their jobs into an art form.
**Hr'a'cknir:** The Astral plane has many strange energies moving through it. Some of these energies are obvious to the senses, such as heat and light. Others are not so easily observed. There are many psychic and strange astral energies that humans generally are not aware of. Being a psychically aware race, however, the githyanki cannot only sense these energies, but harness them too. The hr'a'cknir are the collectors of those energies. They are similar to the mlar, in that they use innate magical powers to perform their crafts.

More than humans, githyanki are hunters and predators. They will typically engage in raiding and plundering seemingly for the joy they derive from it. It is likely that the long centuries of enslavement of their race has caused the githyanki to bully those weaker than themselves.

Unlike humans, though, the githyanki never war amongst themselves. The split of the githyanki and the githzerai (*q.v.*) is the closest thing the gith races have known to civil war. Githyanki never battles githyanki. It is the unwritten rule of gith society and is never broken. This, too, may be an effect of the race's enslavement.

# Githzerai

| | |
|---|---|
| **Climate/Terrain:** | Limbo |
| **Frequency:** | Very rare |
| **Organization:** | Monarchy/dictatorship |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Exceptional to genius (15-18) |
| **Treasure:** | Individual P; Lair Hx2 |
| **Alignment:** | Chaotic neutral |
| **No. Appearing:** | 2-8 (away from lair) |
| **Armor Class:** | Variable |
| **Movement:** | 12, 96 in Limbo |
| **Hit Dice:** | Per class and level |
| **THAC0:** | Per class and level |
| **No. of Attacks:** | Per class and level |
| **Damage/Attack:** | Per weapon type |
| **Special Attacks:** | Nil |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | 50% |
| **Size:** | M (6'tall) |
| **Morale:** | Average to steady (8-12) |
| **XP Value:** | Per class and level |

**Psionics Summary:**

| Level | Dis/Sci/Dev | Attack/Defense | Power Score | PSPs |
|---|---|---|---|---|
| = HD | per level | All/All | = Int | 1d100+150 |

Githzerai are the monastic, chaotic neutral counterparts to the githyanki (*q.v.*). The two races share a stretch of time in history; the githzerai are the lesser and more repressed offshoot of the original people that the warrior Gith helped to escape the slavery of the mind flayers millennia ago.
Githzerai are very similar in appearance to their githyanki cousins, although they tend to look much more

human. Their features are for the most part unremarkable, with vaguely noble countenance. Their skin tone is that of human caucasian flesh. Githzerai dress simply, wearing functional clothing and favoring conservative tones.

**Combat:** The githzerai are unadorned and ruthlessly straightforward with their combat and magic. Their strong resistance to magic seems to make up for their generally inferior fighting ability.

| **Class** | | **Level** (add 3 if thief) | |
|---|---|---|---|
| 01-55 | Fighter | 01-10 | 1st |
| 56-75 | Fighter/Mage | 11-20 | 2nd |
| 76-95 | Mage | 21-30 | 3rd |
| 96-00 | Thief | 31-45 | 4th |
| | | 46-60 | 5th |
| | | 61-75 | 6th |
| | | 76-90 | 7th |
| | | 91-96 | 8th |
| | | 97-00 | 9th |

The armor for each githzerai varies according to class. Mages have AC 10. Fighters and fighter mages have differing armor -- AC 5 to AC 0 (6-1d6). Thieves have AC 7.
Githzerai have Hit Dice according to their class and level, and their hit points are rolled normally. Their THAC0 is determined per class and level, as well. Fighters and fighter/mages may receive more than one attack per round -- other githzerai have one attack per round.
On rare occasions, a githzerai will progress as a thief. These thieves seem to have some significance to the strange githzerai religion. Although they are never known to become leaders in any capacity, these thieves are an exception to the maximum level of 9th, often progressing up to 12th level of experience. Just what role these thieves play is unknown.
Githzerai fighters of at least 5th level have use of *silver swords*. These magical weapons are *two-handed swords +3* that, if used in the Astral plane, have a 5% chance of cutting an opponent's silver cord upon scoring a hit (see The Astral PlaneDMG, page 132), though *mind barred* individuals are immune. These weapons are of powerful religious value to the githzerai and they will never willingly allow them to fall into the hands of outsiders. If this happens, the githzerai will go to great ends to recover the weapon.
All githzerai have the innate power to *plane shift* to any plane. This is rarely done except to travel back and forth to the Prime Material plane where the githzerai have several fortresses.

**Habitat/Society:** The githzerai were originally offspring of a race of humans that were freed from slavery under mind flayers by a great female warrior named Gith. These men and women did not, however, choose to follow Gith's ways after they revolted against their slavers. Instead, they fell sway to the teachings of a powerful wizard who proclaimed himself king -- and later, god -- of the people. The githzerai then separated themselves from the githyanki, beginning a great racial war that has endured the long millennia without diminishing.

Githzerai can progress as fighters, mages, or fighter/mages, and thieves. They will rarely attain levels above 7th and, in any case, will never progress beyond 9th. The githzerai, who worship a powerful and ancient wizard as though he were a god (he is not), are destroyed before they have enough power to become a threat to their ruler.
If encountered outside of their lair, githzerai will usually be in the following numbers:

| | |
|---|---|
| One supreme leader | 9th-level fighter or 4th/7th-level fighter/mage |
| One captain | 6th-level fighter or 4th/4th-level fighter/mage |
| Two warlocks | mages of 3rd-5th level |
| Three sergeants | fighters of 3rd-5th level |
| Three `zerths' | fighter/mages of 3rd/3rd level |
| 20-50 lesser githzerai | evenly distributed between the three possible classes and of 1st-3rd level |

A thief, if present (10% chance), will replace one of the lower level githzerai and will be of 6th-10th level.

The githzerai dwell primarily on the plane of Limbo. They have mighty fortresses in that plane of chaos and their position there is very strong. Typically, one of these fortresses contains approximately 3,000 githzerai led by a single supreme leader. This leader has absolute control over the githzerai, including the powers of life and death.
The githzerai hold only a few fortresses on the Prime Material plane, but these are particularly strong holdings, with walls of adamantite rising as huge squat towers from dusty plains. Each houses approximately 500 githzerai, including a supreme leader.
On Limbo, however, the githzerai presence is very strong. Living in cities typically of 100,000 or more, the githzerai enjoy total power over themselves on an otherwise chaotic and unpredictable plane. One notable example of this is the city *Shra'kt'lor*. This large githzerai capital is composed of some 2,000,000 githzerai living in great power. Shra'kt'lor serves as both a capital and as a headquarters for all githzerai military matters. The greatest generals and nobles of the race meet here to plan githzerai strategy for battling both the githyanki and the mind flayers. There is likely no force on Limbo that could readily threaten the power of Shra'kt'lor or its many inhabitants.
One of the prime motivations among the githzerai is their war with the githyanki. These offshoots of Gith's original race are obsessed with this war of extermination. They often employ mercenaries on the Prime Material plane to aid them in battling the githyanki. The evil, destructive nature of the githyanki makes the hiring of mercenaries to fight them a relatively simple task.

**Legend of the Zerthimon:** In githzerai lore there is a central figure that is revered above all others -- Zerthimon. The githyanki believe him to be a great god that was once a man. According to githzerai lore, when the original race broke free of the mind flayers, it was Zerthimon that opposed Gith, claiming that she was hateful and unfit to lead the people.
There ensued a great battle and the people were polarized by the two powers. Those that chose to support Gith became the githyanki. Those that supported Zerthimon became the githzerai.
Zerthimon died in the battle, but in his sacrifice he freed the githzerai from Gith. The githzerai believe that someday Zerthimon, in his new godly form, will return and take the them to a place on another

plane.
*Zerths* are special among the githzerai, acting as focal points for the attention of Zerthimon. The githzerai believe that when Zerthimon returns for them, he will first gather all of the zerths and lead them to their new paradise. It might be said that the zerths are the center of githzerai religion. Unfortunately, they are not free from religious persecution.
The wizard-king (whose name is not known) that rules over the highly superstitious githzerai would like very much to stamp out the legend of Zerthimon. The wizard-king believes that this legend challenges his authority, and very likely it does. However, he has never been able to rid the githzerai of this legend and he is now forced to tolerate it.

**Rrakkma bands:** Although the githzerai are not a bitter or overly violent race, they still tend to hold a strong enmity and hatred for the race of illithids that originally enslaved the gith race so many thousands of years ago. By human terms, that may be a very long time to hold a grudge, but the githzerai see the mind flayers as the cause of the split of the Gith race and much of the hardships the githzerai are forced to endure. Thus large rrakkma (in the githzerai tongue) bands are often formed to hunt mind flayers. These bands typically consist of 30-60 githzerai warriors led by the githzerai equivalent of a sergeant. For roughly three months, these bands will roam the outer and inner planes, searching for groups of illithids and destroying them utterly. The rrakkma bands are very popular in githzerai society and it is considered to be an honor to serve in one.
The githzerai fortresses on the Prime Material plane tend to be very large affairs with great, impenetrable walls. Wherever these fortresses stand, they destroy the landscape for miles. No plants or animals live within many miles of the fortresses and the land is reduced to wasteland around them. It is not known if the effect is just the land's reaction to the "other-planar" stuff of which the castles are constructed, or if githzerai mages magically produce the effect in order to keep material beings away from these fortresses. The most likely purpose of these fortresses on the Prime Material plane is to keep tabs on the githyanki. The githzerai, not being a particularly war-mongering or violent race, have no desire to conquer the Prime Material plane like the githyanki do. However, the githzerai realize that if their enemies have a strong hold on the Prime Material plane, they will become more powerful and thus will hold power over them. The githzerai carefully monitor the progress on the githyanki and lead coordinated, focused strikes against strongpoints of the githyanki, thus hampering their ability to expand and grow in the Prime Material plane.
During these attacks, the githzerai will not intentionally attack the natural denizens of the Prime Material plane (humans, demihumans, humanoids, etc.), but they will never sacrifice a well-planned attack on the githyanki just to preserve life. With the githzerai, the ends will always justify the means.
Like the githyanki, the githzerai really have no part in the Blood War (*q.v.*) of the fiends. They seldom venture to the lower planes, and only then for matters of absolute importance. The githzerai find the bloodthirsty, destructive nature of the fiends to be distasteful, so they will typically not deal with those creatures for any reason. They coexist with the slaadi, and githzerai are rumored to have mental powers beyond those described here.

**Ecology:** For as long as men have known of the ability to travel the planes, they have wondered at the natural power of the githzerai to wander from plane to plane at will. Although man and githzerai are not natural enemies, battles are frequently fought between the two races, due in part to some humans' desire to capture a live githzerai for study. To date, no such creature has been secured.

| **XP Value:** | 1,400 | 5,000 |

The creature commonly called the gloomwing is the adult stage of the tenebrous worm (see below). These huge moths are native to the demi-plane of Shadow. Their bodies and wings are covered with shimmering, geometric patterns of black and silver. They have large, fern-like black antennae tipped with white and eight legs each ending in a pearly claw.

**Combat:** A gloomwing's shimmering markings make it a difficult target. Any creature viewing the moth squarely from above or below must successfully save vs. spells or be *confused*, as the 4th-level mage spell, for 5-8 (1d4+4) rounds. The markings also provide excellent camouflage, and the moth is 50% undetectable in darkness, twilight, or moonlight. Successfully camouflaged gloomwings cannot cause *confusion*.
When attacking in darkness or near darkness, a gloomwing receives a -2 bonus to its surprise roll. Gloomwings normally swoop to the attack. This gives them a + 2 attack bonus and allows them to seize and carry away victims less than 3 feet tall and that weigh less than 61 pounds. Such victims are securely held in the moth's eight claws while the moth attacks each round with a +4 attack bonus and a +2 bonus to damage. When fighting creatures too large to carry away, the moth hovers, biting and flailing with its two front claws.
During the second and each successive round of combat, the moth emits a potent pheromone that can attract other gloomwings and can cause weakness in any non-insect. The weakness effect has a 25-foot radius and exposed creatures must successfully save vs. poison or lose 1 point of Strength each round they remain in the area of effect. Creatures who are successful with their initial save need not save again if exposure continues. Multiple gloomwings do not require multiple saves. Lost Strength points are recovered at the rate of 1 per turn, beginning 1d4 hours after exposure stops. Creatures reduced to 0 Strength lose consciousness until they regain at least 1 point of Strength.
There is a 20% chance each round that an additional 1d4 gloomwings will arrive at the end of any round when one or more gloomwings are emitting this strong scent. If they do arrive, they will join in combating any opponents.

**Habitat/Society:** Gloomwing moths are short-lived, solitary hunters. They use a variety of pheromones to ward off rivals and to find mates. They form groups, but only to attack large prey, and then only when drawn to the fray by the combat pheromone. When two gloomwings of the same sex meet they flee unless there is combat pheromone in the air.

**Ecology:** Gloomwing moths live only 4-9 (1d6+3) weeks. During this time they search for mates and eat voraciously. Egg-laden females (½ chance) use corpses of small sized or larger creatures as incubators for their eggs. The eggs hatch in 12 days, sprouting 1d6+4 small tenebrous worms. The corpse cannot be resurrected unless the infestation is removed with a *cure disease* spell first. Unless killed, the young

worms completely devour the body when they emerge.

### Tenebrous Worm

These natives of the demi-plane of Shadow resemble giant caterpillars. In combat, they strike with powerful mandibles and anyone bitten by the worm must roll a successful saving throw vs. poison, with a -3 penalty, or suffer double damage from the toxic bite. The head and upper body are covered with poisonous bristles that inflict 1d4 points of damage to anyone whose bare skin comes into contact with them. A successful saving throw vs. poison is required to avoid paralysis for 1d4 rounds after contact. At the end of that time, the victim dies unless a *neutralize poison* or *slow poison* spell is administered. The chance of attackers being hit by the spines is equal to 10% times their base Armor Class (before shield and Dexterity modifiers). Attacking the worm's head reduces the chance of contact by 20% (but only one character can attack the head at a time). The mandibles of this worm are attractive and worth from 1,000 to 3,000 gold pieces per set.

# Gnoll

| | Gnoll | Flind |
|---|---|---|
| **Climate/Terrain:** | Any tropical to temperate non-desert | Any tropical to temperate non-desert |

| **THAC0:** | 19 | 17 |
| **No. of Attacks:** | 1 | 1 or 2 |
| **Damage/Attack:** | 2-8 (2d4) (weapon) | 1-6 or 1-4 (weapons) |
| **Special Attacks:** | Nil | Disarm |
| **Special Defenses:** | Nil | Nil |
| **Magic Resistance:** | Nil | Nil |
| **Size:** | L (7½' tall) | M (6½' tall) |
| **Morale:** | Steady (11) | Steady (11-12) |
| **XP Value:** | 35 | 120 |
| | Leaders & guards | 65 |
| | Leader | 120 |
| | Chieftain | 120 |

Gnolls are large, evil, hyena-like humanoids that roam about in loosely organized bands.
While the body of a gnoll is shaped like that of a large human, the details are those of a hyena. They stand erect on two legs and have hands that can manipulate as well as those of any human. They have greenish gray skin, darker near the muzzle, with a short reddish gray to dull yellow mane.
Gnolls have their own language and many also speak the tongues of flinds, trolls, orcs, or hobgoblins.

**Combat:** Gnolls seek to overwhelm their opponents by sheer numbers, using horde tactics. When under the direction of flinds or a strong leader, they can be made to hold rank and fight as a unit. While they do not often lay traps, they will ambush or attempt to attack from a flank or rear position. Gnolls favor swords (15%), pole arms (35%) and battle axes (20%) in combat, but also use bows (15%), morningstars (15%).

**Habitat/Society:** Gnolls are most often encountered underground or inside abandoned ruins. When above ground they operate primarily at night. Gnoll society is ruled by the strongest, using fear and intimidation. When found underground, they will have (30% chance) 1-3 trolls as guards and servants. Above ground they keep pets (65% of the time) such as 4-16 hyenas (80%) or 2-12 hyaenodons (20%) which can act as guards.
A gnoll lair will contain between 20 and 200 adult males. For every 20 gnolls, there will be a 3 Hit Die leader. If 100 or more are encountered there will also be a chieftain who has 4 Hit Dice, an Armor Class of 3, and who receives a +3 on his damage rolls due to his great strength. Further, each chieftain will be protected by 2-12 (2d6) elite warrior guards of 3 Hit Dice (AC 4, +2 damage).
In a lair, there will be females equal to half the number of males. Females are equal to males in combat, though not usually as well armed or armored. There will also be twice as many young as there are adults in the lair, but they do not fight. Gnolls always have at least 1 slave for every 10 adults in the lair, and may have many more.
Gnolls will work together with orcs, hobgoblins, bugbears, ogres, and trolls. If encountered as a group, there must be a relative equality of strength. Otherwise the gnolls will kill and eat their partners (hunger

comes before friendship or fear) or be killed and eaten by them. They dislike goblins, kobolds, giants, humans, demi-humans and any type of manual labor.

**Ecology:** Gnolls eat anything warm blooded, favoring intelligent creatures over animals because they scream better. They will completely hunt out an area before moving on. It may take several years for the game to return. When allowed to die of old age, the typical gnoll lives to be about 35 years old.

### Flind

The flind is similar to a gnoll in body style, though it is a little shorter, and broader. They are more muscular than their cousins. Short, dirty, brown and red fur covers their body. Their foreheads do not slope back as far, and their ears are rounded, but still animal like.
Flinds use clubs (75%) which inflict 1-6 points of damage and flindbars (25%) which do 1-4 points of damage. A flindbar is a pair of chain-linked iron bars which are spun at great speed. A flind with a flindbar can strike twice per round. Each successful hit requires the victim to save vs. wands or have his weapon entangled in the chain and torn from his grasp by the flindbar. Due to their great strength, flinds get a +1 on their attack rolls.
Flinds are regarded with reverence and awe by gnolls. Flind leaders are 3+3 Hit Dice, at least 13 intelligence and 18 charisma to gnolls (15 to flinds), and always use flindbars.

| **Magic Resistance:** | Special | 20% (and up) | Special | Special |
| **Size:** | S (3½') | S (3' to 3½') | S (3½') | S (2' to 2½') |
| **Morale:** | Steady (12) | Elite (13) | Average (8) | Elite (14) |
| **XP Value:** | 65 (base) | 420 (base) | 65 (base) | 120 (base) |

Small cousins of the dwarves, gnomes are friendly but reticent, quick to help their friends but rarely seen by other races unless they want to be. They tend to dwell underground in hilly, wooded regions where they can pursue their interests in peace. Gnomes can be fighters or priests, but most prefer to become thieves or illusionists instead. Multi-class characters are more common among the gnomes than any other demihuman race.

Gnomes strongly resemble small, thin, nimble dwarves, with the exception of two notable facial features: gnomes prefer to keep their beards short and stylishly-trimmed, and they take pride in their enormous noses (often fully twice the size of any dwarf or human's). Skin, hair, and eye color vary somewhat by subrace: the most common type of gnome, the Rock Gnome, has skin ranging from a dark tan to a woody brown (sometimes with a hint of gray), pale hair, and eyes any shade of blue. Gnomish clothing tends toward leather and earth tones, brightened by a bit of intricately wrought jewelry or stitching. Rock gnomes have an average life span of around 450 years, although some live to be 600 years or more.

Gnomes speak their own language, and each subrace has its own distinctive dialect. Many gnomes learn the tongues of humans, kobolds, goblins, halflings, and dwarves in order to communicate with their neighbors, and some Rock Gnomes are able to communicate with burrowing mammals via a basic language of grunts, snorts, and signs.

Gnomes posses infravision to 60 feet, and the ability to detect sloping passages (1-5 on 1d6), unsafe stonework (1-7 on 1d10), and approximate depth (1-4 on 1d6) and direction (1-3 on 1d6) underground. They are highly resistant to magic, gaining a +1 bonus to their saving throws for each 3.5 points of Constitution (a typical gnome will have a bonus of +3 to +4). Unfortunately, this also means that there is a 20% chance that any magical item a gnome attempts to use will malfunction (armor, weapons, and illusionary items exempted).

**Combat:** Gnomes prefer the use of strategy over brute force in combat and will often use illusions in imaginative ways to "even the odds." Their great hatred of kobolds and goblins, their traditional enemies, gives them a+1 on their attack rolls when fighting these beings. They are adept at dodging the attacks of large opponents, forcing all giant class creatures (gnolls, bugbears, ogres, trolls, giants, etc.) to subtract 4 from their attack rolls when fighting gnomes.

Gnomes can use any weapon that matches their size and often carry a second (or even a third) weapon as a back-up. Short swords, hammers, and spears are favorite melee weapons, with short bows, crossbows, slings, and darts coming into play when distance weapons are called for; virtually every gnome will also carry a sharp knife somewhere on his or her person as a final line of defense.

A typical rock gnome will wear studded leather armor and use a small shield (AC 6). Their leaders will have chain mail (AC 4), and any gnome above 5th level has plate mail (AC 2). There is a 10% chance for each level above 5th that the gnome's armor and/or weapon is magical (roll separately for each). Spell casters have a 10% chance per level of having 1-3 magical items usable by their character class.

**Habitat/Society:** Gnomes live in underground burrows in remote hilly, wooded regions. They are clannish, with friendly rivalries occurring between neighboring clans. They spend their lives mining, crafting fine jewelry, and enjoying the fruits of their labors. Gnomes work hard, and they play hard. They observe many festivals and holidays, which usually involve games, nose measuring contests, and swapping of grand tales. Their society is well organized, with many levels of responsibility, culminating in a single chief who is advised by clerics in matters directly relating to their calling.

A gnomish lair is home to some 40-400 (4d10>010) gnomes, one-quarter of them children. For every 40 adults there is a fighter of 2nd to 4th level. If 160 or more are encountered there is also a 5th-level chief and a 3rd-level lieutenant. If 200 or more are met, there is a cleric or illusionist of 4th to 6th level. If 320 or more are present, add a 6th-level fighter, two 5th-level fighters, a 7th-level cleric, four 3rd-level clerics, a 5th-level illusionist, and two 2nd-level illusionists.

Gnomes often befriend burrowing mammals, so 5d6 badgers (70%), 3d4 giant badgers (20%), or 2d4 wolverines (10%) will be present as well. These animals are neither pets nor servants, but allies who will help guard the clan.

**Ecology:** Gnomes are very much a magical part of nature, existing in harmony with the land they inhabit. They choose to live underground but remain near the surface in order to enjoy its beauty.

**Svirfneblin (Deep Gnome)**

Far beneath the surface of the earth dwell the Svirfneblin, or Deep Gnomes. Small parties of these demihumans roam the Underdark's mazes of small passageways searching for gemstones. They are said to dwell in great cities consisting of a closely connected series of tunnels, buildings, and caverns in which up to a thousand of these diminutive creatures live. They keep the location of these hidden cities secret in order to protect them from their deadly foes, the kuo-toa, Drow, and mind flayers.

Svirfneblin are slightly smaller than rock gnomes, but their thin, wiry, gnarled frames are just as strong. Their skin is rock-colored, usually medium brown to brownish gray, and their eyes are gray. Male svirfneblin are completely bald; female deep gnomes have stringy gray hair. The average svirfneblin life span is 250 years.

Svirfneblin mining teams and patrols work together so smoothly that to outside observers they appear to communicate with each other by some form of racial empathy. They speak their own dialect of gnomish that other gnomish subraces are 60% likely to understand. Most deep gnomes are also able to converse in Underworld Common and speak and understand a fair amount of kuo-toan and drow. These small folk can also converse with any creature from the elemental plane of Earth via a curious "language" consisting solely of vibrations (each pitch conveys a different message), although only on a very basic level.

All svirfneblin have the innate ability to cast *blindness*, *blur*, and *change self* once per day. Deep gnomes also radiate *non-detection* identical to the spell of the same name. Deep gnomes have 120-foot infravision, as well as all the detection abilities of rock gnomes. (See also Wizard Spells, Player's Handbook)

**Combat:** Despite their metal armor and arms, these quick, small folk are able to move very quietly. Deep gnomes are able to "freeze" in place for long periods without any hint of movement, making them 60% unlikely to be seen by any observer, even those with infravision. They are surprised only on a roll of 1 on 1d10 due to their keen hearing and smelling abilities and surprise opponents 90% of the time.

The deep gnomes wear leather jacks sewn with rings or scales of mithral steel alloy over fine chainmail shirts, giving a typical svirfneblin warrior an Armor Class of 2. They do not usually carry shields, since these would hinder movement through the narrow corridors they favor. For every level above 3rd, a Deep Gnome's Armor Class improves by one point -- a 4th-level deep gnome has AC 1, a 5th-level deep gnome, AC 0; to a maximum of AC 6.

All deep gnomes are 20% magic resistant, gaining an extra +5% magic resistance for each level they attain above 3rd. They are immune to illusions, phantasms, and hallucinations. Because of their high wisdom, speed, and agility, they make all saving throws at +3, except against poison, when their bonus is +2.

Deep Gnomes are typically armed with a pick and a dagger which, while nonmagical, gain a +1 bonus to attacks and damage due to their finely-honed edges. Svirfneblin also carry 1d4+6 special *stun darts*, throwing them to a range of 40 feet, with a +2 bonus to hit. Each dart releases a small puff of gas when it strikes; any creature inhaling the gas must save vs. poison or be *stunned* for 1 round and *slowed* for the next four rounds. Elite warriors (3rd level and above) often carry hollow darts with acid inside (+2d4 to damage) and crystal caltrops which, when stepped on, release a powerful *sleep* gas.

**Habitat/Society:** Svirfneblin society is strictly divided between the sexes: females are in charge of food production and running the city, while males patrol its borders and mine for precious stones. A svirfneblin city will have both a king and a queen, each of whom is independent and has his or her own sphere of responsibility. Since only males ever leave the city, the vast majority of encounters will be with deep gnome mining parties seeking for new lodes. For every four svirfneblin encountered, there will be an overseer with 4+7 Hit Dice. Groups of more than 20 will be led by a burrow warden (6+9 Hit Dice) with two 5th-level assistants (5+8 Hit Dice).

It is 25% probable that a 6th-level deep gnome will have illusionist abilities of 5th, 6th, or 7th level. Deep Gnomes who are not illusionists gain the ability at 6th level to summon an earth elemental (50% chance of success) once per day. Deep gnome clerics have no ability to turn undead.

**Ecology:** Stealth, cleverness, and tenacity enable the svirfneblin to survive in the extremely hostile environment of the

Underdark. They love gems, especially rubies, and will take great risks in order to gain them. Their affinity for stone is such that creatures from the elemental plane of Earth are 90% unlikely to harm a deep gnome, though they might demand a hefty tithe in gems or precious metals for allowing the gnome to escape.

### Tinker Gnome (Minoi)

Cheerful, industrious, and inept, tinker gnomes originated on Krynn, but they have spread to many other worlds via spelljamming ships. Physically similar to rock gnomes, even to the extent of sharing the same infravision range, magic resistance, combat bonuses, and detection abilities, their history and culture are so radically different as to qualify them for consideration as a separate subrace.

Graceful and quick in their movements, tinker gnomes' hands are deft and sure. Tinkers have rich brown skin, white hair, and china-blue or violet eyes. Males favor oddly-styled beards and moustaches, and both sexes have rounded ears and typically large gnomish noses. Tinkers who avoid getting blown up in an experiment live for 250-300 years.

Tinker gnomes speak very rapidly, running their words together in sentences that never seem to end. They are capable of talking and listening at the same time: when two tinkers meet, they babble away, answering questions asked by the other as part of the same continuous sentence.

**Combat:** Tinker gnomes rarely carry weapons, although some of their ever present tools can be pressed into service at need. However, they delight in invention and are always devising strange weapons of dubious utility, from the three barrel water blaster to the multiple spear flinger. Tinkers can wear any type of armor but typically outfit themselves in a variety of mismatched pieces for an effective AC of 5.

**Habitat/Society:** Tinker gnomes establish colonies consisting of immense tunnel complexes in secluded mountain ranges. The largest gnome settlement on Krynn, beneath Mount Nevermind, is home to some 59,000 tinkers. Other tinker gnome colonies exist, both on Krynn and elsewhere, but their populations seldom exceed 200-400.

All tinkers have a Life Quest: to attain perfect understanding of a single device. Few ever actually attain this goal, but their individual Life Quests do keep the ever hopeful tinkers busy. Males and females are equal in tinker society, and each pursue Life Quests with similar devotion. Each tinker gnome belongs to a guild. The guild occupies the same place in a tinker's life that the clan occupies for other gnomes. Together the guildmasters make up a grand council that governs the community.

Though most tinker gnomes are content to stay home and tinker with their projects, some have Life Quests which require them to venture out into the world. Adventuring gnomes are generally unable to learn from past experience and repeat the same mistakes, yet they are often successful with quirky solutions to save the day for their companions.

**Ecology:** Despite their great friendliness, tinker gnomes are not well-liked by other races: their technological bent makes them quite alien to those accustomed to magic, and their poor understanding of social relations puts off many potential friends. Sages generally agree that the tinkers' indiscriminate trumpeting of technology has discouraged its development by other races who have encountered tinker gnomes.

### Forest Gnome

Shy and elusive, the forest gnomes live deep in forests and shun contact with other races except in times of dire emergencies threatening their beloved woods. The smallest of all the gnomes, they average 2 to 2½ feet in height, with bark-colored, gray-green skin, dark hair, and blue, brown, or green eyes. A very long-lived people, they have an average life expectancy of 500 years.

In addition to their own gnomish dialect, most forest gnomes can speak gnome common (rock gnome), Elf, Treant, and a simple language that enables them to communicate on a very basic level with forest animals. All forest gnomes have the innate ability to *pass without trace*, *hide in woodlands* (90% chance of success), and the same saving throw bonus as their rock gnome cousins.

**Combat:** Forest gnomes prefer boobie traps and missile weapons to melee weapons when dealing with enemies. Due to size and quickness they receive a -4 bonus to Armor Class whenever they are fighting M- or L-sized opponents. Forest gnomes receive a +1 bonus to all attack and damage rolls when fighting orcs, lizardmen, troglodytes, or any creature which they have seen damage their forest.

**Habitat/Society:** Forest gnomes live in small villages of less than 100 gnomes, each family occupying a large, hollowed-out tree. Most of these villages are disguised so well that even an elf or a ranger could walk through one without realizing it.

**Ecology:** Forest gnomes are guardians of the woods and friends to the animals that live there. They will often help lost travellers but will strive to remain unseen while doing so.

# Gnome, Spriggan

| | |
|---|---|
| **Climate/Terrain:** | Any/Wilderness |
| **Frequency:** | Very rare |
| **Organization:** | Pack |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Average to exceptional (8-16) |
| **Treasure:** | A |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 3-12 |
| **Armor Class:** | 3 or 5 (10) |
| **Movement:** | 9 or 15 |
| **Hit Dice:** | 4 or 8+4 |
| **THAC0:** | 17 or 11 |
| **No. of Attacks:** | 2 |
| **Damage/Attack:** | 2-8/2-8 (weapon) +7 (Strength bonus) |
| **Special Attacks:** | Spells, thief abilities |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | S (3' tall) or L (12' tall) |
| **Morale:** | Champion (15-16) |
| **XP Value:** | Male: 3,000 |
| | Female: 2,000 |

These ugly, dour cousins of gnomes are able to become giant-sized at will.
In either size, spriggans look basically the same. They are ugly, thick-bodied humanoids, with pale or dull yellow skin, brown or black hair, and red eyes. On rare occasions a spriggan may have red hair, which they believe is a symbol of good luck. Their noses are large and bulbous, but not beyond the human norm. They are very fond of mustaches and bushy sideburns, but they never clean or comb them. This same policy of uncleanliness extends to their bodies and any other possessions. Spriggans smell of dank earth, stale sweat, and grime.

Outside of their lair they always wear armor and carry weapons, usually polearms, although they have been known to carry swords or maces. Spriggans never use shields. They like to carry several nasty little daggers concealed in various places in their armor. Spriggans never wear jewelry or other ornaments. They prefer to keep these things with their hoard, where they brood over them at odd moments.

**Combat:** Spriggans are tricky and tough in battle. They have a wide variety of options for combat. Their major ability is to change from small to giant size at will. Weapons, armor and other inanimate objects on their person shrink and grow with them. This action takes the whole round, during which they can move up to 30 feet but not fight. When small, spriggans can use the following spell-like effects: *affect normal fires*, *shatter*, and *scare* (with a -2 penalty to the saving throw, due to their ugliness). They can perform any one of these instead of fighting, once in any round, as often as they want. When giant-sized, spriggans cannot perform magic, other than to shrink again. In this form they are as strong as hill giants (19).

In either size, they have 8th-level thief abilities like those of a gnome with an 18 Dexterity. This high Dexterity enables them to use a weapon twice each round. They can pick pockets (75%), open locks (78%), find or remove traps (70%), move silently (77%), hide in shadows (64%), hear noise (35%), climb walls (81%), and read languages (40%). Keep in mind that their size may affect these chances indirectly. For example, it is difficult for a 12-foot-tall giant to hide in a 6-foot-tall shadow. They can backstab only while in small form, and they inflict triple damage if successful.

Spriggans can never quite get organized as groups. In fact, they are sometimes encountered with part of the group giant-sized and part of them gnome-sized. On an individual level they are very clever and use their abilities to the fullest to accomplish their goals. These goals are usually to cause great havoc and mayhem amongst other races. They seem to take great pleasure in destroying property and hurting innocent creatures.

**Habitat/Society:** Spriggans usually travel in packs, all of them male. The females keep to dismal burrows or secret dens in forgotten ruins, rarely venturing out farther than necessary to gather food. A female has the same combat abilities as a male except that they have only 7+4 Hit Dice in giant form. The females mate with males from packs that wander nearby. The children are cast out upon reaching maturity, the males to join up with packs and the females to find a place to lair. Spriggan infant mortality is high, with the males (80%) surviving more often than the females (60%).

Spriggans hate gnomes more than any living creatures, but they truly love none but those of their own ilk. Perhaps it is the similarity of the true gnomes to their race that drives their hatred. They like to terrorize, rob, and otherwise work vile deeds. They do not hesitate to attack or steal from traveling groups or small settlements in their area. All of their possessions, including their armor and weapons, are stolen from their victims. They greatly fear large groups of organized humans and demihumans, and they avoid such parties.

**Ecology:** The roving packs of males tend to be meat eaters, preferring to hunt or steal their food. As such they must keep moving and establish wide areas of control. The females tend to eat fruits and grains that can be easily gathered near their dens. They eat meat only when offered by a male as part of the mating ritual.

Spriggans are too mean and nasty to have any natural predators, although gnomes attack them on sight unless faced with overwhelming odds. It usually takes a well-armed party to root out a band of spriggans.

# Goblin

| | |
|---|---|
| **Climate/Terrain:** | Any non-arctic land |
| **Frequency:** | Uncommon |
| **Organization:** | Tribe |
| **Activity Cycle:** | Night |
| **Diet:** | Carnivore |
| **Intelligence:** | Low to average (5-10) |
| **Treasure:** | C (K) |
| **Alignment:** | Lawful evil |
| **No. Appearing:** | 4-24 (4d6) |
| **Armor Class:** | 6 (10) |
| **Movement:** | 6 |
| **Hit Dice:** | 1-1 |
| **THAC0:** | 20 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-6 (by weapon) |
| **Special Attacks:** | Nil |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | Small (4' tall) |
| **Morale:** | Average (10) |
| **XP Value:** | 15 |
| Chief & sub-chiefs | 35 |

These small, evil humanoids would be merely pests, if not for their great numbers.
Goblins have flat faces, broad noses, pointed ears, wide mouths and small, sharp fangs. Their foreheads slope back, and their eyes are usually dull and glazed. They always walk upright, but their arms hang down almost to their knees. Their skin colors range from yellow through any shade of orange to a deep red. Usually a single tribe has members all of about the same color skin. Their eyes vary from bright red to a gleaming lemon yellow. They wear clothing of dark leather, tending toward dull soiled-looking colors.
Goblin speech is harsh, and pitched higher than that of humans. In addition to their own language, some goblins can speak in the kobold, orc, and hobgoblin tongues.

**Combat:** Goblins hate bright sunlight, and fight with a -1 on their attack rolls when in it. This unusual sensitivity to light, however, serves the goblins well underground, giving them infravision out to 60 feet. They can use any sort of weapon, preferring those that take little training, like spears and maces. They are known to carry short swords as a second weapon. They are usually armored in leather, although the leaders may have chain or even plate mail.
Goblin strategies and tactics are simple and crude. They are cowardly and will usually avoid a face-to-face fight. More often than not, they will attempt to arrange an ambush of their foes.

**Habitat/Society:** Humans would consider the caves and underground dwellings of goblins to be dank and dismal. Those few tribes that live above ground are found in ruins, and are only active at night or on very dark, cloudy days. They use no form of sanitation, and their lairs have a foul stench. Goblins seem to be somewhat resistant to the diseases that breed in such filth.
They live a communal life, sharing large common areas for eating and sleeping. Only leaders have separate living spaces. All their possessions are carried with them. Property of the tribe is kept with the chief and sub-chiefs. Most of their goods are stolen, although they do manufacture their own garments and leather goods. The concept of privacy is largely foreign to goblins.
A typical goblin tribe has 40-400 (4d10 x 10) adult male warriors. For every 40 goblins there will be a leader and his 4 assistants, each having 1 Hit Die (7 hit points). For every 200 goblins there will be a sub-chief and 2-8 (2d4) bodyguards, each of which has 1+1 Hit Dice (8 hit points), is Armor Class 5, and armed with a battle axe. The tribe has a single goblin chief and 2-8 (2d4) bodyguards each of 2 Hit Dice, Armor Class 4, and armed with two weapons.
There is a 25% chance that 10% of their force will be mounted upon huge worgs, and have another 10-40 (1d4x10) unmounted worgs with them. There is a 60% chance that the lair is guarded by 5-30 (5d6) such wolves, and a 20% chance of 2-12 (2d6) bugbears. Goblin shamans are rare, but have been known to reach 7th level. Their spheres include: Divination, Healing (reversed), Protection, and Sun (reversed).
In addition to the males, there will be adult females equal to 60% of their number and children equal to the total number of adults in the lair. Neither will fight in battles.
A goblin tribe has an exact pecking order; each member knows who is above him and who is below him. They fight amongst themselves constantly to move up this social ladder.
They often take slaves for both food and labor. The tribe will have slaves of several races numbering 10-40% of the size of the tribe. Slaves are always kept shackled, and are staked to a common chain when sleeping.
Goblins hate most other humanoids, gnomes and dwarves in particular, and work to exterminate them whenever possible.

**Ecology:** Goblins live only 50 years or so. They do not need to eat much, but will kill just for the pleasure of it. They eat any creature from rats and snakes to humans. In lean times they will eat carrion. Goblins usually spoil their habitat, driving game from it and depleting the area of all resources. They are decent miners, able to note new or unusual construction in an underground area 25% of the time, and any habitat will soon be expanded by a maze-like network of tunnels.

# Golem, General

**Climate/Terrain:** Any

**Frequency:** Very rare

**Organization:** Solitary

**Activity Cycle:** Any

**Diet:** Nil

**Intelligence:** Non- (0)

**Treasure:** Nil

**Alignment:** Neutral

Golems are magically created automatons of great power. The construction of one involves mighty magic and elemental forces.

**Background:** Golems predate any known literature about their creation. The wizard who discovered the process, if indeed there was only one, is unknown. Some of the rediscoverers have written their secrets in various arcane manuals, enchanted to aid the reader in construction. It is thought that the first golem created was a flesh golem, possibly an accident of some great wizard experimenting with reanimating human bodies. Flesh golems are easier to make than any other sort because they are made of organic material that once lived. Later, the process was generalized to suit certain earthen materials, which produce much stronger golems.

**Theory:** Golems are all made from elemental material. So far, the great wizards have only discovered how to use various earthen materials, such as clay, stone, iron, and even glass, to make golems. The exceptions, such as the flesh golem, use organic materials as components. The animating force of the golem is an elemental spirit from the elemental plane of Earth. Since the spirit is not a natural part of the

body, it is not affected by most spells or even by most weapons (see individual descriptions). The process of creating the golem binds the unwilling spirit to the artificial body, and enslaves it to the will of the golem's creator. The nature of this spirit is unknown, and has so far eluded the grasp of all researchers. What is known is that it is hostile to all Prime Material plane life forms, especially toward the spell caster that bound it to the golem.

Carving or assembling the golem's physical body is an exacting task. Most spell casters end up hiring skilled labor to do it for them, such as a stone mason or dwarf for stone golems, etc. If the maker has no experience working in that material, the construction time is doubled. The standard spells for creating golems specify the size of the creature. Anything bigger or smaller will not work, although some have investigated spells for other sizes of golems, with limited success.

The costs listed include the base physical body and the unusual materials and spell components that are consumed or become a permanent part of the golem. The rituals used to animate the golem require as much as a full uninterrupted month to complete (included in the time below), though some variants such as the necrophidius and scarecrow reduce that time by employing shortcuts. In all cases the spells used can come from devices, such as wands or scrolls. If a magical tome is used to make the golem, no spells are needed, and the level of the spell caster can be significantly lower.

### Golem Creation Table

| Type of Golem | Creator | Construction Time | GP Cost |
|---|---|---|---|
| Bone | W18 | 2 months | 35,000 |
| Caryatid | W16 | 4 months | 100,000 |
| Clay | P17 | 1 month | 65,000 |
| Doll | P15 | 2 months | 20,000 |
| Flesh | W14 | 2 months | 50,000 |
| Gargoyle | P16 | 4 months | 100,000 |
| Glass | P14/W14 | 6 months | 125,000 |
| Guardian | W14 | 1 month | 20,000 |
| Iron | W18 | 4 months | 100,000 |
| Juggernaut | W16 | 3 months | 80,000 |
| Necrophidius | P9/W14 | 10 days | 8,000 |
| Scarecrow | P9 | 21 days | 100 |
| Stone | W16 | 3 months | 80,000 |

**Combat:** All golems share several traits in common. They are all immune to all forms of poison and cannot be affected by *hold, charm, fear,* or other mindbased spells, as they have no minds of their own. Certain spells can harm golems; these are mentioned below.

Most golems are fearless and need never check morale.

### Flesh Golems

The pieces of the golem must be sewn together from the dead bodies of normal humans that have not decayed significantly. A minimum of 6 different bodies must be used, one for each limb, one for the torso (with head), and a different one for the brain. In some cases, more bodies may be necessary to form a complete golem. The spells needed are *wish*, *polymorph any object*, *geas*, *protection from normal missiles*, and *strength.*

### Clay Golems

Only a lawful good priest can create a clay golem. The body is sculpted from a single block of clay weighing at least 1000 pounds, which takes about a month. The vestments, which cost 30,000 gp, are the only materials that are not consumed and can be reused, reducing the total cost after the first golem. The spells used are *resurrection, animate object, commune*, *prayer*, and *bless.*

### Stone Golems

A stone golem's body is chiseled from a single block of hard stone, such as granite, weighing at least 3000 pounds, which takes 2 months. The rituals to animate require another month. The materials and spell components alone cost 60,000 gold pieces and the spells used are *wish*, *polymorph any object*, *geas*, and *slow.*

### Iron Golems

It takes 5000 pounds of iron,to build the body, which must be done by a skilled iron smith. The spells used in the ritual are *wish*, *polymorph any object*, *geas*, and *cloud kill.* Construction of the body requires an ornate sword which is incorporated into the monster. A magical sword can be used, in which case there is a 50% chance that it is drained of magic when the golem is animated. The golem can only use those abilities of the sword that are automatic. Any property that requires a command word and any sentient ability of the sword is lost. If the sword is ever removed from the golem, it loses all of its magic.

### Variant Golems

The first golems were, undoubtedly, all traditional golems. Over the years, however, various wizards and priests examined the techniques employed by earlier designers and modified them. As they introduced changes, they documented the processes they used to create their new constructs. This process of study and modification is never-ending. Even today, the work of these mysterious scholars is being studied and revised in magical colleges around the world.

**Theory:** Like other golems, golem variants depend on the powerful forces of elemental magic to animate them. They have no lives of their own and are animated by a spirit from the elemental plane of Earth. In some cases this spirit is tricked, lured, or forced into animating the body while in other cases it comes willingly. In the former cases, the stone construct sometimes breaks free of the influence of its creator and becomes a free-willed entity. Because of the nature of its physical shell, constructs that break free often become berserk killers, destroying everything in their paths before being annihilated themselves.

**Construction:** The actual construction of any golem's physical body is a tiring and demanding task. Although the steps required to create a variant golem differ depending on the type, they do have some elements in common. The most important of these is the degree of detail that is put into the carving of the body. In the case of the caryatid column, for example, the construct must be lovingly crafted with great skill. In most cases, the wizard or priest creating a caryatid column hires a professional sculptor or stone

mason to undertake this step of the animation process.
Less sophisticated golems, like the stone guardian and the primitive scarecrow, do not require the artistic perfection of the caryatid column. However, they are often covered with delicate mystical runes or glyphs that must be perfect if the creature is to be successfully animated.

### Bone Golem

The body of a bone golem is assembled wholly from the bones of animated skeletons who have been defeated in combat. Any type of skeletal undead will do, but all must have been created and slain in the Demiplane of Dread. Only 10% of the bones from any given skeleton can be used, so the final product is the compilation of bones from many creatures. Often, there will be animal, monster, and human bones in the same golem, giving the creature a nightmarish appearance. The spells woven over the body must include *animate dead, symbol of fear, binding,* and *wish.*

### Caryatid column

The caryatid column can be created by a priest or wizard using a special version of the manual of golems. Whenever such a tome is discovered, there is a 20% chance that it describes a caryatid column.

### Doll Golem

These creatures resemble a child's toy -- often a baby doll or stuffed animal. Doll golems can serve as either the guardians of children or as murdering things too foul to contemplate.
The spells needed to complete the animation are *imbue with spell ability, Tasha's uncontrollable hideous laughter, (un)holy word, bless,* and *prayer.* The first known examples of this type of golem turned up on the Demiplane of Dread in the land of Sanguinia.

### Gargoyle Golem

This creature is fashioned in the image of a real gargoyle and is often placed as a warden atop buildings, cathedrals, or tombs. It is most similar to the stone golem; the body must be carved from a single slab of granite (weighing 3,000 pounds) and prepared with expensive components. Only the vestments created for the process are reusable (saving 15,000 gp on the cost of additional gargoyle golems). The spells required to complete the process are *bless, exaction, (un)holy word, stone shape, conjure earth elemental,* and *prayer.*

### Glass Golem

The glass golem is composed entirely of stained glass. Perhaps the most artistic of all golems, its creation requires the following spells: *glassteel, animate object, prismatic spray, rainbow,* and *wish.* Because of the mixture of spells, this type of golem is usually built by multi- or dual-classed characters or with the aid of a powerful assistant.
The first appearance of glass golems is not recorded with certainty. It is believed that they were created by a spell-caster who fancied himself an artist (hence their eerie beauty), but no one knows.

### Juggernaut

Juggernauts that can alter their form require an extra step in their creation, which normally resembles the process to make a stone golem. Prior to animating a juggernaut, the wizard must use the mimic blood as a material component in the final spells woven over the body. This addition gives this golem variant intelligence and an alignment.

## Necrophidius

A necrophidius may be created in one of three ways. The first is a special form of *manual of golems* that provides secrets of its construction. The *Necrophidicon,* as it is called, must be burnt to ashes that provide the monster's animating force. The other two arcane and priestly processes are long and complex. A wizard must cast *limited wish, geas,* and *charm person* spells. A priest requires the spells *quest, neutralize poison, prayer*, *silence,* and *snake charm*. Whichever method is used, the monster requires a complete giant snake skeleton (either poisonous or constrictor), slain within 24 hours of the enchantment's commencement. Each necrophidius is built for a single specific purpose (which must be in the spellcaster's mind when he creates it), such as "Kill Ragnar the Bold." The necrophidius never seeks to twist the intent of its maker, but its enchantments fade when its task is done or cannot be completed; for example, when it kills Ragnar.

The maker must want the necrophidius to serve its purpose. He could not, for example, build a death worm to "Sneak into the druid's hut and steal his staff," if he really intended for the necrophidius to merely provide a distraction. He could not build more than one death worm and assign both to kill Ragnar, since he could not imbue the second death worm with a task that he intended the first one to complete. For this reason, necrophidii almost never work as a team.

Rumors claim that there were once methods to make a necrophidius gain 1 Hit Die every century it was pursuing its purpose.

## Scarecrow

Scarecrows can only be created either by using a special manual or by a god answering the plea of a priest employing the following spells: *animate object, prayer, command,* and *quest.* The final step of the process, casting the *quest* spell, is done during a new moon.

Scarecrows can be constructed to kill a specific person. To do so, the clothes worn by the scarecrow must come from the intended victim. Once the scarecrow is animated, the priest need only utter a single word -- "Quest". The scarecrow then moves in a direct line toward the victim. When it reaches the victim, the scarecrow disregards all other beings and concentrates its gaze and attacks entirely on the person it has been created to kill. After slaying its victim, a quested scarecrow's magic dissipates and it collapses into dust.

## Stone Guardian

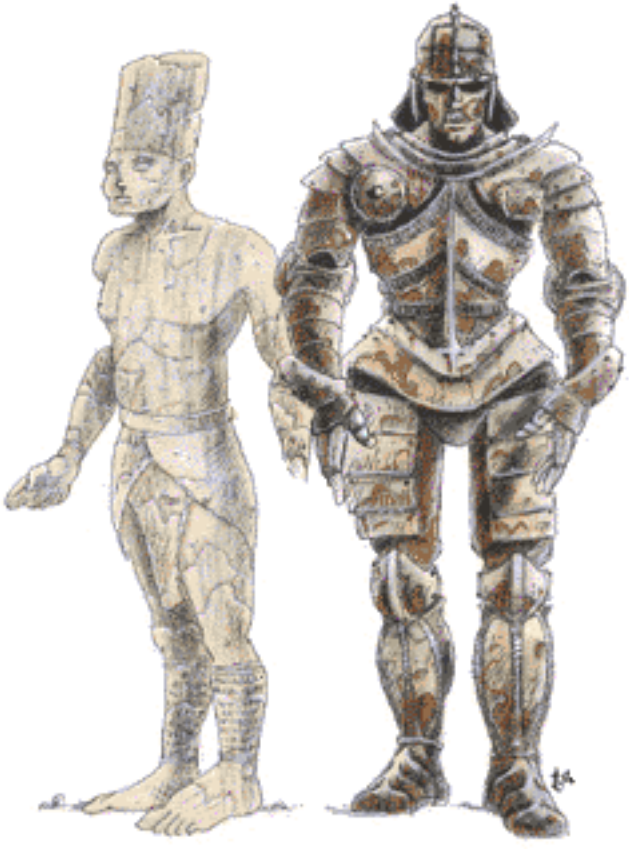
A stone guardian is very similar to a traditional stone golem, but it has some unique abilities its ancestor does not. In physical appearance, the two constructs are quite similar, but the stone guardian is usually decorated with runes and magical glyphs.

A stone guardian is created with the following spells: *enchant an item, transmute mud to rock, magic mouth,* and *limited wish* or *wish.* In addition, the wizard creating the guardian may cast a *detect invisible* spell to give the creature that power.

The initial material of the body is mud around a heart of polished stone. As the various spells are woven into the body, a spirit from the elemental plane of Earth is forced to enter the body and animate it. Because the spirit is there against its will, there is a 20% chance that the golem goes berserk each time it is activated.

A special *ring of protection* can be created when the stone guardian is animated; this prevents the guardian from striking at anyone wearing it. In addition, all those within 10 feet of the ring wearer are also immune to attack. Rings of this type function only against the guardian they were made with and provide no protection from any other golem.

# Golem, Greater



| | Stone | Iron |
|---|---|---|
| **Climate/Terrain:** | Any | Any |
| **Frequency:** | Very rare | Very rare |
| **Organization:** | Solitary | Solitary |
| **Activity Cycle:** | Any | Any |
| **Diet:** | Nil | Nil |

| **Treasure:** | Nil | Nil |
| **Alignment:** | Neutral | Neutral |
| **No. Appearing:** | 1 | 1 |
| **Armor Class:** | 5 | 3 |
| **Movement:** | 6 | 6 |
| **Hit Dice:** | 14 (60 hp) | 18 (80 hp) |

| | | |
|---|---|---|
| **THAC0:** | 7 | 3 |
| **No. of Attacks:** | 1 | 1 |
| **Damage/Attack:** | 3-24 (3d8) | 4-40 (4d10) |
| **Special Attacks:** | See below | See below |
| **Special Defenses:** | See below | See below |
| **Magic Resistance:** | Nil | Nil |
| **Size:** | L (9½' tall) | L (12' tall) |
| **Morale:** | Fearless (19-20) | Fearless (19-20) |
| **XP Value:** | 8,000 | 13,000 |

A greater golem is an artificial humanoid body which has been animated by an elemental spirit but remains under the complete control of its creator.

**Stone Golem**
A stone golem is 9½ feet tall, and weighs around 2000 pounds. Its body is of roughly chiseled stone, frequently stylized to suit its creator. For example it might be carved to to look like it is wearing armor with a particular symbol on the chest plate. Sometimes designs are worked into the stone of its limbs. The head may be chiseled to resemble a helmet or other head piece. Regardless of these elements, it always has the basic humanoid parts (2 arms, 2 legs, head with 2 eyes, nose, mouth etc.). It is always weaponless and never wears clothing.

**Combat:** Greater golems are mindless in combat, only following the simple tactics of their masters. They are completely emotionless and cannot be swayed in any way from their instructions. They will not pick up and use weapons in combat, even if ordered to, always preferring their fists. Stone golems have a strength of 22, for purposes of breaking or throwing things.
The stone golem is immune to any weapon, except those of +2 or better enchantment. A *rock to mud* spell slows a golem for 2-12 (2d6) rounds. Its reverse, *mud to rock* acts to heal the golem, restoring all lost hit points. A *flesh to stone* spell does not actually change the golem's structure, but does make it vulnerable to any normal attack for the following round. This does not include spells, except those that will cause direct damage. All other spells are ignored. Once every other round, the stone golem can cast a *slow* spell upon any opponent with 10 feet of it.

**Habitat/Society:** Golems are automatons, artificially created and under the direct control of their creator. They have no society and are not associated with any particular habitat. They are frequently used to guard valuable items or places. Unlike the lesser golems, the greater golems are always under the complete control of their master. A greater golem can obey simple instructions involving direct actions with simple conditional phrases. Although this is better than a lesser golem is capable of following, they still make poor servants. Any given task could take several separate commands to direct the golem to its completion.

**Ecology:** Golems are not natural creatures, and play no part in the ecology of the world. They neither eat nor sleep, and "live" until they are destroyed, usually in combat. Certain spells (see above) can be used to

heal or repair any damage done to them in combat. This is usually done by their creators to insure long and valuable service.

### Iron Golem

An iron golem is twice the height of a normal man, and weighs around 5000 pounds. It can be fashioned in any stylized manner, just like the stone golems, although it almost always is built displaying armor of some sort. Its features are much smoother in contrast to the stone golem. Iron golems are sometimes found with a short sword (relative to their size) in one hand. On extremely rare occasions this sword will be magical.
The iron golem cannot speak or make any vocal noise,
nor does it have any distinguishable odor. It moves with a ponderously smooth gait at half the speed of a normal man. Each step causes the floor to tremble, unless it is on a thick, solid foundation.

**Combat:** The iron golem conforms to the strategies listed for the stone golem except as described here. It has a strength of 24 for the purposes of lifting, throwing or breaking objects. The iron golem is immune to any weapon, except those of +3 or better enchantment. Magical electrical attacks will *slow* it for 3 rounds, and magical fire attacks actually repair 1 hit point of damage for each hit die of damage it would have caused. All other spells are ignored. Iron golems are subject to the damage inflicted by a rust monster. Once every 7 rounds, beginning either the first or second round of combat, the iron golem breathes out a cloud of poisonous gas. It does this automatically, with no regard to the effects it might have. The gas cloud fills a 10 foot cube directly in front of it, which dissipates by the following round, assuming there is somewhere for the gas to go.

# Golem, Lesser

| | Flesh | Clay |
|---|---|---|
| **Climate/Terrain:** | Any | Any |
| **Frequency:** | Very rare | Very rare |

| | | |
|---|---|---|
| **THAC0:** | 11 | 9 |
| **No. of Attacks:** | 2 | 1 |
| **Damage/Attack:** | 2-16 (2d8)/2-16 (2d8) | 3-30 (3d10) |
| **Special Attacks:** | Nil | See below |
| **Special Defenses:** | See below | See below |
| **Magic Resistance:** | Nil | Nil |
| **Size:** | L (7½' tall) | L (8' tall) |
| **Morale:** | Fearless (19-20) | Fearless (19-20) |
| **XP Value:** | 2,000 | 5,000 |

A golem is an artificial humanoid body which is animated by an elemental spirit and under the control of its creator.

**Flesh Golem**
The flesh golem stands a head and a half taller than most humans and weighs almost 350 pounds. It is made from a ghoulish collection of stolen human body parts, stitched together to form a single composite human body. Its skin is the sickly green or yellow of partially decayed flesh. A flesh golem smells faintly of freshly dug earth and dead flesh. No natural animal, such as a dog, will willingly track a flesh golem. It wears whatever clothing its creator desires, usually just a ragged pair of trousers. It has no possessions, and no weapons. The golem can not speak, although it can emit a hoarse roar of sorts. It walks and moves with a stiff jointed gait, as if it is not in complete control over its body parts.

**Combat:** The lesser golems are mindless in combat. They follow the orders of their master explicitly, and are incapable of any strategy or tactics. They are emotionless in combat, and cannot be easily provoked (unless they have broken control and gone berserk). They will not use weapons for combat, even if ordered to, always preferring to strike with their fists. Flesh golems have a strength of 19 for purposes of lifting, throwing or breaking down doors.
Flesh golems can only be struck by a magical weapon. Fire and cold based spells merely slow them for 2-12 (2d6) rounds. Any electrical attack restores 1 hit point for each die of damage it would normally have done. All other spells are ignored by the creature.
The elemental spirit in a lesser golem is not bound strongly, resulting in a 1% cumulative chance per round of combat, calculated independently for each fight, that it will break free of its master. The flesh golem's master has a 10% chance per round of regaining control. To do this he must be within 60 feet of the flesh golem, and the creature must be able to see and hear its master. No special spells are required to regain control, its creator just has to talk to it forcefully and persuasively, to convince it to obey.

**Habitat/Society:** Golems are automatons, artificially created and under the direct control of their creator. They have no society and are not associated with any particular habitat. They are frequently used to guard valuable items or places. A lesser golem can obey simple instructions involving a single, direct action. They make poor servants because each detail of a task must be given as a separate command.

**Ecology:** Golems are not natural creatures, and play no part in the world's ecology. They neither eat nor

sleep, and "live" until their bodies are destroyed, usually in combat.

### Clay Golem

The clay golem is a humanoid body made from clay, and stands about 18 inches taller than a normal man. It weighs around 600 pounds. The features are grossly distorted from the human norm. The chest is overly large, with arms attached by thick knots of muscle at the shoulder. Its arms hang down to its knees, and end in short stubby fingers. It has no neck, and a large head with broad flat features. Its legs are short and bowed, with wide flat feet. A clay golem wears no clothing except for a metal or stiff leather garment around its hips. It smells faintly of clay. The golem can not speak, or make any noise. It walks and moves with a slow and clumsy gait, almost as if it were not in control over its actions.

**Combat:** Clay golems conform to the strategies listed above for the flesh golem except as noted here. A clay golem has a strength of 20 for the purposes of lifting, throwing or smashing objects. They can only be struck by magical blunt weapons such as hammers or maces. A *move earth* spell will drive the golem back 120 feet and inflict 3-36 (3d12) points of damage upon it. A *disintegrate* spell merely slows the golem for 1-6 rounds and causes 1-12 points of damage. An *earthquake* spell cast directly at a clay golem will stop it from moving that turn and inflict 5-50 (5d10) points of damage. After it has engaged in at least one round of combat, the clay golem can *haste* itself for 3 rounds. It can only do this once per day. Damage done by the golem can only be cured by a *heal* spell from a priest of 17th level or greater. The elemental spirit in a lesser golem is not bound strongly, resulting in a 1% cumulative chance per round of combat, calculated independently for each fight, that it will break free of its master. If a clay golem does manage to break control, it becomes a berserker, attacking everything in sight until it is destroyed. Its first action is to *haste* itself, if it can. Unlike the flesh golem, there is no chance to regain control of a rampaging clay golem.

# Golem, Bone, Doll

### Bone Golem

The bone golem is built from the previously animated bones of skeletal undead. These horrors stand roughly 6 feet tall and weight between 50 and 60 pounds. They are seldom armored and can easily be mistaken for undead, much to the dismay of those who make this error.

**Combat:** Bone golems are no more intelligent than other forms of golem, so they will not employ clever tactics or strategies in combat. Their great power, however, makes them far deadlier than they initially appear to be. There is a 95% chance that those not familiar with the true nature of their opponent will mistake them for simple undead.

Bone golems attack with their surprisingly strong blows and sharp, claw-like fingers. Each successful hit inflicts 3-24 (3d8) points of damage. They can never be made to use weapons of any sort in melee.

In addition to the common characteristics of all Ravenloft golems (described previously), bone golems take only half damage from those edged or piercing weapons that can harm them.

Bone golems are immune to almost all spells, but can be laid low with the aid of a *shatter* spell that is focused on them and has the capacity to affect objects of their weight. If such a spell is cast at a bone golem, the golem is entitled to a saving throw vs. spells to negate it. Failure indicates that weapons able to harm the golem will now inflict twice the damage they normally would. Thus, edged weapons would do full damage while blunt ones would inflict double damage.

Once every three rounds, the bone golem may throw back its head and issue a hideous laugh that causes all those who hear it to make fear *and* horror checks. Those who fail either check are *paralyzed* and cannot move for 2-12 rounds. Those who fail *both* checks are instantly stricken dead with fear.

### Doll Golem

The doll golem is an animated version of a child's toy that can be put to either good uses (defending the young) or evil uses (attacking them). It is often crafted so as to make it appear bright and cheerful when at rest. Upon activation, however, its features become twisted and horrific.

**Combat:** The doll golem is, like all similar creatures, immune to almost all magical attacks. It can be harmed by fire-based spells, although these do only half damage, while a *warp wood* spell will affect the creature as if it were a *slow* spell. A *mending* spell restores the creature to full hit points at once.

Each round, the doll golem leaps onto a victim and attempts to bite it. Success inflicts 3d6 points of damage and forces the victim to save versus spells. Failure to save causes the victim to begin to laugh

uncontrollably (as if under the influence of a *Tasha's uncontrollable hideous laughter* spell) and become unable to perform any other action. The effects of the creature's bite are far worse, however. The victim begins to laugh on the round after the failed save. At this time, they take 1d4 points of damage from the muscle spasms imposed by the laughter. On following rounds, this increases to 2d4, then 3d4, and so on. The laughter stops when the character dies or receives a *dispel magic*. Following recovery, the victim suffers a penalty on all attack and saving throws of -1 per round that they were overcome with laughter (e.g., four rounds of uncontrolled laughter would equal a -4 penalty on attack/saving throws). This represents the weakness caused by the character's inability to breathe and is reduced by 1 point per subsequent turn until the character is fully recovered.

### Gargoyle Golems

The gargoyle golem is a stone construct designed to guard a given structure. It is roughly the same size and weight as a real gargoyle (6' tall and 550 pounds). Although they have wings, they cannot fly. However, a gargoyle golem can leap great distances (up to 100 feet) and will often use this ability to drop down on enemies nearing any building the golem is protecting.

Gargoyle golems cannot speak or communicate in any way. When they move, the sound of grinding rock can be heard by anyone near them. In fact, it is often this noise that serves as a party's first warning that something is amiss in an area.

**Combat:** When a gargoyle golem attacks in melee combat, it does so with its two clawed fists. Each fist must attack the same target and will inflict 3d6 points of damage. Anyone hit by both attacks must save versus petrification or be turned to stone. On the round after a gargoyle golem has petrified a victim, it will attack that same target again. Any hit scored by the golem against such a foe indicates that the stone body has shattered and cannot be *resurrected*. *Reincarnation*, on the other hand, is still a viable option.

Gargoyle golems are, like most golems, immune to almost every form of magical attack directed at them. They are, however, vulnerable to the effects of an *earthquake* spell. If such a spell is targeted directly at a gargoyle golem, it instantly shatters the creature without affecting the surrounding area. The lesser *transmute rock to mud* spell will inflict 2d10 points of damage to the creature while the reverse (*transmute mud to rock*) will heal a like amount of damage.

On the first round of any combat in which the gargoyle golem has not been identified for what it is, it has a good chance of gaining surprise (-2 on opponent surprise checks). Whenever a gargoyle golem attacks a character taken by surprise, it will leap onto that individual. The crushing weight of the creature delivers 4d10 points of damage and requires every object carried by that character in a vulnerable position (DM's decision) to save vs. crushing blows or be destroyed. In the round that a gargoyle golem pounces on a character, it cannot attack with its fists.

### Glass Golems

The glass golem is very nearly a work of art. Built in the form of a stained glass knight, the creature is often built into a window fashioned from such glass. Thus, it usually acts as the guardian of a given location -- often a church or shrine.

Glass golems, like most others, never speak or communicate in any way. When they move, however,

they are said to produce a tinkling sound like that made by delicate crystal wind chimes. If moving through a lighted area, they strobe and flicker as the light striking them is broken into its component hues.

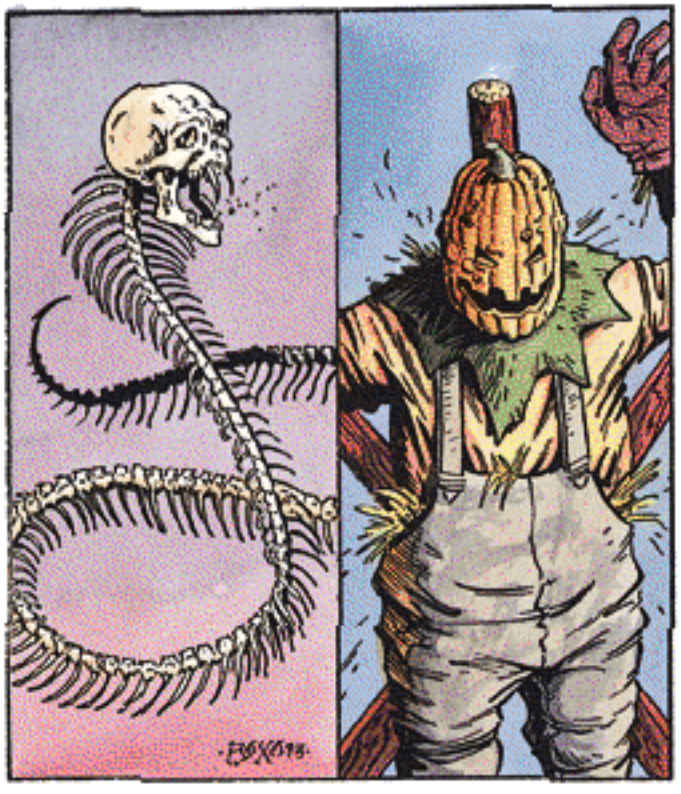
**Combat:** When the stained glass golem attacks, it often has the advantage of surprise. If its victims have no reason to suspect that it lurks in a given window, they suffer a -3 on their surprise roll when the creature makes its presence known.

Once combat is joined, the stained glass figure (which always has the shape of a knight) strikes with is sword. Each blow that lands delivers 2d12 points of damage.

Once every three rounds, the golem can unleash a *prismatic spray* spell from its body that fans out in all directions. Any object or being (friend or foe) within 25 feet of the golem must roll as if they had been struck by a wizard's *prismatic spray* spell (see the AD&D® Player's Handbook Glass golems are the most fragile of any type of Ravenloft golem. Any blunt weapon capable of striking them (that is, a magical weapon of +2 or better) inflicts double damage. Further, a *shatter* spell directed at them weakens them so that all subsequent melee attacks have a percentage chance equal to twice the number of points of damage inflicted of instantly slaying the creature.

Anyone casting a *mending* spell on one of these creatures instantly restores it to full hit points. In addition, they regenerate 1 hit point per round when in an area of direct sunlight (or its equivalent).

# Golem, Necrophidius and Scarecrow



| | Necrophidius | Scarecrow |
|---|---|---|

| **XP Value:** | 270 | 1,400 |

The necrophidius and scarecrow are constructs like all other golems, but they are less powerful because of the magical shortcuts employed in their construction.

### Necrophidius

The necrophidius, or "death worm," is built and animated for a single task, such as protection or assassination. It has the bleached-white skeleton of a giant snake, a fanged human skull, and constantly whirling, milk-white eyes. Its bones are warm to the touch. The necrophidius is odorless and absolutely silent; the skeleton makes no noise, even when slithering across a floor strewn with leaves. A necrophidius is constantly moving with a macabre grace.

**Combat:** The necrophidius prefers to surprise opponents, and its silence imposes a -2 penalty to their surprise rolls. If the necrophidius is not surprised, it performs a macabre maneuver called the Dance of Death, a hypnotic swaying backed by minor magic. The Dance rivets the attention of anyone who observes it, unless a successful saving throw vs. spell is rolled. Intelligent victims are immobilized, as per the *hypnotism* spell. This allows the necrophidius to attack without opposition.

Besides taking damage as indicated, a bitten victim must make a saving throw vs. spell or be paralyzed and unconscious for 1d4 turns. This effect can be cancelled only by *dispel magic*; *neutralize poison* is useless.

This creature acts and reacts as if it had Intelligence 10. However, its mind is artificial, so mind influencing spells have no effect. The creature is immune to poison and requires no sleep or sustenance. It is not undead and cannot be turned.

### Scarecrow

Statistics in italics above refer to conscious scarecrows.

Scarecrows are enchanted creatures made from the same materials as normal scarecrows. Though non-intelligent, they can follow simple, one- or two-phrase orders from the priest who created them. They do so to the best of their ability, without regard to their own safety.

Each scarecrow is unique, but all share several characteristics. Their bodies, arms, and legs are always made of cut wood bound with rope. Tattered rags cover the frame, and are sometimes stuffed with grass or straw. A hollow gourd with a carved face serves as head. Once animated, a fiery light burns in the scarecrow's eye sockets. Scarecrows are light but slow. Their leg and elbow joints bend both ways, so they move with an uneven, jerky gait, and the head spins freely.

Scarecrows do not speak, but cackle madly when attacking.

**Combat:** Once per round, a scarecrow can gaze at one creature within 40 feet. Any intelligent person meeting this gaze must make a successful saving throw vs. spells or be fascinated, standing transfixed, arms hanging limply, allowing the scarecrow to strike again and again (automatic hit each round). The charm lasts until the scarecrow either dies or leaves the area for a full turn. The scarecrow's touch causes 1d6 damage and has an effect identical to the gaze (saving throws apply). A scarecrow attacks one victim at a time, striking the first person charmed until dead. While slaying its victim, the scarecrow uses its gaze attack to charm other opponents as possible. Scarecrows attack until destroyed or ordered to stop. Scarecrows are vulnerable to fire. Fire-based attacks gain a +1 bonus to the attack roll and a +1 damage bonus per die.
The magic that created them keeps their tattered parts from decomposing and shields them from the effects of cold.

### Conscious Scarecrows

Most scarecrows disintegrate when their creators die, but a few (10%) become conscious, gaining an evil alignment, average Intelligence (8-10), and great cunning. They gain a desire for self-preservation, so their morale drops to elite (13-14). They hide by day and stalk the night, committing acts of evil. Because scarecrows hate fire and are immune to cold, conscious scarecrows try to reach colder climes. During the trek they kill everything they encounter, including those who pose no threat. Conscious scarecrows hate all life and kill humans and demihumans whenever possible.

These variant golems are close relatives of the dreadful stone golems. They are generally created by powerful wizards and employed as guards or servants in a wide variety of settings.

## Caryatid Column

The caryatid column is a beautiful and wondrous construct. Before activation, it looks like the classical architectural work it is named for, standing about 7 feet tall, and resembling a finely carved pillar in the shape of a beautiful young girl. Close examination reveals that the maiden has a slender sword in her left hand, but there is no indication that the column is anything other than what it appears to be. Once constructed and animated, it is usually assigned to keep watch over a valuable object or special places. It does so, remaining motionless, until its preset activation conditions are triggered (these depend on the creator's instructions). As soon as this happens, the column moves to take action against those who have triggered it.

When activated, the caryatid column undergoes a stunning and swift transformation. The smooth, grey stone that was once its skin changes hue to become light or dark flesh tones (depending on the nature of the carving), the eyes come alive with a gleaming white light, and the thin blade transforms into a fine weapon of gleaming steel.

In combat, the column lashes out with its gleaming sword, causing 2d4 points of damage with each hit. The column's magical nature gives it a +4 bonus to saving throws, and all nonmagical weapons inflict only half damage. Magical weapons inflict full damage, but do not receive the magical bonus normally due them. For example, a *long sword +2* does not gain its +2 bonus, but inflicts normal long sword damage.

There is a 25% chance that a weapon shatters when it successfully strikes a caryatid column. This chance is reduced by 5% for each plus of the weapon. Thus, a *sword +2* has only a 15% chance of breaking. A magical weapon with no attack bonus is considered a +1 weapon when checking for shattering.

A *stone to flesh, transmute rock to mud, or stone shape* spell destroys the column instantly if it fails its saving throw.

When a caryatid column has completed its task, it returns to its waiting position and reverts to stone. If it is killed in combat, it (and its sword) reverts to stone for 2d6 rounds, at the end of which time it crumbles into dust.

## Juggernaut

The juggernaut generally appears as a huge, powerful stone vehicle of some sort, with wheels or rollers for locomotion.

A juggernaut is clumsy and slow moving, but it makes up for these handicaps by rolling right over opponents in a deadly crushing attack. A juggernaut has a movement rate of 3 in its first round of animation. This increases by 3 each round to a maximum of 12. A juggernaut is slow to turn, and can change direction only 90 degrees for every 30 feet of movement.

Anyone caught in the path of a juggernaut charge is run over by the thundering behemoth, though the juggernaut must make a normal attack roll if the victim can avoid the charge. A hit indicates that the victim is crushed, suffering 10d10 points of damage. In addition, every item carried by the victim must roll a saving throw vs. crushing blow to avoid destruction. A successful saving throw vs. death magic entitles the victim to only half damage, but it does not protect his equipment.

Some juggernauts are a unique crossbreed of stone golem and mimic. Once animated, these juggernauts can alter their shape as the mimics do. They can grow up to six limbs, each designed for current needs. For example, if it wishes to sound a warning, a limb may grow into a trumpet or horn. In combat, its limbs become maces or hammers that inflict 2d6 points of damage each, due to its great strength. A juggernaut can rarely bring more than two limbs to bear on a single opponent.

## Stone Guardian

In combat, a guardian slams opponents with its massive arms, each of which inflicts 1d8+1 points of damage. The stone guardian suffers only¼ damage from edged weapons and ½ damage from all cold, fire, or electrical attacks. Normal missiles cause no damage. A stone guardian can be instantly destroyed by a *stone to flesh, transmute rock to mud, stone shape,* or *dig* spell; it is not entitled to a saving throw.

# Gorgon

| | |
|---|---|
| **Climate/Terrain:** | Temperate or tropical/Wilderness or subterranean |

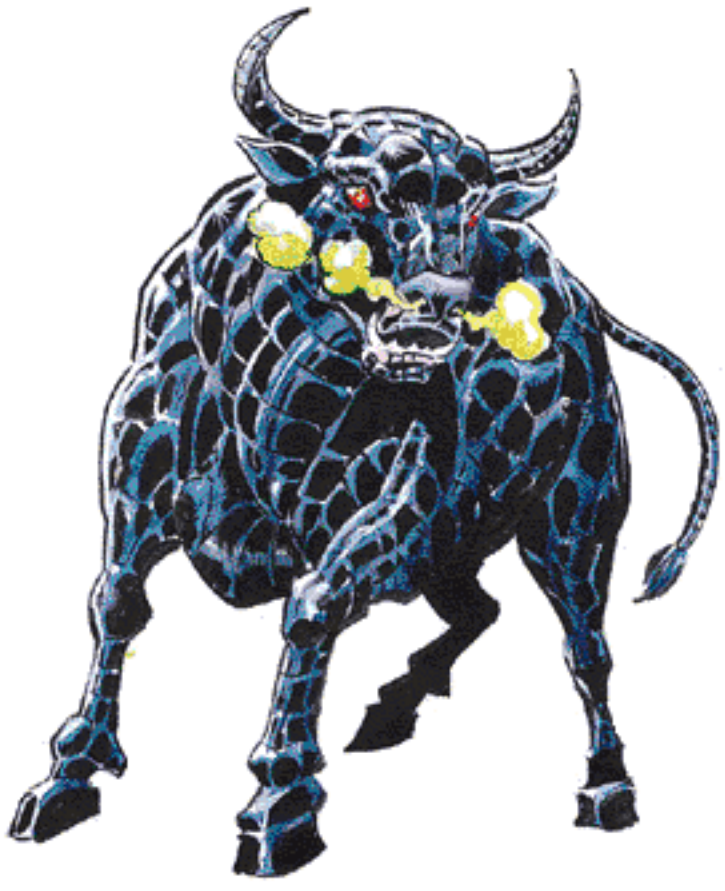
| **Morale:** | Average (8-10) |
| **XP Value:** | 1,400 |



Gorgons are fierce, bull-like beasts who make their lairs in dreary caverns or the fastness of a wilderness. They are aggressive by nature and usually attack any creature or person they encounter.
Monstrous black bulls, gorgons have hides of thick metal scales. Their breath is a noxious vapor that billows forth in great puffs from their wide, bull nostrils. Gorgons walk on two hooves, when necessary, but usually assume a four-hoofed stance. Despite their great size, they can move through even heavy forests with incredible speed, for they simply trample bushes and splinter smaller trees. Gorgons speak no languages but let out a roar of anger whenever they encounter other beings.

**Combat:** Four times per day gorgons can make a breath weapon attack (their preferred means of attack). Their breath shoots forth in a truncated cone, five feet wide at the base and 20 feet wide at its end, with a maximum range of 60 feet. Any creature caught in this cone must roll a saving throw vs. petrification. Those who fail are turned to stone immediately! The awareness of gorgons extends into the Astral and Ethereal planes, as do the effects of their breath weapon.
If necessary (i.e., their breath weapon fails) gorgons will engage in melee, charging forward to deliver a vicious head butt or horn gore. Gorgons fight with unrestricted ferocity, slashing and trampling all who challenge them until they themselves are slain.

**Habitat/Society:** It is believed that gorgons can actually devour the living statues they create with their breath weapon. Whether their flat iron teeth break up and pulverize the stone or their saliva returns the victim to flesh while they eat is a matter for conjecture.
Their primary prey are deer and elk, but gorgons won't hesitate to add other meats to their diet when hungry. Their sense of smell is acute and once they get on the trail gorgons are 75% likely to track their victim successfully. Once their victim is in sight, gorgons let out a scream of rage and then charge. Unless somehow evaded, a gorgon will pursue tirelessly, for days if necessary, until the prey either drops from exhaustion or is caught in the gorgon's deadly breath.
Gorgons have no use for treasure, hence gold and gems are often left petrified on the statue of the being that once wore them. Occasionally a gorgon in his haste will devour something of value; the items will later be left in the gorgon's droppings, somewhere near the entrance to its lair.
Gorgons are usually encountered in groups of three or four -- one male bull with two or three females. Gorgon calves are raised by the females to the age of two, then the young bulls are turned out to make their own way. Females remain with the dominant bull.
About 25% of the time only a single gorgon is encountered. Lone gorgons are always rogue males in search of females.
The forest around a gorgon lair is usually a crisscrossing network of trails and paths they've made. Occasionally there are clearings where the grasses were trampled down in a battle and perhaps the shattered remains of a statue can be found.

**Ecology:** Gorgons have no natural enemies other than themselves. Bull gorgons are often called upon to defend their positions against rogue gorgons. These battles are not usually fatal, but even a gorgon can be felled by a well-aimed horn gore. The only other creature known to hunt these fierce predators is man.
Gorgon blood, properly prepared, can seal an area against ethereal or astral intrusion; their powdered scales are an ingredient in the ink used to create a *protection from petrification* scroll.
In addition, the hide of a gorgon can be fashioned, with considerable work and some magical enhancement, into a fine set of scale mail. This armor will provide the wearer with a +2 bonus to all saving throws vs. petrification or flesh-to-stone spells.

The grell is a fearsome carnivore that looks like a giant brain with a vicious beak and 10 dangling tentacles, each 6 feet long. Some grell are rogues, while others live in family units. The "civilized" grell is a hive or colony creature, much like an ant or a bee, but far more intelligent, arrogant, and dangerous. Grell have a weird language composed of bird-like squawks and chirps, combined with tentacular motion and a limited telepathy with other grell. Other creatures cannot learn the grell language, and they would not deign to learn the language of "lesser beings" (a synonym for "food" in their language).

**Combat:** The grell's most common strategy is to use its natural levitation ability to hide in the upper reaches of large chambers. It can then drop silently on a victim, who suffers a -3 penalty to surprise rolls when attacked in this way.

A worker grell attacks with all 10 tentacles; each one that hits grips the opponent (the grip can be broken with a successful bend bars/lift gates roll). For each hit, the victim must roll a saving throw vs. paralysis, with a +4 bonus, or be paralyzed for 5d4 rounds. With two tentacles gripping the prey, the grell can lift it up toward the ceiling and devour the prey when desired. A grell automatically hits paralyzed prey each round.

Soldier grell often use weapons, including the tip-spear and the *lightning lance.* The tip-spear is an edged metal head which fits on the tip of a tentacle and is held there by suction; the weapon causes 1d6 damage if used to slash, 2d6 if used to impale. Victims hit by a tip-spear must make a saving throw vs. paralysis, as if hit by a tentacle. The *lightning lance* delivers 3d6 points of electrical damage to those hit with it, though a successful saving throw vs. spells halves the damage. A lightning lance starts with 36 charges; it can use one per round.

Any hit against a tentacle (AC 4) renders it unusable, but subtracts no hit points from the grell's total. Grell regenerate lost or damaged tentacles in 1-2 days, and are immune to electrical attacks.

Grell use strategy and tactics in their battles, and can attack more than one opponent each round. They are intelligent enough to allocate their tentacle attacks in an advantageous way. They use their beaks only against paralyzed prey.

**Habitat/Society:** Grell have a distinct hierarchy. Each hive is led by a patriarch, who gives orders to the philosophers, who direct the soldiers and workers in their every day tasks. A hive occupies an underground complex, or travels by ship.

Supposedly, all grell answer to a mysterious Imperator, a grell of great power who can unite all the grell

for a common cause; to conquer a realm, a territory, or even a world.
A grell mates but once in its 30-40 year life span. The female later lays a clutch of 2d4 eggs. Young are born active and self-sufficient, but with only 1 Hit Die. They gain 1 Hit Die every two months until they reach adulthood.

**Ecology:** Arrogant and vicious, grell hunt their territories to exhaustion, then move on to more fertile places.
A grell's paralytic poison cannot be extracted from the creature's body, but parts of the monster's body can be used for spells or items relating to levitation or electricity.

**Soldier/Worker:** These are the common grell that form the bulk of a hive or a raiding party. Occasionally, a grell will become separated from its fellows; these become rogues. Rogues carry no weapons, collect no treasure, and avoid sunlight.

**Philosopher:** These grell serve as intermediaries between patriarchs and workers/soldiers. Some lead lesser grell in combat, and there is one philosopher for every 10 lesser grell encountered. Some philosophers (20%) wear powerful *rings of protection*, giving them AC 0. About 10% of philosophers can cast spells as 2nd-level wizards.

**Patriarch:** Each hive has a patriarch, a huge, sedentary mass of flesh that directs the lesser grell. If the patriarch is taken to a ship, it can dig its many tentacles into the ship and animate it, even make it fly to other worlds.

Often mistaken for imps, gremlins are small, winged goblinoids. There are many varieties of gremlins, and most are chaotic and mischievous. Their skin color ranges from brown to black to gray, frequently in a mottled blend. Their ears are very large and pointed, giving them a 65% chance to *hear noise*. A pair of bat-like wings enables them to fly or glide. Gremlins never wear clothing or ornamentation.

**Combat:** Gremlins are worthless in real combat; at every opportunity they flee rather than fight face-to-face. What gremlins like to do best is cause trouble. The angrier their victims are, the happier the gremlins. Their favorite tactic is to set up a trap to humiliate opponents and maybe even cause them to damage a valued possession or hurt a loved one. If the opponent gets hurt as well, that's just fine. For example, the gremlin may set a trip wire across a doorway that pulls down a fragile vase onto the victim's head. A building infested by a gremlin pack can be reduced to shambles in a single night.
In melee, gremlins have only their weak bite for attacks (1d4 points of damage). They can fly quite well (MC B), but they usually stay close to the ground or well over their opponents' heads, where they are difficult to reach. They can be hit only by magical weapons, and are 25% resistant to magic. Despite these defenses, they are cowards and fight only if cornered.

**Habitat/Society:** Gremlins are magical creatures that originated in an unknown plane of existence. They are highly susceptible to mutation and can interbreed with any goblinoid species. This has resulted in several different gremlin races, each with slightly different abilities and natures.
Gremlins travel in small packs, and they have a highly organized social order. Each gremlin knows who is above him in social rank, and who is below. As a rule, this is ordered by hit points, but an aggressive gremlin with lower hit points may be above larger gremlins in the social standing. Males and females are indistinguishable to all but other gremlins. Both sexes participate equally in all things. Offspring are left to fend for themselves from birth, which they are fully capable of doing. Within a month, the gremlin is a fully matured adult. Fortunately, they do not mate often.
These obnoxious creatures usually look for a building or estate to infest. Although they flee individual combat, they will not leave the building or grounds they infest until it is no longer fun (when everything is broken and the inhabitants have fled), or until their lives are in danger. Since the gremlins take great pains to not be seen, except as fleeting shadows, the inhabitants are frequently convinced that the place is

haunted.

**Ecology:** Gremlins are not a natural part of the ecology. Their immunity to normal weapons protects them from normal predators. Unmolested, they live for centuries.

### Fremlin

These friendly gremlins are quite harmless. They tend to be plump, whiny, and lazy, but otherwise look like small, slate colored gremlins. Occasionally, they become tolerable companions, if they take a liking to someone and are well fed and entertained. Even in this case, they never assist in combat and may in fact hinder it by giving away the location of hiding characters or making other such blunders.

### Galltrit

These nasty little stone-gray creatures live in areas of dung, carrion, or offal. Because of their small size and coloration, they are detected only on a 1 in 8 chance (1 in 6 for elves). They attack anything that disturbs them. Galltrit attempt to gain surprise and bite (with a +3 bonus to the attack roll if they have surprise) somewhere unobtrusive. An anesthetic in their saliva prevents their victims from feeling the bite, rather like a vampire bat.

Once locked on, galltrits suck 1 hit point of blood per round for a full turn, if undisturbed. If challenged in any way, the galltrits flee. This loss of blood reduces the victim's Constitution by 1 point for every 4 hit points of blood lost. If the victim loses 3 or more points of Constitution, usually due to multiple galltrits, he faints from the sudden blood loss. It takes two full turns to awaken and two weeks to regain the lost Constitution points.

### Mite

Mites are tiny, mischievous, wingless gremlins that waylay dungeon adventurers for fun and profit. Mites have hairless, warty skin varying in color from light gray to bright violet. Their heads are triangular, with bat-like ears and a long, hooked nose. Male mites sport a bone ridge down the center of their skulls and short goatee beards. Many wear filthy rags stolen from previous victims. Their voices are high-pitched and twittery, conveying only the simplest ideas to each other; nongremlin races cannot make sense of their language.

Mites try to catch lone travelers and stragglers using pit traps (1d6 points of damage to the victim), nets (successful saving throw vs. paralysis or the victim is caught), and trip wires (successful Dexterity check or the victim falls prone). Mites swarm over prone or netted victims, and pummel them with weighted clubs (2% cumulative chance, per club, of stunning the victim, but only if the victim is in armor worse than splint mail). The mites bind their unconscious victims head and foot, and drag them into their lair. Once inside the lair, the victims are teased and chattered at for one to four days until the mites get bored. The mites then stun their victim again, steal all their possessions and deposit them at a random place -- often one that causes the victims great discomfort or embarrassment.

Mite lairs consist of dozens of interconnecting corridors built above and below main dungeon corridors. Numerous entrances connect the mite tunnels to the dungeon, but all are hidden by carefully placed stones (check for secret doors to find a mite tunnel entrance). Mite corridors are tiny by human and demi-human standards; man-sized and larger creatures suffer a -4 attack roll penalty and a +4 Armor Class penalty when fighting in a mite tunnel.

Mites are small and quick. They scurry to and fro through their tunnels, stopping briefly to spy on the main tunnel, always chattering and twittering to themselves.

Deep inside the mite tunnel system is a single, large chamber with a low-ceiling. The mite king lives

here, sitting on his tiny throne, dressed in baggy clothes stolen from previous victims. The mite king is a fierce (by mite standards) warrior with 1+1 Hit Dice. His bite causes 1d4 points of damage. Also in the chamber are 4d6 mite females and 4d6 mite children. The women have 1-2 Hit Dice and bite for 1-2 points of damage. The children are non-combatants.
The chamber itself is filthy and strewn with captured weapons, armor, and clothes. Coins and such are carelessly thrown about, but mites love bright, shiny gems. These are kept by the king, who is allowed to play with them anytime he wants. Mites are mischievous and curious. They pore for hours over every little stolen item, poking and prodding, bending and tasting, until either they grow bored, or, more likely, the item breaks. They delight in wearing clothes several dozen sizes too large. Mites are fond of bones, and they sometimes drag the skulls of great monsters into their lair.
Mites hunt vermin and other pests, but they love to eat iron rations which they consider a delicacy. Mites are viewed as bite-sized snacks by most monsters. Evil giants sometimes feature them as appetizers.

## Snyad

Snyads are distant relatives of mites. Their love of treasure often compels them to steal from humans and demihumans. Snyads resemble mites, but they are slightly larger (2½ feet tall), have full, though messy, heads of hair, and are light brown in color.
Snyads speak no known language but seem to communicate with mites successfully. These two creatures sometimes team up, with the mites distracting the victim, while the snyads dart in and grab things.
Snyads steal with great skill, surprising their targets 90% of the time, often snatching items directly from a person's hand (the victim gets a successful Wisdom check to hold onto the item), then zipping back into their holes and hiding until the pursuers leave. Spotting the entrance to a snyad lair requires a successful search roll: a 1-in-3 chance for elves and a 1-in-4 chance for all others.
Snyads never attack, relying on their amazingly quick reflexes to escape combat. They are not particularly strong, and any human or demi-human character with a Strength greater than 11 can capture a snyad with a successful attack roll. Captured snyads kick and scream, squirming and twisting to get away, but never bite, (for fear that the captor might bite back). Because of their high Dexterity, snyads gain a +3 bonus to their saving throws vs. non-area-effect spells. Snyads live in immediate families, marrying for life.

# Gremlin, Jermlaine

| | |
|---|---|
| **Climate/Terrain:** | Subterranean |

| **Size:** | T(1'+) |
| **Morale:** | Steady (12) |
| **XP Value:** | Normal: 15 |
| | Elder: 65 |

Jermlaine are a diminutive humanoid race that dwells in tunnels and ambushes hapless adventurers. They are known by a variety of names such as jinxkin or bane-midges.
Jermlaine appear to be tiny humans dressed in baggy clothing and leather helmets. In fact the "clothing" is their own saggy skin and pointed heads. The limbs are knottily muscled. The fingernails and toenails

are thick and filthy, although the fingers and toes are very nimble. Their gray-brown, warty hide blends in with natural earth and stone. When they wear rags or scraps as clothing, such items are also camouflage colored.
They speak in high-pitched squeaks and twitters. This speech may be mistaken for the sounds of a bat or rat. They can also converse with all sorts of rats, both normal and monstrous. Each jermlaine has a 10% chance to understand common, dwarvish, gnomish, goblin, or orc (roll separately for each language).

**Combat:** Jermlaine are cowards who have made an art of the ambush. They only attack when they feel there is no serious opposition. They prefer to attack injured, ill, or sleeping victims. They avoid directly confronting strong, alert parties, although they may try to injure them out of sheer maliciousness.
Jermlaine possess weak eyes and infravision that only extends for 30 yards, but their keen smell and hearing enable them to detect even invisible creatures 50% of the time. Jermlaine move silently and quickly, with a scuttling gait (this stealth causes opponents to suffer a -5 penalty to their surprise rolls). They are 75% undetectable, even if listened or watched for, unless the jermlaine purposefully reveal their presence.
Jermlaine typically arm themselves with needle-sharp darts; they can hurl these 120 yards for 1-2 points of damage. They also carry a miniature pike; these 1½-foot-long sticks with sharp tips inflict 1d4 points of damage. If the jermlaines are out to capture a victim, they are also armed with blackjacks.
The jermlaines' favorite tactic is capturing victims with nets or pits. In little-used passages the creatures prepare pits covered by camouflaged doors or string nets overhead. In more-traveled passages, the jermlaine stretch trip cords. When a victim falls afoul of a trap, the jermlaine swarm over him. Some pummel him with blackjacks while others tie him with ropes and cords. Such beatings have a cumulative 2% chance per blow of causing the victim to lapse into unconsciousness. If a victim is wearing splint, banded, or plate mail, these pummeling attacks are ineffective. Knowing this, the jermlaine attack well-armored victims with acid or flaming oil missiles.
Slain victims and 5% of subdued victims are later devoured by the jermlaine and their rats. Most captives are robbed, stripped, shaved totally hairless, and left trussed in a passageway. If an unsuspecting victim pauses near a lurking band of jermlaine, they dart out and cut straps, belts, packs, and pouches. Each jermlaine in the band makes one such attack before fleeing back into the shadows. Such attacks are usually not noticed till 1d12 turns later, when the slashed items begin to fall apart. They also try to steal, damage, or befoul victims' possessions.
When encountered, 25% of jermlaine are accompanied by 1d6 rats and 50% are accompanied by 1d6 giant rats (only one type of rat per group of jermlaine). Groups of 35 or more jermlaine are accompanied by an elder -- a very old jermlaine with the magical ability to drain the magic from most magical items if he can handle such an object for 1d4 rounds. Artifacts and relics are immune to such attacks.
Jermlaine are treated as 4-Hit Die monsters for purposes of saving throws and magical attacks. Due to their diminutive size, they escape all damage from attacks that normally do half damage if the saving throw is successful.

**Habitat/Society:** Jermlaine are extremely distant relatives of the gnomes. Their deeply rooted sense of inferiority at their own diminutive size has become a malicious need to humiliate normal-sized humanoids. They make a good living preying on hapless adventurers, who provide riches, sadistic amusement, and an occasional meal. Jermlaine acquire a wide variety of treasure, although such items tend to be small objects.
The jermlaine life span is one third that of humans. Reproduction is identical to other humanoids,

although cross breeding is impossible. Jermlaine females give birth to one or two babies at a time. Most (75%) of the offspring are male, although the dangers of their hostile life reduces the male numerical superiority to an even male-female mix among the adults.
Jermlaine society is divided among clans whose members are united by blood. Each clan consists of 4d4 families. The clan chief is normally the strongest or most clever of the elders. The chief both instructs the young jermlaine in the art of the ambush and leads important attacks (albeit from a secure location in the rear). The families center around the mothers, as the fathers may be unknown, off hunting, or dead. If a female jermlaine has dependent children, she normally concentrates on raising such children rather than participating in attacks. As the children mature, she and the clan chief take the young on practice attacks on potential victims and participate in the humiliation of captives.
Jermlaine lairs are cunningly hidden and physically impassable by most humanoids, as they are usually a series of small chambers and tunnels scaled to their tiny occupants. The typical jermlaine lair is a filthy cave or burrow a short distance from a larger cavern complex. The only areas that can be easily reached by a human-sized being are the areas in which living captives are held and dead victims butchered for food. Access past this area is controlled by small, one-foot-high corridors or thin, normally impassable cracks in the rock walls. The corridors lead directly to living areas and communal chambers. The living areas are furnished with crude furniture and items scavenged from past victims.
Each jermlaine family has a personal section that half resembles a nest, half a junk yard. Treasures are concealed throughout the lair. Each family maintains a series of small, personal caches, while the communal hoard is hidden in a series of small chambers at the end of cunningly concealed crawl ways. No one larger than a jermlaine can reach such treasure chambers.
Jermlaine get along well with rats of all types. They can speak all rat-related languages. They are 75% likely to be accompanied by rats and 50% likely to share their lair with rats. This cohabitation extends to all forms of mutual cooperation and defense. There is a 10% chance that the jermlaine colony has a mutual cooperation pact with osquips rather than normal rats.
The diet is an omnivorous mixture of insects, fresh meat, carrion, fungi, and molds. Humanoids are a delicacy reserved for special occasions. Lizards form the bulk of the meat intake. Jermlaine cherish foods from the surface, even the hardtack and iron rations carried by adventurers. If the jermlaine can identify which of the adventurers' bags carry food, these are stolen as enthusiastically as the treasure pouches. Jermlaine have a fondness for rarities such as sugar, candy, and preserved fruits. Such items can be used to entice the normally malevolent jermlaine to leave an adventurer alone, at least temporarily.

**Ecology:** Jermlaine are opportunistic brigands who prey on unwary travelers in the subterranean regions. They are well aware of any such travelers, including a party's size, composition, and general condition. Jermlaine may be persuaded, for a suitable fee, to share such knowledge with adventurers.
Jermlaine may deal with "giants" (any race bigger than they are) if they are bribed or given access to a plentiful flow of victims or riches. They never ally themselves with truly good-aligned adventurers, although they may, in a moment of craftiness, pretend to enter such an alliance. Regardless of their spoken intentions, 75% of jermlaine eventually either lie to or turn against their larger "allies." They may make their lairs near the established territories of such races as drow, trolls, or troglodytes. Although they are careful to avoid direct conflict with such evil beings, the jermlaine happily prey on the victims of their neighbors, as well as scavenging the scenes of their neighbors' battles. Jermlaine may act as watchmen for their neighbors, provided suitable terms can be agreed upon.
They unintentionally act as garbagemen, cleaning the subterranean regions. Dead animals may be used as food or supplies, while dead humanoids are taken away to be searched for valuables or used as food. Because of this, adventurers seeking the remains of a slain companion may seek out the local jermlaines

since they may be aware of where the remains are located.

| **XP Value:** | 650 |

Half-lion, half-eagle, griffons are ferocious avian carnivores that prey upon horses and their kin (hippogriffs, pegasi, and unicorns). This hunger for horseflesh often brings griffons into direct conflict with humans and demihumans.

Adult griffons stand five feet at the shoulder and weigh over half a ton. Their head, upper torso, and forelegs are like those of a giant eagle. This eagle half is covered in golden feathers from its wing tips to its razor-sharp beak. Their powerful forelimbs end in long, hooked talons. Wings, with a span of 25 feet or more, rise out of their backs. The lower half of a griffon is that of a lion. Dusky yellow fur covers the lion half's muscular rear legs and clawed feet. A lion's tail hangs down from the griffon's powerful rear

haunches. Griffons speak no languages, but emit an eagle-like screech when angered or excited (usually by the smell of horse).

**Combat:** Griffons hunt in groups of 12 or less, searching the plains and forests near (within 20 miles) their lair for horses and herd animals. With their superior vision and sense of smell, griffons can spot prey up to two miles distant. If the prey is horse or horse-kin, griffons are 90% likely to attack even if the horses have riders. Griffons hunt only for food, so a rider who releases one or two horses can usually escape unharmed (though in all likelihood his horse won't). Any attempt to protect a horse brings the full fury of the attacking griffons on the protector.

When attacking ground targets, griffons use their great size and weight to swoop down from above and raking their opponent with the talons before landing nearby. Griffons always fight to the death if there is horseflesh at stake.

In aerial combat, griffons are equally fierce, lunging into battle and tearing at their opponent until they or their prey are dead. Many a griffon has plummeted to its death with a struggling hippogriff caught firmly in its grasp.

**Habitat/Society:** Griffons prefer rocky habitats, near open plains. Once griffons establish their territory, they remain until the food supply has been exhausted.

Griffons, like lions, live in prides, with each pride comprising several mated pairs, their young, and one dominant male. The dominant male is responsible for settling territorial disputes with other prides and choosing the direction the hunt will take.

Each pair of mated griffons in the pride has its own nest, located near the pride's other lairs. Griffon nests are usually situated in shallow caves, high along a cliff face.

The nests are made of sticks and leaves, as well as an occasional bone. Griffons collect no treasure, but their caves frequently contain the remains of unfortunate travelers who tried to protect their horses from the griffons.

During spring, female griffons lay one or two eggs that hatch in the late summer. For the first three months griffon young are known as hatchlings; thereafter, until they mature the young are called fledglings. Griffon young grow rapidly for three years until they are large enough to hunt with the pride. Adult griffons are extremely protective of their young and attack without mercy any creature that approaches within 100 feet of the nest.

**Ecology:** If trained from a very early age (three years or less), griffons will serve as mounts. The training, however, is both time-consuming and expensive, requiring the expertise of an animal trainer for two years. Once trained, though, griffons make fierce and loyal steeds, bonding with one master for life, and protecting him even unto death. A griffon mount knows no fear in battle, but attacks any horse or horse-kin in preference to other opponents.

Acquiring a griffon fledgling is a very dangerous venture as the adults never stray far from the nest and fight to the death to defend eggs or young. Any given griffon nest is 75% likely to contain one or two fledglings or eggs. Fledgling griffons sell for 5,000 gold pieces on the open market; eggs sell for 2,000 gold pieces each.

# Grimlock

| | |
|---|---|
| **Climate/Terrain:** | Any/Mountainous |
| **Frequency:** | Uncommon |
| **Organization:** | Tribal |

| **Alignment:** | Neutral Evil |
| **No. Appearing:** | 20-200 |
| **Armor Class:** | 5 |
| **Movement:** | 12 |
| **Hit Dice:** | 2 (and see below) |
| **THAC0:** | 19 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-6, or by weapon type |
| **Special Attacks:** | Nil |
| **Special Defenses:** | See below |
| **Magic Resistance:** | Special |
| **Size:** | M (5½'-6' |
| **Morale:** | Steady (11) (and see below) |
| **XP Value:** | Normal: 35 |
| | Leader: 120 |
| | Champion: 175 |

Powerfully-built humanoids clad only in dark, filthy rags, these warlike subterranean creatures emerge from their deep caverns at night to search for unlucky humans to add to their larders.
Grimlocks have thick, scaly, grey skin and long, black, filthy hair. Their teeth are white and extremely sharp. Their eyes are blank white orbs.
Grimlocks are totally blind, but have highly developed senses of smell and hearing. Their sensitive ears and noses combine to allow them to distinguish objects and creatures within 20', just as well as if they were able to see.

**Combat:** Grimlocks are immune to the effects of spells which affect the vision. These include *phantasmal force, darkness, invisibility, mirror image,* and many others. However, spells such as *audible glamer*, or any loud, continuous noise will partially "blind" them. This reduces their ability to perceive opponents to a 10' range and makes them -2 on their attack rolls. Substances such as snuff or strong perfumes will have much the same effect if inhaled by a grimlock or thrown in its face.
Grimlocks attack fiercely, but with little or no organization, often stopping in the middle of battle to carry off fallen foes or comrades for food. For every 10 grimlocks encountered, there will be a leader of 3 Hit Dice and AC 4, for every 40 there will be a champion of 4 Hit Dice and AC 3. These exceptional individuals will usually be the only ones to show even the most elemental strategy, usually by allowing their followers to weaken opponents before entering battle themselves.
Grimlocks will nearly always attack in darkness if possible. While not adversely affected by light, they are intelligent enough to realize that in total darkness, their unique form of perception gives them a distinct advantage.
Though able to attack with their hands (for 1-6 hp damage), grimlocks prefer edged weapons and will usually (90% chance) be armed as follows: hand-axe, 20%; battle-axe, 15%; two-handed sword, 15%; bastard sword, 15%; broad sword, 15%; long sword, 20%.
Leaders or champions will always be armed with a battle-axe or two-handed sword.
Grimlocks, whether normal, leader, or champion, make all saving throws as 6th-level fighters. Grimlocks gain a +1 on surprise rolls, since their acute hearing allows them to communicate in voices too faint for other races to hear. In addition, their morale is raised by 1 for every leader or champion with the group.

**Habitat/Society:** Grimlocks lair in vast cavern complexes in mountainous areas. They are well adapted to these environs. In any rocky terrain they blend in so well that, while motionless, they are completely undetectable -- unless one actually bumps into them. In any grimlock lair, there will be nearly as many females (1 Hit Die and AC 6) as males, and at least as many young (1 hit point, AC 6 and non-combatant). Grimlock leaders and champions do wield some control over these communities. However, this control is usually effective only as long as the leader who gave the order is around to enforce his will. It is nearly impossible for those of other races to tell one grimlock from another -- although leader types may appear slightly larger -- but they easily tell each other apart by subtle differences in scent and movement.
Extremely xenophobic, grimlocks rarely consort with other races. However, there is a small (10%) chance that they will allow medusae to share their lairs, and a 2% chance that any wandering group will be accompanied by 1-2 mind flayers.

**Ecology:** Grimlocks will only eat the raw flesh of humanoid creatures, vastly preferring that of humans to all others. Foraging parties often raid the homes of other subterranean races, especially those who keep large slave populations (such as drow). They are often on good terms with mind flayers since illithids have a large supply of humanoid bodies discarded after they have devoured the brains. Grimlocks are particularly hated by githyanki for this reason. Since the slave flesh the grimlocks often consume (raw) is frequently unwholesome, whole communities are often decimated by disease.

# Grippli

| | |
|---|---|
| **Climate/Terrain:** | Tropical/Swamps and jungles |
| **Frequency:** | Rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Day |
| **Diet:** | Omnivore |
| **Intelligence:** | Very to high (11-14) |
| **Treasure:** | Qx4, I |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1-10 |
| **Armor Class:** | 9 |
| **Movement:** | 9, leap 15 |
| **Hit Dice:** | 1+1 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-4 (weapon) |
| **Special Attacks:** | -3 penalty to opponents' surprise |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | S (2½' tall) |
| **Morale:** | Average (8-10) |
| **XP Value:** | Normal: 65 |
| | Mates: 175 |
| | Tribe mother: 270 |

Grippli resemble small, intelligent, humanoid tree frogs. They are have a primitive culture and are nonaggressive.

They stand 2½ feet tall and weigh 25 to 30 pounds. Their bodies are shaped like those of frogs, except for the human-like hands and hand-like feet. Their eyes are yellow with vertical slit pupils. Their skin is gray-green with camouflage stripes and swirling patterns. Although their skin looks wet and shiny, it is actually dry to the touch. Grippli smell of old, wet vegetation.

They love bright colors and eagerly acquire any such items. They wear clothing only for decoration or for a particular functional purpose, such as for pockets. A normal encounter with grippli outside of the village finds them wearing only thin belts or loin cloths to hold weapons or acquired items.
They speak a language of croaks, groans, clicks, and squeaks. In a tribe there is usually at least one member that can speak either common, elvish, or some other jungle humanoids' language. When speaking any language but their own, they are barely understandable because of the croaking resonances in their speech.

**Combat:** Because of the grippli's coloring, opponents suffer a -3 penalty to their surprise rolls. Grippli defend themselves with snares, nets, poisoned darts, and the occasional sword or dagger. Any metal weapons must be manufactured elsewhere for the grippli, so swords are rare. They can adapt to use any weapons, and they have been known to use spears and blowguns on rare occasions. They never wear armor. Generally speaking the grippli prefer small weapons that don't get in the way of climbing.
A grippli can climb trees or non-sheer rock at its normal movement rate, thanks to its unusual hands and feet. When keeping still among vegetation, a grippli's natural camouflage causes a -3 penalty to its opponents' surprise rolls. They have infravision good up to 10 yards, which means they can operate at night almost as well as during the day.
They are very capable of formulating strategies and tactics to overcome a larger, more powerful force. Grippli prefer ambushes and traps to most other strategies. By trapping their opponents in snares and nets, they can hurl darts at them safely from high in the trees. If unprovoked, they attack only to steal various brightly colored baubles.

**Habitat/Society:** A grippli tribal village is made of small huts of wood and mud built on the ground, in the deep shadows of large trees. On rare occasions, a grippli village is found in the strong limbs of the trees. Each village is led by a tribe mother (AC 7, HD 3, 1d6+1 points of damage with a weapon). Once per day the tribe mother can emit a musk cloud, which is treated as a *stinking cloud* spell. She looks like any other grippli, except for being almost four feet tall. She has 1d3 mates of larger than normal size (AC 8, HD 2, 1d4+1 points of damage with poisoned weapons), standing three to three-and-a-half feet tall. The tribe mother is supposed to have a touch of the blood of their god in her.
A typical village has 5d6 males capable of defending it. There are an equal number of noncombatant females and 1d6 offspring, also noncombatants. They have basic family units, just like humans, and each family has its own hut. The tribe mother's hut doubles as a temple to their small, frog-like deity. Other deities in the pantheon include evil snake gods and spider goddesses.
Their natural high intelligence enables them to learn new devices and weapons quickly and easily. As a race they have no desire to manufacture such items themselves. However, they will trade for them with other races. Trade items usually include rare fruits or other hard-to-get jungle specimens. They are extremely cautious and only develop trade relations with groups that they trust completely, such as good elves or the rare village of good humans in their area.

**Ecology:** Grippli eat fruit and insects. They trap small insects in large quantities and hunt the giant varieties like humans hunt stags. They are in turn hunted by most large, ground- and tree-based predators. Giant snakes and spiders in particular are fond of grippli as meals.
Grippli are rare in the world, mostly because of their low birthrate. They live to be 700 years old, but give birth to only six or so young in that time. Because of this, the grippli defend their young ferociously.

Hags are witchlike beings that spread havoc and destruction, working their magics, and slaying all whom they encounter.
Hags appear as wretched old women, with long, frayed hair and withered faces. Horrid moles and warts dot their blotchy skin, their mouths are filled with blackened teeth, and their breath is most foul. Though wrinkled and skinny, hags possess supernatural strength and can easily crush smaller creatures, such as goblins, with one hand. Similarly, though hags look decrepit, they run swiftly, easily bounding over rocks or logs in their path. From the long, skinny fingers of hags grow iron-like claws. Hags use these claws (and their supernatural strength) to rend and tear at opponents in combat. Their garb is similar to that of peasant women, but usually much more tattered and filthy.

**Combat:** The combat abilities of hags vary with each type (see below for details), but all hags possess the following: 18/00 Strength or greater, some level of magic resistance, and the spell-like ability to *change self* at will. Hags use this last ability to attract victims, frequently posing as young human or demihuman females, helpless old women, or occasionally as orcs or hobgoblins. A disguised hag reveals her true form and leaps to the attack when weak opponents come near. Against well armed and armored parties, hags maintain their disguise and employ further trickery designed to place the intended victim in a more vulnerable position. This trickery can take any of several forms, including verbal persuasion, leading the victim into a prearranged trap, and so on.
The one weakness of hags is their arrogance. Hags have great disdain for the mental abilities of all humans and demihumans and, though hags are masterful employers of disguise, clever characters may be able to glean a hag's true nature through conversation.

**Habitat/Society:** Hags live alone or in coveys of three. They always choose desolate, out-of-the-way places in which to dwell. They sometimes coexist with ogres or evil giants. The former act as servants or guards for hags, but giants are treated with respect (for obvious reasons) and often cooperate with hags to accomplish acts of great evil against the outside world.
While individually powerful, hags are much more dangerous when formed into a covey. A covey is composed of three hags of any combination (e.g., two annis and a green hag, three annis, etc.). Coveys have special powers that individual hags don't possess. These powers include the following spells: *curse*, *polymorph other*, *animate dead*, *dream*, *control weather*, *veil*, *forcecage*, *vision*, and *mind blank*. Covey spells can each be used once per day, and take effect as if they were cast by a 9th-level spellcaster. To cast one of these spells, the members of the covey must all be within 10 feet of each other and the spell

being cast must be in lieu of all other attacks.
Coveys never cast these spells in combat, instead these spells are used to help weave wicked plots against neighboring human or demihuman settlements. A common ploy by coveys is to force or trick a victim into performing some heinous deed. This deed usually involves bringing back more victims, some of whom are devoured by the hags; the rest are used on further evil assignments. Any creature fortunate (or unfortunate) enough to resist a covey is immediately devoured.
A covey of hags is 80% likely to be guarded by a mixture of 1d8 ogres and 1d4 evil giants. Coveys often use one or two of their ogres as spies, sending them into the world beyond after polymorphing them into less threatening creatures.
These minions frequently (60%) wear a special magical gem called a *hag eye*. A *hag eye* is made from the real eye of a covey's previous victim. It appears to the casual observer to be no more than a low-value gem (20 gp or less), but if viewed through a *gem of true seeing*, a disembodied eye can be seen trapped in the hag eye's interior. This hidden eye is magically connected to the covey that created the *hag eye*. All three members of the covey can see whatever the *hag eye* is pointed at. *Hag eyes* are usually placed on a medallion or brooch worn by one of the hag's polymorphed servants. Occasionally *hag eyes* are given as gifts to unsuspecting victims whom the hags want to monitor. Destroying a *hag eye* inflicts 1d10 points of damage to each member of the covey that created it, and one of the three hags is struck blind for 24 hours.
Hags commonly inhabit bone-strewn glens deep within forests. There is an 80% chance that hags are keeping one or two captives in a nearby earthen pit or *forcecage*. These prisoners are held for a purpose known only to the hags themselves, though it will certainly involve spreading chaos into the outside world. Prisoners kept in a pit are guarded by an evil giant or one to two ogres; those in a forcecage are left alone.

**Ecology:** Hags have a ravenous appetite and are able to devour man-sized creatures in just 10 rounds. They prefer human flesh, but settle for orc or demihuman when necessary. This wanton destruction has earned hags some powerful enemies. Besides humanity in general, both good giants and good dragons hunt hags, slaying them whenever possible. Still, hags multiply rapidly by using their *change self* ability to appear as beautiful maidens to men they encounter alone. Hag offspring are always female. Legends say that hags can change their unborn child for that of a human female while she sleeps. They further state that any mother who brings such a child to term is then slain by the hag-child she carries. Fortunately, such ghastly tales have never been proven.
Hags hoard fine treasure, using the jewelry and coins to decorate the bones of their more powerful victims, and the finer gems (500 gp value or higher) to manufacture magical *hag eyes*.

## Annis

The largest and most powerful of all the hags, annis stand seven to eight feet tall. Their skin is deep blue in complexion, while their hair, teeth, and nails are glossy black. The eyes of an annis are dull green or yellow. Annis have normal infravision (60-foot range), but superior hearing and sense of smell. Annis are surprised only on a 1 on 1d10.
An annis attacks using its talons and teeth to inflict horrible wounds. In melee, annis tend to close and grapple. An annis that hits an opponent with all three of its attacks in one round has successfully grappled its opponent. Next round, all attacks by the annis are automatic hits, unless the opponent is stronger, the annis is slain, or the victim uses some magical means to escape the hag. Otherwise, the annis will continue to hold the victim in its grasp, and deliver damage with its raking talons and

sharpened teeth each round until the victim is slain.
In addition to normal attacks, annis have the ability to cast *fog cloud* three times per day. This spell is used to confuse resistance or to delay attack by a superior foe. Annis can also *change self* like all hags, appearing as a tall human, ogre, or even a small giant. These spells are cast at 8th level for purposes of determining spell range, duration, etc.
The skin of an annis is iron-hard; thus edged weapons cause 1 less point of damage when they hit these hags. Conversely, blunt weapons (including morning stars) cause 1 additional point of damage against an annis.
Annis speak their own language, as well as ogre, all evil giant tongues, and some common. Some of the most intelligent annis can speak common fluently and know a smattering of various demihuman languages. Annis are believed to live for 500 years.

### Greenhag

These wretched creatures live in desolate countryside and amid dense forests and swamps. Greenhags, as their name implies, have a sickly green pallor. Hair color ranges from near black to olive green, and their eyes are amber or orange. Their skin appears withered but is hard and rough like the bark of a tree. Due to their coloration and their ability to move with absolute silence, greenhags impose a -5 penalty to an opponent's surprise roll when in a forest or swamp. They have superior hearing, smell, and sight, including infravision (90-foot range). They are only surprised on a roll of 1 on the 1d10 surprise roll.
Rock-hard talons grow from the long, slender fingers of greenhags. They use these talons to slash and rend their opponents. Smaller than their annis cousins, greenhags nonetheless possess Strength equivalent to that of an ogre (18/00). Because of their great Strength, all their attack rolls gain a +3 bonus and all hits receive a +6 damage bonus.
Greenhags can cast the following spells at will, one spell per round: *audible glamor, dancing lights, invisibility, pass without trace, change self, speak with monsters, water breathing*, and *weakness*. Each spell is employed at 9th level of ability.
To lure victims, greenhags typically use their mimic ability. This enables them to imitate the voice of a mature or immature male or female, human or demihuman. Calls for help and crying are common deceptions employed by greenhags. They are also able to mimic most animals.
Greenhags speak their own language (a dialect of annis) as well as all demihuman languages and common. These are the longest lived of all hags -- they can live for up to 1,000 years.

### Sea Hag

These, the most wretched of all hags, inhabit thickly vegetated shallows in warm seas and, very rarely, overgrown lakes. Warts, bony protrusions, and patches of slimy green scales dot their sickly yellow skin. Their eyes are always red with deep, black pupils. Long, seaweed-like hair hangs limply from their heads, covering their withered bodies.
Sea hags hate beauty, attempting to destroy it wherever it is encountered. Sea hags can *change self* at will, and often use this ability to draw their victims within 30 feet before revealing themselves. The true appearance of a sea hag is so ghastly that anyone viewing one of these hags grows weak from fright unless a successful saving throw vs. spell is rolled. Beings that fail their saving throw lose ½ of their Strength for 1d6 turns. Worse still, sea hags can cast a deadly glance up to three times a day. This look affects one creature of the sea hag's choosing within 30 feet. To negate the effects of this glance, the victim must successfully save vs. poison. If the saving throw is failed, the victim either dies immediately from fright (25% chance) or falls stricken and is paralyzed for three days (75% chance). Few who survive the glance live to tell of it, for sea hags quickly devour their helpless victims.

Sea hags always use their deadly glance as their primary form of attack; they will melee, but only if they have the advantage of numbers. Unlike other hags, sea hags use daggers in combat, receiving a +3 bonus to their attack roll and a +6 damage bonus, due to their ogre-like Strength.
Sea hags speak their own language as well as common and the languages of annis, and sea elves, and live for 800 years.

Halflings are a hard-working race of peaceful citizens. Their communities are similar to those of humans, although they usually contain many burrow homes in addition to surface cottages.
Halflings average 3 feet in height, have ruddy complexions, with sandy to dark brown hair, and blue or hazel eyes. Their dress is often colorful but serviceable, and they like to wear caps or tunics. In addition to their own language, many halflings also speak the common tongue, gnome, goblin, and orcish.

**Combat:** Halflings will fight with great ferocity in defense of good or their homes. They are very skilled with both the sling and the bow (receiving a +3 bonus on all attack rolls) and use these weapons to great advantage in battle. Their tactics often involve feints to draw their attackers into the open where they can be subjected to a volley of fire from cover.
When equipped for battle, halflings wear padded or leather armor. A halfling force is usually armed with short swords and hand axes. In addition, two-thirds of the halflings will be carrying either a sling or short bow.
All halflings above normal level will have Armor Class 6, while those of 3rd or 4th level wear chain mail over their leather (AC 4). Higher level halflings have a 10 percent chance per level of having a magic weapon or armor.
As all halflings are naturally resistant to magic and poisons -- they save at 4 levels above their actual level. In addition, halflings are exceedingly clever at quiet movement and hiding. In combat, their opponents receive a -5 on their surprise roll. In natural terrain halflings are considered *invisible* when they are hiding in vegetation.

**Habitat/Society:** Halfling villages will generally have between 30 and 300 (30d10) individuals living in them. For every 30 halflings in a particular community there will be two 2nd-level fighters and a 3rd-level priest. If more than 90 halflings are encountered there will be an additional leader of 3rd-level fighting ability. If more than 150 are encountered there will also be the following additional halfling warriors in the group: one 9th-level fighter, two 4th-level fighters and three 3rd-level fighters. Further, a community of 150 halflings will have a 5th-level priest.
Cheerful and outgoing, halflings, take great pleasure in simple crafts and nature. Their fingers, though short, are very dexterous allowing them to create objects of great beauty. Halflings shun water and extremes in temperature, preferring to settle in temperate pastoral countrysides. They get along well with humans and receive a +2 bonus to all their Reaction Rolls involving human NPCs.

**Ecology:** Halflings hunt occasionally, but prefer breads, vegetables and fruits, with an occasional

pheasant on the side. They have a life expectancy of 100 years on the average.

### Tallfellow

A taller (4'+) and slimmer halfling with fair skin and hair, tallfellows are somewhat rare among the halfling folk. Tallfellows generally speak the language of elves in addition to those listed previously and greatly enjoy their company. In combat, tallfellows often ride ponies and carry spears or small lances. Tallfellows of strength 17 or more can rise to 6th level fighting ability. They live 180 years on average. Like elves, a tallfellow can recognize a secret door on a roll of 1 on a 1d6. All tallfellows receive a +2 bonus to surprise rolls when in forest or wooded terrain.

### Stout

These halflings are shorter and stockier than the more common hairfoots. Stouts take great pleasure in gems and fine masonry, often working as jewelers or stone cutters. They rarely mix with humans and elves, but enjoy the company of dwarves and often speak their language fluently. Like dwarves, stouts have infravision (60'), a 75% chance to detect sloping passageways, and a 50% chance of determining direction when underground. Stouts with a strength score of 17 or better can work their way up to the 9th-level of fighting ability. Their ties with the dwarven folk have spilled over into their combat tactics, with many stouts employing hammers and morningstars in combat. Stouts also have no fear of water and, in fact, many are excellent swimmers. Stouts can reach an age of 140 or more years.

# Harpy

| | |
|---|---|
| **Climate/Terrain:** | Temperate, tropical land or coast |

| **Size:** | M (6') |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 975 |

Harpies are wicked avian beasts that prey upon nearly all creatures but prefer the flesh of humans and demihumans.

Harpies have the bodies of vultures but the upper torsos and heads of women. Their human features are youthful, but hideous, with frayed unkempt hair and decaying teeth. A foul odor surrounds all harpies and that which they touch. Harpies never bathe nor clean themselves in any way. Their dress, if anything, is limited to tattered rags and shiny trinkets taken from previous victims.

The language of harpies, in contrast to their enticing song, is a horrible collection of cackles and shrieks. Although there are instances of harpies which could speak the languages of other creatures, these are few and far between.

**Combat:** The song of the harpies has the ability to charm all humans and demihumans who hear it (elves are resistant to the charm). Those who fail their saving throw versus spell will proceed towards the harpy with all possible speed, only to stand entranced while the harpy slays them at its leisure. This charm will last as long as the harpy continues to sing. Harpies can sing even while engaged in melee.
It is impossible to fend off a harpy song simply by clasping hands over ears because the charm takes effect the moment the first note is heard. Characters making prior preparations to block out the sound, (wax in ears, etc.), are immune to the effects of the song. In addition, characters who make their saving throw are thereafter immune to its effect, until such time as they encounter a different group of harpies.
If forced to fight, harpies can do so quite effectively by delivering a vicious bite and raking simultaneously with their talons. About 50% of all harpies encountered will use weapons, usually a bone club (damage 1-8) which they wield surprisingly well.
The touch of a harpy upon a charmed individual has a similar, though somewhat less potent, effect. Those who are touched and miss their saving throw versus spell will stand mesmerized for 20+1d10 hours.
The effect of either charm is broken if the harpy is slain.

**Habitat/Society:** Harpies make their home upon coastlines in regions near shipping lanes and by well-traveled paths. There they use their song to lure travelers to their doom.
Their lair is usually a shallow cave, which they defile until no animal dare approach it. Here they remain unless hunting. Harpies often carry victims back to their lair to devour them in more familiar surroundings.
Harpies have little use for treasure, other than the shiny baubles which they often attach to their clothes. Other items, such as gold and weapons, are frequently interspersed amongst the filth and bones that litter the cave. This refuse can reach a depth of several feet in the oldest of harpy lairs.
A typical harpy lair houses about a half-dozen of these wretched creatures. No male harpies have ever been seen and it seems that harpies can reproduce at will by laying a single egg every other year. Harpies take no care of their young, which live off carcasses and cave vermin until they themselves are old enough to sing and hunt.
Harpies have no social structure, frequently quarreling over who gets what part of a victim and when to stop the torturing and start the feasting. Occasionally these quarrels will turn violent, so that more than one harpy feast has begun with the last minute addition of the losing harpy to the menu.
Harpies will occassionally agree to cooperate in evil acts with other humanoids.

**Ecology:** Harpies hunt all manner of beasts, remaining in an area for as long as the food supply lasts. They are despised and greatly feared by all creatures weaker than themselves.
Harpies have a voracious appetite, devouring all manner of man and beast. They take great delight in torture, and frequently kill for pleasure. Slain victims which harpies do not eat are simply left to rot.
Their life span is unknown but seems to be about 50 years.

| **XP Value:** | Variable | Variable |

Hatori, sometimes called the "crocodiles of the sands" are giant reptiles dwelling within sandy desert wastes. The hatori's hard, knobby hide ranges in color from gray-white to red-brown and is virtually indistinguishable from stone. Hatori use this semblance to great advantage, allowing the wind to partially bury them beneath the sands so that a casual observer may believe he is looking at rock outcroppings instead of behemoths of the sands.
Hatori are shaped like overgrown lizards, save that their legs have evolved into flat, flipper-like appendages that they use in conjunction with their massive tails to "swim" through the sands with astonishing speed and mobility. When forced to travel upon something more solid, such as a rocky plain, hatori move by awkwardly flopping and dragging themselves forward. Hatori eyes are normally concealed deep within dark recesses that look like small hollows. In the case of greater hatori (6 HD and over) these recesses sometimes look like cavern entrances.
Greater hatori are identical to lesser hatori in all respects save size and their ability to swallow larger prey whole (see below).

**Combat:** The only thing that can drive hatori into combat is hunger. Unfortunately, hatori have voracious appetites and food is rare in their home environment, so they never pass up an opportunity to make a meal out of a passing traveler -- or even an entire caravan. The hatori's favorite hunting method is to position themselves along a well-used migratory trail or caravan route. When, believing the hatori to be no more than a rocky outcropping, a prospective meal passes nearby, the hatori spring into action. Once the battle begins, hatori try to bite their victims with their toothy maws. Greater hatori swallow man-sized victims whole on a natural attack roll of 20. Such victims suffer 1d12 points of damage per round from the crushing and acid effects of the digestive tract. Swallowed victims cannot escape until the hatori is killed, for the muscular action of the esophagus prevents them from climbing out the throat. Hatori use their bony tails to lash out at anyone attacking from the rear, or to attack fleeing victims while simultaneously trying to eat someone else.
Lesser hatori can swallow whole only opponents of kender size or less (on a natural attack roll of 20).
Experience points earned for defeating a hatori depend upon its number of HD. See and 32 of the *Dungeon Master's Guide* to compute the XP values.

**Habitat/Society:** Hatori live in the sandy regions of large deserts. Because they are constantly searching for food, however, they tend to be found near migratory paths or along busy caravan routes. They stay in a productive area until food becomes scarce.

Hatori grow very slowly, at the rate of only 1-foot per year, but they keep growing throughout their lives. They accumulate Hit Dice at the rate of 1 HD every 10 years. Therefore, young hatori of 1 HD are usually 10 feet or less in length and 10 years old or younger, hatori of 2 HD are between 10 and 20 feet and between 10 and 20 years of age, etc.

Females care for their hatchlings until the young reach 50 feet in length (5 HD). This is the only time when they are commonly encountered in groups, for adult hatori are solitary creatures. Female hatori accompanied by hatchlings seldom exceed 10 HD, for they generally stop bearing young after their 100th year.

Every 10 years, male hatori and young females without any offspring migrate to the center of the desert. Here the males engage in ferocious battles to win the right to breed with the females. Although no civilized man has ever witnessed these mating rituals, certain desert tribes speak of a "time of thunder when mountains die." These legends may refer to battles occurring during the hatori mating season.

**Ecology:** Hatori eat anything, though they cannot digest gems or magical armor and weaponry. These items tend to accumulate in their stomachs over their long lifetimes. Hatori have no natural predators (save for each other at mating time), though it is rumored that certain kinds of dragons have been known to attack smaller hatori in times of hunger. Legends speak of a hidden hatori burial ground where ancient hatori go to die. If such a burial ground exists, it certainly abounds with gems and magical armor.

(Note: Statistics separated by a slash: those to the left refer to the natural state, those to the right are for a possessed victim.)

A haunt is the restless spirit of a person who died leaving some vital task unfinished. Its sole purpose is to take over a living body and use it to complete the task, thus gaining a final release from this world. Haunts may assume either of two forms, at will: a hovering luminescent ball of light (identical in appearance to a will-o-wisp) or a nebulous, translucent image of the haunt's former body. In the later state, haunts look like groaning spirits, spectres, or ghosts, and are often mistaken for them. Transformation from one state to the other takes one round.

**Combat:** A haunt must remain within 60 yards of where it died, unless it takes control of a victim's body. This 60-yard radius is called the haunt's domain.

A haunt attacks mindlessly, and always targets the first human or demihuman that enters its domain. It will continue to attack until possession is achieved or the intended victim leaves the haunt's domain.

The touch of a haunt drains 2 points of Dexterity per hit. As the character's Dexterity is drained, he suffers not only the penalties of lowered Dexterity, but increasing numbness creeps over his body. If Dexterity reaches 0, the haunt slips into the body and possesses it. Once the body is possessed, Dexterity returns to normal.

The haunt uses the host's body to complete its unfulfilled task. The task need not be dangerous, although it often is. Once the task is completed, the haunt passes on to its final rest and the victim regains control of his body. When the haunt leaves a victim, the character has a Dexterity of 3. Lost Dexterity points are regained at the rate of 1 point for each turn of complete rest. If a haunt's possessed body is slain, it will haunt the place where that body was killed.

If the victim has an alignment opposite to that of the haunt (good vs. evil), the haunt will try to strangle the victim using the victim's own hands. Unless the victim's arms are being restrained, the strangulation begins the round after the haunt takes control of the body. On the first round the victim suffers 1 point of damage, on the second 2, on the third 4, and so on, doubling each round until the victim is dead or the haunt is driven off.

Attacks on a possessed character will cause full damage to the character's body. If attacked, the haunt will use whatever weapons and armor the victim carries, but it cannot use any items that would require special knowledge (spells, scrolls, rings). The only safe way to free the victim is by casting *hold person* or *dispel evil* (*good*). If *hold person* is cast, the haunt must make a successful saving throw vs. paralyzation or be ejected from the body; *dispel evil* (*good*) destroys the haunt forever.

Haunts are linked to the sites where they died and therefore cannot be turned by priests. When in the natural state (i.e., not possessing a body) haunts may be struck only by silver or magical weapons, or by fire. Weapons cause only 1 point of damage, plus the magical bonus (if any). Normal fire causes 1 point of damage per round, but magical fire inflicts full damage. If a haunt is reduced to 0 hit points, it loses control of its form and fades away. The haunt reforms in one week to haunt the same location again until its task is completed.

**Habitat/Society:** The exact task to be accomplished varies, but the motives are always powerful -- revenge, greed, love, hate. Often great distances need to be traveled before a task can be completed, and haunts will drive their hosts mercilessly toward the goal, ignoring the need for food or sleep.

A few haunts (10%) retain some knowledge of their former lives and can be communicated with. Often these haunts feel remorse at having to prey upon the living, but the force of the uncompleted task is too powerful for the haunt to resist.

**Ecology:** Haunts cling to this world by force of will alone. They have no treasure of their own unless it is connected to their quest. They prey only on humans and demihumans.

# Hell Hound

Hell hounds are fire-breathing canines from another plane of existence brought here in the service of evil beings.

A hell hound resembles a large hound with rust-red or red-brown fur and red, glowing eyes. The markings, teeth, and tongue are soot black. It stands two to three feet high at the shoulder, and has a

distinct odor of smoke and sulfur. The baying sounds it makes have an eerie, hollow tone that send a shiver through any who hear them.

**Combat:** Hell hounds are clever hunters that operate in packs. They do not bay like normal dogs while hunting. They move with great stealth, imposing a -5 penalty to opponents' surprise rolls. One or two of the pack sneak up on a quarry while the others form a ring around it. The first hell hound then springs from ambush, attacks the nearest victim, and attempts to drive the others toward the rest of the pack. If the prey does not run away, the rest of the pack closes in within 1d4+2 rounds. If hell hounds are pursuing fleeing prey, they might bay.

Hell hounds attack first by breathing fire at an opponent up to 10 yards away. The fire causes 1 point of damage for each of the hell hound's Hit Dice. A successful saving throw vs. breath weapon cuts the damage in half. The hell hound then attacks with its teeth. The hell hound can continue to exhale flame while biting. If the hell hound rolls a natural 20 on its attack roll, it grabs a victim in its jaws and breathes fire on the victim.

Hell hounds have a variety of defenses. They are immune to fire. Their keen hearing means they are surprised only on a 1 or 2 on 1d10. They can also see hidden or invisible creatures 50% of the time.

**Habitat/Society:** Hell hounds are native to those extradimensional planes notable for their hot, fiery landscapes. There they roam in packs of 2d20 beasts. The hell hounds on the Prime Material plane are summoned there to serve the needs of evil creatures. Most of them later escape to the wild.

Hell hounds may have 4 to 7 (1d4+3) Hit Dice. The more Hit Dice a hell hound has, the larger it is and the more damage it causes. Each pack is led by a 7-Hit Die hell hound. The leader drives off other 7 HD rivals, who form their own packs.

The diet of hell hounds is similar to that of normal canines. They roam a wide area of 1d10+4 square miles centered on their den. Pack territories may overlap.

They do not easily reproduce on the Prime Material plane. Only 5% of encounters include puppies. Such puppies are born in litters of 2d4. They burp flame uncontrollably at least once a day. The flames are harmless aside from the tendency to set fire to anything flammable in the area. Newborn puppies are at 10% of the adult growth; they quickly grow an additional 5% each month and reach full adult growth (4 HD) in 1½ years. While growing they can attack with their incendiary bite. Hell hound puppies up to two months old inflict 1 point of damage. Older ones add an additional 1 point for each additional six months of growth.

Prey is usually eaten where it is slain, though hell hounds occasionally haul a carcass back to their den for later meals. Hell hounds are also similar to normal canines in that they may act as retrievers. Some objects are specifically sought; this is especially the case in trained hell hounds. Other hell hounds are simply playful and use the retrieved items as toys. They especially like noisy bags and pouches filled with their late victims' treasures. Flammable containers eventually burn and spill their contents in or around the den. Parchments are rarely found here unless protected by nonflammable containers.

**Ecology:** Hell hounds have little place in the ecology of the normal world. They are dangerous annoyances prone to cause fires wherever they hunt. Hell hounds cause more forest fires than any other creature except for humanoids. Hell hounds have their uses, though. Because of their ability to easily detect hidden or invisible creatures, hell hounds make excellent watch dogs, especially for intelligent monsters such as fire giants.

Hell hounds can be domesticated if raised from puppies, but there is a 10% chance each year that domesticated hell hounds go wild.

# Heucuva

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Nil |
| **Intelligence:** | Semi- (2-4) |
| **Treasure:** | C |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1-10 |
| **Armor Class:** | 3 |
| **Movement:** | 9 |
| **Hit Dice:** | 2 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-6 |
| **Special Attacks:** | Disease |
| **Special Defenses:** | Hit only by silver or +1 weapons |
| **Magic Resistance:** | See below |
| **Size:** | M (5'-7' tall) |
| **Morale:** | Steady (11) |
| **XP Value:** | 270 |

The heucuva is an undead spirit similar in appearance to a skeleton, but more dangerous and more difficult to dispel.
The heucuva appears to be a humanoid skeleton of normal size. The bones are covered by a robe that is little more than tattered rags.

**Combat:** The heucuva attacks by swiping with one of its hands; the sharp finger bones are capable of tearing into wood. A victim must roll a successful saving throw vs. poison or be afflicted with a disease. The victim suffers a daily loss of 1 point each of Strength and Constitution. A *cure disease* spell must be cast on the victim to prevent death and restore the lost points.

Heucuva are treated as wights on the *Turning Undead* table. They are resistant to all mind-influencing spells. Heucuva bones soon crumble once the monsters are destroyed.
Heucuva have a special hatred of priests. Once a priest uses his spells or tries to turn the heucuva, they will concentrate on attacking that priest. They may even ignore everyone else except for the priest and those defending him.
Heucuva are able to polymorph themselves up to three times a day. They may use this power to assume a nonthreatening shape in order to get close to an unsuspecting victim or avoid an undesired encounter when pursuing a specific prey. Heucuva may assume the form of people they have met in the recent past, such as a past victim or a member of the party that encounters the monsters. If the heucuva are in their lairs, they may assume their old (living) appearances. Groups encountered on the surface may appear to be pilgrims in procession. Such disguises fool only those who view the world solely via visible light; heucuva appear the same as other skeletal undead if looked at with infravision. The heucuva are incapable of speech; they can only moan or wail.

**Habitat/Society:** Heucuva roam the dark places of the world. They can be found in subterranean realms, as well as most temperate or tropical regions. Cold seems to prevent heucuvan activity, for they are not found in high, desolate mountains or in any cold regions.
Legends tell that heucuva are the restless spirits of monastic priests who were less than faithful to their holy vows. In punishment for their heresies, they are forced to roam the dark. Their spirits, appearance, and holy powers have become perverted mockeries of their old selves. The tatters they wear are the unrecognizable remains of their monks' robes. Instead of healing, they can kill with a diseased touch. Instead of helping others, they seek to kill all who still live. Even their old power to turn undead is now used to help them resist the efforts of others to turn them.
Heucuva retain dim memories of their old lives. Their lairs are decorated as grotesque mockeries of their old abbeys and temples. The corpses of past victims may be used to represent parishioners. These corpses may retain their original possessions, which may represent a large portion of the heucuvan treasure trove. Other accumulated treasures may be scattered around the mock altar as decorations or offerings. Such a mock temple is a chilling sight to most and an abomination that few good-aligned cleric can resist destroying.
Some heucuva are nomadic and constantly wander on a pilgrimage to nowhere. Even these are mockeries of real pilgrimages.

**Ecology:** Heucuva are malignant spirits that seek to destroy those who still live. They are used as examples to remind priests the fate that befalls those who stray from their devotion or use their religion as a mask to hide unpious deeds. Powdered heucuva bones may be used in the preparation of magical items intended to corrupt the spirits of living beings or to control undead.

# Hippocampus

| | |
|---|---|
| **Climate/Terrain:** | Fresh or salt water depths |
| **Frequency:** | Rare |
| **Organization:** | Herd |
| **Activity Cycle:** | Any |
| **Diet:** | Herbivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | Nil |

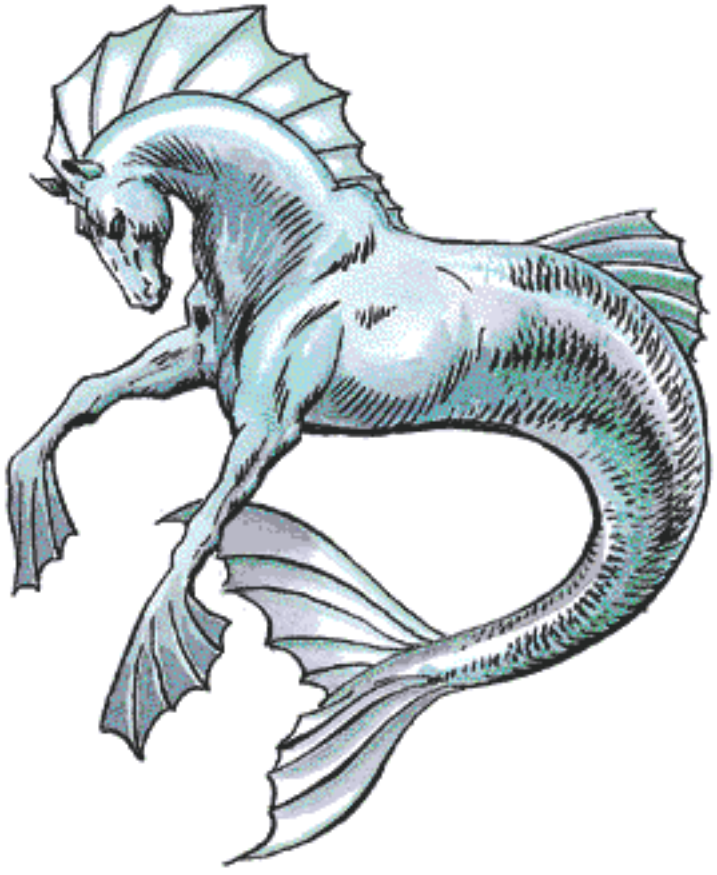
| **Morale:** | Steady (11-12) |
| **XP Value:** | 120 |



The hippocampus is the most prized of the marine steeds, a creature that combines features of a horse and a fish.
The hippocampus has the head, forelegs, and torso of a horse. The equine section is covered with short hair. The mane is made of long, flexible fins. The front hooves are replaced by webbed fins that fold up as the leg moves forward, then fan out as the leg strokes back. Past the rib cage the body becomes fish-like. The tail tapers 14 feet into a wide horizontal fin. A dorsal fin is located on the rump. Coloration is that of seawater. Typical colors include ivory, pale green, pale blue, aqua, deep blue, and deep green.

**Combat:** Hippocampi are usually peaceful creatures. They do not attack unless cornered or if another hippocampus or an ally is threatened. They are fast enough to out-swim most anything that would want

to attack them.
The hippocampus attacks with a strong bite. It suddenly extends its head, chomps down with a crushing bite, and then releases. Hippocampi do not hold onto their opponents.
Hippocampi also butt their heads against targets. Such attacks may stun an opponent or break his bones. Their firm, powerfully muscled bodies provide a strong protection against attack. The blood coagulates quickly on exposure to water, thus minimizing blood loss that could both debilitate the hippocampus and attract sharks (sharks have only a 20% chance of going into a feeding frenzy if the only bleeding creature is a hippocampus).

**Habitat/Society:** Hippocampi are the prized steeds of the sea. They can be found in deep waters anywhere, in freshwater lakes and oceans. They are able to breathe fresh and salt water with equal ease. They can also breathe air but require frequent gulps of water to keep from drying out. They are unable to move out of water.
Despite their radically different environments, horses and hippocampi are very similar. They have approximately the same sizes, life spans, and personalities, although hippocampi are blessed with much higher intelligence.
Hippocampi are herbivores. They normally graze on seaweed and other soft vegetation. If their usual fodder is unavailable, their strong teeth can chew up mollusks and coral.
Wild hippocampi roam in herds of 2d4. These are usually a stallion, 1d4 mares, and the rest young hippocampi of either sex. Hippocampus mares lay a single, large egg. After six months, the egg hatches a single foal. Twins are extremely rare (1% chance). The foals grow quickly in two years. The yearlings are physically the equals of the adults. Hippocampian tales speak of a "Great Herd" of hundreds or thousands of hippocampi that roams the uncharted reaches of the far seas. No non-hippocampi have ever seen this spectacle.
Hippocampi may be "domesticated" by water-breathing humanoids, especially tritons. In truth, the intelligent hippocampi cooperate with the humanoids. The hippocampi provide their services as steeds and allies while the humanoids provide protection. The benevolent hippocampi may assist surface dwellers who are visiting the aquatic world, whether voluntarily or by accident. Many a shipwrecked sailor has been saved from drowning by a passing hippocampus. Hippocampi are good judges of character; they will not assist an evil being or anyone who acts in a hostile manner toward them. Sometimes a hippocampus's offer of a ride can be more trouble than it is worth. Young hippocampi often forget that most surface dwellers breathe air, not water.
Hippocampi do not accumulate treasure. Most spurn even ornamental gifts such as collars or leg bands. They simply have no use for these gewgaws. They do appreciate delicacies, however, in the forms of tasty foods not available in the water.

**Ecology:** Hippocampi are one of the most successful of the intelligent, good-aligned marine monsters. They maintain ties with mermen and sea elves, as well as surface dwellers who make their living in the water. They provide valuable services as steeds, guides, and allies. Hippocampus eggs sell for 1,500 gp. Young hippocampi are worth 2,500 gp. However, surface dwellers who have been saved by hippocampi remain so grateful to their former rescuers that they may attack any merchant selling eggs or foals in a public market and attempt to return the hippocampi to the sea.

# Hippogriff

| **Size:** | L (10' long) |
| **Morale:** | Average (9) |
| **XP Value:** | 175 |

Hippogriffs are flying monsters that have an equal likelihood to be predator, prey, or steed.
The hippogriff is a monstrous hybrid of eagle and equine features. It has the ears, neck, mane, torso, and hind legs of a horse. The wings, forelegs, and face are those of an eagle. It is about the size of a light riding horse. A hippogriff may be colored russet, golden tan, or a variety of browns. The feathers are usually a different shade than the hide. The beak is ivory or golden yellow.

**Combat:** The hippogriff attacks with its eagle-like claws and beak. Each claw can tear for 1d6 points of damage, while the scissor-like beak inflicts 1d10 points of damage.

**Habitat/Society:** Hippogriffs prefer the desolate sections of the temperate and tropic regions, especially

rolling hills that enable them to get quickly airborne.
Hippogriffs are territorial. They have a preferred grazing and hunting area that covers 1d4 x 10 square miles. Somewhere in this territory is a naturally protected site that serves as the hippogriff nest. Here is where the young hippogriffs stay. The nest is always guarded.
The typical hippogriff herd includes 1-3 adult males, an equal number of mares, and the rest are immature young. There is a 25% chance that one or more of the mares is pregnant. Gestation takes 10 months. During the first five months, this occurs within the mare. Then she lays an egg that hatches in another five months. Twin births are rare (1% chance).
The foal is able to walk upon hatching. Its beak remains soft for the first two weeks; this enables the foal to nurse. Then its beak hardens and the hippogriff switches to regurgitated food from its mother. The colts learn to eat solid meat at four months, although they are clumsy killers (-4 penalty to attack rolls and damage). At six months they can fly (18, class D) and fight with a -2 penalty to attack rolls and damage. Yearlings are identical to adults, although they are unable to breed until they are three years old.
Wild hippogriffs are omnivorous. They feed on whatever is available, whether greenery, fruits, or wildlife. Hippogriffs are able to attack fairly large prey, such as bison, but they do not prey on carnivores. The exception is humanoids. Hippogriffs may, in the absence of other meat, attack small groups of people. Bodies are then carried back to the nest to feed the others; this is where the victim's possessions usually spill out. Hippogriffs are clean monsters; they dispose of carcasses and other debris by carrying them downhill. They like clear, sparkly things like glass, crystals, and precious gems. Males may amass a small trove kept covered by brush. As a mating ritual, he arranges these in a display to entice mares.

**Ecology:** Hippogriffs are closely related to griffons. Just as griffons are the result of crossing an eagle with a lion, hippogriffs resulted from the crossing of an eagle with a horse. Hippogriffs may have been created as a natural prey for the griffons. Fortunately for the hippogriff, its own formidable weapons give it a fighting chance. To make up for the griffon's superiority, hippogriffs gather in larger groups.
Hippogriffs are also related to pegasi. Because the hippogriffs eat meat, pegasi avoid their company.
Hippogriffs make excellent flying mounts. The maneuverability decreases to Class D, but their speed is unimpaired. They are less likely to eat the rider than a griffon is.
If a hippogriff is captured while still very young (under four months), it can be domesticated and trained to serve as a steed. Hippogriff eggs sell for 1,000 gp, young hippogriffs for 2,000-3,000 gp. It will probably have to be taught to fly. Domestic hippogriffs are also taught to recognize a limited number of species as food; humanoids of course are not on that list. Hippogriffs have difficulty breeding in captivity. Like flying, the wild hippogriff has to be captured before such skills are learned. Mature hippogriffs may be persuaded to voluntarily assist riders who can provide them with ample food or protection.

# Hobgoblin

| | |
|---|---|
| **Climate/Terrain:** | Any non-arctic |
| **Frequency:** | Uncommon |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | J, M, D, (Qx5) |
| **Alignment:** | Lawful evil |
| **No. Appearing:** | 2-20 (2d10) |
| **Armor Class:** | 5 (10) |
| **Movement:** | 9 |
| **Hit Dice:** | 1+1 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | by weapon |
| **Special Attacks:** | Nil |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | M (6 ½' tall) |
| **Morale:** | Steady (11-12) |
| **XP Value:** Hobgoblin | 35 |
| Sub-chief | 65 |
| Chief | 120 |

Hobgoblins are a fierce humanoid race that wage a perpetual war with the other humanoid races. They are intelligent, organized, and aggressive.

The typical hobgoblin is a burly humanoid standing 6½' tall. Their hairy hides range from dark reddish-brown to dark gray. Their faces show dark red or red-orange skin. Large males have blue or red noses. Hobgoblin eyes are either yellowish or dark brown while their teeth are yellow. Their garments tend to be brightly colored, often bold, blood red. Any leather is always tinted black. Hobgoblin weaponry is kept polished and repaired.

Hobgoblins have their own language and often speak with orcs, goblins, and carnivorous apes. Roughly

20% of them can speak the common tongue of man.

**Combat:** Hobgoblins in a typical force will be equipped with polearms (30%), morningstars (20%), swords and bows (20%), spears (10%), swords and spears (10%), swords and morning stars (5%), or swords and whips (5%).
Hobgoblins fight equally well in bright light or virtual darkness, having infravision with a range of 60 feet.
Hobgoblins hate elves and always attack them first.

**Habitat/Society:** Hobgoblins are nightmarish mockeries of the humanoid races who have a military society organized in tribal bands. Each tribe is intensely jealous of its status. Chance meetings with other tribes will result in verbal abuse (85%) or open fighting (15%). Hobgoblin tribes are found in almost any climate or subterranean realm.
A typical tribe of hobgoblins will have between 20 and 200 (2d10 x 10) adult male warriors. In addition, for every 20 male hobgoblins there will be a leader (known as a sergeant) and two assistants. These have 9 hit points each but still fight as 1+1 Hit Die monsters. Groups numbering over 100 are led by a sub-chief who has 16 hit points and an Armor Class of 3. The great strength of a sub-chief gives it a +2 on its damage rolls and allows it to fight as a 3 Hit Die monster. If the hobgoblins are encountered in their lair, they will be led by a chief with AC 2, 22 hit points, and +3 points of damage per attack, who fights as a 4 Hit Die monster. The chief has 5-20 (5d4) sub-chiefs acting as bodyguards. Leaders and chiefs always carry two weapons.
Each tribe has a distinctive battle standard which is carried into combat to inspire the troops. If the tribal chief is leading the battle, he will carry the standard with him, otherwise it will be held by one of his sub-chiefs.
In addition to the warriors present in a hobgoblin tribe, there will be half again that many females and three times as many children as adult males.
Fully 80% of all known hobgoblin lairs are subterranean complexes. The remaining 20% are surface villages which are fortified with a ditch, fence, 2 gates, and 3-6 guard towers. Villages are often built upon ruined humanoid settlements and may incorporate defensive features already present in the ruins. Hobgoblin villages possess artillery in the form of 2 heavy catapults, 2 light catapults, and a ballista for each 50 warriors. Underground complexes may be guarded by 2-12 carnivorous apes (60%).
They are highly adept at mining and can detect new construction, sloping passages, and shifting walls 40% of the time.

**Ecology:** Hobgoblins feel superior to goblins or orcs and may act as leaders for them. In such cases, the "lesser races" are used as battle fodder. Hobgoblin mercenaries may work for powerful or rich evil humanoids.

**Koalinth**
This marine species of hobgoblin is similar to the land dwelling variety in many respects. Koalinth dwell in shallow fresh or salt water and make their homes in caves.
Their bodies have adapted to marine environments via the evolution of gills. Their webbed fingers and toes give them a movement rate of 12 when swimming. Their bodies are sleeker than those of hobgoblins and they have light green skin. They speak an unusual dialect of the hobgoblin tongue.
They tend to employ thrusting weapons like spears and pole arms. Koalinth are every bit as disagreeable

as hobgoblins, preying on every thing they come across, especially aquatic humanoid and demi-human races. They detest aquatic elves.

# Homonculous

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | See below |
| **Treasure:** | Nil |
| **Alignment:** | See below |
| **No. Appearing:** | 1 |
| **Armor Class:** | 6 |
| **Movement:** | 6, Fl 18 (B) |
| **Hit Dice:** | 2 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 1-3 |
| **Special Attacks:** | Bite causes sleep |
| **Special Defenses:** | See below |
| **Magic Resistance:** | See below |
| **Size:** | T(18" tall) |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 270 |

Homonculi are small mystical beings created by magicians for spying and other special tasks.
The average homonculous is vaguely humanoid in form. It is 18 inches tall and its greenish, reptilian skin may have spots or warts. They have leathery, bat-like wings with a span of 24 inches and a mouth filled with long, pointed teeth that can inject a potent sleeping venom.

**Combat:** The homonculous is a quick and agile flyer which uses this ability to great advantage in combat. It can dart to and fro so quickly that any attempt to capture it short of a net or *web* spell is almost impossible.
In combat, the homonculous will land on its chosen victim and bite with its needle-like fangs. In addition to doing 1-3 points of damage, the creature injects a powerful venom. Anyone bitten by the homonculous

must save vs. poison or fall into a comatose sleep for 5-30 (5d6) minutes.
The creature's saving throws are the same as those of its creator. While most attacks against either the homonculous or creator do not affect the other, there is one exception. Any attack which destroys the homonculous causes its creator to suffer 2-20 (2d10) points of damage. Conversely, if the creator is slain, the homonculous also dies and its body swiftly melts away into a pool of ichor.

**Habitat/Society:** Homonculi are artificial creatures created by wizards as living tools. The process by which one is created is long, complicated, and expensive. Any wizard who desires a homonculous servant must first locate and hire an alchemist. The wizard must provide one pint of his own blood and 500-2,000 (1d4 x 500) gold pieces. The blood becomes the basis for the creature's body while the money pays for a variety of other supplies and the alchemist's time. The alchemist requires 1-4 weeks to transform the blood into the necessary magical base. The wizard is then sent for and required to cast *mending*, *mirror image*, and *wizard eye* spells upon the fluids. As the last of these spells is worked, the fluids spontaneously coagulate and form the body of the homonculous.
The homonculous is telepathically linked to its creator. It knows everything that its master knows and transmits everything it sees and hears to him. The creator can telepathically control the actions of the homonculous at a range of up to 480 yards. The homonculous will never willingly travel beyond the limits of contact with its master, though it can be removed from that region by force. As soon as it loses contact with its master, the creature panics and will do anything to regain contact. Contact between the two cannot be maintained across planar or dimensional barriers. If either the creator or homonculous is on another plane, the homonculous will remain near the point where it was last in contact with its master.
Homonculi are a reflection of their creator. They have the creator's alignment, basic intelligence, and even physical mannerisms. They are mute but can write if the creator is literate. They may assist their creator in a variety of tasks including magical endeavors, although they cannot themselves cast spells.
Homonculi lairs are in the homes of their creators. Indulgent wizards may provide a specially built bed, nest, or living chamber. Otherwise, the homonculous simply perches wherever it can.

**Ecology:** Homonculi are nothing more than tools. They have no place in the natural world and are not part of any ecological system. They provide the wizard who created them with a variety of useful services. Commonly, a homonculous is called upon to act as a spy, scout, messenger, or emissary. Because of the potential harm which the death of a homonculous inflicts on its master, they are seldom employed as body guards or living weapons.
Although they are magical creations, homonculi possess the same biological functions as non-magical creatures. They must rest and require food and drink in order to survive. When eating, they share the tastes of their masters and generally consume about as much as a typical cat.
There are rumors of magical means by which non-wizards can acquire their own form of homonculous. Although these are not widely believed to be valid, there are those who report having seen the process or its results first hand. If such a procedure exists, it would be quite valuable to its discoverer.

# Hook Horror

| | |
|---|---|
| **Climate/Terrain:** | Any/Subterranean |
| **Frequency:** | Rare |
| **Organization:** | Clan |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | P |
| **Alignment:** | Neutral |
| **No. Appearing:** | 2-12 |
| **Armor Class:** | 3 |
| **Movement:** | 9 |
| **Hit Dice:** | 5 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 3 |
| **Damage/Attack:** | 1-8/1-8/2-12 |
| **Special Attacks:** | Nil |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | L (9' tall) |
| **Morale:** | Steady (11-12) |
| **XP Value:** | 175 |

The hook horror is a bipedal, underground-dwelling monster that looks like a cross between a vulture and a man with hooks instead of hands.

The hook horror stands about nine feet tall and weighs almost 350 pounds. It has a tough, mottled grey exoskeleton, like that of an insect. Its front limbs end in 12-inch-long hooks. Its legs end in feet that have three small hooks, like long, sharp toes. Its head is shaped like that of a vulture, including the hooked beak. Its eyes are multifaceted. It is thought that the hook horror is distantly related to the cockroach or cave cricket.

Hook horrors do not have a smell to humans and demihumans, but an animal would detect a dry musty odor. They communicate in a series of clicks and clacks made by the exoskeleton at their throats. In a cave, this eerie sound can echo a long way. They can use this to estimate cavern sizes and distances,

much like the sonic radar of a bat.

**Combat:** Hook horrors have acute hearing and are surprised only on a roll of 1. They always know their territory, and they try to ambush unsuspecting travelers or denizens. Each round they swing with both hooks. If in any round both hit, during that round their beaks hit automatically. They automatically inflict 2d6 points of damage each round with the beak until at least one of the hooks is dislodged.
The eyesight of the hook horrors is very poor. They are blinded in normal light. They use their extremely acute hearing to track and locate prey. Since their eyesight is so poor anyway, they suffer no combat or movement penalties if blinded or in complete darkness. They attack silenced opponents with the penalties others suffer when attacking blind.
Hook horrors are natural climbers, as their hooks give them excellent purchase on rock surfaces. They can move at normal speed up vertical surfaces that are not sheer. Their great weight means that they cannot hang from the ceiling like other insects.

**Habitat/Society:** The obvious penalty for having hooks instead of hands is that hook horrors cannot use weapons or tools. They can only pick up items in their beaks. This severely restricts their ability to amass large treasures.
A clan of hook horrors most often lives in caves and underground warrens. The entrance is usually up a vertical or steeply sloped rock wall. Each family unit in the clan has its own small cavern off a central cave area. The clan's eggs are kept in the safest, most defensible place. The clan is ruled by the eldest female, who never participates in combat. The eldest male, frequently the mate of the clan ruler, takes charge of all hunting or other combat situations and is considered the war chieftain.
Members of a clan rarely fight each other. They may quarrel or not cooperate, but they rarely come to blows. Clans sometimes fight each other, but only when there is a bone of contention, such as territorial disputes. It is rare for a clan of hook horrors to want to rule large areas or to conquer other clans.
Hook horrors have poor relationships with other races. Although they do not foolishly attack strong parties, generally other creatures are considered to be meat. They retreat when faced with a stronger group. Hook horrors do not recognize indebtedness or gratitude. Their simple language does not even have a term for these concepts. Just because a player character saves the life of a hook horror does not mean that it will feel grateful and return the favor.

**Ecology:** Although hook horrors are basically omnivores, they prefer meat. They can eat just about any cave-dwelling fungus, plants, lichens, or animals. Hook horrors are well acclimated to cave life. They have few natural predators, although anything that managed to catch one would try to eat it.
The hook horror's exoskeleton dries and becomes too brittle for use after a month or so.

Horses are large quadrupeds often used for transportation, or as pack and draft animals, by human and demihuman races. They are frequently bred for their speed and for their beauty.
A horse can be solid white, gray, chestnut, brown, black, or various reddish tones; its hide can instead show a variation or combination of these colors. Some of the more interesting variations include the piebald, which has a coat of large, irregular patches of black and white; the palomino, with its rich yellow-gold coat and white mane and tail; and the dapple gray, which is dark gray with flecks of lighter color on the chest, belly, and hindquarters.
In addition to the coat's color, the horse may have markings of various sorts. The long hairs of the mane and tail can be lighter, darker, or of the same color as the body of the horse. Possible markings include socks (meaning the leg from the hoof, halfway to the knee, or hock, is white); a white muzzle; a blaze (a wide band of white from the top of the horse's head to the tip of its nose); and a star (a white, diamond-shaped patch set on the horse's forehead, right between its eyes).
Horses are measured in "hands." One hand equals 4 inches.

**Combat:** War horses will fight independently of the rider on the second and succeeding rounds of a melee. Other breeds fight only if cornered. Most attack twice per round by kicking with their front hooves.
Unless specially trained, horses can be panicked by loud noises, strange smells, fire, or sudden movements 90% of the time. Horses trained and accustomed to such things (usually warhorses) panic only 10% of the time.

**Habitat/Society:** The horse's gestation period is about 11 months. Mares (female horses) usually give birth to a single foal (young horse). Twins do occur, but only about 10% of the time (or less). Even triplets are possible, but are extremely rare. The foal is weaned after six months. It is mature after two to three years, and is considered adult at age five. The usual life span of a horse is 30-35 years, though rare exceptions have lived to age 50, and hard-worked horses rarely live past age 12.
Only 10% of ponies and wild horses can be trained to serve as warhorses. Of all the breeds and varieties listed here, only mules are agile enough for use in mountainous or subterranean environments.

**Ecology:** Modern horses evolved in temperate plains and grasslands. Domestic breeds can be found anywhere people live (even in the high mountains, if the local roads are good).
Horses can carry great weights for long periods of time, but not without tiring. The table below shows the maximum weight a horse can carry; as illustrated, greater weights cause the horse to move at slower movement rates.

**Horse Table 1. Maximum weight in pounds at**

| Type of Horse | Full speed | Half speed | One-third speed |
|---|---|---|---|
| Draft | 260 | 390 | 520 |
| Heavy war horse | 260 | 390 | 520 |
| Medium war horse | 220 | 330 | 440 |
| Light war horse | 170 | 255 | 340 |

| | | | |
|---|---|---|---|
| Pony | 160 | 240 | 320 |
| Wild | 170 | 255 | 340 |
| Riding | 180 | 270 | 360 |
| Mule | 250 | 375 | 500 |

A horse can also move at speeds higher than those given as their base movement rates, as shown on the table below. The horse's normal movement rate is considered a trot.

| **Type of Horse** | **Walk** | **Trot** | **Canter** | **Gallop** |
|---|---|---|---|---|
| Draft | 6 | 12 | 18 | 24 |
| Heavy war horse | 6 | 15 | 21 | 27 |
| Medium war horse | 9 | 18 | 27 | 36 |
| Light war horse | 12 | 24 | 36 | 48 |
| Pony | 6 | 12 | 18 | 24 |
| Wild | 12 | 24 | 36 | 48 |
| Riding | 12 | 24 | 36 | 48 |
| Mule | 6 | 12 | 18 | 24 |

As noted in Chapter 14Player's Handbook, in a day of travel over good terrain, a creature can travel a number of miles equal to twice its normal movement rate. A horse's overland movement rate can be improved by pushing it to a canter or gallop. A canter can be safely maintained for two hours, or a gallop for one hour, but the horse must be walked for an hour before its speed can again be increased. For the effects of increasing a horse's speed enough to affect its overland movement rate, see Chapter 14 of the DMG.
A horse will not gallop when loaded with enough material to reduce its normal movement rate by half; nor will it canter or gallop if carrying a load which will reduce its normal movement rate to one-third normal (see Horse Table 1).

### Draft Horse
Draft horses are large animals bred to haul very heavy loads, and are usually trained to be part of a dray team. Muscular but slow, these ponderous animals haul freight over long distances without complaint, and are frequently used by traders.

### War Horse
Warhorses are bred and trained to the lance, the spear, and the sword. They have higher morale than other horses, and are not as skittish about sudden movements and loud noises. The choice of knights and cavalry, these are the pinnacle of military horses. There are three varieties; heavy, medium and light.
*Heavy war horses* are similar to draft animals. Large and muscular, they are relatively slow. Their size and powerful legs allow them to be armored in plate, and to carry a warrior in plate, as easily as a pony carries saddle bags. A good heavy war horse, fully trained, costs 400 or more gold pieces.

*Medium war horses* are lighter and smaller than their heavy cousins. They can be encumbered with leather or light plate armor and carry a rider wearing leather or light plate. The advantage of the medium war horse is its increased speed. The price of a medium war horse is 200 gp or more.
*Light war horses* are the fastest of the breed. They can carry warriors in leather armor, but are rarely armored themselves. They make excellent mounts for raiding parties, light cavalry, and thieves. Light war horses cost 150 gp or more.

### Pony
Small horses used primarily for transportation and occasionally farm work, ponies are a lively breed. They are more excitable than the larger horses, but frequently more gentle, as well. They are sometimes trained and used as war horses by several of the smaller demihuman races. Prices vary depending on training and size, but most cost around 500 gp.

### Wild Horse
Wild horses can be captured and trained to serve as mounts or work ponies. Training usually takes twice as long as training a domestic horse. Wild horses are hardy but jittery, and difficult to catch in the wild. They are sometimes hunted for food by human and demihuman tribes.

### Riding Horse
Riding horses are bred to the saddle. Perhaps the most common of all horses, they are ridden, worked, and raced by humans and demihumans alike. The price of a riding horse will vary, depending on its bloodlines, training, and appearance. Fast and agile, this breed is a good choice for personal transportation and general use.

### Mule
Sterile hybrids of horses and donkeys, mules are very sure-footed and exceptionally stubborn. They can be ridden by patient handlers who know how to control them, but are best used as pack animals in difficult or mountainous terrain. They are sometimes used by adventurers, for they are the only breed that can be taken into subterranean regions. The price of mules depends on how much grief they have given their current owners.

### Steppe Pony
A steppe pony is not attractive, graceful, or large, but its homely, ungainly appearance disguises an animal of great endurance, speed, and strength. A steppe pony looks like a cross between a horse and a pony, but is a breed unto itself. They are small, averaging 13 hands (4'4") at the withers, and they have short necks, large heads, and heavily boned bodies. Their winter coat is shaggy and gives them the appearance of being "half-wild." They are most commonly colored copper or bronze, with a light yellow stripe running down their backs.
These horses are tough, hard to kill, and aggressive in battle. They have most of the same characteristics as a light war horse, with a few exceptions. It attacks three times per round, its third attack being a bite which causes 1-3 points of damage. The steppe pony's thick, shaggy coat and tough hide gives it an AC of 6. Its short legs are powerful and can carry horse and rider swiftly, over long distances; its small back is also very strong and it can carry as much as a medium war horse (220/330/440). The steppe pony is even-tempered and steady in battle; its morale is average (8-10), and it panics very rarely (5% chance) due to such things as fire and loud noises.
The steppe pony has remarkable endurance. It can survive by grazing alone and does not require feeding

and handling by its rider, so separate supplies of grain are not needed. It can be ridden for long distances without tiring or faltering. A +3 modifier is applied to the pony's saving throws for lameness and exhaustion checks when travelling overland.

In spite of all its qualities, the steppe pony is not sought after or considered valuable. It is most commonly ridden by nomadic tribes. Outside the steppes, the animal is almost completely unknown and does not command high prices at auction. Only breeders who know the steppe pony's qualities, and who seek strength and stamina in their own horses' bloodlines, are likely to consider the steppe pony as valuable.

**Aborigine/Caveman**

These primitive humans are found in otherwise uninhabited regions. For every 10 aborigines there will be a 3rd-level fighter. Aboriginal tribes are always led by a chief (a 5th-level fighter) and 1-4 subchiefs (4th-level fighters). For every 10 aborigines encountered there is a 10% chance that they have a shaman (3rd-level priest) with them.

Most encounters (60%) will be with predominantly male war or hunting/gathering parties. There is a 40% chance that an encounter will be in or near their lair. Aborigines make their lairs in natural shelters such as caves or forest groves. The number encountered above is for males; there will usually be an equal number of females and children in the lair.
Aborigines are typically armed with stone axes, spears, and clubs.

## Adventurer

These are NPC counterparts of the PC's band, groups of fighters, thieves, priests, and wizards who band together in search of fame, fortune, and power. Typical adventuring bands consist of between two to eight members. Solitary adventurers may be separated from their group, lost, advanced scouts, or sole survivors of decimated groups.
After determining the base size of the group encountered, determine which class each belongs to:

| d10 | Class |
|---|---|
| 1-4 | Fighter |
| 5-6 | Cleric |
| 7-8 | Thief |
| 9-10 | Wizard |

Determine the level of the party of adventurers; low, medium, high, or very high, and roll for each member on the table below.

| Level | Level Range | Die |
|---|---|---|
| Low | 1-3 | (1d3) |
| Medium | 4-7 | (1d4+3) |
| High | 7-12 | (1d6+6) |
| Very high | 9-20 | (1d12+8) |

A high level adventurer will have attracted followers who will accompany the party -- 1-100% of them. This can swell an encountered band's size to that of a small army.
Clerics and wizards will have 1-100% of their full spells at the time the encounter occurs (round down).
Higher level fighters and clerics will usually have plate mail and shields, and ride unbarded medium warhorses. Each level an adventurer has attained gives a cumulative 5% chance for magical items as shown below. Roll for each item marked "Y." Reroll if a cursed or otherwise undesirable item occurs, but only one reroll is allowed for each category. If no usable item is indicated, the adventurer has no item in that category.

| Item | Fighter | Wizard | Cleric | Thief |
|---|---|---|---|---|
| Armor | Y | N | Y | N |
| Shield | Y | N | Y | Y |

| | | | | |
|---|---|---|---|---|
| Sword | Y | N | N | Y |
| Misc. Weapon | Y | N | Y* | Y |
| Potion | Y | N | Y | Y |
| Scroll | N | Y | Y | N |
| Ring | N | Y | N | Y |
| Wand/Staff/Rod | N | Y | N* | N |
| Misc. Magic | N | Y | Y | Y |

*If there is no usable miscellaneous weapon, roll again for possibility of a wand/staff/rod. If one is indicated but is unusable by a priest, there is no such item present.

In addition, such adventurers have ordinary treasure. Fighters have type L and M; clerics J, K, and M; wizards L, N, and Q; and thieves J, N, and Q.

### Bandit/Brigand

Bandits are rural thieves who openly prey on travelers and isolated dwellings. They travel in groups of 20-200, usually led by high level fighters, rogues, wizards, and priests. For every 20 bandits encountered, there will be an additional 3rd-level fighter. If 100+ are encountered, the leader will be at least 8th level. Bandits are typically armed with swords, spears, and small shields. Up to 20% may be armed with bows. Bandits may wear no armor (50%), leather (35%), padded (10%), or ring mail (5%). Brigands are better equipped and will have higher morale.

### Barbarian/Nomad

Barbarians belong to primitive cultures that possess rudimentary skills such as animal husbandry and simple manufacturing (weaving, carving). They may live in villages of simple buildings or in portable structures like tents, tepees, yurts, or wagons. In aquatic regions, they may live on watercraft like canoes or rafts. Barbarians are typically armed with swords, knives, bows, spears, and clubs. Armor is limited to shields, helmets, and chestplates. They tend to be hostile toward unfamiliar wizards. Barbarians are adept at surprising opponents; such opponents have a -5 penalty on their surprise rolls.

### Berserker/Dervish

Berserkers are violent war parties prone to manic behavior in battle. When encountered, berserkers drive themselves into a battle frenzy that raises their fighting skills and morale. Berserkers attack twice per round, or once at +2. Many use leather armor and shields, giving them Armor Class 7. Berserkers need never make morale checks.
Dervishes are highly religious nomads. Due to their fanatical nature, dervishes add 1 to their attack rolls and damage dice. They never check morale in combat.
If encountered during a peaceful period, berserkers may be indistinguishable from normal warrior bands; dervishes may be mistaken for armed pilgrims.

### Farmer/Herder

These are simple people involved in the production of agricultural goods. About 65% of all encounters will be with farmers tilling their land. Encounters with herders may occur anywhere there is grazing land or a

market for their herds. Encounters with herders also involve the herd animals, whatever they are.

### Gentry
These are the upper classes. They are not the ruling nobility, but their wealth and connections make them nearly as powerful. Each member of the gentry encountered may be accompanied by 0-3 guards (d4-1) and 1-6 servants. The guards are mercenary fighters of 1st to 6th level and armed with sword and spear. The servants might fight as 0-level fighters, but are more likely to panic. The gentry themselves might be armed with daggers and short swords.

### Knight
Knights are armored, mounted fighters directly serving their lord. They may be on a quest, a specific mission, or simply patrolling their lord's realm. Knights may be accompanied by their squires, hirelings, and other followers (50%). Knights are armed with sword, lance, mace or flail, and dagger. Armor includes a shield and either plate or chain mail. A knight rides a medium or heavy warhorse, usually a barded mount.
About 5% of encounters will be with a vanquished knight. Being stripped of arms and armor, the knight may be mistaken for any nonwarrior class. The knight may even support this deception, at least until weaponry becomes available.
See "Adventurer"& to determine level and special possessions.

### Mercenary Soldier
These are groups of low level fighters who hire themselves to the highest bidder. When encountered, there is an even chance they may be already hired and on their way to a war, meeting with a prospective employer, open for employment, or on their way home and not willing to take on a new task just yet.
See "Adventurer" to determine level and special possessions.

### Merchant Sailor/Fisherman
Men of the sea are usually found on or near open waters. If encountered inland, sailors may be ferrymen on streams or rivers. Fishermen will either be putting out to a fishing site, fishing, or returning with their catches. Sailors may be armed with knives, short swords, cutlasses, or belaying pins (1 point of damage).

### Merchant/Trader
Merchants and traders deal in goods and services. Those encountered in the wild are traveling in caravans in search of new business. Only 10% of the number encountered are actually merchants: 10% are drovers and the rest are mercenary guards. The guards are led by a fighter (6th-11th level) and a lieutenant one level lower. Each leader is accompanied by 12 guards of 2nd level. For each 50 people in the caravan there is a 10% chance of a wizard (6th-8th level) and a 5% chance of a priest (5th-7th level), as well as a 15% chance of a thief (8th-10th level) accompanied by 1-4 thieves (3rd-7th level). All such leaders, guards, and special characters are in addition to the number of merchants, drovers, and normal guards.
The treasure is mostly in trade goods (90%). The caravan has 10 pack animals or one wagon per 5,000 gp value.

### Middle Class
These are travelers journeying on personal business. They are found primarily in civilized regions, although pioneers may be encountered in relatively peaceful frontier regions. Middle class travelers may be armed with knives, daggers, and short swords.

## Peasant/Serf

Peasants are farmers, herders, and simple tradesmen of low social class. Unlike serfs, peasants are freemen. Serfs are totally subject to the local lord; they are the lowest of the social classes. They farm and perform the brute labor functions on large agricultural holdings. Serfs, really, are little more than slaves.
Both peasants and serfs may be armed with daggers, clubs, quarterstaves, and farming tools. They never have any treasure except under the rarest of occasions when they are able to hoard scavenged goods.

## Pilgrim

Pilgrims are groups of the devout on their way to or from a holy place. They can be found anywhere.
A group of pilgrims will always be accompanied by priests and other character classes. These people may be acting as leaders, guards, or pilgrims. Groups of pilgrims always include one to six 2nd-level priests, one to four 4th-level priests, one or two 6th-level, and one 8th-level priest (accompanied by one 3rd- and one 5th-level assistant). For every 10 pilgrims, there is a 10% chance of one to eight fighters (1st-8th level) and 1-6 thieves (2nd-7th level). There is a 5% chance per 10 pilgrims of a wizard of 6th-9th level. If the pilgrims are lawful good, the fighters will be paladins; if the pilgrims are chaotic good, the fighters will be rangers. If the party is neutral, the priests will be druids. If the pilgrims are lawful evil, they all fight as berserkers, although armed only with daggers.
Pilgrim alignment is determined below:

| d100 | Alignment |
|---|---|
| 01-35 | Lawful good |
| 36-55 | Chaotic good |
| 56-65 | Neutral |
| 66-85 | Lawful evil |
| 86-00 | Chaotic evil |

About 75% of pilgrim bands encountered are on foot. There is a 5% chance that a high level priest will be carrying a religious artifact, carefully hidden and protected by traps and magic.

(See also Priestand Priest Spells, Player’s Handbook)

## Pirate/Buccaneer

These are seafaring thieves and fighters. Pirates are always led by a captain of 8th or 10th level -- 8th if fewer than 200. The captain will have a 6th- or 7th-level lieutenant and four mates of 4th level. For every 50 pirates encountered, there will be a 3rd-level fighter, as well as a 15% chance for a cleric of 12th-15th level and a 10% chance for a wizard of 6th-9th level. For every 100 pirates, there will be a 5th-level fighter. All of these are in addition to the pirates already indicated by the dice.
Pirates wear leather armor; leaders wear chain mail. All are armed with knives, swords, and polearms. Some will be armed with crossbows, either light (20%) or heavy (10%). In addition their ships may be equipped with ballistae or catapults.
Buccaneers are similar, but are neutral with evil tendencies.

## Police/Constabulary

These are the duly appointed representatives of the local government, concerned with upholding the laws, maintaining the peace, and carrying out their superior's will. If constables are encountered in the wilderness, they might be pursuing a fugitive (50%) or investigating a case on the outskirts of their jurisdiction (50%). Constables are the equivalent of fighters of 1st-4th level. Wilderness encounters include a 25% chance that the constables are accompanied by a mob. The mob is composed of citizenry temporarily deputized to assist the police; they fight as 0-level fighters.

### Priest

These are typical NPC priests traveling on personal business or on a mission. The number encountered refers to the number of actual priests. If they are of high enough level, they might also have followers accompanying them (50%).
See "Adventurers" to determine level and special possessions.

### Sailor

Nonmerchant sailors are the seagoing armed forces of the local government, acting as police or soldiers. They may be patrolling their home waters, pursuing a waterborne criminal, or on their way to or from a mission in other waters. Each ship is commanded by a captain (6th-level fighter) and a first officer (5th-level fighter). Sailors are armed with swords, knives, bows, and polearms. They may also be armed with heavier weapons such as catapults and ballistae.

### Slaver

Slavers are usually found in control of a band of captive slaves; if no slaves are present, the slavers may be mistaken for mercenaries or brigands. The slavers' leader might be a thief, fighter, or fighter/thief (6th-11th level), assisted by a lieutenant one level lower. Each leader is accompanied by 1-12 guards of 1st or 2nd level. For each 50 slaves and slavers, there is a 10% chance of a wizard (6th-8th level) and a 5% chance of a priest (5th-7th level); these work for the slavers.
There are 10 slaves present for each 1-10 slavers. Slaves are treated the same as serfs. They may be recently acquired captives being taken from their homelands or long-time slaves being moved to a new market. Such slaves will be on foot and linked together in strings of 10-100 by ropes or chains. They will be willing to help any adventurers who try to rescue them, although they will be limited in the help they can provide. Slaves may be any class or type, but only 1% of captives belong to one of the character classes.

### Soldier

These are organized militia engaged in the defense of their home region. Soldiers are led by a captain (6th level or higher) and a lieutenant (1-4 levels lower). Each leader is accompanied by 1-12 soldiers of 1st or 2nd level. Most soldiers are engaged in routine patrols of the homeland. If local wars are occurring, there is a 50% chance that the soldiers are either heading off to the war or returning from it. There is a 5% chance of a cleric (5th-7th level) for each 50 soldiers present.
See "Adventurers " to determine level and special possessions.

### Thief/Thug

These are low level rogues who, if not already engaged in a crime, may attempt to rob wealthy or weak-looking adventurers. Thieves may be armed with concealed weapons such as knives, darts, blackjacks, and short swords.
See "Adventurers" to determine level and special possessions.

## Tradesfolk/Craftspeople

People engaged in the trades and crafts will be about their business when encountered. They may be operating a shop, acquiring materials for their business, or traveling to or from a client's location. They are willing to do business with adventurers, provided they are properly paid. They will not attack except to defend themselves. Note that 1% of all tradesfolk may be retired adventurers. Tradesmen may be armed with knives, quarterstaves, and tools.

About 90% of their treasure is merchandise or equipment.

## Tribal Culture

Tribal societies are the heart of primitive cultures; people hunt, fish, and farm near their simple villages. They are found in any climate.

For each 10 tribespeople, there will be an additional 3rd-level fighter. Tribes are led by a chief (a 5th-level fighter) and 1-4 subchiefs (4th-level fighters). For every 10 encountered, there is a 4th-level priest with them, and for each 30 tribespeople encountered, a 6th-level priest. The tribe has a shaman (8th-level priest). Tribal priests tend to be druidical in nature.

Tribal villages are made of local materials (grass, bamboo, mud, ice). In addition to the males encountered, there will also be an equal number of women and a 75% chance of 20-50 slaves.

Tribesmen's weapons are typically clubs, knives, spears, and bows. Armor is limited to shields.

## Wizard

These are typical NPC wizards. They may be engaged in personal business, gathering materials, or traveling. The number encountered refers to the number of actual wizards. They may be accompanied by 0-3 (1d4-1) servants and guards for each wizard. Guards are fighters 1-4 levels lower than the wizard they protect.

| Heads | THAC0 | Damage | Heads | THAC0 | Damage |
|---|---|---|---|---|---|
| 5 | 15 | 1-6 | 9 | 12 | 1-8 |
| 6 | 13 | 1-6 | 10 | 10 | 1-8 |
| 7 | 13 | 1-8 | 11 | 10 | 1-10 |
| 8 | 12 | 1-8 | 12 | 9 | 1-10 |

Hydrae are immense reptilian monsters with multiple heads. For each Hit Die the hydra has, it will have one head. The chart above lists the THAC0 value for hydrae, the number of heads and the damage that they inflict each time they bite.
Hydrae are gray-brown to dark brown, with light yellow or tan underbellies. Their eyes are amber and their teeth are yellow-white. Hydrae have between 5 and 12 heads (1d8 +4).

**Combat:** Hydrae always have 8 points on each of their Hit Dice and all heads must be severed before the hydra dies. A hydra can bring up to four heads into action against a single foe, biting once with each of them.
Each time a hydra takes 8 points of damage, one of its heads is assumed to have been severed. When this happens, a natural reflex seals the neck arteries shut to prevent blood loss.
Hydrae attack according to the number of heads they have. Therefore, a 10-headed hydra continues to attack as a 10 HD monster even after several heads have been slain.
Attacks on the body have no effect unless a single attack inflicts damage equal to the hydra's original hit points.

**Habitat/Society:** Hydrae are solitary creatures who prefer dismal surroundings. They gather only to mate.

**Ecology:** Despite the hydra's size and multiple attacks, they are often preyed upon by dragons. They are

impossible to train.

### Lernaean Hydra

Although similar to a normal hydra, Lernaean hydrae will regenerate two heads for each one that is severed. A maximum of 12 heads can be grown. New heads form in 1-4 rounds and can be avoided only by the prompt application of flame to the neck following the attack which destroyed the first head. This hydra's body is immune to all attacks.

### Pyrohydra

These reddish hydra have 7 or 8 heads which are able to breathe a jet of fire (5' wide and 2' long) twice per day. This attack does 8 points of damage, halved if a save vs. breath weapon is made.

### Cryohydra

Each head of this purplish-brown hydra is able to breathe a stream of frost 10 feet wide and 20 feet long which does 8 points of damage. A save vs. breath weapon is allowed for half damage.

# Imp

Imps are diminutive creatures of an evil nature who roam the world and act as familiars for lawful evil wizards and priests.

The average imp is a 2' humanoid with leathery, bat-like wings, a barbed tail, and sharp, twisted horns. Its skin is a dark red and its horns and jagged teeth are a gleaming white.

The imp can *polymorph* itself into two other animal forms. The most commonly encountered alternate forms are those of a large spider, raven, giant rat, or goat. In such forms the imp is physically identical to a normal animal.

**Combat:** In its natural form, the imp attacks with the wicked stinger on its tail. In addition to inflicting 1-4 points of damage, this stinger injects a powerful poison which is so deadly that those who fail their save versus poison are instantly slain by it. When it is *polymorphed*, the imp attacks with the natural weaponry of its adopted form, though the goat and raven forms lack damaging attacks.
The imp can use its special magical abilities no matter what its form. All imps are able to *detect good, detect magic,* or become *invisible* at will. Once per day they can use a *suggestion*.
Imps are immune to attacks based on cold, fire, or electricity and resist all other spell attacks as if they were 7 Hit Die creatures. They can be harmed only by silver or magical weapons and are able to regenerate one hit point per melee round.

**Habitat/Society:**Imps are beings of a very evil nature who originate on the darkest of evil planes. Their main purpose on the Prime Material plane is to spread evil by assisting lawful evil wizards and priests. When such a person is judged worthy of an imp's service, the imp comes in answer to a *find familiar* spell.
Once they have contacted their new "master", imps begin at once to take control of his actions. Although imps maintain the illusion that the summoner is in charge, the actual relationship is closer to that of a workman (the imp) and his tools (the master).
Although an imp's body can be destroyed on the Prime Material plane, it is not so easily slain. When its physical form is lost, its corrupt spirit instantly returns to its home plane where it is reformed and, after a time, returned to our world to resume its work.
While they are technically in the service of their master, imps retain a basic independence and ambition to become more powerful someday. They may acquire treasure from those they slay, and will often pilfer valuables encountered during their travels.
The imp confers some of its powers upon its master. A telepathic link connects the two whenever they are within one mile of each other. This enables the master to receive all of the imp's sensory impressions, including its infravision. The master also gains the imp's inherent 25% magical resistance and is able to regenerate just as the imp does. If the imp is within telepathic range, the master acts as if he were one level higher than he actually is. Conversely, if the imp is more than a mile away, the master acts as if he were one level of ability below his actual rank. If the imp is killed, the master instantly drops by four levels, though these can be regained in the usual manner.

**Ecology:** Imps are the errand boys of the powerful evil beings who command the darkest planes. They often act as emissaries and agents, but their primary task is to enhance the spread of evil in our world.

## Quasit

Quasits are chaotic evil counterparts to imps. The chaotic evil priests and wizards which quasits "serve" gain the same benefits and disadvantages that an imp's master does. Like imps, each quasit can assume two other forms. Those most commonly chosen by quasits are bats, giant centipedes, frogs, or wolves. They can use their magic in any of their forms.
The quasit attacks with its clawed hands (doing 1-2 points each) and its deadly bite (doing 1-4 points). The quasit's claws are coated in a toxin which causes anyone struck by them to save versus poison or lose one point of dexterity for 2-12 (2d6) rounds. The effects of multiple wounds are cumulative.
Quasits can turn *invisible, detect good,* or *detect magic* at will. They regenerate 1 hit point per round and can unleash a blast of fear with a 30 foot range radius once per day. Once each week the quasit can *commune* with the lower planes (asking up to 6 questions).
Quasits can only be harmed by cold iron or magical weapons. They are able to resist magic 25% of the

time, save as if they were 7 Hit Die monsters and are immune to cold, fire, and lightning.

Mephits are nasty little messengers created by powerful lower planes creatures. They are evil and malicious by nature and appear on the Prime Material Plane only to perform evil deeds. Six types of mephits are known: fire, ice, lava, mist, smoke, and steam. Each is created from the substance for which

it is named.
Mephits appear as thin, 5-foot humanoids with wings. Their faces have exaggerated features, including hooked noses, pointed ears, wide eyes, and protruding chins. Their skin continually oozes the stuff from which they were made. Mephits speak a common mephit tongue.

**Combat:** In battle, mephits attack with either clawed hands or breath weapons. Damage is variable depending on the type of mephit encountered. All mephits have the ability to *gate* in other mephits; the type *gated* in and percentage chance for success varies with the mephit initiating the gating (see below for details).

**Habitat/Society:** Mephits love tormenting helpless creatures and bragging about their latest evil accomplishments. They wear garish, vulgar costumes in bizarre colors and outrageous designs. They give themselves pompous, impossibly long names, such as
Garbenaferthal-sprite-slayer-greatest-of-all-the-steam-mephits.
Mephits assume a groveling, craven, yes-master stance around their bosses. Toward victims and each other, mephits drop their humble servant persona and take on the arrogant air of a superior being. A limited camaraderie exists between mephits of the same order. Disputes between different types are often settled by a friendly game of tug-a-demihuman.
Mephits are usually assigned to deliver some message or pick to up packages on the lower planes, but occasionally (5 % ) they are sent to the Prime material plane. Missions on the Prime Material Plane include retrieving a particular person, delivering a special magical item, or just spreading a little mayhem (so folks don't forget the lower planes are still there).

**Ecology:** Mephits lead brief, troublesome lives. They are quickly created and destroyed, but they have no predetermined life span. They never eat, but must return to the substance from which they were formed to heal damage (usually 1 hit point per turn in contact).

### Fire Mephit

The most mischievous of all mephits, these fiends play terrible pranks on other mephits (such as pushing lava mephits into wa-
ter and watching them harden) and on their victims.
Touching a fire mephit causes 1 point of heat damage (no saving throw). Their clawed hands rake for ld3 points of damage each, plus 1 hit point of heat damage per hit.
Fire mephits may use their breath weapon three times a day. It has two forms. The first is a flame jet 15 feet long and 1-foot wide. This jet automatically hits one target, of the mephit's choosing, for ld8+1 points of damage (half if saving throw is successful). The second form is a fan of flame covering a 120 arc directly in front of the mephit to a distance of 5 feet. Any creature in the arc suffers 4 points of damage, no saving throw allowed.
Fire mephits may also cast *heat metal* and *magic missile* (two missiles) spells each once per day. Once every hour a fire mephit can attempt to *gate* in another mephit. The chance for success is 25% and the summoned mephit is either fire, lava, smoke, or steam (equal probability of each).

### Ice Mephit

Ice mephits are angular in form, with translucent ice-blue skin. They live on the colder lower planes and never mix with fire, lava, smoke, or steam mephits. Ice mephits are aloof and cruel, surpassing all other mephits in the fine arts of torture and wanton destruction.

In combat, ice mephits attack with two clawed hands, inflicting 1-2 points of damage each. In addition, their chilling touch has a freezing effect, reducing the victim's hit points by 1 per hit, no saving throw allowed. These effects are cumulative and last three to four turns, or until the victim is healed to full hit points (whichever comes first).
Ice mephits may breathe a volley of ice shards three times per day. This volley automatically hits a single victim within 15 feet of the mephit. Damage is 1d6, halved if the victim rolls a successful saving throw.
Once per hour an ice mephit may attempt to *gate* in one other mephit. The chance of success is 25% and the summoned mephit is either mist or ice (equal probability of each).

### Lava Mephit

Lava mephits are the least intelligent of all mephits. They are slow on the uptake and frequently the brunt of fire mephit jokes. Lava mephits generate extreme heat that can be felt 30 feet away. Their claws are small and soft, causing only 1 point of damage when they hit, but each hit inflicts an additional 1d8 points of heat damage. The touch of a lava mephit automatically melts or burns most materials. The rate of this destruction varies from one hour to burn through an inch of wood to three rounds to completely melt plate armor.
Their breath weapon is a molten blob of lava usable once every three melee rounds. This blob automatically hits one target within 10 feet of the breathing mephit (ld6 points of damage, no saving throw). A lava mephit may use this weapon a maximum of eight times, after that, the mephit must recharge by soaking in a lava pool for on hour. Mephits may recharge during battle, if they come in contact with lava during combat, they regenerate 2 hit points per melee round. This ability is, of course, lost if the mephit is brought to 0 hit points or less, at this point the mephit is dead. These fiends may shapechange into a pool of lava 3 feet in diameter by 6 inches deep. This maneuver does not recharge the breath weapon. They may still be harmed normally when in this lava pool form.
Once every hour, a lava mephit may attempt to *gate* in 1-2 other mephits. The chance of success is 25%. If two are summoned, they are of the same type (equal probability of fire, lava, smoke, or steam).

### Mist Mephit

Mist mephits fancy themselves as spies par excellence and practice this ability on other mephits. They are quick to report other mephits who show mercy or any other treasonous behavior, and they never engage in idle banter with other mephits. Mist mephits have the ability to see clearly in fog or mist. Their skin is pale green. They never engage in melee unless they are trapped. Their soft claws inflict just 1 point of damage when they hit. Mist mephits may breathe a sickly, green ball of mist, every other round, up to three times an hour. This ball automatically envelopes one victim within 10 feet of the breathing mephit. The victim must roll a successful saving throw vs. poison or suffer ld4+1 points of choking damage and be blinded for ld4 rounds. In addition to the breath weapon, mist mephits can create a *wall of fog* (as the spell) once per day (at a 3rd level ability). They can also assume gaseous form once per day and often use this ability to spy on others or escape combat.
Once per hour a mist mephit may attempt to *gate* in 1-2 other mephits. The chance of success is 20%. If two mephits arrive, they are of the same type (either ice or mist, equal probability).

### Smoke Mephit

Smoke mephits are crude and lazy. They spend most of their time lounging around invisible, smoking pipe weed, telling bad jokes about their creators, and shirking their responsibilities.
Smoke mephits' two clawed hands cause 1-2 points of damage each. Their breath weapon consists of a sooty ball usable every other melee round, with no limit on the number of times it can be used in a day.

The sooty ball automatically strikes one creature of the mephit's choice within 20 feet, causing ld4 points of damage and blinding the victim for 1-2 rounds. No saving throw is permitted.
Smoke mephits may cast *invisibility* and *dancing lights* once each per day. Once per hour they can attempt to *gate* in 1-2 other mephits. The chance of success is 20%, with equal probability of the summoned mephits being fire, lava, smoke, or steam. If two mephits appear, they are of the same type.
When a smoke mephit dies, it disappears in a flash of flame. The flash causes 1 point of damage to all creatures within 10 feet (no saving throw).

### Steam Mephit

Steam mephits are the self-appointed overlords of all mephits. They frequently give orders to weaker mephits. In addition to hissing steam escaping from their pores, steam mephits leave a trail of near-boiling water wherever they walk.
The hardened claws of a steam mephit cause 1d4 points of damage each, plus 1 additional point of heat damage per touch (no saving throw). In addition, the victim is 50% likely to be stunned for one round. These effects are cumulative, so a victim raked twice could be stunned for two rounds.
Steam mephits can breath a scalding jet of water every other round; no limit to the number of times per day this can be used. This jet has a 20-foot range and automatically hits its target. Damage is 1d3 points (no saving throw) with a 50% chance of stunning the victim for one round.
Once per day a steam mephit may create a rainstorm of boiling water over a 20-by 20-foot area. This storm inflicts 2d6 points of damage to all victims caught in the area of effect, with no saving throw allowed. Steam mephits may also *contaminate water* once per day (reverse of *purify water*).
Once per hour a steam mephit may attempt to *gate* in 1-2 other mephits with a 30% chance of success. There is an equal probability that the summoned mephits are either fire, lava, smoke, or steam. If two are summoned: they are of the same type.
Unlike other mephits, who will delay an attack for as long as possible, steam mephits are ruled by their oversized egos. They will even ambush even large, well-armed parties, striking first with boiling rainstorms, then concentrating their breath weapons on the nearest wizard or priest.

Insects are the heartiest and the most numerous of creatures. Normal insects are found almost

everywhere. The giant variety, many of which are listed here, with added brawn and power, make tough opponents.

### Ant, Giant
Both worker and warrior ants fight. If a warrior manages to bite, it also tries to sting for 3d4 points damage. A successful save reduces damage to 1d4. The queen has 10 HD but does not move or fight.

### Ant Lion, Giant
The ant lion builds tapering pits in loose sand and waits for prey to fall in. Once the ant lion hits, all additional attacks are automatic.

### Aratha
Aratha grasp and hold prey with their 8-foot clawed tentacles that can lash out 20 feet. An aratha does not bite opponents, but chews flesh torn from prey by its tentacles.

### Psionics Summary:

| Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|
| 9 | 3/1/7 | PsC,MT,PB/All | 13 | 202 |

**Psychokinetic** - *Devotions:* molecular agitation.
**Psychometabolism** - *Devotions:* body equilibrium, suspend animation.
**Telepathy** - *Sciences:* psychic crush. *Devotions:* attraction, empathy, mind thrust, psionic blast.

### Aspis, Cow
Aspis cows exude a dangerous corrosive that coats the body and adheres to the walls and floor of the chambers. This corrosive causes damage every round her opponents stay in her chamber.

### Aspis, Drone
Most combat situations are handled by aspis drones. They rise on two rear legs, leaving the other four limbs to wield two weapons and two shields, increasing its AC to 2. All aspis are immune to cold and electrical damage; fire-based attacks cause only half damage.

### Aspis, Larva
Aspis larvae attack with their perpetually ravenous jaws.

### Assassin Bug
The male assassin bug attacks first with the female close to the battle. Those bitten must save vs. poison or that part of the body is paralyzed for one hour. The female attacks that same location the following round to inject 1d6+6 eggs. In 1d12+12 hours, the eggs hatch, and each larva causes 1 point of damage per hour. After two weeks, the larva emerge as adults. Only powerful spells like *wish* and *limited wish* will erase the infestation.

### Bee, Worker
Worker bees use their stinger in combat. The victim must save vs. poison or suffer and additional 1d4

points of damage. Bees lose their stinger after one use and die in an hour. If encountered at the hive, there will be 20 times the normal number of bees.

### Bee, Soldier
Soldier bees are identical to worker bees, except their sting causes more damage, and the victim must save with a -1 penalty.

### Bumblebee
Bumblebee poison causes an additional 1d6 points of damage unless a save vs. poison (with a -1 penalty) is made. If encountered at or near the nest, there will be 1d6+6 bumblebees, and a combative queen. The queen has 8d4 HD and a sting that causes 1d8 points of damage. The poison from her sting causes an additional 2-8 points of damage if a save vs. poison at a -2 penalty is failed. Bumblebees do not lose their stingers after use.

### Cave Cricket
If a group of people are within 20 feet of a chirping cave cricket, the noise drowns out all speech and vocal spell casting. The noise inhibits the victim's ability to hear approaching predators and enemies.

### Dragonfly
Giant dragonflies gain a -3 bonus to initiative rolls and a +4 Armor Class bonus against missile weapons. A dragonfly scoops tiny- and small-sized creatures into its leg basket and devours them in midair. When captured, its victim is attacked automatically. When attacking man- or large-sized creatures, the dragonfly darts in to bite with its mandibles, and backs up, always facing its opponent.

### Dragonfly, Larva
These larva surprise their prey 50% of the time. Their mandibles are covered with a rubbery organ when not in use; so even before the attack, they appear to be inoffensive, toothless creatures.

### Ear Seeker
The ear seeker needs warm places to lay its eggs, favoring locations like ears. The creature lays 8+1d8 eggs that hatch in 4d6 hours. The larva eat the surrounding tissue, deafening the victim. Constantly burrowing deeper into the victim's head where food and warmth are plentiful, the host has a 90% chance of dying in 1d4 days. After this time, the ear seekers emerge from the infested ear as adults. A *cure disease* removes the infestation but does not return the loss of hearing.

### Firefriend (Giant Firefly)
In addition to its mandibles, the giant firefly can brighten its abdomen once every turn, creating a beam of greenish light that causes 5d4 points of damage; one-half damage if a save vs. wands is successful.

### Fly, Giant Bluebottle
This breed of giant fly prefers carrion, offal, and the like. They are, however, attracted to sweet odors, and creatures covered with blood or open wounds.

### Fly, Giant Horsefly
The largest of all giant flies, the giant horsefly alights on any creature to attack for blood with its tuberous mouth. After biting, the giant horsefly causes an equal amount of damage the next round by

drawing blood, unless driven off.

### Fyrefly
When a fyrefly contacts flammable objects, these items must save vs. normal fire or be consumed. Persons in burning clothing suffer 1d6 points of damage. Hits that do not strike burnable material, cause 1 point of damage to the victim.

### Horax
Horax attack in packs, gaining a -1 bonus to initiative rolls. Once a horax scores a hit, it maintains its hold, causing damage every round.

### Hornet, Giant
The solitary giant hornet swoops down on its prey, holding with its legs while its stinger repeatedly stabs the victim. A failed save vs. poison causes an additional 5d6 points of damage and 2d6 hours of paralyzation. Hornets do not lose their stingers when they attacks.

### Pernicon
Pernicons attack by swarming victims and tearing at exposed flesh with their huge mandibles. Able to worm their way under clothing and armor, no one is completely safe from these creatures. When the swarm hits, the victim suffers 1d10 points of damage and 1 point of Constitution. If the Constitution dips below 3, the victim falls unconscious; below 1 and the victim dies. One point of Constitution is recovered per day, regardless of healing methods.

### Praying Mantis, Gargantuan
The gargantuan praying mantis grabs prey, that inadvertently comes too close, with its front spiny arms. Besides its two claws, it bites with its strong mandibles, removing and chewing flesh with each unerring strike.

### Termite, Giant Harvester
Groups of 30 or more worker termites are accompanied by soldiers. Soldier termites can spit an irritating liquid like kerosene once per turn at a range of 10 feet. This flammable liquid blinds creatures, for 5d4 rounds, that do not save vs. poison. If ignited, termite spittle causes 4d4 points of damage. King termites have double range spittle and can use this attack every other round, but the queen lacks this ability. Both the queen and king (and the eggs) are guarded by twice the number of workers and soldiers encountered normally, and who attack with a +1 to hit and a +5 bonus to morale rolls.

### Tick, Giant
These creatures drop on victims from trees, stalactites, or rock formations. After the initial hit, the tick drains 1d6 hit points of blood every round until its drain total equals its hit point total. A victim has a 50% chance of contracting a fatal disease that kills the host in 2d4 days unless a *cure disease* is cast.

### Wasp, Giant
These cooperative insects attack with both their bite and stinger. The venom carried by wasps is identical to that held by the giant hornet. Wasps do not lose their stingers when they attack.

# Insect Swarm

| | Velvet Ants | Grasshoppers and Locusts |
|---|---|---|
| **Climate/Terrain:** | Tropical, subtropical or temperate/Forest, hills,and plains | Tropical and subtropical/ Forest, hills, and plains |

| **THAC0:** | See below | See below |
| **No. of Attacks:** | 1 | 1 |

| | | |
|---|---|---|
| **Damage/Attack:** | See below | See below |
| **Special Attacks:** | Poison | Nil |
| **Special Defenses:** | Nil | Nil |
| **Magic Resistance:** | Nil | Nil |
| **Size:** | Individual: T (1"long); Swarm: see below | T (2" long); Swarm: see below |
| **Morale:** | Unsteady (6) | Unsteady (6) |
| **XP Value:** | See below | See below |

As individuals, velvet ants, grasshoppers, and locusts are relatively harmless. But in swarms, these insects can cause immense damage to fields and forests, as well as threatening the lives of all creatures in their path.

### Velvet Ants

The velvet ant resembles a plump version of the common ant, except for the soft fuzz that covers its entire body. The fuzz is usually red or black, but it can also be yellow, brown, or orange.

**Combat:** A velvet ant swarm eats everything in its path, animal matter as well as vegetation. To determine the size of a swarm, roll 1d100 and multiply the result by 1,000. There are about 100 ants per square foot; therefore, a swarm of 10,000 ants forms a block about 10 feet per side.
If a swarm comes in contact with an obstacle, it turns 90 and continues. A victim in contact with a swarm has an 80% chance per round of being bitten and suffering 1d4 points of damage.
The victim must roll a successful saving throw vs. poison or suffer intense pain for the next 2d4 turns, making all attack and damage rolls with a -2 penalty during this time.
Each point of damage inflicted on an insect swarm kills 1d20 insects. They may be scattered with smoke or fire; immersion in water washes them off. If half of a swarm is killed, the survivors attempt to scatter and hide. If an entire swarm is killed, award 975 experience points.

### Grasshoppers and Locusts

The grasshopper is about 2 inches in length and is usually green or brown in color. The grasshopper can make leaps of about four feet. Locusts are a type of grasshopper, with shorter antennae. They can rub their hind legs against their wings to produce a distinctive chirp.

**Combat:** Grasshopper and locust swarms fly from place to place in search of lush fields on which to settle and consume. These swarms move in straight lines and are easy to avoid.

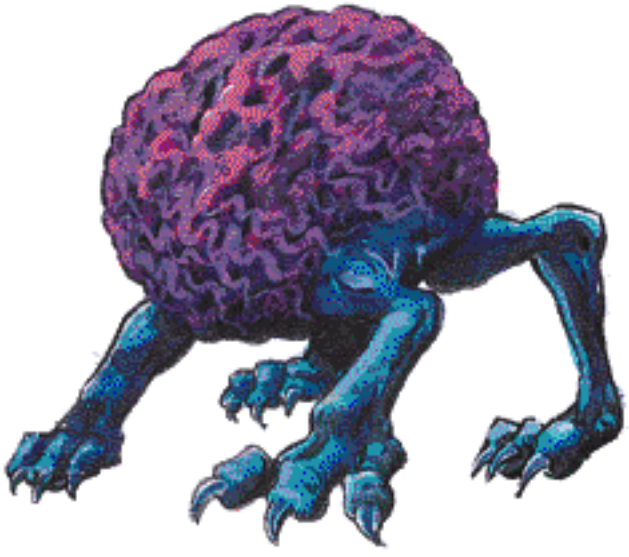
To determine the size of a grasshopper swarm, roll 1d100 and multiply the result by 10,000. Multiply this result by 2 when determining the size of a locust swarm. There are about 20 grasshoppers or locusts per square foot (for convenience, assume there are 20 insects per cubic foot when approximating the size of flying swarm).
A victim in contact with a grasshopper or locust swarm has a 90% chance per round of being bitten and suffering 1 point of damage. Additionally, victims within a cloud of these insects have their vision

reduced to 2d4 feet.
Each point of damage inflicted on an insect swarm kills 1d20 insects. They may be scattered with smoke or fire; immersion in water washes them off. If half of a swarm is killed, the survivors attempt to scatter. If an entire swarm is killed, award 2,000 experience points.

**Habitat/Society:** Insect swarms are migratory, sleeping at night wherever they happen to be. Females lay up to 100 eggs every year. These insects have no leaders or any specialized workers. They do not collect treasure.

**Ecology:** Velvet ants eat seeds, grasses, and meat, especially enjoying carrion. The poison of velvet ants renders them inedible to carnivores.
Grasshoppers and locusts prefer seeds and grains. Snakes, mice, birds, and spiders are among these insects' numerous natural enemies. Grasshoppers and locusts can be eaten by carnivores.

# Intellect Devourer



| | Adult | Larva |
|---|---|---|
| **Climate/Terrain:** | Any subterranean or dark areas | Dark, moist areas |
| **Frequency:** | Very rare | Rare |
| **Organization:** | Solitary | Solitary |

| **Armor Class:** | 4 | 5 |
| **Movement:** | 15 | 9 |
| **Hit Dice:** | 6+6 | 3+3 |

| | | |
|---|---|---|
| **THAC0:** | 13 | 17 |
| **No. of Attacks:** | 4 | 1 |
| **Damage/Attack:** | 1-4/1-4/1-4/1-4 | 2-5 (1d4+1) |
| **Special Attacks:** | Psionics, stalking | Psionics, poison |
| **Special Defenses:** | +3 weapon needed to hit; see below | Psionics |
| **Magic Resistance:** | Nil (see below) | Nil |
| **Size:** | T (6" long) | T (6" long) |
| **Morale:** | Fanatic (17-18) | Unsteady (5-7) |
| **XP Value:** | 6,000 | 650 |

The term "intellect devourer" refers only to this creature's adult form; its larva is an ustilagor. Both resemble a brain on four legs. The body of the intellect devourer has a crusty protective covering, and its legs are bestial, jointed, and clawed. The ustilagor's body is soft and moist and usually covered with a gray fungus; it has a 3-foot-long tendril at the front, and its legs are spindly and coral-like. Though both forms are about brain-sized, the adult can use psionics to alter its size.

**Combat:** The ustilagor attacks by striking with its flexible tendril. The tendril secretes an alkaline substance which causes 1d4+1 damage on a successful hit, as well as another 1d4+1 damage the following round, unless the victim makes a successful saving throw vs. poison. The creature is quite agile, and can jump and dart quickly.

The ustilagor can also attack psionically, first making contact with a victim's mind. It uses aversion to give a victim an aversion to fungus or to a certain area; id insinuation to effectively paralyze the victim; or telempathic projection to increase an opponent's dislike or distrust of companions.

Despite its psionic prowess, the ustilagor cannot be attacked mentally (magically or psionically) except by psionic blast. Its fungal growth interferes with and prevents mental attacks, protects the ustilagor from drying out, prevents cerebral parasites from attacking, and makes the creature immune to fungal attacks and any power that reads or affects an aura.

The adult form also prefers to attack with psionics, though its three-taloned paws can all be used in the same round, as the creature jumps on an opponent and rakes.

Aside from its regular psionic powers (see below), the adult intellect devourer has specialized forms of three psionic powers; these are constantly in effect and cost no PSPs, but they do count as psionic activity for detection purposes. Through a special form of energy containment, the intellect devourer is immune to damage from normal and magical fires, and takes only one hit point per die of electrical damage; a form of split personality is always in effect, allowing the creature to attack with psionics and claws in the same round; and it has psionic sense with a 60 foot range.

The intellect devourer is immune to weapons with less than a +3 enchantment, and takes only 1 point of damage per hit from those weapons which can harm them. A *death spell* has only a 25% chance of success, but *power word: kill* is effective. A *protection from evil* keeps the intellect devourer at bay, and bright light (including that caused by fire) drives it away.

An intellect devourer hunts and stalks psionic creatures. After killing a psionic victim, it sometimes uses reduction to enter the body, devour the brain, and occupy its place. It reads the victim's mind as it

devours it, then animates the body from within, using it to find other minds to attack and devour.

**Psionics Summary:**

| | Level | Dis/Sci/Dev | Attack/Defense | Score | PSPs |
|---|---|---|---|---|---|
| Larva | 2 | 2/1/5 | II/M- | 10 | 150 |
| Adult | 6 | 3/3/11 | EW,II/M-,TS,IF | = Int | 200 |

Intellect devourers have the following psionic powers; ustilagor have only those powers marked by asterisks:
**Psychometabolism - Sciences:** ectoplasmic form*. **Devotions:** body equilibrium*, chameleon power, expansion, reduction.
**Psychoportation - Devotions:** astral projection.
**Telepathy - Sciences:** domination, mindlink. **Devotions:** aversion*, contact*, ego whip, ESP, id insinuation*, telempathic projection*.

**Habitat/Society:** Intellect devourers dwell beneath the ground or in dismal wilderness areas. Their reproductive method is unknown. The intellect devourer rarely protects its young, and may even devour them. Ustilagor develop a symbiotic relationship with a bizarre fungus which feeds on residual thought emanations from the ustilagor's victims. An ustilagor becomes an adult by consuming the brain of a psionic creature.

**Ecology:** Mind flayers raise intellect devourers, treating the ustilagor as culinary delights, and using adults as watch dogs. Both forms of the creature can be used as components in items and potions related to ESP and mind control.

# Invisible Stalker

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Very rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Special |
| **Intelligence:** | High (13-14) |
| **Treasure:** | Nil |
| **Alignment:** | Neutral |
| **No. Appearing:** | 1 |
| **Armor Class:** | 3 |
| **Movement:** | 12, Fl 12 (A) |
| **Hit Dice:** | 8 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 4-16 (4d4) |
| **Special Attacks:** | Surprise |
| **Special Defenses:** | Invisibility |
| **Magic Resistance:** | 30% |
| **Size:** | L (8' tall) |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 3,000 |

The invisible stalker is a creature from the elemental plane of Air. Those encountered on the Prime Material plane have almost always been summoned by wizards to fulfill a specific task.
The true form of the invisible stalker is unknown. On the Material, Astral, or Ethereal planes, the invisible stalker can only be perceived as a shimmering air mass which looks much like the refraction effect caused by hot air passing in front of cold.
Invisible stalkers understand the common speech of men, but can not speak it. They can converse only in their own language, which sounds much like the roaring and whooshing of a great wind storm.

**Combat:** Invisible stalkers attack by using the air itself as a weapon. It is capable of creating a sudden, intense vortex that batters a victim for 4-16 (4d4) points of damage. Such attacks affect a single victim

on the same plane as the invisible stalker.
Due to their invisibility, these creatures impose a -6 penalty on the surprise rolls of those they choose to attack. Similarly, all opponents who are unable to see or *detect invisible* foes are at a -2 on their attack rolls. Although they are fully *invisible* on the Prime Material plane, their outlines can be dimly perceived on the Astral or Ethereal planes.
Invisible stalkers can only be killed on the elemental plane of Air. If attacked on another plane, they automatically return to their home plane when their total hit points are exceeded by the damage they suffered.

**Habitat/Society:** Little is known about the lives of these creatures on their home plane. It is assumed that they are similar to normal air elementals when encountered there.
Those present on the material plane are there as the result of a conjuration by some wizard. This magic causes the creature to serve its summoner for a time. The conjurer retains full command of the stalker until it either fulfills its duties or is defeated and driven back to its home plane. Once given a task, an invisible stalker is relentless. They are faultless trackers who can detect any trail less than a day old. If ordered to attack, they will do so with great fury and will cease their efforts only upon their own destruction or the direct orders of their master. Once their mission is accomplished, the creature is free to return to its home plane.
The invisible stalker is, at best, an unwilling servant. It resents any task assigned to it, although brief, uncomplicated labors may be seen as something of a diversion and thus undertaken with little resentment. Tasks that require a week or more of its time will drive the invisible stalker to pervert the stated intent of the command. Such commands must be carefully worded and come from a powerful wizard. An invisible stalker may look for a loop hole in the command as a means of striking back at its master. For example, a simple command such as "keep me safe from all harm" may result in the stalker carrying the conjurer back to the elemental plane of air and leaving him there in a well hidden location. Each day of the invisible stalker's indenturedness there is a 1% cumulative chance that the creature will seek a means to pervert its commands and free itself of servitude. If no option is open, the creature must continue to serve.

**Ecology:** Invisible stalkers are a species unwillingly transplanted to the Prime Material plane. They are slaves whose terms of servitude dominate their brief stays. Those who have been subjected to great hardship, assigned very difficult tasks, or who have faced death at the hands of humanoids, tend to retain a distrust or outright hatred of them. Those that have had an easy time during past periods of service or who are first time arrivals on the Prime Material plane may be easier to deal with. Such feelings may carry over to influence encounters with humanoids traveling in the aerial plane. Anyone who has befriended an invisible stalker in the past will find that voyages through the plane of elemental Air are far less hazardous than they might otherwise have been.
Invisible stalkers only obey those who actually summon them and few wizards can be commissioned to summon such a being on another's behalf. Some mercenary wizards have been able to construct the necessary summons onto scrolls that are usable by others. These sell for between 5,000 and 10,000 gp and are very dangerous to use. Even the slightest error can cause users of such scrolls to come to a tragic end.

# Ixitxachitl

| | |
|---|---|
| **Climate/Terrain:** | Shallow tropical waters |
| **Frequency:** | Very rare |
| **Organization:** | Tribe |
| **Activity Cycle:** | Day |
| **Diet:** | Carnivore |
| **Intelligence:** | Average to High (8-14) |
| **Treasure:** | P, R, S (in lair only) |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 5-12 (1d8+4) |
| **Armor Class:** | 6 |
| **Movement:** | Sw 12 |
| **Hit Dice:** | 1+1 to 4+4 |
| **THAC0:** | 1+1 and 2+2 HD: 19 |
| | 3+3 HD: 17 |
| | 4+4 HD: 15 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 3-12 |
| **Special Attacks:** | Spells, see below |
| **Special Defenses:** | Spells, see below |
| **Magic Resistance:** | Nil |
| **Size:** | S-L (3'-8' wingspan) |
| **Morale:** | Elite (13) |
| **XP Value:** | 35 |
| 1+1 HD priest | 65 |
| 2+2 HD priest | 120 |
| 3+3 HD guardian priest | 270 |
| 4+4 HD high priest | 420 |
| 2+2 HD vampiric | 420 |
| 8+8 HD greater vampiric | 4,000 |

Ixitxachitl are a race of intelligent, aquatic beings that resemble small manta rays with barbed tails. They have an evil disposition and worship evil powers; they love to hunt marine humanoids, and then sacrifice or devour their catch.
Ixitxachitl is both singular and plural; it is properly pronounced ish-it-SHACH-itl, though many refer to them as icks-it-ZACH-it-ul or even icks-it-zuh-chit-ul.

**Combat:** A favored tactic of ixitxachitl is to hide in the sand of the ocean floor, wait for prey to pass by, then spring up and bite them. The creatures are not very stealthy, and this tactic gives them normal chances to surprise their prey.
Some ixitxachitl act as priests, learning special versions of spells which have only verbal components, from the following spheres: Charm, Divination, Elemental (Water), Necromantic, Healing, Protection, and Sun (Darkness only). For every 10 ixitxachitl encountered, there is one ixitxachitl with the abilities of a 2nd-level priest. For every 20, there is an individual with the powers of a 3rd-level priest. For every 50, there is one with 2+2 Hit Dice and the abilities of a 5th-level priest.
When more than 50 are encountered, they are led by a high priest with 4+4 HD and 8th-level ability. The high priest is accompanied by two guardian priests, each with 3+3 HD and 6th-level ability. Guardian and high priests often have treasure type U, with magical items that can be used without hands.
For every 20 ixitxachitl encountered, there is a 50% chance they will be accompanied by a vampiric ixitxachitl. One in one hundred of these are greater vampiric ixitxachitl, but these are rarely encountered outside a city.

**Habitat/Society:** Though they are occasionally encountered in rivers, ixitxachitl live in shallow ocean depths. They usually have a community of 10-100 individuals, which lives in a maze of corridors inside a coral reef. A community usually has 20-200 humanoid slaves to do heavy labor for them, such as carving corridors. The community's entrance is hidden.
Large communities that have strong leaders, like a greater vampiric ixitxachitl, are sometimes built on the ocean floor. These large cities hold pyramids and other buildings which serve as lairs for small groups of the creatures. Rumors tell of ixitxachitl cities with populations in the thousands. The strongest ixitxachitl in the community leads its religious hierarchy, which controls the lives of the populace.

**Ecology:** Ixitxachitl have no natural predators, though they have many enemies, ranging from sahuagin to humans. They are vicious predators who prey on almost any living creature; they often over hunt a region, eliminating all life forms, forcing the ixitxachitl to find new hunting grounds.

### Vampiric Ixitxachitl

These rare creatures are even more dangerous than the others. Each has 2+2 HD and regenerates 3 hp per round. In addition to its normal damage, the bite of a vampiric ixitxachitl drains one life energy level. They look no different than other ixitxachitl, and often serve as guards for their leaders.

### Greater Vampiric Ixitxachitl

These creatures are rare indeed; they achieve greater status only by being bitten by an existing greater vampiric ixitxachitl. These creatures have 8+8 Hit Dice. They drain two life energy levels with a bite (except when the bite is performed on another vampiric member of their race). A greater vampiric ixitxachitl is the center of the large cities of its kind; it is their tyrannical ruler, and they worship it as the

incarnation of a greater power. Captives are brought to it to be drained of life.

# Jackalwere

| | |
|---|---|
| **Climate/Terrain:** | Any temperate |
| **Frequency:** | Rare |
| **Organization:** | Pack |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore |
| **Intelligence:** | Very (11-12) |
| **Treasure:** | C |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1-4 |
| **Armor Class:** | 4 |
| **Movement:** | 12 |
| **Hit Dice:** | 4 |
| **THAC0:** | 17 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 2-8 (2d4) |
| **Special Attacks:** | Gaze causes sleep |
| **Special Defenses:** | Hit only by iron and +1 or better magical weapons |
| **Magic Resistance:** | Nil |
| **Size:** | S (3' long) as a jackal<br>M (6' tall) as a human or hybrid |
| **Morale:** | Steady (11-12) |
| **XP Value:** | 270 |

The jackalwere is a terrible and savage creature which preys on unsuspecting travelers and other demihumans that it can ambush. Its ability to alter its shape at will makes it a most dangerous foe. The jackalwere can be found in any of three forms, showing no preference for any one over the others. The first of these is that of a normal jackal. In this form it will often run and hunt with jackal packs. Its second form is a six foot tall, half-human/half-jackal hybrid which stands erect. In its third form, the jackalwere is physically indistinguishable from normal human beings. The exact physical characteristics of the jackalwere's human form varies according to the desires of the monster.

**Combat:** In its jackal form, the monster conforms to the statistics presented elsewhere in this volume. A careful observer, however, will find that the creature does not act in the manner typical of a normal jackal, for it is far more aggressive.
In its hybrid form, the jackalwere can attack with either its bite or with any weapons in hand. Because it has a great thirst for the blood of humans and demihumans, the jackalwere will use its bite whenever possible. Still, it will not avoid the use of weapons that will insure its victory in combat.
In its human form, the jackalwere can only attack with weapons. Although it may employ any manner of weapon, it greatly enjoys those which will cut and tear the flesh of its victims. In some cases, a jackalwere has been known to feed on the bodies of fallen enemies without reverting to its jackal or hybrid form.
In all forms, the jackalwere possesses a magical gaze. If an unsuspecting victim meets the monster's gaze, the victim must save versus spell or fall deeply asleep; the effect is identical to that of the *sleep* spell. Note that hostile, scared, or excited people are not considered to be unsuspecting.
The jackalwere's special defenses also function in all three forms. Only +1 or better magical weapons or those forged from cold iron will cause any damage to the jackalwere. Jackalweres revert to their jackal form after death.

**Habitat/Society:** When the jackalwere locates a victim it will assume human shape and approach its prey. It will seek to ease the suspicions of its target, often pretending to be injured or otherwise in need, until it can employ its gaze attack. If this fails and the jackalwere is confronted with forceful resistance it will decide whether to flee or press the attack based on its estimation of its victim's strength.
The jackalwere spends its life hunting and killing any humans and demihumans it comes across. They roam the world in either the jackal or human form, seeking humanoids to kill, eat, and rob. They are sly creatures and masters of deceit.
Jackalweres are able to mate only in their jackal form. They may produce offspring either by mating with true jackals or other jackalweres, but only those young who were not of mixed blood will be jackalweres themselves. The children of a jackal and jackalwere mating will be jackals, although they will be unnaturally aggressive.
Female jackalweres give birth in five months to a litter of 1-4 pups. These are identical to jackal pups although they initially have 1 Hit Die. The pups grow quickly and add an additional Hit Die each year. Their jackal forms reach full growth at three years and pups are locked in that form for their first two years. At age two they gain the ability to assume their hybrid form and at age three they gain the ability to assume a human form which is apparently nine years of age. The human form grows at triple the normal human rate. If a parent in human form is discovered with its pups, it will often try to pass them off as pets.
Jackalweres may (20%) travel in the company of 1-6 normal jackals. Although these jackals are normal in every regard, the influence of the jackalwere tends to make them more fierce than normal. Jackals under the influence of a jackalwere will be hunters instead of scavengers.

**Ecology:** Jackalweres will not serve any but the most evil of humanoids, and even then only if they have the opportunity to slay more humans and demihumans than they could on their own.

# Kenku

| | |
|---|---|
| **Climate/Terrain:** | Any land |
| **Frequency:** | Uncommon |
| **Organization:** | Clan |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | F |
| **Alignment:** | Neutral |
| **No. Appearing:** | 2-8 |
| **Armor Class:** | 5 |
| **Movement:** | 6, Fl 18 (D) |
| **Hit Dice:** | 2-5 |
| **THAC0:** | 2 HD: 19 |
| | 3-4 HD: 17 |
| | 5 HD: 15 |
| **No. of Attacks:** | 3 or 1 |
| **Damage/Attack:** | 1-4/1-4/1-6 or by weapon |
| **Special Attacks:** | Nil |
| **Special Defenses:** | See below |
| **Magic Resistance:** | 30% |
| **Size:** | M (5'-7' tall) |
| **Morale:** | Elite (13) |
| **XP Value:** | 2 HD: 175 |
| | 3 HD: 420 |
| | 4 HD: 650 |
| | 5 HD: 975 |

Kenku are bipedal, humanoid birds that use their powers to annoy and inconvenience the human and demihuman races.
The typical kenku resembles a humanoid hawk wearing human clothing. Kenku have both arms and wings. The wings are usually folded across the back and may be mistaken at a distance for a large

backpack. Height ranges from 5 to 7 feet. The feathers are predominantly brown with white underfeathers and face markings. The eyes are a brilliant yellow.

**Combat:** All kenku have the skills of 4th-level thieves. They are expert fighters and usually attack with a scimitar or quarterstaff. If unarmed, they attack with either pair of claws (two attacks for 1d4 points of damage apiece) and their beak (1d6 points of damage). If they are on foot, they use the hand claws. If in flight, the foot claws are used. They do not usually kill unless their own lives are threatened by the survival of their foe. All kenku have well-developed disguise skills. They have a 50% chance of passing for human, although their disguises often have telltale large noses.

A 3-Hit Die kenku has one 1st-level wizard spell, usually *magic missile*. Once each 30 days a kenku can shape change and retain that shape for up to seven days. A 4-Hit Die kenku has an extra 1st-level spell, often *shocking grasp*. They gain the innate ability to become invisible with no limitation on duration or frequency of use. A 5-Hit Dice kenku leader gains an additional 2nd-level mage spell, usually *mirror image* or *web*, and the innate ability to *call lightning* (the same as the 3rd-level priest spell).

**Habitat/Society:**Kenku are a secretive race that lives among the human and demihuman races without the bulk of the population ever being aware of their presence.

If a group of kenku is encountered, the group's size determines its composition. A group of five or fewer contains two 2-Hit Dice and three 3-Hit Dice kenku. A group of six or seven has a leader with 4 Hit Dice, three kenku with 3 Hit Dice, and the rest have 2 Hit Dice. A group of eight kenku adds a supreme leader of 5 Hit Dice.

Kenku do not speak; although they may give out bird-like squawks, these are gibberish. Kenku apparently communicate with each other telepathically. They are adept at symbols, sign language, and pantomime.

Kenku may appear to be friendly, helpful, and even generous. They freely give treasure to humans and demihumans, but it is rarely genuine and crumbles into dust within a day. They may offer nonverbal advice to humanoids, but this is carefully designed to mislead. It may actually lead the party into dangers and difficulties they might otherwise have avoided. As a rule of thumb, kenku have only a 5% chance of actually helping people.

The actual structure of kenku society is elusive. The kenku themselves either refuse to comment or lie. Those kenku lairs that have been encountered tend to be small underground chambers or cave complexes. It is believed that large caverns deep underground may hold sizeable kenku communities, including individuals of 6 Hit Dice or more and with greater magical powers.

Kenku reproduction is similar to that of large birds. The female lays a clutch of two to four eggs that hatch after 60 days. New hatchlings are featherless, helpless, and have 1 hit point each. Hatchlings grow swiftly and gain 1 hit point each month. Within six to eight months they have adult feathers and are able to function independently as 1-Hit Die kenku. At this point they can begin to learn to use the skills they need as adults (thieving, fighting, disguise). If a hatchling is captured, it either lacks this training or has whatever minimal skills it acquired before capture.

Younger kenku (3 Hit Dice or less) are reckless and prone to audacious plans. They have been known to pass themselves off as gods and collect the worshipers's offerings. Older kenku are more reserved and cunning, preferring to kidnap wealthy humans and demihumans as a source of revenue.

**Ecology:** Domestically raised kenku are prized as servants. Kenku eggs are commonly sold for 250 gp, hatchlings for 300-500 gp. However, this is a form of slave trade, with all the attendant complications. If a kenku discovers captive kenku, it will attempt to secretly rescue the captive and, if possible, kidnap the

slave trader or owner. They will avenge slain kenku.

# Ki-rin

| **Size:** | H (13' long) |
| **Morale:** | Fanatic (18) |
| **XP Value:** | 11,000 |

**Psionics Summary:**

| Level | Dis/Sci Dev | Attack Defense | Power Score | PSPs |
|---|---|---|---|---|
| 9 | 4/5/18 | All/All | = Int | 200 |

The ki-rin is a noble creature that roams the sky in search of good deeds to reward or malefactors to punish.

The ki-rin's coat is covered with luminous golden scales like a sunrise on a clear morning. The thick mane and tail are a darker gold. The horn and hooves are gold tinged with pink. The eyes are a deep

violet. The ki-rin has a melodious voice.
Ki-rin speak their own language. Since they are telepathic, they are able to mentally or verbally converse with virtually any living thing.

**Combat:** The ki-rin can physically attack with its powerful hooves (2d4 points of damage each) or a unicorn-like horn that gains a +3 bonus to its attack roll and inflicts 3d6 points of damage.
They can employ spells as if they were 18th-level mages. Each day they may use nine 1st-level spells, eight 2nd-level spells, seven 3rd-level spells, etc., all the way to one 9th-level spell.
The ki-rin's telepathy enables them to read conscious thoughts and are thus nearly impossible to surprise.
The ki-rin also possess a variety of magical powers that can each be used once each day. They can create nutritious food and beverages for 2d12 people, as well as 32 cubic feet of soft goods or 18 cubic feet of wooden items. These are permanent creations. The ki-rin can create metal items with a total weight of up to 2,000 gp weight, but such items have very short life spans. In general, the harder the substance, the shorter the life span; for example, adamantite lasts an hour, while gold lasts 1d4+1 days.
The ki-rin can also generate illusions with audial, visual, and olfactory components. These illusions last without further concentration until the illusion is either magically dispelled or disrupted by disbelief. The ki-rin can assume *gaseous form*, *wind walk*, *summon weather*, and *call lightning* as well. When a ki-rin conjures things of the sky or things that involve the air, the creature or magic produced is at twice normal strength, including hit points and the damage inflicted by its attacks. They can enter the Ethereal and Astral planes at will.

**Habitat/Society:** The ki-rin are a race of aerial creatures that rarely set hoof on solid ground. Only the males ever approach the ground. No encounter with a female ki-rin has ever been recorded, although it is certain such beings exist. Likewise no young ki-rin has ever been encountered, thus details of their reproduction are unknown. Ki-rin are reticent about these topics.
Ki-rin come to the aid of humanoids if asked properly or if such beings are faced with a powerful, extremely evil being. Ki-rin believe in self-improvement, though, and do not casually come to a humanoid's aid except in the most dire of circumstances.
Ki-rin sustain themselves by creating their own food and drink. They are highly imaginative with their creations. They may establish a lair high atop a mountain or plateau. Such sites are virtually impossible to reach without resort to flight or climbing. The lairs may have an stony exterior crafted from local materials. It is enhanced by magically created wood and stout cloth. The interiors tend to be luxurious. The ki-rin are able to craft fine cloth, tapestries, pillows, and other comforts. An occupied lair is kept clean by carefully controlled winds that sweep out debris.
Although ki-rin are generous and not avaricious, they still tend to accumulate treasure. These may be their own creations, gifts from friends and allies, souvenirs of past travels and exploits, fines levied against malefactors, or booty taken from vanquished foes.

**Ecology:** Ki-rin spend most of their time pursuing their own affairs. They often monitor the activities of powerful evil creatures and beings. If such beings become too malevolent, the ki-rin act against them. Ki-rin may reward allies or needy individuals by creating food and valuables.
The intact skin of a ki-rin is worth 25,000 gp. Possession of such a item is dangerous, due to the retribution that may be visited upon the possessor by other ki-rin, sympathetic humanoids, or intelligent lawful good monsters.

The kirre is one of the more vicious animals of the forests and jungles of Athas. Resembling a tiger in many ways, the kirre is a beast not to be trifled with.
At first glance, the kirre looks like a great cat, but upon closer examination, the differences quickly become clear. The kirre is 8 feet in length and has eight legs, each ending in paws which sport very sharp claws. The kirre also has large horns on either sides of its head and a sharp barbed tail spike often used as a weapon. The mouth of the kirre is large and has sharp, canine teeth, which are used mostly for tearing food that has been killed. The kirre is a fur-covered animal with coloration similar to a tiger (both are striped). But where are a tiger is striped in black and orange, the kirre is striped in brown and grey. This coloration is consistent all over the kirre's body, with the exception of its face, which is all grey. The yellow eyes of this creature against the dark grey fur of its face create a fearsome appearance.

**Combat:** Being predators by nature, kirre are very well equipped for combat. This creature is very quick in melee combat, and therefore receives a -1 modifier to its initiative rolls. If the DM is using the "Optional Modifiers to Initiative", kirres are treated as small creatures, receiving only a +3 modifier, instead of the normal +6 for large creatures.
During each round of combat, a kirre can attack up to seven times, using its limbs, teeth, horns, and tail as weapons. It first attacks with its foremost claws, followed by its bite and horn attack. It then attacks with its secondary claws and its tail. Each claw does 1d4 points of damage, both the bite and tail do 1d6 points, and the horn attack does 1d8 points.
Like many of the creatures of the Athas, kirres have natural psionic powers. Instead of its multiple attacks, each round the kirre can use one of its psionic powers as can any normal psionic creature. Also, the kirre has natural psionic defense modes that are always considered to be "on." These provide the creature it with a powerful defense against psionic opponents (assuming the kirre has enough PSPs to power the defense mode being used).

**Habitat/Society:** Kirres are normally solitary creatures, until the approach of their mating season, at which time a male and female will join and produce offspring. Kirre litters number from three to five young. Kirres are mammals, and females produce milk for their young. Young kirres survive on milk for the first five months, at which point they begin to eat solid food such as small forest animals and other mammals.
When the female is ready to give birth, both she and her mate will make a den in a remote area of the forest where they will be unlikely to be disturbed. During the first five months after birth, both the male and female protect their den ferociously, attempting to kill any creature who threatens their young.

**Ecology:** Kirre are a favorite game of many hunting tribes of races who live in the forests of Athas. The meat from kirres is some of the finest on all of Athas, and it is sought after by many. Aside from a source of food, the kirre also has other uses when killed. The creature's horns can be cut off and used as spear heads; in some cases, they can be carved into ornate daggers. Also, the tail of a kirre has a sharp, bone spike at its end that can be fashioned into either an arrow head or a dart.

Kobolds are a cowardly, sadistic race of short humanoids that vigorously contest the human and demi-human races for living space and food. They especially dislike gnomes and attack them on sight. Barely clearing 3 feet in height, kobolds have scaly hides that range from dark, rusty brown to a rusty black. They smell of damp dogs and stagnant water. Their eyes glow like a bright red spark and they have two small horns ranging from tan to white. Because of the kobolds' fondness for wearing raggedy garb of red and orange, their non-prehensile rat-like tails, and their language (which sounds like small dogs yapping), these fell creatures are often not taken seriously. This is often a fatal mistake, for what they lack in size and strength they make up in ferocity and
tenacity.
Kobolds speak their own language; some (75%) speak orc and goblin.

**Combat:** The kobold approach to combat uses overwhelming odds or trickery. Kobolds will attack gnomes on sight, but will think twice about attacking humans, elves, or dwarves unless the kobolds outnumber them by at least two to one. They often hurl javelins and spears, preferring not to close until they see that their enemies have been weakened.
Kobolds attack in overwhelming waves. Should the kobolds be reduced to only a three to two ratio in their favor, they must make a morale check. Kobolds are wary of spellcasters and will aim for them when possible.
This diminutive race also enjoys setting up concealed pits with spikes, crossbows, and other mechanical traps. They usually have view ports and murder holes near these traps so that they can pour flaming oil, missile weapons, or drop poisonous insects on their victims.
Kobold war bands are armed with spiked clubs, axes, javelins, short swords and spears. Their shields are seldom metal, but are normally wood or wicker. Chiefs and guards tend to have the best weapons available.
Kobolds have 60-foot infravision but do not see well in bright sunlight, suffering a -1 on their attack rolls.

**Habitat/Society:** Kobolds live in dark, damp places underground and in overgrown forests. They can be found in almost any climate. As kobolds are good miners, any area with potential for mining is fair game for settlement.
The average kobold tribe has 40 - 400 (4d10x10) adult males. For every 40 kobolds in a band there will be one leader and two bodyguards (AC 6; HD 1-1; hp 4 each; damage 1-6). In a lair there will be 5-20 (5d4) bodyguards, females equal to 50% of the males, young equal to 10% of the males and 30-300 (3d10x10) eggs. There will also be a chief and 2-8 guards (AC 5; HD 1+1; hp 7 each; damage 1-8). Further, there is a 65% chance there will be guard animals: (70%) 2-5 wild boars (AC 7; HD 3+3; damage 3d4 gore) or (30%) 1-4 giant weasels (AC 6; HD 3+3; damage 2d6 bite and blood drain). There may be one or more shamans.
Their society is tribal but can be further broken up into war bands based on specific clans. As many as 10 families can be part of a clan, and each clan usually is responsible for controlling the area in a 10 mile radius from the lair. Kobolds recover treasure from the bodies of their victims and often carry them back to their lair as food. In some instances, kobolds will not kill their victims, but will sell them as slaves. Kobolds are distrustful of strangers. They hate brownies, pixies, sprites and gnomes. Gnomes are never eaten or taken prisoner.

**Ecology:** Perhaps kobolds are so cruel because they are easy prey for larger humanoids and hungry monsters. They have many enemies, and even the dwarves have had to admit that the numerous kobold-goblin wars have kept the number of goblins down to a safe level.
Kobolds can live 135 years.

## Urd

Urds are distant relatives of kobolds. Three feet tall, with short ivory horns, their bodies are frail and covered with mottled yellow to brick red scales. Their leathery, batlike wings span 8 feet.
Urds have 60-foot infravision and prefer to hunt at night, dropping jagged stones (2-3 pounds each) from the air. Unsuspecting victims are AC 10 for the attack roll. Actively dodging opponents are considered AC 2 before modifications to Dexterity. Rocks cause 2d4 points of damage. Some urds (25%) carry light sprears (1d4 damage).
A band of 20 urds is accompanied by a subchieftain (AC 7, 7 hp). Urd flocks of 100 or more include the chieftain (10 hp, 50% have magical leather armor). Urd lairs contain 1d6 shamans able to speak with bats as per *speak with animals*.
Urd life spans can exceed 100 years, but they rarely live past 50.

# Kuo-Toa

Kuo-toa are an ancient race of fish-men that dwells underground and harbors a deep hatred of surface dwellers and sunlight.

A kuo-toan presents a cold and horrible appearance. A typical specimen looks much like a human body, albeit a paunchy one, covered in scales and topped with a fish's head. The huge fish eyes tend to swivel

in different directions when observing an area or creature. The hands and feet are very long, with three fingers and an opposing digit, partially webbed. The legs and arms are short for the body size. Its coloration is pale grey, with undertones of tan or yellow in males only. The skin has a sheen from its slimy covering. The color darkens when the kuo-toan is angry and pales when it is badly frightened. A strong odor of dead fish follows it around.
It wears no clothing, only leather harnesses for its weapons and gear. Typically, a kuo-toan warrior carries daggers, spears, shields, harpoons and weighted throwing nets.
Kuo-toa speak the strange subterranean trade language common to most intelligent underworld dwellers. Additionally, they speak their own arcane tongue and have empathic contact with most fish. Their religious speech is a corruption of the language used on the elemental plane of Water; if a kuo-toan priest is in a group of kuo-toa, it is 75% unlikely that a creature native to the plane of Water will attack, for the priest will request mercy in the name of the Sea Mother, Blibdoolpoolp.

**Combat:** These creatures normally travel in well-armed bands. If more than 20 kuo-toa are encountered, it is 50% likely that they are within 1d6 miles of their lair. For every four normal warriors encountered there is an additional fighter of 3rd or 4th level. For every eight normal fighters there is an additional fighter of 5th or 6th level. For every 12 normal kuo-toa in the group there is a cleric/thief of 1d4+3 levels each. If more than 20 normal fighters are encountered, the group is a war consisting of the following:

One 10th-level fighter as Captain
Two 8th-level fighters as Lieutenants
Four 3rd/3rd-level fighter/thief Whips
One Monitor (see below)
One slave per four kuo-toa

The whips are fanatical devotees of the Sea Mother goddess of the kuo-toa. They inspire the troops to stand firm and fight without quarter for the glory of their ruler and their deity.
It is 50% probable that any kuo-toan priest above 6th level is armed with a pincer staff. This is a 5-foot-long pole topped by a three-foot-long claw. If the user scores a hit, the claw has closed upon the opponent, making escape impossible. The weapon can be used only on enemies with a girth range between an elf and a gnoll. It is 10% probable that both arms are pinned by the claw and 40% probable that one arm is trapped. If the victim is right handed, the claw traps the left hand 75% of the time. Trapped opponents lose shield and Dexterity bonuses. If the weapon arm is trapped, the victim cannot attack and the Dexterity bonus is lost, but the shield bonus remains.
The harpoon is mostly used only by higher level fighters. It is a wickedly barbed throwing weapon with a 30 yard range. It inflicts 2d6 points of damage, exclusive of bonuses. Victims must roll a successful saving throw of 13+ on 1d20 to avoid being snagged by the weapon. Man-sized or smaller beings who fail this saving throw are jerked off their feet and stunned for 1d4 rounds. The kuo-toan, who is attached to his weapon by a stout cord, then tries to haul in its victim and slay him with a dagger thrust.
Kuo-toan shields are made of special boiled leather and are treated with a unique glue-like substance before a battle. Anyone who attacks a kuo-toan from the front has a 25% chance of getting his weapon stuck fast. The chance of the victim freeing the weapon is the same as his chance for opening doors.
Hit probability for kuo-toa is the same as that of a human of similar level, but males also gain a +1 bonus to both attack rolls and damage rolls when using a weapon, due to Strength. When fighting with a dagger only, kuo-toa can bite, which causes 1d4+1 points of damage.
When two or more kuo-toan priests or priest/thieves operate together, they can generate a lightning

stroke by joining hands. The bolt is two feet wide and hits only one target unless by mischance a second victim gets in the way. The bolt inflicts 6 points of damage per priest, half that if a saving throw vs. spell is successful. The chances of such a stroke occurring is 10% cumulative per caster per round.
The special defenses of these creatures include skin secretions, which gives attempts to grapple, grasp, tie, or *web* a kuo-toan only a 25% chance of success. Despite their eyes being set on the sides of their heads, they have excellent independent monocular vision, with a 180-degree field of vision and the ability to spot movement even though the subject is invisible, astral, or ethereal. Thus, by maintaining complete motionlessness, a subject can avoid detection. Kuo-toa also have 60-foot infravision and have the ability to sense vibrations up to 10 yards away. They are surprised only on a 1 on the 1d10 surprise roll.
Kuo-toa are totally immune to poison and are not affected by paralysis. Spells that generally affect only humanoid types have no effect on them. Electrical attacks cause half damage, or none if the saving throw is successful; magic missiles cause only 1 point of damage; illusions are useless against them. However, kuo-toa hate bright light and suffer a -1 penalty to their attack roll in such circumstances as daylight or *light* spells. They suffer full damage from fire attacks and save with a -2 penalty against them.
Sometimes kuo-toa are encountered in small bands journeying in the upper world to kidnap humans for slaves and sacrifices. Such parties are sometimes also found in dungeon labyrinths that connect to the extensive system of underworld passages and caverns that honeycomb the crust of the earth. Only far below the surface of the earth can the intrepid explorer find the caverns in which the kuo-toa build their underground communities.

**Habitat/Society:** Kuo-toa spawn as do fish, and hatchlings, or fingerlings as they call their young, are raised in pools until their amphibian qualities develop, about one year after hatching. The young, now a foot or so high, are then able to breathe air and they are raised in pens according to their sex and fitness. There are no families, as we know them, in kuo-toan society.
Especially fit fingerlings, usually of noble spawning, are trained for the priesthood as priests, priest/thieves, or special celibate monks. The latter are called “monitors” whose role is to control the community members who become violent or go insane. The monitor is capable of attacking to subdue or kill. A monitor has 56 hit points, attacks as a 7th-level fighter and has the following additional abilities: twice the normal movement rate, AC 1, and receives four attacks per round -- two barehanded for 2d4 points of damage (double if trying to subdue) and two attacks with teeth for 1d4+1 points of damage. One hand/bite attack occurs according to the initiative roll, the other occurs at the end of the round. Subdued creatures cannot be larger than eight feet tall and 500 pounds. Subduing attacks cause only half real damage, but when the points of damage inflicted equal the victim's total, the creature is rendered unconscious for 3d4 rounds.
Kuo-toan communities do not generally cooperate, though they have special places of worship in common. These places are usually for intergroup trade, councils, and worship of the Sea Mother, so they are open to all kuo-toa. These religious communities, as well as other settlements, are open to drow and their servants, for the dark elves provide useful goods and services, though the drow are both feared and hated by the kuo-toa. This leads to many minor skirmishes and frequent kidnappings between the peoples. The illithids (mind flayers) are greatly hated by the kuo-toa and they and their allies are attacked on sight.
The ancient kuo-toa once inhabited the shores and islands of the upper world, but as the race of mankind grew more numerous and powerful, these men-fish were slowly driven to remote regions. Continual warfare upon these evil, human-sacrificing creatures threatened to exterminate the species, for a number of powerful beings were aiding mankind, their sworn enemies. Some kuo-toa sought refuge in sea

caverns and secret subter-ranean waters, and while their fellows were being slaughtered, these few prospered and developed new powers to adapt to their lightless habitat. The seas contained other fierce and evil creatures, however, and the deep-dwelling kuo-toa were eventually wiped out, leaving only those in the underworld to carry on, unnoticed and eventually forgotten by mankind. But the remaining kuo-toa have not forgotten mankind, and woe to any who fall into their slimy clutches.
Now the kuo-toa are haters of sunlight and are almost never encountered on the earth's surface. This, and their inborn hatred of discipline, prevent the resurgence of these creatures, for they have become numerous once again and acquired new powers. However, they have also become somewhat unstable, possibly as a result of inbreeding, and insanity is common among the species.
If a kuo-toan lair is found, it contains 4d10 x 10 2nd-level males. In addition, there are higher level fighters in the same ratio as noted for wandering groups. The leader of the group is one of the following, depending on the lair's population:

A priest/thief king of 12/14th level, if 350 or more normal kuo-toa are present, or
A priest/thief prince of 11/13th level, if 275-349 normal kuo-toa are present, or
A priest/thief duke of 10/12th level, if fewer than 275 normal kuo-toa are present

There are also the following additional kuo-toa in the lair:

Eight Eyes of the priest leader -- 6th- to 8th-level priest/thieves
One Chief Whip -- 6th/6th-level fighter/thief
Two Whips of 4th/4th or 5th/5th level (see whip description)
One Monitor per 20 2nd-level kuo-toa
Females equal to 20% of the male population
Young (noncombatant) equal to 20% of the total kuo-toa
Slaves equal to 50% of the total male population

In special religious areas there are also a number of kuo-toan priests. For every 20 kuo-toa in the community there is a 3rd-level priest, for every 40 there is a 4th-level priest, for every 80 there is a 5th-level priest, all in addition to the others. These priests are headed by one of the following groups:

One 6th-level priest if the group is 160 or fewer, or One 7th-level and one 6th-level priest if the group is between 161 and 240, or
One 8th-level, one 7th-level, and one 6th-level priest if the group numbers between 241 and 320, or
One 9th-level, two 7th-level, and three 6th-level priests if the group numbers between 321 and 400, or
One 10th-level, two 8th-level, and four 6th-level priests if the group numbers over 400

Though kuo-toa prefer a diet of flesh, they also raise fields of kelp and fungi to supplement their food supply. These fields, lit by strange phosphorescent fungi, are tended by slaves, who are also used for food and sacrifices.
Kuo-toan treasures tend more toward pearls, gem-encrusted items of a water motif, and mineral ores mined by their slaves. Any magical items in the possession of a kuo-toan are usually obtained from adventuring parties that never made it home again.

**Ecology:** Not much is known to surface-dwelling sages about this enigmatic, violent, subterranean race, but some of the more astute scholars speculate that the kuo-toa are but one-third of the three-way rivalry

that includes mind flayers and drow. It is partially because of this continuing warfare that none of the three races has been able to achieve dominance of the surface world.

Of all the hazards that the desert presents, few can compare with the cruel race of flesh-eating creatures known as lamias. These half-human, half-quadruped beast hybrids use deceit, speed, and spells to entrap the foolhardy adventurer who dares wander into their ruins.

Their upper torsos, arms, and heads resemble those of beautiful human women, while their lower bodies are those of beasts, such as goats, deer, or lions, with the appropriate coloration. This hybrid configuration makes lamias very fast and powerful. They are usually armed with daggers, which they use to carve up their prey for the feast. Lamias sometimes smell like perfume flowers, so as to attract unwary victims. They wear no clothing or jewelry. In communicating, they use the common tongue.

**Combat:** A lamia is able to use the following spells once per day: *charm person*, *mirror image*, *suggestion*, and *illusion* (as a wand). For purposes of duration, effect, etc. assume that the lamia casts its spells at 9th-level spell ability. These spells are typically used to lure persons to the lamia and then hold them there for the creature to devour at its leisure.
The lamia's touch permanently drains 1 point of Wisdom from a victim, and when his Wisdom drops below 3, he willingly does whatever the lamia tells him do. These orders often involve having the victim attack his compatriots while it continues whittling down their ranks. If it has a chance to drain the Wisdom of more than one victim, it will certainly do so. It may even use its *charm* spell to supplement its control over party members.
Among a lamia's favorite illusions to cast upon itself are the following: a lovely damsel in distress, a tough but beautiful female ranger, or an elf maiden. At times, it simply may cast an illusion of a lost child in distress or a group of peasants being attacked by a large beast, while hiding itself, awaiting the right moment to attack from the rear.

**Habitat/Society:** Lamias dwell in ruined cities or caves, places situated in desert or wasteland areas. These evil creatures are solitary beasts, sustaining themselves on the flesh of those who walk too close to their territories. During lean times, they supplement their diet by stalking game animals. Lamias hardly ever venture more than 10 miles from their lairs.

**Ecology:** Lamias are legendary monsters that prey upon travelers or guard hidden places or objects of power. They are mysterious creatures that seem devoted to the spreading of chaos and evil in their dwelling places.

### Lamia Noble

These beings rule over the lamias and the wild, lonely areas they inhabit. They differ from the normal lamias in that the lamia nobles' lower bodies are those of giant serpents and their upper bodies can be either male or female. It is rumored that the normal female lamia is born from the union of two nobles. The males wield short swords and have 1d6 levels of wizard spells, plus the inherent spells *charm person*, *mirror image*, *suggestion*, and *illusion*. The females are unarmed and only attack with magic; they are more experienced magically and have 2d4 levels of wizard spells plus the usual inherent spells. Like normal lamia, lamia nobles have the Wisdom-draining touch.
All lamia nobles are able to assume human form. In this guise they attempt to penetrate human society and wreak evil. They speak all of the languages of humans and demihumans. When in human form, they are recognizable as lamias by humans and demihumans only if the characters are of 7th level or higher, with a 5% cumulative chance per level above 6th. Priests and paladins receive an additional 15% chance (i.e., a 10th-level priest has a 35% chance). Lamia nobles are given to outbursts of senseless violence.

The lammasu, a winged leonine figure with a human head, aids and protects lawful good persons. They are generally kind and friendly to all good creatures.
Lammasu resemble golden-brown lions with the wings of eagles and the heads of men with shaggy hair and beards. Their formidable appearance is softened by their regal, compassionate, and beneficent expressions. They communicate in their own tongue, in common, and through a limited form of telepathy.

**Combat:** Since lammasu are concerned for the welfare and safety of good beings, they almost always enter combat if they see good creatures being threatened, in the way least likely to cause harm to the good beings.
Lammasu are able to become invisible or dimension door at will. They radiate a *protection from evil, 10' radius* (-2 penalty to all evil attacks, +2 bonus to saving throws against evil attacks). Additionally, they are able to use priest spells up to 4th level, at 7th-level proficiency. Lammasu can employ four 1st-level spells, three 2nd-level spells, two 3rd-level spells, and one 4th-level spell. They have *cure serious wounds* (4d8+2) and *cure critical wounds* (6d8+6), and 10% of lammasu can speak a *holy word* as well. If all else fails, lammasu can attack with their two razor-sharp front claws, inflicting 1d6 points of damage each. If they choose to swoop down from the sky on a target, this damage is doubled.

**Habitat/Society:** The lammasu have a very structured and lawful society, reflecting their alignment. They are organized in prides, just like lions. They dwell in old, abandoned temples situated in warm regions. These temples have not lost their consecration, and in some way, the lammasu are the self-appointed resident guardians of these high and holy places. As a rule, only one pride of lammasu is ever found in a 25-mile area; they spread themselves out so they can respond quickly to any evil outburst.
Lammasu females fight as effectively as the males; for every four lammasu encountered, one is a female. When found in their lair, there are young equal to 25% of the adult population. Female lammasu have the heads of women, with long, hair.
Once a month, the pride leaders gather together to consort about how the war on evil goes. This grouping is called the Whitemoon, since it takes place on the first night of the full moon. There are usually 6d6 lammasu and 2d4 greater lammasu, with the latter presiding over the meeting. Such a gathering of lawful good causes the entire temple where they meet to glow in a pure light, until it breaks up at dawn. There is perhaps no safer place in all the world that night.

Though they dwell in warm areas, they occasionally visit every clime. They speak their own tongue as well as common. At times they use a limited form of telepathy.
Good-aligned strangers are always well received. Neutrals are watched carefully, but are treated politely unless the outsiders begin causing trouble. Evil beings are firmly asked to leave, and if they fail to do so, they are attacked by the pride. In case of trouble, there is a cumulative 10% chance per turn that a neighboring pride picks up a telepathic summons and come to help out the original pride. Lammasu harbor an especially strong dislike for lamias and manticores. Some foolish people confuse lammasu for manticores, which does little to improve the lammasu disposition toward them.

**Ecology:** Lammasu keep the wastelands from being completely overrun by evil creatures. Their aid to frontier settlements is beyond measurable value.

### Greater Lammasu

These creatures are slightly larger than a lesser lammasu and one or two may be found dwelling with a pride of six or more lesser lammasu. Greater lammasu can travel the Astral and Ethereal Planes, become invisible, teleport without error and dimension door, all at will. They radiate *protection from evil* in a 20' radius (-4 penalty to evil attacks and +4 bonus to saving throws) and have the curative powers of their lesser cousins. Their priest spells consist of five 1st-level, four 2nd-level, three 3rd-level, two 4th-level, and one 5th-level spell. Fifty percent of greater lammasu can speak a *holy word* as well. They cast spells as 12th-level priests.
Greater lammasu have empathy, telepathic communication, and speak their racial speech and the common tongue. Despite their greater stature, these lammasu are just as gentle and humble as their lesser brethren.

Giant leeches are horrid, slug-like creatures that dwell in wet, slimy areas and suck the blood of warm-blooded creatures.
These disgusting parasites range from 2 to 5 feet long. Their slimy skin is mottled brown and tan with an occasional shade of gray. Two antennae protrude from atop the head.

**Combat:** Leeches wait in the mud and slime for prey. The initial attack attaches the sucker mouth of the giant leech. On the next round, and on each round thereafter, it drains blood for 1 point of damage per Hit Die of the leech. There is only a 1% chance that the victim is aware of the attack if it occurs in the water. The leech has anesthetizing saliva, and its bite and blood drain are not usually felt until weakness (the loss of 50% of hit points) sets in and makes the victim aware that something is amiss.
They can be killed by attack or by salt sprinkled on their bodies. There is a 50% chance that the bite of one of these creatures causes a disease that is fatal in 1d4+1 weeks unless cured.

**Habitat/Society:** These creatures are found only in the waters of swamps and marshes. Giant leeches range from 1 to 4 Hit Dice in size; various sized creatures usually are found in a group.

### Throat Leech

This leech is about one inch long and resembles an inconspicuous twig. It is found in pools, lakes, and streams.
Anyone drinking water containing a leech has a 10% chance of taking it into his mouth unless the water is carefully filtered (such as through a sheet of gauze) before drinking. The leech sucks blood at the rate of 1-3 points of damage per round, until it becomes completely distended. After ten rounds of sucking, the leech is bloated and will not suck any more blood.
Each round that the leech is in the victim's throat, there is a 50% chance that the victim chokes, causing an additional 1d4 points of damage. A victim who chokes on three successive rounds dies on the third round.
Apart from magical means that may suggest themselves, the only way to kill a throat leech in a victim's throat is to place a thin, heated metal object, such as a wire, into the bloated leech; the hot metal causes the leech to burst and no further damage is inflicted on the victim.

### Leech swarm

This is merely a massive swarm of small leeches, found only in the water. They move in a cloud 10 feet in diameter. Anyone caught in the swarm receives 1d10 points of damage per round from blood drain. Area-effect attacks that inflict 10 or more points of damage will disperse the swarm.

# Leprechaun

| | |
|---|---|
| **Climate/Terrain:** | Temperate/ Green lands, sylvan glens |
| **Frequency:** | Uncommon |
| **Organization:** | Clans |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |

| **Special Defenses:** | See below |
| **Magic Resistance:** | 80% |
| **Size:** | T (2' tall) |
| **Morale:** | (Steady) 11 |
| **XP Value:** | 270 |

Leprechauns are diminutive folk who are found in fair, green lands and enjoy frolicking, working magic, and causing harmless mischief.
Rumored to be a cross between a species of halfling and a strong strain of pixie, leprechauns are about 2 feet tall. They have pointed ears, and their noses also come to a tapered point. About 30% of all male leprechauns have beards. Pointed shoes, brown or green breeches, green or gray coats, and either wide-brimmed or stocking caps are the preferred dress of the wee folk. Many leprechauns also enjoy smoking a pipe, usually a long-stemmed one.

**Combat:** These fun-loving creatures of magical talent are by nature noncombative. They can become

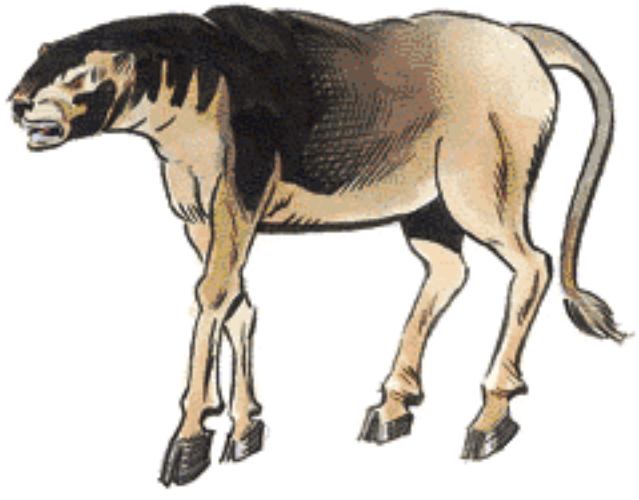
invisible at will, polymorph nonliving objects, create illusions (with full audio and olfactory effects), and use *ventriloquism* spells as often as they like. Their keen ears prevent them from ever being surprised. Being full of mischief, they often (75%) snatch valuable objects from adventurers, turn invisible and dash away. There is a 75% chance that the attempt is successful. If pursued closely, there is a 25% chance per turn of pursuit that the leprechaun drops the stolen goods. The chase never leads to the leprechaun's lair.
If caught or discovered in its lair (10% chance), the leprechaun attempts to mislead his captor into believing that he is giving over his treasure while he actually is duping the captor. It requires great care to actually obtain the leprechaun's treasure.

**Habitat/Society:** Leprechauns live in families of up to 20, though they call this unit a clan. They use first names and surnames, and it is fairly certain that these names are a good indicator of which clan one is dealing with. A lair usually consists of a warm, dry cave with a hearth, rugs, and furniture. Strangely, word travels fast between clans of the same surname, and a clan that a group of adventurers runs into may already know the adventurers' names from another clan the party encountered several days prior. There is a rumor that a King of the Leprechauns exists, but there seems to be no official political hierarchy. There are no communities or villages of leprechauns.
It is rare to see leprechaun offspring, but they do exist, born with the full magical powers of an adult. For every 10 adults encountered in a lair, one child will be found.
Leprechauns enjoy eating the same sorts of foods that humans and demihumans eat, with a special fondness for wine. This weakness may be used to outwit them.
Gold is the one treasure found in every leprechaun's hoard. If an intruder secures this treasure, a leprechaun will bargain and beg to get it back. As a last desperate measure, he will grant the intruder three wishes (very limited), but only if the intruder gives over the treasure first. When this is done, the leprechaun will indeed grant the three wishes. After all three wishes, the leprechaun will flatter the intruder and declare that the three wishes were so well-phrased that he will give a fourth wish. If the fourth wish is pronounced, the leprechaun will cackle with glee, the results of all the wishes will be reversed, and the intruder plus his group will be teleported (no saving throw) to a random location 2d20 miles away. No member of that party will never be able to find that particular leprechaun again.
Leprechauns are naturally distrustful toward humans and dwarves, since these races have greedy tendencies. They get along well with elves, gnomes, and halflings.
A leprechaun will not sit idly by while a helpless creature is attacked, since they have a soft spot for weaker creatures. In general, if a leprechaun senses that a stranger means no harm, he can be quite civil, but he will not bring visitors to his lair. If the leprechaun finds someone hurt, he might take the victim to his lair, but only after making sure that the stranger is not followed and cannot see where he is being taken.

**Ecology:** The best times and places to observe leprechauns are called borderlines. Dawn and dusk (which are neither all light nor dark), the shore (which is neither all earth nor all water), or the equinoxes and solstices (which are neither one season nor another), are the best times and places to see leprechauns and their ilk frolicking and celebrating.

# Leucrotta

| | |
|---|---|
| **Climate/Terrain:** | Temperate/ Wasteland, broken terrain |
| **Frequency:** | Rare |
| **Organization:** | Pack |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore |
| **Intelligence:** | Average (8-10) |
| **Treasure:** | D |
| **Alignment:** | Chaotic evil |
| **No. Appearing:** | 1-4 |
| **Armor Class:** | 4 |
| **Movement:** | 18 |
| **Hit Dice:** | 6+1 |
| **THAC0:** | 15 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | 3-18 |
| **Special Attacks:** | See below |
| **Special Defenses:** | Kick in retreat |
| **Magic Resistance:** | Nil |
| **Size:** | L (7' at shoulder, 9' long) |
| **Morale:** | Elite (14) |
| **XP Value:** | 975 |



The leucrotta is a creature of ugly appearance and temperament that haunts deserted places in search of prey.
The average leucrotta stands 7 feet tall at the shoulder and can reach a length of 9 feet in its mature form. The body of the leucrotta resembles that of a stag, with a leonine tufted tail and cloven hooves. Its head resembles that of a huge badger, but instead of teeth it has sharp, jagged bony ridges. Its body is tan, with the neck gradually darkening until it turns black at the head. The so-called teeth are sickly gray, and its eyes glow with a feral red light. The smell of animals, decomposing on a hot humid day follows the leucrotta, and its breath is especially bad.

**Combat:** This monster is very sly and can imitate a range of noises and voices, the most common ones being a man, a woman, a child, or domestic animals in pain. It uses these noises in order to trick its prey into approaching within attack distance. It hunts humans, demihumans, humanoids, and even other animal predators. Leucrotta are intelligent and can speak their own language as well as the common tongue.

Leucrotta attack by biting for 3d6 points of damage. It is rumored that their bony ridges and jaws are so powerful that they can even bite through metal. If a leucrotta scores a hit against someone with a shield or armor, the target must roll a saving throw vs. crushing blow for the shield. If the roll fails, then in addition to scoring the regular damage, the beast managed to also bite through the shield. Once the shield is gone, the armor must go through the same routine with subsequent successful bites.

Once an opponent is rendered helpless, a leucrotta will leave its prize and attack any other intruders if the melee is still going on. It will give chase to an enemy, but will never pursue beyond sight of any prey it has managed to already capture.

When a leucrotta retreats, it turns its back on its opponent and kicks with its hind legs, causing 1d6 points of damage with each hoof.

Note to trackers: It is almost impossible to identify leucrotta tracks, since they look exactly like a stag's.

**Habitat/Society:** This ugly creature haunts deserted and desolate places because most other creatures cannot bear the sight of it. Its ugliness is legendary. Leucrotta lair in treacherous ravines and rocky spires, because they are as surefooted as a mountain goat. Caves, old abandoned towers, or a hollowed out deadfall are the preferred lairs for this disgusting beast.

For every four leucrotta found in a lair, there is a 10% chance that an extra one, an immature leucrotta of half strength, is also present. Leucrotta are not a very family oriented species, as their nasty tempers extend sometimes to each other. The beasts range over a 20-mile area.

Since the leucrotta is not a very social creature, all strangers are nothing more than sources of food. Sometimes, a powerful chaotic evil person may entrap a leucrotta and force it to serve as a guardian, but such beasts rebel at the first opportunity.

Those brave enough to venture into a leucrotta lair must first roll a successful saving throw vs. poison with a -1 penalty, due to the horrendous stench, or gag helplessly for 1d4 rounds. Once inside, the money and possessions of past victims await.

Though the leucrotta prefer freshly killed meat, they are not above eating carrion. This serves to enhance their already bad reputation.

**Ecology:** Leucrotta distance themselves from the grand picture of nature, preferring to lurk on the fringes. They serve no practical use and one would be hard pressed to find a druid that would try to protect a member of this species. Some sages speculate that the leucrotta is an unnatural abnormality, an aberration spawned by some demented power or archmage.

Still, some mages prize the leucrotta hide for creating *boots of striding and springing*, hoping that the surefootedness of the beast passes down to the boots themselves. There are rumors that leucrotta saliva is an effective antidote to love philters, but so far there have been no volunteers to test this theory.

The lich is, perhaps, the single most powerful form of undead known to exist. They seek to further their own power at all costs and have little or no interest in the affairs of the living, except where those affairs interfere with their own.
A lich greatly resembles a wight or mummy, being gaunt and skeletal in form. The creature's eye sockets are black and empty save for the fierce pinpoints of light which serve the lich as eyes. The lich can see with normal vision in even the darkest of environments but is unaffected by even the brightest light. An aura of cold and darkness radiates from the lich which makes it an ominous and fearsome sight. They were originally wizards of at least 18th level.
Liches are often (75%) garbed in the rich clothes of nobility. If not so attired, the lich will be found in the robes of its former profession. In either case, the clothes will be tattered and rotting with a 25% chance of being magical in some way.

**Combat:** Although a lich will seldom engage in actual melee combat with those it considers enemies, it is more than capable of holding its own when forced into battle.
The aura of magical power which surrounds a lich is so potent that any creature of fewer than 5 Hit Dice (or 5th level) which sees it must save vs. spell or flee in terror for 5-20 (5d4) rounds.
Should the lich elect to touch a living creature, its aura of absolute cold will inflict 1-10 points of damage. Further, the victim must save vs. paralysis or be utterly unable to move. This paralysis lasts until *dispelled* in some manner.
Liches can themselves be hit only by weapons of at least +1, by magical spells, or by monsters with 6 or more Hit Dice and/or magical properties. The magical nature of the lich and its undead state make it utterly immune to *charm*, *sleep*, *enfeeblement*, *polymorph*, *cold*, *electricity*, *insanity*, or *death* spells.
Priests of at least 8th level can attempt to turn a lich, as can paladins of no less than 10th level.
A lich is able to employ spells just as it did in life. It still requires the use of its spell books, magical components, and similar objects. It is important to note that most, if not all, liches have had a great deal

of time in which to research and create new magical spells and objects. Thus, adventurers should be prepared to face magic the likes of which they have never seen before when stalking a lich. In addition, liches are able to use any magical objects which they might possess just as if they were still alive.
Defeating a lich in combat is difficult indeed, but managing to actually destroy the creature is harder still. In all cases, a lich will protect itself from annihilation with the creation of a phylactery in which it stores its life force. This is similar to a *magic jar* spell. In order to ensure the final destruction of a lich, its body must be wholly annihilated and its phylactery must be sought out and destroyed in some manner. Since the lich will always take great care to see to it that its phylactery is well hidden and protected this can be an undertaking fully as daunting as the defeat of the lich in its physical form.

**Habitat/Society:** Liches are usually solitary creatures. They have cast aside their places as living beings by choice and now want as little to do with the world of men as possible. From time to time, however, a lich's interest in the world at large may be reawakened by some great event of personal importance.
A lich will make its home in some ominous fortified area, often a strong keep or vast subterranean crypt. When a lich does decide to become involved with the world beyond its lair, its keen intelligence makes it a dangerous adversary. In some cases, a lich will depend on its magical powers to accomplish its goals. If this is not sufficient, however, the lich is quite capable of *animating* a force of undead troops to act on its behalf. If such is the case, the lich's endless patience and cunning more than make up for the inherent disadvantages of the lesser forms of undead which it commands.
Although the lich has no interest in good or evil as we understand it, the creature will do whatever it must to further its own causes. Since it feels that the living are of little importance, the lich is often viewed as evil by those who encounter it. In rare cases, liches of a most unusual nature can be found which are of any alignment.
The lich can exist for centuries without change. Its will drives it onward to master new magics and harness mystical powers not available to it in its previous life. So obsessed does the monster become with its quest for power that it often forgets its former existence utterly. Few liches call themselves by their old names when the years have drained the last vestiges of their humanity from them. Instead, they often adopt pseudonyms like “the Black Hand” or “the Forgotten King.” Learning the true name of a lich is rumored to confer power over the creature.

**Ecology:** The lich is not a thing of this world. Although it was once a living creature, it has entered into an unnatural existence.
In order to become a lich, the wizard must prepare its phylactery by the use of the *enchant an item, magic jar, permanency* and *reincarnation* spells. The phylactery, which can be almost any manner of object, must be of the finest craftsmanship and materials with a value of not less than 1,500 gold pieces per level of the wizard. Once this object is created, the would-be lich must craft a potion of extreme toxicity, which is then enchanted with the following spells: *wraithform, permanency, cone of cold, feign death,* and *animate dead*. When next the moon is full, the potion is imbibed. Rather than death, the potion causes the wizard to undergo a transformation into its new state. A system shock survival throw is required, with failure indicating an error in the creation of the potion which kills the wizard and renders him forever dead.

**Demilich**
The demilich is not, as the name implies, a weaker form of the lich. Rather, it is the stage into which a lich will eventually evolve as the power which has sustained its physical form gradually begins to fail. In most cases, all that remains of a demilich's body are a skull, some bones, and a pile of dust.

When it has learned all that it feels it can in its undead life, the lich will continue its quest for power in strange planes unknown to even the wisest of sages. Since it has no use for its physical body at this point, the lich leaves it to decay as it should have done centuries ago.

If the final resting place of a demilich's remains are entered, the dust which was once its body will rise up and assume a man-like shape. In the case of the oldest demiliches (25%), the shape will advance and threaten, but dissipate without attacking in 3 rounds unless attacked. Younger demiliches (75%) still retain a link to their remains, however, and will form with the powers of a wraith. This dust form cannot be turned. In addition, it can store energy from attacks and use this power to engage its foes. If the dust form is attacked, each point of damage which is delivered to it is converted to an energy point. Since the demilich will fall back and seem to suffer injury from each attack (though none is actually inflicted), its attackers are likely to press on in their attempts to destroy it. Once the demilich has acquired 50 energy points, it will assume a manifestation which looks much like the lich's earlier undead form and has the powers and abilities of a ghost, but which cannot be turned.

If anyone touches the skull it will rise into the air and turn to face the most powerful of the intruders (a spell user will be chosen over a non-spell user). Instantly, it unleashes a howl which acts as a *death ray*, affecting all creatures within a 20' radius of the skull. Those who fail to save vs. death are permanently dead.

On the next round, the demilich will employ another manner of attack. In order to attain the status of a demilich, a lich must have replaced 5-8 (1d4+4) of its teeth with gems. Each of these gems now serves as a powerful magical device which can *trap the soul* of its adversaries. The physical body of someone hit with the demilich's spell collapses and rots away in a single round. Once it has drained the life essence from the most powerful member of the party, the skull sinks back to the floor. If it continues to be challenged, the demilich can repeat this attack until all of its gems are filled. An *amulet of life protection* will prevail over the gem, but the character's body will perish regardless.

In addition to the attacks mentioned above, a demilich can also pronounce a powerful *curse* on those who disturb it. These can be so mighty as to include: always being hit by one's enemies, never making a saving throw, or the inability to acquire new experience points. Demilich *curses* can be overcome with a *remove curse*, but the victim loses one point of charisma permanently when the curse is removed.

The skull of a demilich is Armor Class -6 and has 50 hit points. It can be affected by spells in only a few ways: a *forget* spell will cause it to sink down without attacking (either by howling or draining a soul), a *dispel evil* will do 5-8 (1d4+4) points of damage to it, a *shatter* spell will inflict 3-18 (3d6) points of damage to it, a *holy word* pronounced against it will deliver 5-30 (5d6) points of damage, and a *power word kill* spell cast by an ethereal or astral wizard will cause the skull to shatter (destroying it).

Most weapons will be unable to harm the skull of a demilich, but there are exceptions. A fighter or ranger with a *vorpal sword*, *sword of sharpness*, *sword +5*, or vorpal weapon can inflict normal damage on the skull, as can a paladin with a vorpal or +4 weapon. Further, any character with a +4 or better weapon or a *mace of disruption* can inflict 1 point of damage to the skull each time he strikes it.

Upon the destruction of the skull, those who have been trapped inside the gems must make a saving throw vs. spell. Those who fail are lost forever, having been consumed by the demilich to power its magical nature. If the character survives, the gem glows with a faint inner light, and *true seeing* will reveal a tiny figure trapped within. If the throw is made the soul can be freed by simply crushing the gem. A new body must be within 10 yards for the soul to enter or it will be lost. Such a body might be a clone or simulacrum . (See spells of those names.)

If the fragments of the destroyed skull are not destroyed by immersion in holy water and the casting of a *dispel magic* the demilich will reform in 1-10 days.

## Archlich

From time to time, sages have heard rumors of liches having alignments other than evil, and even lawful good liches apparently have existed. There have even been reports of priests who, in extreme circumstances, have become liches. These reports have recently been verified, but the archlich is as rare as Roc's teeth.

# Living Wall

| | |

| **XP Value:** | 2,000 to 100,000+ |

Living walls appear to be normal walls of stone or brick, although they radiate both evil and magic if detected. Infravision will not detect any peculiar patterns. However, a character who casts a *true seeing* spell or who peers through a *gem of seeing* will see past the illusion: the wall actually consists of greying and sinewy flesh -- of faces, hands, broken bones, feet, and toes jutting from the surface. Characters within 5 yards of the wall can hear low moans of horror, pain, and sorrow issuing from it. Even if a silence spell is cast, the moans still rise.

A living wall contains the melded bodies of humanoids and monsters who died within 100 yards of the

wall since its creation. Those who die fighting a living wall are absorbed into it and actually strengthen it. Characters and monsters captured by the wall retain all the abilities they had in life; as part of the wall, they become chaotic evil and fight any creature that approaches it to the best of their abilities.
If a wizard becomes melded with a living wall, his spellcasting abilities are retained and can immediately be used for attacks. The wizard retains any spells that were memorized at the time he was absorbed into the wall; these are renewed each day. If a warrior loses his life in combat with a living wall, his fighting abilities and his weapons come under control of the beast: the weapons are hidden within the wall until the wall attacks, then are pushed through the mass of graying flesh to the surface. A hand attaches itself to the weapon, and eyes jutting from the wall guide the attack of the weapon. If the wall absorbs characters with ranged weapons, the weapons become useless once arrows, quarrels, or other necessary projectiles are expended.

**Combat:** A living wall never initiates combat, except against its creator, whom it despises. When such a wall is attacked, every creature that is part of the wall returns one attack, per strike against the wall. If a wall is made up of 12 creatures and one creature lands a blow on the wall, the attacker is subject to a dozen return blows from the wall.
All creatures in the wall fight according to their normal attack modes. These attacks can be magical, physical, or mental in origin. The type of attack and its damage often depend upon who or what is melded into the wall.
If a 10th-level fighter and a 6th-level fighter are absorbed into the wall, the wall attacks as one 6th-level fighter and one l0th-level fighter. For every mage or priest absorbed, the wall gains spell attacks. The only spells that can be used, however, are those that the mage or priest had memorized (and had material components for) at the time of absorption. Each of these spells may be cast once per day. The material components of the spells are not consumed. If one absorbed mage has three *fireball* spells memorized and a second mage has one *fireball* in memory, the living wall can attack with four *fireballs* per day. If the wall assimilates a paladin or a lawful good priest, all his special powers are reversed (e.g., *detect good* rather than *detect evil, harm* by laying of hands rather than *heal*, etc.).
Magical items absorbed with characters grant the wall their spell effects, though items that grant AC improvements are less effective because of the wall's size. The wall gains 1 point improvement in Armor Class for every 3 points of magical improvement to AC. Thus, a *ring of protection* +3 lowers the wall's AC by 1.
When a character is absorbed, his hit points, at full health, are added to the wall's base hit point total of 64.
Nonmagical armor, packs, and purses are lost by absorbed characters. The piles of loot at the base of the wall often attracts bystanders, bringing them close enough to be seized by one of the wall's hands.
Though a living wall will not initiate an attack, characters who come within 2 feet of the wall may be weakly grabbed by its many beseeching hands, tugging at them and imploring them for deliverance. (Any character, regardless of Strength, may break the hold.). Sometimes PCs who hear voices imploring, "help me! pull me free, help me!" grope about until they grab a hand. In this case, the character must roll a save vs. spell or become absorbed. If another character is holding onto the first character, he must also roll a saving throw vs. spell or become absorbed into the wall. If the save vs. spell succeeds, the character is able to break free. A character who views the absorption of any creature into the wall must make a horror check.
Once absorbed, characters are lost forever. A *wish* spell, worded carefully, can remove one or more trapped characters.
*Passwall* spells do not allow individuals to go through a living wall. Characters must either cut through

or blast through using magic. This, however, allows the wall to return attacks. When cutting or blasting though the living wall, the stench that rises from the exposed underflesh is nauseating and horrifying. A saving throw vs. poison is required to avoid passing out from the smell. A successful saving throw indicates the character is only nauseated.
Living walls are immune to all planar and temporal spells. *Speak with dead, ESP* and similar spells reveal a cacophony of tortured minds and voices. The caster learns nothing and must make a horror check.

**Habitat/Society:** Living walls never reproduce and always remain active until they are killed. Living walls encountered in the lairs of malevolent creatures often serve as part of a torture chamber, or to cover the true openings to secret passageways or corridors.
No one knows whether these monstrosities are limited in size or longevity. Walls as large as 15 feet high, 30 feet long, and 10 feet thick have been reported. Living walls do, however, seem to be limited to one section of wall. Thus, a cemetery or castle could not be surrounded by one large living wall.

Nor can a wall section spread beyond itself: a house with a living wall in its basement will not slowly become a living house.
The wall desires, above all else, to slay the creature who created it. If it does so, or the creature meets its end within 100 yards of the wall, the corpse of the hated creator is assimilated and the beings trapped in the wall are freed to return to the peace of death. The wall reverts to being a structure of stone, with the corpse of its creator entombed within.

**Ecology:** Chaotic evil mages occasionally create these monoliths. The exact method is unknown, but several years of preparation and spellcasting are required. A minimum of three corpses are necessary for the spells.
A fact known only to one or two inhabitants of Ravenloft, is that living walls also arise as rare manifestations of Ravenloft's power, as responses to despair and dread. These walls are born in curses, midwived by death, and nursed on massacre.
The seed for such a living wall is planted when one sapient creature willfully entombs another in a wall. The hapless victim may be bound and walled alive in a rock niche on a windswept mountain trail, a sill in a fetid catacomb, a corner in an asylum, a cave wall, a mausoleum facade, or any other stone or brick wall. Once entombed, the victim will suffocate, dehydrate, or starve in utter darkness and solitude. But even this agony is not sufficient to wake the land's attention -- the entombed creature, in his terror, must curse his slayer, screaming loudly enough for his voice to carry beyond his tomb of stone. Only then does the land hear his agony.
When the victim dies, his life force is trapped within the wall. As he struggles to escape, his life energy becomes soiled by the soot of his screams and curses, which thickly coat the inside of his stone sarcophagus. In a matter of days, madness corrupts the trapped life force, changing it to chaotic evil.
At this point, the bodies of any creatures that have died within 100 yards of the wall within the last month rise, shamble to the wall, and meld into it. Even corpses that have been buried will dig their way to the surface and converge upon the wall. Although the wall retains its previous appearance, it is no longer stone, but a gray and rotting bulwark of limbs, ribs, hands, bones, and faces, twisted and fused together. Bodies of any subsequent deaths occurring within 100 yards also rise and wander to the wall for assimilation.
Most cultures, and all good-aligned characters, attempt to destroy these creations wherever they are found. But many of these assaults merely strengthen the wall with deposits of more corpses.

## Fire Lizards

Fire lizards resemble wingless red dragons and are sometimes called "false dragons." They are gray-colored with mottled red and brown back and reddish undersides. Hatchlings are light gray in color, and darken as they age.

**Combat:** Fire lizards attack with a combination of raking claws and bite. They can simultaneously breathe a fiery cone 5 feet wide at the mouth, 10 feet wide at the end, and 15 feet long which inflicts 2-12 points of fire-based damage (half if saving throw vs. breath weapon is made). Fire lizards are immune to fire-based attacks.

**Habitat/Society:** Fire lizards prefer subterranean lairs but come out every fortnight to hunt fresh game. Prey is hauled back to the lair for a leisurely meal; the debris forms the treasure trove. Fire lizards are slow moving and sleep 50% of the time. Their lairs may have 1-4 eggs (10% chance, market value 5,000 gp each). Hatchlings immediately leave to hunt on their own. Shiny objects attract fire lizards; gems and metals form the bulk of treasure found in their dens.

**Ecology:** Fire lizards are perhaps an ancestral dragon type or offshoot of a common ancestor. Real dragons avoid these "false dragons," which live to be 50-100 years old. Fire lizard eggs are worth 5,000 gp, hatchlings 7,500 gp.

## Giant Lizards

This lizard is relatively normal, albeit large, and lives in marshes and swamps. An attack score of 20 means the giant lizard's victim is trapped in the mouth and suffers double damage (2-16 points). The giant lizard inflicts 2-16 points of damage each round thereafter. Giant lizards are lazy hunters and tend to attack anything edible that wanders by. While their great size protects them from most predators, it renders them a sumptuous feast to the black dragons who share their swamps. Giant lizards are sometimes domesticated by lizard men, who use them as mounts, beasts of burden, and food. Their lairs may be home to a wide range of lizards, from eggs to century-old adults.

## Minotaur Lizards

This huge, aggressive lizard derives its name from its horns. While these horns look like those of a minotaur, the male's horns are not used in combat -- rather, they are believed to be a means of attracting a

mate. The minotaur lizard attacks with sharp claws and teeth. They are adept at ambushes; others are -5 on their surprise roll. An attack roll of 20 means the lizard has trapped its victim within its jaws and can automatically inflict 3-18 points of damage each round thereafter until the victim escapes or dies. The victim is unable to attack the following round. Minotaur lizards are found in tropical hills and mountains near copper and red dragons.

### Subterranean Lizards

This aggressive lizard is able to run across walls or ceilings with the help of its suction cup-tipped feet. An attack roll of 20 means the lizard has clamped its jaws on its victim and does double damage (4-24 points). The victim automatically suffers an additional 2-12 points of damage each round thereafter. These lizards never leave their caves voluntarily. Some species are albino; these shun light and attack at -1 in daylight or its equivalent. Other species have tongues up to 20 feet long. Any man-sized or smaller prey seized by the tongue will be drawn into the mouth and bitten the next round unless a bend bars roll is made.

| War leader | 270 | |
| Shaman, 3rd | 175 | |
| Shaman, 5th | 650 | |
| Shaman, 7th | 975 | |

Lizard men are savage, semi-aquatic, reptilian humanoids that live through scavenging, raiding, and, in less hostile areas, by fishing and gathering.
Adult lizard men stand 6 to 7 feet tall, weighing 200 to 250 pounds. Skin tones range from dark green to gray to brown, and their scales give them a flecked appearance. Their tails average 3 to 4 feet long and are not prehensile. Males are nearly impossible to distinguish from females without close inspection. Lizard man garb is limited to strings of bones and other barbaric ornament. Lizard men speak their own language.

**Combat:** In combat, lizard men fight as unorganized individuals. If they have equality or an advantage over their opponents, they tend toward frontal assaults and massed rushes. When outnumbered, overmatched, or on their home ground, however, they become wily and ferocious opponents. Snares, sudden ambushes, and spoiling raids are favored tactics in these situations. While individually savage in melee, lizard men tend to be distracted by food (such as slain opponents) and by simple treasures, which may allow some of their quarry to escape. They occasionally take prisoners as slaves, for food, or to sacrifice in obscure tribal rites.
For every 10 lizard men encountered, there will be one patrol leader with maximum hit points (17 hp) and a 50% chance for a shaman with 3 Hit Dice and the abilities of a 3rd-level priest. If one or more tribes are encountered, each tribe will also have a war leader of 6 Hit Dice, two subleaders with 4 Hit Dice, and a shaman of either 4 or 5 Hit Dice (50% chance of each). Any group of two or more tribes has a 50% chance for an additional shaman of 7 Hit Dice. Furthermore, each such group has a cumulative 10% chance per tribe to be led by a lizard king. If a lizard king is present, a shaman of 7 Hit Dice will always be present, and all patrol leaders from each tribe (i.e., 10% of the male warriors) will be combined into a single fanatical bodyguard for the lizard king.

**Habitat/Society:** Lizard men are typically found in swamps, marshes, and similar places, often (35%) dwelling totally underwater in air-filled caves. A tribe rarely numbers more than 150 individuals, including females and hatchlings. It is not uncommon for several tribes in an area to forge an informal

alliance against outsiders, including other lizard man tribes.
Lizard men are omnivorous, but are likely to prefer human flesh to other foods. In this regard they have been known to ambush humans, gather up the corpses and capture the survivors, and take the lot back to their lair for a rude and horrid feast.

**Ecology:** Lizard men have few natural enemies. They prey on human, demihuman, or humanoid settlements if these are nearby. Lizard man eggs are bitter and inedible, as is their flesh, but their skin is sometimes worked as scale armor (Armor Class 6). Lizard men produce no art, artifacts, or trade goods.

### Advanced Lizard Men

About 1 tribe in 10 has evolved to a higher state. These lizard men dwell in crude huts, use shields (thus Armor Class 4) and hurl barbed darts (30 yard range, 1-4 points damage) or javelins (1-6 points damage) before closing with the enemy. These lizard men use clubs (treat as morning stars, 2-8 points damage), and the leaders may use captured swords or other weaponry. The chance of these advanced lizard men having a lizard king is doubled, i.e., 20% cumulative chance per tribe.

### Lizard King

A lizard king is a lizard man of above average height and intelligence, leading one or more loosely organized tribes of lizard men. The lizard king is most often armed with a great trident, which it wields with great skill and ferocity. In the hands of the lizard king, the weapon inflicts 5-20 (3d6+2) points of damage. If the attack roll is 5 or more greater than the score needed to hit, the lizard king inflicts double damage (with a minimum of 15 points).
A lizard king usually demands two humans each week. If no humans are available, demihumans and other humanoids will be sought. If none are available, two of the lizard king's bodyguards will be killed and eaten instead.

# Locathah

| | |
|---|---|
| **Climate/Terrain:** | Tropical and subtropical/Coastal waters |
| **Frequency:** | Rare |
| **Organization:** | Clan |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |
| **Intelligence:** | Very (11-12) |
| **Treasure:** | A |
| **Alignment:** | Neutral |
| **No. Appearing:** | 20-200 |
| **Armor Class:** | 6 |
| **Movement:** | 1, Sw 12 |
| **Hit Dice:** | 2 |
| **THAC0:** | 19 |
| **No. of Attacks:** | 1 |
| **Damage/Attack:** | By weapon |
| **Special Attacks:** | Nil |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | M (5'+ tall) |
| **Morale:** | Average (9) |
| **XP Value:** | 35 |

The locathah are a humanoid race of aquatic nomads that roams warm coastal waters.
A typical locathah stands 5 to 6 feet tall and weighs 150 to 200 pounds. The skin is covered in fine but tough scales. The scales vary in color from a ivory yellow on the stomach and neck to a pale yellow on the rest of the body. The fins of their ears and spine are ocher. The ear fins enhance hearing while the large eyes are designed to enhance underwater vision. The only way to distinguish males from females is a vertical ocher stripe marking the egg sac. On the surface, locathah have a typically fish-like smell. They speak their own language; 10% also speak merman, koalinth, or other aquatic languages.

**Combat:** The intelligent locathah have developed tactics that enable them to beat their deadlier rivals.

They always operate in teams, the larger the better. Furthermore, when away from their homes they ride giant eelsthat act as both mounts and allies.
A typical locathah force is armed as follows:

| | |
|---|---|
| Lance | 20% |
| Crossbow | 30% |
| Trident | 30% |
| Short sword | 20% |

Since a locathah lacks claws or teeth, it cannot do damage if it is disarmed. If that happens, it will either grapple a foe (if armed locathah are present), look for weapons, or flee. Locathah only battle to the death if cornered or if their home is threatened.

**Habitat/Society:** Locathah have developed a society similar to that of surface humans. They have a well-developed hunter-gatherer society and a strong sense of territory. Locathah make their lairs in rocks carved into castle-like strongholds. These aquatic castles are very similar to their surface counterparts. Openings are protected by stout doors, shutters, or coral bars. Often 4d4 moray eels are used as guardbeasts. There is a 50% chance that Portuguese man-o-war jellyfish may be used as traps. A herd of giant eels is kept at the edge of each stronghold.
Locathah have a communal society organized in tribes of 20 to several hundred. Each band of forty locathah has a leader (18 hit points, treat as a 4th-level fighter) and four assistants (14 hit points, treat as 3rd-level fighters). Clans of more than 120 locathah are led by a female chieftain (22 hit points, treat as a 5th-level fighter) accompanied by 12 guards (12-14 hit points, treat as 3rd-level fighters).
Clan chieftains are prolific egg layers. Eggs are gathered into well-guarded nurseries where they hatch after five to six months. Hatchlings are raised communally but each is assigned a "parent", a nonwarrior adult that takes personal responsibility for that hatchling.
Locathah shamans are priests of up to the 3rd level.

**Ecology:** Locathah are omnivorous. They have both aquatic farmers and hunter-gatherers that provide a varied diet for their clan brethren. The locathah's stone-age technology is limited to manufacturing weapons, tools, and ornaments from available materials. More advanced or magical items are scavenged from sunken wrecks, invaders, and drowning victims. Although they defend their territories against hostile invaders, locathah cooperate with nonhostile visitors, especially traders. Locathan coral carvings and jewelry are highly valued by art collectors and are traded for forged metals, ceramics, and durable magical items. Locathah can be hired to assist travelers in their realm. They also collect tolls from fishermen using locathah territorial waters.
Locathah never voluntarily leave the water. They are almost helpless on land. They are limited to slow crawls because they are unused to supporting their own weight. The use of magic to fly or levitate will negate this helplessness. They risk swift suffocation as their gills dry out; after ten turns, a surfaced locathah suffers 1 point of damage each round. If the locathah immerses itself in water, the damage is halted.
Locathah always try to recover captive locathah or their bodies. If such are detected aboard a ship, other locathah might first demand the return of their kin or simply sink the boat by carving into its bottom.

# Lurker

| **Morale:** | Steady (11) | Steady (11) | Steady (11) |
| **XP Value:** | 2,000 | 3,000 | 3,000 |

The lurker is a carnivorous scavenger found only in subterranean settings. It resembles a large manta ray; its grayish belly is textured like stone. The lurker typically attaches itself to a ceiling, where it is very difficult to detect (only 10% chance) unless actually prodded.

**Combat:** Lurkers are slow-moving creatures that must wait for their prey to come into range. Lurkers wait on the ceiling, then drop and wrap themselves around their prey. Lurkers cause a -4 penalty to opponents' surprise rolls. The constriction causes 1d6 points of damage per round and suffocation within 1d4+1 rounds, regardless of the damage suffered by the victim. This damage is automatic each round unless the victim breaks free or the lurker dies. Lurkers do not stop attacking until dead. Prey can only fight with short weapons that were in hand when the lurker attacked.

**Habitat/Society:** Lurkers are solitary creatures. The females lays eggs in a glutinous clutch near the ceiling. The hatchlings fall to the ground and feed on vermin until they become large enough to fly. Young resemble rectangular patches of moss.

**Ecology:** Lurkers are opportunistic feeders that make do with whatever wanders by. The lurker flies by means of gases generated into sacs. These gases may be used in the preparation of a *potion of levitation*. Lurker eggs or hatchlings may be sold as living defenses for those who want them. Lurker, trapper, and miner eggs can all be sold for 900 gp, hatchlings for 1,100 gp.

### Trapper

The subterranean trapper is found only in caves and other dark places. It can alter its shape and color to resemble the local floor and to form a protuberance in the center that resembles a box. A trapper is difficult to detect (95%) once it has settled into a disguise. When prey wanders into the trapper's center, the creature's edges rise up and wrap around the victim. The victim suffers damage per round equal to 4 points plus his Armor Class (a victim with AC 2 suffers 6 points of damage per round). The constriction prevents breathing; victims smother in six rounds regardless of the damage suffered. A trapper does not release a victim unless the trapper is reduced to 1 hit point or killed.

Trappers are immune to heat- or cold-based attacks. Trappers remain wrapped in a ball for 1d8 hours while digesting a victim. The remains of their victims are excreted below and form the trappers' treasure troves. A typical trapper can cover about 400 square feet, while large ones can cover up to 600 square feet.

Eggs are laid in a pebble-like mass. Hatchlings resemble flat rocks. Trapper skin may be used to make nonmagical +1 leather armor.

### Forest Trapper (Miner)

The forest trapper, or miner, resembles a tailless manta ray mottled brown or green-brown. Its frontal and dorsal ridges are hard bone.

It preys primarily on small forest animals but traps larger creatures by burrowing beneath paths or roads, then extending the 1d20+5 poisonous, twig-like barbs on its back through the surface. Passers-by have a 25% chance (75% if surprised) of unknowingly stepping on one. If not surprised, druids or rangers have a 5% chance per level of spotting and identifying the barbs. Victims must roll successful saving throws vs. poison or be paralyzed for 2d20 turns. A miner will not surface until all surface movement stops. Then it attacks in the same manner as a subterranean trapper.

Miners travel slowly on the surface by rippling like a snake. Burrowing is faster but travel is limited to soil, sand, and gravel.

Because a miner is always underground unless attacking, it is rarely attacked. The miner's toxin is located in sacs at the base of the barbs. The toxic barbs can be used in a blowgun or as a hand weapon by small creatures, provided the grip is wrapped.

Eggs are laid in a clutch several feet below the surface. The young feed on burrowing animals for their first year.

# Lycanthrope, General

Lycanthropes are humans who can transform themselves to resemble normal animals or monsters. The term "lycanthrope" is actually a misnomer, coming from the roots *lycos* (wolf), and *anthropos* (man). A more correct term is "therianthrope," from *therios* (animal) and *anthropos.* However, since werewolves are the most common therianthropes, the term lycanthrope has gained much more popularity, and more common usage.

To further confuse the issue, there are creatures like the wolfwere and jackalwere, animals which can assume human form. These creatures ("antherions" for lack of a better term) pass on their condition genetically (that is, by having offspring), not by biting and infecting other creatures. Other differences between the two classes of creature include their vulnerabilities: antherions can be struck by cold iron, lycanthropes by silver. Antherions hate lycanthropes, and always attack their counterparts (wolfweres attack werewolves, etc.). Likewise, most lycanthropes feel enmity for antherions, and attack on sight as well.

In addition, there are many subspecies of some lycanthropes, beyond the differences in animal type. For instance, there are three distinct subspecies of werewolf, differing in their secondary form: one has fangs, a furred body, a tail, wolf-like legs, and lupine features (but without the snout); another has a very wolf-like face and body, with human hands, and is easily mistaken for a wolf when down on all fours; and the third secondary form is that of a huge wolf, as big as a bear.

The condition of being a lycanthrope, often referred to as a curse, is called lycanthropy. A distinction must be made between true lycanthropes and infected lycanthropes. True lycanthropes are those to whom lycanthropy is a genetic trait; they breed with other lycanthropes and produce baby lycanthropes. Only true lycanthropes can infect others with lycanthropy. Infected lycanthropes are those whose lycanthropy results from being wounded by a true lycanthrope.

There are also creatures known by some as "induced lycanthropes," whose shape changes are effected by magical items; these creatures cannot infect others with lycanthropy, though the magical items can be transferred to new owners. Some of the items are cursed, so that once they are worn, they cannot be removed without the application of a *remove curse* spell. Induced lycanthropes include swanmays and anyone using a *cloak of the manta ray.*

Finally, there are "cursed lycanthropes" created by a certain spell, *curse of lycanthropy* (see boxed text). True lycanthropes and induced lycanthropes seldom hate their "curse." They see themselves as being like any other creature, with the same right to survival. Those bitten and infected, or those affected by the *curse of lycanthropy* spell, are generally unhappy with their fate. These unfortunates seek cures and occasionally try to hunt down the lycanthrope who infected them (or the wizard who cursed them).

**Description:** Most lycanthropes have three forms; some have only two. See the individual descriptions for more details. The first form is always the natural humanoid form, which over time becomes more and more reminiscent of the lycanthrope's animal form. The second form is a hybrid, combining both animal and humanoid features; the size of this hybrid tends to lie between the humanoid size and the size of the creature replicated. The third form of the lycanthrope is externally identical to that of a normal creature of the replicated species; the only visual clue is that the eyes may glow in the dark. A slain lycanthrope

always reverts to its natural humanoid form within one round of being killed.

**Curse of Lycanthropy (Necromancy, Alteration)**
6th-level Wizard spell

| | | | |
|---|---|---|---|
| Range: | Touch | Casting Time: | 6 |
| Components: | V, S, M | Area of Effect: | Creature touched |
| Duration: | Special | Saving Throw: | Negates |

This spell causes a temporary case of lycanthropy in the victim touched by the caster. A normal attack roll is required for the wizard to touch the victim, who must then roll a saving throw vs. spell. Failure indicates that the victim is affected by lycanthropy. Every month, the victim's condition manifests with the full moon; after each attack, the victim can make another saving throw vs. spell to see if the spell's effects wear off.
Almost any type of standard lycanthropy can be induced with this spell. By using the blood of a normal animal as a spell component, the wizard can cause the victim to assume that were- form.
Lycanthropy manifests the night of the full moon, as well as the night immediately before, and the night immediately after, the full moon. During those nights, the character gains no benefits from sleep or normal healing, and loses all memory of events which happen while in animal form. In all respects, the character gains the abilities, immunities, defenses, and bloodlust of an infected lycanthrope; it cannot transmit lycanthropy. When the three-night attack is over, the victim can make another saving throw, with a -3 penalty, to throw off the spell's effects.
A *remove curse* allows the character to roll a saving throw vs. polymorph; success means the curse is broken. A *wish* also dispels the curse. No other spells can remove the curse.

**Contracting lycanthropy:** Although the forms of attack vary with each species, all true lycanthropes can transmit their dreadful affliction. Any humanoid creature injured by a lycanthrope but not actually killed (and presumably eaten) has a chance to contract lycanthropy. This chance equals 1% per point of damage caused by the lycanthrope. Some lycanthropes transmit their affliction only through their bite, others through any natural attack, and some even through the weapons they use. For ease of bookkeeping, if a character suffers 24 points of damage (from all attacks) from a true werewolf, the character has a 24% chance to become an infected werewolf.
If the character eats belladonna within an hour of the attack, there is a 25% chance this will cure the affliction; it definitely incapacitates the character for 1d4 days. Note that only a sprig of belladonna need be eaten, and it must be reasonably fresh (picked within the last week). If too much is eaten, the character may still be cured, but is incapacitated for 2d4 days.
The only other way to lift the affliction is to cast a *remove curse* on the character, on the night of a full moon, or the night immediately preceding or following the full moon. After *remove curse* is cast, if the character makes a successful saving throw vs. polymorph, the curse is broken. Otherwise the changes take place and the spell has no effect. *Cure disease* and other healing spells and abilities have no effect against lycanthropy.
Only infected lycanthropes can be cured. To a true lycanthrope, lycanthropy is as natural as breathing, and the condition cannot be altered. True lycanthropes have complete control over their physical states;

they are not affected by darkness, phases of the moon, or any of the other situations which traditionally affect infected lycanthropes.

**Combat:** In human form, the lycanthrope uses weapons to attack. They tend to use natural attack abilities in other forms.
In lycanthrope form, the monster can be struck only by silver or magical weapons. Wounds from any other weapon heal too quickly to cause actual damage. Damage from spells, acid, fire, and other special effects apply normally. Because of their vulnerability to silver, some lycanthropes have a psychological aversion to the metal and refuse to handle it; in some cases, the psychosomatic effect is so great that touching silver actually burns the lycanthrope.

**Habitat/Society:** True lycanthropes can change shape at will, regardless of the time of day or phase of the moon. Infected lycanthropes are usually humanoid during the day. When darkness falls on the night of a full moon, or on the night immediately preceding or immediately following a full moon, the infected lycanthrope unwillingly changes shape and is overcome by bloodlust. During this time, an infected PC is beyond the player's control; the DM takes over the character.
The character's Strength increases temporarily to 19. Armor Class, number of attacks, movement rate, and immunities, become identical to those of the type of lycanthrope that bit the character. The transformed character wants only to hunt and kill, and usually selects either personal friends or enemies as victims. The werecreature makes no distinction between friends and enemies; all that matters is the Strength of the emotion binding them.
When the character returns to normal form, 10% to 60% (1d6>010) of any wounds suffered while in animal form heal instantly. The character also has hazy, haunting memories of performing terrible acts.
Each type of lycanthrope has its own language as well as its humanoid language; some may be able to speak the languages used by the animals they imitate.
True lycanthropes tend to avoid human society unless attacking or on an errand. Lycanthropes travel alone or in packs. The packs are usually of similar lycanthropes, but may also include normal animals or monsters whom the lycanthropes resemble. Some lycanthropes have the ability to summon such creatures.

**Ecology:** Lycanthropes fit a variety of roles, depending on the type of creatures they become, scavengers act as scavengers, predators as predators. See individual descriptions for more details.

**Designing New Types of Lycanthrope**
Described here is a process for creating variant lycanthropes, either as true lycanthropes, one-shot opponents, or for the results of a *curse of lycanthropy*.

**Animal Type:** Virtually any predator between the size of a small dog and a large bear can be the basis for a type of lycanthrope. Most (but not all) true lycanthropes are mammals; most (but not all) are carnivores. An animal type used by the DM to create a race of true lycanthropes should be a carnivorous mammal with animal Intelligence (1), or rarely, a reptile, bird, or even fish with animal Intelligence. There has never been a reliable report of a were-amphibian of any type.
Induced lycanthropes, by spell or item, can be created using a wide variety of animal types, and even monstrous creatures.

**Appearance:** In humanoid form, the lycanthrope has subtle indications of the curse, ranging from hair

color like that of the animal, to general facial type, to voice and actions. In animal form, the lycanthrope resembles a large version of the normal animal (but not so large as to be immediately noticeable). On close inspection, the animal form's eyes show a faint spark of unnatural intelligence, and often glow red in the dark.
The lycanthrope may also have a third form, part human and part animal. This form is usually humanoid in general shape, and the body has the same covering as the animal (usually fur, sometimes scales or feathers). Facial features and body shape change somewhat, gaining more characteristics of the animal (fangs, whiskers, claws, animal leg structure, etc.).

**Statistics and Attributes:** To determine the new lycanthrope's statistics, extrapolate from those of the base animal and from existing lycanthrope types. If the base animal is more powerful than a wolf, the new lycanthrope should have more Hit Dice than a werewolf; if the base animal is similar to a giant rat, the new werecreature should have about the same Hit Dice as a wererat. In almost every case, the new lycanthrope should have at least 1-2 Hit Dice more than the base animal.
The lycanthrope gets the same attack forms as the base animal type, such as claws, bite, tail slap, head butt, or whatever. The damage should be very similar to that caused by the base animal. Many lycanthropes associate with animals of their base type, and the werebeast should be able to dominate such a group.
Armor Class depends on the base animal's natural toughness, speed, and dexterity. The lycanthrope should have a slightly better AC than the base animal, perhaps by 1 or 2 places.
Movement rate should be the same as that of the base animal, as should diet and habitat. Morale should be about one category better than that of the base animal.
The creature's alignment tends to be an extrapolated version of the base animal's alignment. Since most base animals are neutral, the DM must look at the animal's tendencies. If the animal is a vicious predator and a strong fighter, the lycanthropic version is probably evil; it tries to stay out of the way of other creatures, it may be good or neutral. If the animal is very independent, the lycanthrope should be chaotic; if the animal is very methodical and has regular habits, the lycanthrope is probably lawful.

**Vulnerability:** True lycanthropes share a vulnerability to silver weapons, possibly because of the metal's mystical relationship with the moon, or the inherent qualities or powers of the metal itself. Extremely rare variants might have no such vulnerability, but instead may have developed a weakness for another precious metal (gold and copper being the most likely), or perhaps for bronze, obsidian, or even wood.

**Special Abilities:** In addition to their abilities of shapeshifting, calling normal animals to their aid, and so forth, some lycanthropes have other special powers. These should not be rolled randomly for a new lycanthrope type, but chosen to fit with the attitude and style of the base animal. A few samples are listed below.

Thief skills, level 1-6
*Charm person* by gaze or voice
Regeneration (except for damage from silver weapons)
Wizard spells, casting level 1-6
*Cause fear*
Psionicist abilities, level 1-6
Cast *sleep*, once per day
Poison

The seawolves are humans who can assume a form combining aspects of a seal and a wolf. Their packs roam the seas in search of ships to attack.
The monstrous form of the lesser seawolf has the 6 to 7 foot long body of a seal. The head and shoulders are those of a wolf. In human form the lesser seawolves stand 5 to 6 feet tall. All are thickly muscled and have tiny ears and long hair that covers their head and shoulders like a mane. The lesser seawolf has a hybrid form of a wolfman, a humanoid shape that retains the seawolf's teeth, claws, and fur; statistics for this form are given in parentheses above.

**Combat:** Lesser seawolves approach a ship in seawolf form, then change into the hybrid form and climb aboard. There they use their teeth and claws to kill their opponents. If the ship looks too heavily defended, the seawolves may gnaw holes in the hull in order to sink the ship.
Unlike most other lycanthropes, lesser seawolves have no special protection against normal weapons. Dead seawolves revert to their human form in a single round.

**Habitat/Society:** Most seawolves were formerly fishermen or sailors; as such, they also tend to be male and human. They travel in packs with those of their own kind. Their fierce hatred of their former coworkers drives them to seek to kill them or pass on the lycanthropic curse. Victims who acquire the disease become seawolves in 2-5 days. Once night falls, the new seawolf slips into the water and goes off in search of a pack.
Seawolves are nomads constantly roaming the cooler sections of the seas. They neither build lairs nor keep treasure. During the day, they sleep on beaches or in caves or appropriated houses. If surprised on a beach, they pretend to be shipwreck victims, then kill the intruders and take their clothing. If at sea, the seawolves are still able to sleep during the day by floating on their backs; in this case they may be mistaken for a cluster of drowning victims. If a ship moves close to investigate, the seawolves wait for the best opportunity to attack and take over the ship.
Seawolves breathe air. They can remain submerged for 17-24 (1d8+16) minutes. Failure to surface after that time causes them to suffer 1-6 points of damage each round until they drown.
Female seawolves give birth to single cubs. These may appear to be human infants during the day or baby seals at night. Seawolves lack parental feelings and abandon the cubs. Although the cubs are able to swim and hunt from birth, they have difficulty keeping up with adults and often drown during the day if they are at sea. Only 5% of cubs reach adulthood. The offspring of a seawolf and a human are good swimmers who feel mysteriously drawn to the sea, but few (25%) become seawolves upon reaching adolescence.
Seawolves may ally themselves with other evil aquatic lycanthropes. They hate selkies, whom they consider allies of the humanoids. Lesser seawolves attack selkies on sight.
Their diet includes a variety of foods, such as shellfish, fish, seabirds, sea mammals, and anyone they can sink their teeth into. Occasionally, packs may wander into a town and take over a tavern for a round of drinking and wenching.
Seawolf personalities are a twisted version of their original, human personalities. It is as if the seawolf persona is a savage, magnified version of all the original person's bad traits. Seawolves periodically return to their original home port. This may be a subconscious longing for their old life or a means to renew their

hatred of those still humanoid. If a seawolf spots his old self's mate or child, he may attempt to make contact.

**Ecology:** Seawolves are the sworn enemies of any humanoid who makes his living in the sea. They live to destroy shipping, spread terror, and spread their curse further.

### Greater Seawolves

The monstrous form of the greater seawolf has a 12 to 15 foot long body, but is otherwise identical to the lesser seawolf. In human form, greater seawolves stand 6 to 7 feet tall.

**Combat:** Greater seawolves assume their human forms to get close to their opponents. The typical plan is to bite or strangle one or two deckhands, take their weapons, and begin a general assault. In seawolf form, greater seawolves can be harmed only by silver, cold iron, or magical weapons of +1 or better. Steel weapons have no effect. Dead seawolves revert to their human form in one round.

# Lycanthrope, Werebat

| | |
|---|---|
| **Climate/Terrain:** | Temperate woodlands |

| **Special Defenses:** | See below |
| **Magic Resistance:** | Nil |
| **Size:** | M (6' tall) |
| **Morale:** | Steady (11-12) |
| **XP Value:** | 420 |

Like the other species of lycanthrope found in Ravenloft, two varieties of werebat exist -- natural (or true) and infected. True werebats are those creatures who have been born to werebat parents. The parents may be either true or infected werebats themselves, but the offspring of any two werebats is a true werebat. In those rare cases when a child is born with one werebat and one human parent, there is a 50% chance that it will be a true werebat and a 25% chance that it will be an infected werebat.

True werebats have three forms: normal human, vampire bat, or hybrid. In the first form, it is marked by bat-like features and traits (an aversion to bright lights, keen night vision, a taste for blood or raw meat, etc.). In its vampire bat form, it looks just like a common vampire bat. By far the most feared of its forms, however, is that of the hybrid. In this form, it retains its humanoid shape but takes on the added features of a bat. The arms extend to become willowy and leather wings form under them, the teeth

sharpen into deadly fangs, and the snout protrudes from the face. The nails stretch into deadly claws and the eyes spawn an inner glow when light hits them.
Infected werebats have only two of the three forms listed above. Most (75%) have a human and hybrid form, while the rest have only a human and true bat form.

**Combat:** The type of attacks employed by a werebat depend upon its form. In human form, it will depend upon weapons to inflict damage, for its bare hands inflict but 1d2 points per attack. If at all possible, the creature will avoid combat in this form.
In bat form, they attack just as if they were bats. Each round, they may attack once and inflict but a single point of damage with any successful strike. The bitten victim, of course, stands a chance of contracting lycanthropy (see below), even from this meager wound. Opponents of a werebat in this form will find that it is unusually resilient, for it has its full human-form hit points.
In hybrid form, the werebat does not have the manual dexterity to employ weapons effectively. However, its deadly sharp claws and needle-like teeth make it far from helpless. In each round it may strike twice with its claws (inflicting 1d4 points of damage each). If both of these attacks hits, it may follow with a vicious bite that does 2d4 points of damage. Werebats can fly in their hybrid form and often use this ability to their advantage in combat.
Anyone who takes damage from a werebat's natural attacks stands a chance of contracting the disease of lycanthropy and becoming an infected werebat. Every point of damage done indicates a flat 2% chance per point that the victim will become infected. The procedures for curing an infected lycanthrope are given in Chapter 5 of the *Ravenloft Boxed Set.*
Werebats can be harmed only by silver or +1 or better magical weapons. Any wound inflicted by another type of weapon knits as quickly as it is inflicted, hinting at the creature's true nature.

**Habitat/Society:** Werebats favor caves in lightly wooded, temperate regions as their homes. From here, they can fly out and seek prey from which they can draw the blood necessary to satisfy their thirst. Werebat caves are commonly home to only one family of werebats (two parents and 1-4 young). The young remain in true bat form until they reach 3 years of age. A this time, they mature into adults and, within a single year, become fully grown. This time of transformation brings out a great hunger in the creature, which forces it to spend most of its time hunting and feeding. Human villages near a werebat cave will certainly lose many citizens to the feasting of the ravenous creature at this time.
In addition to the werebat family, each cave will contain 20-200 (20d10) common bats and 1-10 giant bats. All of these lesser are under the command of the adult werebats and will act as their sentinels and companions.

**Ecology:** Although werebats favor humans and demihumans as prey, they have been known to feed on the blood of other mammals (like cattle and horses) when preferred prey is not available. Interestingly, such animals seem to be immune to the lycanthropy that these dark creatures spread.
While werebats do look upon humans and demihumans as animals to be devoured, they are not cruel or evil in their attacks. They simply regard such beings as having a lower place in the food chain. Werebats will, typically, refer to themselves as "predators of the night."

# Lycanthrope, Werebear

| | |
|---|---|
| **Climate/Terrain:** | Cold or temperate regions |
| **Frequency:** | Rare |
| **Organization:** | Solitary |
| **Activity Cycle:** | Nocturnal |
| **Diet:** | Omnivore |
| **Intelligence:** | Exceptional (11-12) |
| **Treasure:** | R, T, X |
| **Alignment:** | Chaotic good |
| **No. Appearing:** | 1-4 |
| **Armor Class:** | 2 |
| **Movement:** | 9 |
| **Hit Dice:** | 7+3 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 3 |
| **Damage/Attack:** | 1-3/1-3/2-8 |
| **Special Attacks:** | Hug for 2-16 |
| **Special Defenses:** | Hit only by silver or +1 or better magical weapons |
| **Magic Resistance:** | Nil |
| **Size:** | L (6'-9') |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 1,400 |

Werebears are humans who can transform themselves into large brown bears. They are the best known good-aligned lycanthropes. The ursine form most often resembles a brown bear. Some have blond, reddish, black, or ivory fur (the latter is common in frozen regions).
In human form they are large, stout, well-muscled, and hairy. Their brown hair is thick; males usually wear beards. Some have reddish, blond, ivory, or black hair; this matches the color of the ursine form. They dress in simple cloth and leather garments that are easily removed, repaired, or replaced.

**Combat:** In human form, the werebear uses available weapons, preferring axes, and knives, since these have practical applications suitable for woodland life. If attacked in daylight, the werebear usually

remains human unless death is likely. The shapechange renders the werebear helpless for a round. In ursine form, the werebear attacks with two swiping claws and a bite. If both claws hit, during the next round the werebear can hug for an additional 2-16 points of damage. This subsequent damage continues automatically each round thereafter.
Like those of other lycanthropes, the werebear's defenses function only in the bear form. Weapons used against the werebear must be either silver or magical weapons of +1 or better. Werebears can summon 1-6 brown bears within 2-12 turns, provided such animals are within one mile. Werebears heal at three times the normal human rate and can *cure disease* in another creature in 1-4 weeks if they so desire.
If a werebear dies, he reverts to his human form in one round.

**Habitat/Society:** Werebears are normally solitary creatures. As humans, they build cabins far from settled areas, preferably in a deep forest near well-stocked waters. Werebears do not marry although they may have preferred mates they meet on a very irregular basis. Females bear 1-2 children in human form. Such children are very stout and grow quickly. Within eight years they gain adolescence and the ability to change into werebears. Shortly after, the mother drives the children out and seeks a mate to start the cycle anew. The newly independent young are discreetly guided and assisted by older werebears. Despite their apparent isolationism and rugged individualism, werebears have a sense of community. They never attack each other and aid any werebear threatened by another lycanthrope species.
Werebears are closest to forest-dwelling classes like rangers, druids, and wildlife-oriented priests. They rarely enter villages and never enter cities except in dire emergencies or to help other good-aligned people, especially those threatened by evil lycanthropes. Werebears hate wererats and werewolves.
The average werebear claims a territory 1 to 4 square miles in size. Fishing areas are open to all werebears. A werebear feels a close bond to its home region, acting as a game warden to protect its territory and the animals therein from the ravages of intruders.
Werebears do not travel a great deal. Only the rare individual (usually young) can be coaxed into joining a band of adventurers. Werebears may join an adventuring group as guides, provided the money is right and the job is agreeable.
Treasure is usually limited to small, valuable commodities like gold, platinum, gems, and jewelry. Werebears rarely carry any treasure and instead hide it near their homes. They also collect scrolls, potions, and other magical items, often as fees or rewards for past services. Werebears destroy any magical items that specifically affect lycanthropes or bears, since such items might be used against themselves.

**Ecology:** Werebears are omnivorous, preferring fish, small mammals, and a honey-rich mead. This mead is extremely intoxicating to normal humans. Werebears have few natural enemies. Their closest enemies are the werewolves who share their preferred wilderness regions.

# Lycanthrope, Wereboar

| | |
|---|---|
| **Climate/Terrain:** | Any dry land |
| **Frequency:** | Rare |
| **Organization:** | Tribal |
| **Activity Cycle:** | Any |
| **Diet:** | Omnivore |

| **Special Defenses:** | Silver or +1 or better to hit |
| **Magic Resistance:** | Nil |
| **Size:** | M (5'-6' tall) |
| **Morale:** | Elite (13) |
| **XP Value:** | 650 |

Wereboars are humans who are able to transform themselves into a form combining human and boar features. Their tempers are as ugly as their features.
In human form wereboars tend to be stocky, muscular people of average height. Their hair is short and stiff. They dress in simple garments that are easy to remove, repair, or replace.
The boar form stands slightly taller than the human form, but the hunchbacked posture thrusts the head forward. The head is identical to a boar's head, complete with short tusks. The torso's diameter is doubled, the neck shortened, and the feet become hoof-like. Stiff, black hair like wire bristles covers the skin.

**Combat:** The wereboar combines his hands and tusks for deadly effect. The wereboar seizes a target and pulls it toward his head. He stabs his tusks into the victim, then pulls his victim to one side while swinging his head in the other direction, which tears the wound further. He then tosses the victim aside and attacks someone else. A wereboar will gladly wade into the center of a group of opponents and then fight his way out.
In human form the wereboar attacks with whatever weapon he has. Wereboars prefer bludgeoning or chopping weapons, such as axes and maces, rather than stabbing or missile weapons such as swords, spears, or bows.
In either form the wereboar is immune to damage from nonmagical and nonsilver weapons. Such wounds are little more than scratches that quickly heal.

**Habitat/Society:** Wereboars are ill-tempered, easily angered, and almost as prone to attack their few friends as they are to attack an enemy. As humans they are rude, crude, and vulgar. However, they are invaluable allies in a fight. A wereboar does not give his friendship easily, but when he does it is a special bond he will not break. The problem is, due to the wereboar's peculiar personality, it is difficult to tell whether he is being friendly or hostile.
Wereboars prefer dense woodlands, ideally far from towns and cities. Like werebears, they live in caves or build cabins for their homes. Their homes tend to be ill-kept and slovenly. Wereboars don't repair things, they replace them.
Despite their personalities, wereboars have close-knit families. Females give birth to litters of 1d4+2 offspring. Newborns are very small by human standards but are strong and able to crawl hours after birth. The offspring mature quickly. When they reach adolescence at eight years, they gain the ability to become wereboars themselves. A wereboar father appears to be distant and aloof, but a staunch protector who will attack any foe who threatens his family, no matter how uneven the odds. Females are aggressive when defending their young (+2 bonus to attack roll). Neither males nor females check morale when defending their young.
The diet is a mixture of small game, vegetables, and fungi. Their favorite food is the subterranean fungus called truffles; even in human form they can detect the truffles growing several feet underground. Wereboars aren't very good gardeners. A typical garden is a cleared field strewn with a variety of seeds and bulbs in the hope that something edible will grow. Wereboar cuisine is equally haphazard; it can be summed up as burned meat and stews.
Wereboars avoid normal hogs and boars. They are suspicious of strangers. Wereboars assume everyone is hostile. In human form they may wait for the first attack, but when in boar form they usually (75% chance) chase the intruders away and attack any who defend themselves.

**Ecology:** Wereboars produce little of value, whether trade goods or services. Their main desire is simply to stay away from everyone else. In the wild, they defend their territories against any intruders. Wereboars fit into orcish society as well as they do into human society, and might sometimes assist or ally themselves with orcish forces. Wereboars can tolerate half-orcs.

| **Magic Resistance:** | Special (see below) |
| **Size:** | M |
| **Morale:** | Elite (13) |
| **XP Value:** | 2,000 |

A foxwoman is an elven-appearing woman who is able to transform herself into a silver fox form or a silver-furred humanoid (vixen) form with a fox's head. They are extremely self-centered.
The female elven form of the foxwoman is extremely beautiful. She has silver or silver-streaked hair, including a widow's peak. She dresses attractively in loose garments. A pouch holds valuables and spell components.
The vixen form is a hybrid of elven and fox-like features. The body and limbs are those of the elven form but covered with silvery fur. The head and tail are fox-like. The vixen may wear elven clothing. The vixen can run very quickly (18).
The silver fox form appears to be a normal, large fox. It moves extremely fast (24), can *pass without*

*trace*, and is 90% undetectable in undergrowth if it passes out of view for a moment.

**Combat:** The silver fox's bite inflicts 1-2 points of damage but is otherwise harmless. The vixen's more savage bite causes 2d6 points of damage. Human or elven women who are bitten by a vixen for 50% or more of their hit points become foxwomen within three days unless both a *cure disease* and a *remove curse* spell are cast upon the victim by a priest of at least 12th level.
In elven form, the foxwoman relies on weapons. She gains a +1 bonus with bow or sword. Her best weapon is her incredible beauty. Any human, humanoid, or demihuman males whose Wisdoms are 13 or less are effectively caught by a *charm* spell. Those whose Wisdoms are 14 or greater are not charmed but still find the foxwoman extremely attractive. In elven form, the foxwoman has magic use as a wizard of level 1d4. She is 90% resistant to *sleep* and *charm* spells.
In any form, the foxwoman is able to see by infravision (60-foot range). They can only be harmed by silver or +1 or better magical weapons. Scars from nonfatal wounds vanish within a month.

**Habitat/Society:** Foxwomen dwell in lonely woodlands far from humanoid communities. Their homes may be hidden cottages or comfortably furnished cave complexes; in either case their homes are filled with typical human comforts. Foxwomen are solitary in regard to their own kind. They are self-serving, vain, and hedonistic. Foxwomen serve their vanity by enslaving humanoid males. Those males become servants and companions.
Werefoxes do not keep dwarves, gnomes, or halflings; such males are slain quietly as soon as the opportunity arises.
Each foxwoman is always accompanied by 1d4+1 charmed males. At least one of the males is a fighter (70%) or ranger (30%) of level 1d4+1. There is a 50% chance that any one of the other males is also a fighter of level 1d4. There is a 10% chance that one of the remaining males is a cleric (10%), druid (45%), mage (10%), thief (25%), or some other class (10%) of level 1d4. Of her elven or half-elven companions, 25% are multi-class characters. All males who do not fit into any of the above categories are 0-level fighters and elves or half-elves of 1 Hit Die. The males may use such magical items as they possessed prior to being charmed into the foxwoman's service.
Foxwomen are barren. They must kidnap or adopt their children. There is a 10% chance that a foxwoman has a "daughter." The foxwoman has stolen an elven girl, infected her with lycanthropy, and is raising her as a foxwoman. Such a child is be 1d8+5 years old. If she is 12-13, she is treated the same as a normal foxwoman; otherwise she is a noncombatant.
Non-elven women who are afflicted with lycanthropy undergo a slow transformation that alters their normal form. Over a period of one to two years, such women turn into elven women; only their faces and odd marks (tattoos, birthmarks) provide faint proof of their old identities.

**Ecology:** Foxwomen are unique among the lycanthropes. They have no major goals or desires aside from pampering themselves and feeding their vanity. They have little contact with other foxwomen (whom they see as rivals), real foxes (irrelevant beasts), or other lycanthropes (crude, unattractive, and uncharmable).

Wererats, also called ratmen, are humans who can transform themselves into three forms -- human, human-sized ratman, and giant rat. They are sly and evil, and usually inhabit tunnel complexes beneath cities.

The wererat's human form tends to be a thin, wiry individual of shorter than average height. His eyes constantly dart around, and his nose and mouth may twitch if he is excited. Males often have thin, ragged moustaches.

The ratman form is somewhat shorter than the human form. The head, torso, and tail are identical to those of a rat, but the limbs remain human.

The third form is that of a giant rat 2 feet from nose to rump. This form is identical to that of the giant rat

(q.v.). This is the preferred form for travel and spying on potential victims.
Wererats are often followed by 1-6 mice or rats that are instinctively drawn to them but are not controlled by them.

**Combat:** In all three forms, wererats rely on weapons for their attacks, preferring shortswords and daggers. Anyone who is injured by a true wererat has a 1% chance per point of damage of becoming a wererat. In their ratman and giant rat forms, wererats can be hurt only by silver or magical weapons.
Wererats prefer to attack from ambush. A favorite tactic is to assume human shape and lure unsuspecting victims into a trap. This is the only time wererats are voluntarily alone. Victims are then robbed, held for ransom, or eaten.
Each wererat is able to summon and control 2-12 giant rats.

**Habitat/Society:** Wererats live in packs, regardless of form, never being alone if they can help it. Solitary wererats are either sole survivors or engaged in mischief. They do not form interpersonal bonds like love or marriage. In fact, wererats rarely mate with their own kind. Offspring of a wererat and a human woman are human, although they are small, like their fathers. Offspring of a female wererat resemble giant rats with human-like paws. These ratlings grow to maturity in two years and gain the ability to transform themselves into human children with an apparent age about three times that of the ratling's actual age.
Wererats prefer subterranean lairs hidden among the sewers and catacombs beneath cities. Nothing can pass through the sewers and escape their attention. Unfortunately for the wererat, the sewer's stains and smells do not vanish when it assumes human form. This effectively limits wererats to the less savory sections of town as well as reducing the number of humans who might unknowingly mate with a wererat.
Wererats see cities as their hunting grounds. They delight in matching their superior intellects and meager physical skills against the more powerful and numerous humans. But they are no fools; they will not attack unless they are sure they can win. If a battle is going against them, wererats will scatter, transform to rat form, and head for the sanctuary of the sewers. They won't even defend their own lairs. Their attitude is that since they had stolen most of their belongings in the first place, they can always replace them.
Wererats are greedy and collect anything they think might have worth. The resulting trove usually has more junk than treasure, but a thorough search may reveal a wide variety of valuables.
Wererats frequent sleazy taverns, both for the cheap alcohol and to follow drunks into the streets to drag them away for the next day's meal.

**Ecology:** Wererats are parasites. They recognize that they are physically weaker than most species that dominate the surface. They have found and exploited the one niche where they have a chance to dominate, the world beneath the cities. They feed on humans and steal their riches. Humans unknowingly protect the wererats from both surface dwelling creatures and those who might burrow up from far below. Besides, the humans pay for the upkeep of the wererat's sewer realm.
Psychologically, wererats remind humans that no matter how strongly defended they think they are, monsters can still get in. Mothers describe wererats as bogeymen to scare unruly children.

# Lycanthrope, Wereraven

| | |
|---|---|

| **XP Value:** | 420 |

Wereravens are a race of wise and good-aligned shapechangers who seem to have migrated to Ravenloft from another realm (probably Greyhawk) centuries ago. While they are no longer found on their plane of origin, they have managed to survive in Ravenloft.

Natural wereravens have three forms, that of a normal human, a huge raven, and a hybrid of the two. Infected wereravens can assume only two of the above forms. While all infected wereravens can take the human form, roughly half are able to turn into hybrids while the others can transform into huge ravens. The hybrid form of these creatures looks much like that of a werebat. The arms grow long and thin, sprouting feathers and transforming into wings. The mouth hardens and projects into a straight, pecking beak, and the eyes turn jet black. A coat of feathers replaces the normal body hair of the human form.

**Combat:** Wereravens are deadly opponents in close combat, although they seldom engage in it. Because they can be hit only by silver weapons or those with a +2 or better magical bonus, these creatures do not fear most armed parties.

When in human form, a wereraven retains its natural immunities to certain weapons, but has no real attack of its own. If forced to fight unarmed, it inflicts a mere 1-2 points of damage. For this reason, wereravens in human form often employ weapons, doing damage appropriate to the arms they wield.

In raven form, the wereraven attacks as if it were a common example of that creature. Thus, it inflicts but 1-2 points of damage but has a 1 in 10 chance of scoring an eye peck with each successful attack. Any eye peck will cause the target to lose the use of one eye until a *heal* or *regeneration* spell can be cast on the victim. Half-blinded persons (those who have lost 1 eye) suffer a -2 on all attack rolls. A second eye peck results in total blindness until the above cure can be affected.

In hybrid form, the wereraven's arms have grown into wings, making them almost useless in combat. However, the muscles in their mouths/beaks strengthen, giving them a savage bite. Each attack made with the creature's beak inflicts 2d6 points of
damage.

Anyone bitten or pecked by the wereraven has a 2% chance per point of damage inflicted of becoming an infected wereraven. Infected lycanthropes are discussed in the *Ravenloft Boxed Set.*

Wereravens are strong flyers and often use this ability to their advantage in combat.

**Habitat/Society:** A wereraven family will be found only at the heart of a dense forest. Here, they live in the hollowed out body of a great tree. Entrance to their lair is possible only from above (if one does not wish to cut or break through the trunk itself). Curiously, the wereravens are able to keep the tree in which they nest from dying even after they have hollowed it out, so it is difficult to distinguish from the normal trees around it.

Wereravens recognize that they are bastions of good in a land dominated by evil. They have managed to survive by avoiding large populations or overt acts of good that would draw the attention of the reigning lords to them. Thus, a wereraven flock will generally have no more than 2-8 adults in it. Of course, such groups have young with them (1-4 per 2 adults), but these are seldom encountered for they remain in a true raven state until they are old enough to fend for themselves. In addition, a typical wereraven lair will draw 10-100 (10d10) common ravens to nest in the trees about it. These wise birds will serve the wereravens, doing their bidding and striving to protect them from harm.

Wereravens are not opposed to helping out the cause of good in Ravenloft, but they do so reluctantly. This is not because they do not wish to do good, but because they fear the wrath of the Dark Powers. It is said that the wereravens have come to the aid of endangered Vistani clans on several occasions and that close ties exist between these two races, but neither will admit this openly.

**Ecology:** Wereravens are omnivores who prefer to maintain a vegetarian diet. They enjoy berries and nuts, but will eat carrion or kill for fresh meat from time to time in order to maintain good health.

# Lycanthrope, Weretiger

| **XP Value:** | 975 |

Weretigers are humans, usually female, that have the ability to transform into tigerlike forms. They have a strong affinity for all felines.

The human form tends to be sleekly muscular, taller than average, and very agile. The voices of weretigers are husky and they tend to roll their r's.

The weretiger form is a hybrid between a human and a tiger. It is about 25% larger than the human form, and is covered by tiger-striped hide. A 3-foot tail extends from the spine. The legs are more feline than human; this form walks on its toes. The head is also a mixture of features. The ears, nose, muzzle, and teeth are tigerlike, but the eyes and overall shape are human. If the human form's hair is long, it is still present. The fingernails grow into claws. Despite the changes, the hybrid form can pass for human at a

distance if properly disguised.
The third form is that of a fully grown tiger without any trace of human features.
Weretigers speak the languages of all feline breeds, so normal felines, including the great cats, have a 75% chance of being friendly toward a weretiger. Even feline monsters have a 25% chance of being automatically friendly. However, weretigers are rarely found in the company of real tigers, being only 5% likely to be accompanied by them.

**Combat:** In either tiger form, the weretiger attacks with a variety of punches, raking claws, and bites. The weretiger's punches are so strong that they cause 1-4 points of damage. Otherwise the claws can be raked across an opponent, causing 2-5 points of damage. The teeth are the most dreadful weapon. They can tear a victim apart or crush a windpipe. Weretigers usually bite only in their full tiger form.
In human form, the weretiger uses a wide variety of weapons with which it is adept. A weretiger is also good at unarmed combat; it retains its deadly punch in this form, as well as an enhanced sense of smell and night vision.

**Habitat/Society:** For various reasons weretigresses outnumber weretigers five to one.
Weretigers travel alone or in small prides. They do not marry but have preferred mates, which may be either humans or tigers. Weretigers give birth to one or two cubs. The cubs are the hybrid form; they look like fuzzy human babies with tails. Cubs mature quickly. They can crawl within days, walk within a month, and hunt within a year. Their physical size matches that of a human child of three times the same age. At age six, they reach adolescence and gain the ability to transform into a fully human form. At age 12, they gain the ability to assume a full-tiger form; this is considered the mark of adulthood.
If a male weretiger mates with either a real tigress or human woman, the offspring initially has the same appearance as the mother. Lycanthropic transformations do not begin until the hybrid reaches adolescence.
Weretigers are omnivorous. In the wild they roam a territory of 7-10 (1d4+6) square miles. Their homes are usually near human settlements. These tend to be well kept cabins with small herb and vegetable gardens. The only livestock will be a variety of cats and some poultry.
Weretigers rarely live in confined settings such as cities or large towns because their lycanthropic nature would be hard to conceal. If found in such a setting, one or two weretigers in human form will be on an errand, such as a mission, a revel, or a simple shopping trip. In any form, weretigers are very confident and not prone to attack unless provoked.
Treasure varies widely, acquired as payment for past services, plunder from past adventures, or scavenged from the remains of past opponents. Weretigers have an affinity for gems and often keep a small cache hidden somewhere near their homes.

**Ecology:** Weretigers are the most adaptable of the lycanthropes. They are equally at home in human, feline, or monster company.

# Lycanthrope, Werewolf

Werewolves are the most feared of the lycanthropes, men who can transform into wolflike beasts. They should not be confused with *wolfweres* (q.v.) -- wolves who turn into men. Great enmity exists between werewolves and wolfweres.

The human forms of werewolves have no distinguishing traits. The werewolf form is equally varied. Many have a bipedal form that is a hybrid of human and lupine features. These creatures are about 1-foot taller and stronger than their human forms. The bodies are fur-covered and have short tails, wolflike legs, and heads that are combinations in varying degrees of human and lupine features.

A second form of hybrid is more wolflike, and may be mistaken for a large wolf when it runs on all four legs. This hybrid can also walk erect and has humanlike hands.

Another type of werewolf (about 20%) looks exactly like a large wolf about the size of a bear. This creature has no human features, although the eyes may glow red in the dark.

**Combat:** In their human forms, werewolves attack with a variety of weapons, generally those common to their human identity and class. In the werewolf or wolflike forms, the creature attacks with its fearsome teeth. If the form has hands, the werewolf may grab its prey for a better bite.
In the wolf form, the werewolf can be harmed only by silver or magical weapons of +1 or better. Wounds from other weapons heal too quickly to actually injure the werewolf.
Werewolves attack in packs; packs including females and young drive the adults to hit harder. If the female is attacked, the male fights at +2 to hit and does full damage with each blow. If the young are attacked, the female attacks at +3 to hit and does full damage. Cubs with 60% full growth are -4 to hit, cubs with 70% are -3 to hit, and so on. All cubs inflict 2-5 points of damage.

**Habitat/Society:** Werewolf packs roam the wilderness in search of human or other prey. True werewolves tend to be nomadic, although infected werewolves often continue to live the life to which they were accustomed. Werewolves retreat to their dens during the winter months or the years when the females are raising the helpless cubs. As humans, werewolves do not build homes, although they may take over existing dwellings, sometimes the home of past victims. Caves and burrows are the dens most commonly used in the wild. These sparsely furnished retreats are used mostly as a sleeping area and a place to store their human possessions. Many werewolf families roam the countryside in wagons, much like gypsies. In fact, this has caused many gypsies to be accused of being werewolves.
Werewolves live in packs, generally related by bloodlines. Werewolf packs of five to eight individuals are single family groups consisting of a male, female, and three to six cubs, six to nine years old. Cubs under six years old are kept in secluded dens and never encountered by hostile humans.
When pregnant, the female retreats with her mate and an older female who will act as midwife. In a very secluded area they prepare a special den that will be home for the mother and her cubs for the next six years. The female gives birth to a litter of 5-10 cubs. The cubs are born in the hybrid form; they resemble fuzzy human babies with wolflike faces. Infant mortality is high; 2-4 cubs of each litter never reach 60% growth. Cubs grow at the same rate as humans for their first five years. By the sixth year they attain 60% of their full growth. At this point they develop the ability to transform into their other forms. Each following year brings an increase of an additional 10% growth. Werewolves are considered mature at age 10.
If a werewolf mates with a woman, the offspring is completely human. The temperament reflects the father; such children are violent, combative, and prone to mental illness. There is a 10% chance each year from the onset of adolescence that such a child will spontaneously transform into a true werewolf.

**Ecology:** Werewolves are a peculiar hybrid of human and lupine personalities. They are savage killers, yet they are devoted to their close-knit families. Werewolves are hostile toward lycanthropes who oppose them, especially werebears.

Mammals are the most common of the vertebrate. Generally born alive, mammals possess hair. Warm-blooded, mammals maintain a single body temperature, regulated by an internal thermostat. Most mammals are harmless to humanoids and they are often trained to perform a specific function.

**Ape, Carnivorous:** Carnivorous apes gain a +2 to their surprise rolls. They eat anything they can kill.

**Baboon, Wild:** Wild baboons are large, herbivorous primates that are characterized by long arms and legs, large dog-like muzzles, and sharp canine teeth.

**Badger:** Badgers are vicious little creatures that prefer to run from danger than fight. If cornered, the badger will fight, attempting to bite the tender throat of its opponent.

**Banderlog:** Banderlogs resemble baboons with green skin and brown fur. They throw retch plant fruit or coconuts at enemies. Coconuts cause 1d4+1 points damage while retch plant fruit splash a 5-foot radius area with nauseating fluids. Those caught in the splash, retch for three rounds and their Strength is reduced by half for the next hour+no saving throw allowed.

**Bhaergala:** This predator jumps its prey from great heights. It can drop from as high as 60 feet, causing maximum damage plus 1d6 for every 10 feet dropped. This beast heals 2 hit points every day and gains a +3 to all saving throws vs. poison. Four times a day, the bhaergala can turn spells as the *ring of spell turning*.

**Boar, Wild:** Wild boar continue to attack until they are reduced to -7 hit points. The giant boar is often called an alothere.

**Chattur:** Chatturs, called space bandits, are small mammals that exhibit traits of both primates and rodents. Not very combative, they fight in defense of their nests, kin, or friends.
**Cooshee:** Known as elven dogs, they only bark to warn their elven masters of danger. They can strike bipedal opponents with front paws to knock man-sized or smaller creatures down.

**Dakon:** Dakons are intelligent apes with a reasonable grasp of the common tongue. When attacking it gains a +2 bonus.

**Debbi:** This desert scavenger, a baboon-hyena crossbreed, can *cause fear* by stamping its feet in a slow, rhythm and calling forth magical power that makes its fur crackle and spark. This fear lasts for two rounds.

**Goat:** When a goat charges, it gains a +2 attack bonus and does an additional 1-2 points damage.

**Gorilla:** The gorilla is non-aggressive and shy, but fights fiercely when threatened or cornered.

**Hsing-sing:** The hsing-sing are a recluse ape-like race believed to personify the principles of pacifism and harmony with nature. However, once a year, for 2d6+4 days, the males gather into raiding bands and complete the ``war season.'' Their bands attack humanoid settlements on the edge of their territory. Such attacks are impartial; pillaging good and evil creatures alike. To maximize the advantage of surprise, the hsing-sing rarely attack the same settlement two years in a row.

**Hyena:** Often confused as a canine, the hyena taunts enemies with its nervous, high-pitched howl.

**Jackal:** Jackals are timid scavengers that run from the threat of other predators. When attacking, the jackal darts in to bite its victim and quickly retreats to a safe distance. If more than one jackal is trying to down an animal, they attack in a haphazard fashion with little or no coordination of effort.

**Losel:** An arboreal orc/baboon cross, losel resemble primitive humans in many respects. They can throw stones up to 20 yards for 1d4 points damage.

**Monkey Spider:** Measuring 1-inch in length, monkey spiders fight creatures their own size, avoiding combat with larger creatures. If forced to battle such creatures, the monkeys jump and bite at an eye. The

bite causes extreme pain and the victim must hold his eye and take no other action for a round, giving the monkey a chance to run away. Monkey spiders can jump 10 feet down or 5 feet forward and can climb anything a typical spider can.

**Porcupine:** Porcupines are covered with long barbed quills. The creature is unable to throw its quills. Generally, a predator who chases the fleeing creature gets a mouthful of quills which causes the damage cited above.

**Rothé:** The rothé (pronounced "roth-AY") is a musk ox-like creature with an aversion to light. It prefers to live underground near lichen and moss.

**Skunk:** Anyone within a skunk's 10x10x10-foot cloud of musk must save vs. poison or be nauseated for 1-4 rounds, losing 50% of Strength and Dexterity.

**Sleek:** This ermine-like mammal surprises opponents on 1-5 on 1d6. On an attack roll of 19 or 20, the sleek opens a major vein, causing 2d6 points of damage. Every round thereafter, the victim suffers 1d6 more points damage until the wound is wrapped with a tourniquet, direct pressure, or magical healing.

**Stag, Wild:** Wild stags are the aggressive males of the deer herds. Normally docile and passive, they defend their herds against all but the most fearsome opponents.

**Stench Kow:** Stench Kine are the cattle of the lower planes. They are immune to all forms of cold, fire, and poison. In close quarters, their breath and bodies are so foul, a save vs. poison must be made or the character is affected as if struck by a *stinking cloud* spell. The save must be made every three rounds of exposure.

**Taer:** These vile primates live in cold mountain caves. They throw spears before closing in for hand-to-hand.

**Tyrg:** When in melee, tyrgs emit fierce howls that mildly stun their victims (+2 penalty to initiative and -2 penalty to attack rolls) for the next three rounds+no saving throw allowed. These are tiger-dog crossbreeds that move silently 75% of the time and have a +2 bonus to avoid surprise.

**Warthog:** The warthog is so aggressive, it continues to attack until it reduced to -7 hit points.

**Weasel:** Weasels, related to minks and stoats, are common predators, though they are hunted for their pelts, or for pets.

**Wolverine:** When engaged in battle, the wolverine becomes a most fearsome adversary, giving it a +4 bonus to its attack roll.

**Minimal Mammals:** Minimals are half-sized breeds of otherwise normal animals. They have the same physical and behavioral traits of their full-sized relatives, although most are not dangerous. Minimals generally have one-half the number of Hit Dice with a corresponding drop in THAC0, a +2 Armor Class penalty, and a -2 Morale penalty. The damage caused by a minimal is one-half that of the full-sized relative.

**Giant Mammals:** Giant mammals are double-sized breeds of otherwise normal animals. They have the same physical and behavioral traits of their full-sized relatives. These giants generally have double the number of Hit Dice, a corresponding rise in THAC0, a -2 AC bonus, and a +2 Morale bonus. The damage caused by the attacks of a giant mammal is twice that of the full-sized relative.

Herd animals live in all climates and terrain, from freezing tundra (bactrian camel) to temperate hills (wild cattle) to tropical plains (antelope). Though normally passive, herd animals can be dangerous when angered or frightened.
Herd animals are four-legged hoofed mammals covered with hair -- thick fur for buffalo, curly wool for sheep, and short, coarse hair for camels, antelope, and sheep. Male cattle, buffalo, antelope, and sheep have sharp horns. A camel's humps (one hum for dromedaries, two for bactrian) enable it to go without food or water for up to two weeks.

**Combat:** Most herd animals attack by biting. Buffalo defend themselves with their horns, usually attacking if approached too closely (6' or less); if charging from a distance of at least 40', a buffalo does 3-18 hp of impaling damage plus 1-4 hp of trampling damage. Nasty-tempered camels have a 50% chance of spitting at persons attempting to ride them or use them for pack animals; the victim of a spit attack has a 25% chance of being blinded for 1-3 rounds. Cattle, antelope, and sheep generally flee from danger, but will attack if cornered or threatened. A male antelope or sheep defending his herd will charge, inflicting 1-4 hp of butting damage if charging from at least 40'. Male cattle are 75% likely to attack if intruders approach before the herd has a chance to escape.
If frightened by intruders, there is a 25% that the entire herd will stampede. If a herd stampedes, roll 2d4 for each creature in the path of the stampede who does not take cover (such as by hiding in a tree or behind a rock pile or wall). This is the number of herd animals trampling the exposed creature. Trampling causes either 1-4 hp of damage (camel, cattle, antelope, and sheep) or 1-6 hp of damage (buffalo) per herd animal trampling.

**Habitat/Society:** Herd animals graze on open terrain, migrating to a new territory when the food supply of the old has been depleted. Herd size varies from a family of four buffalo to a commercial flock of 1,000 sheep. The largest and oldest male usually serves as the leader, directing the movement his herd and watching for predators. Herd animals do not collect treasure.

**Ecology:** Herd animals eat grass, grains, and shrubbery. They are the favored prey of carnivores, including lions, tigers, and dragons. Man often domesticates herd animals for their meat, milk, fur (blankets and clothing), and skin (shoes and tents). Dried droppings of herd animals can be burned for fuel.

**Climate/Terrain:** Various
**Frequency:** Common
**Intelligence:** Animal (1)
**Alignment:** Neutral
**Magic Resistance:** Nil
**Morale:** Unreliable to Average (2-9)

Most small mammals are harmless to humans. Some have useful traits or abilities. Most animals have only rudimentary languages that humanoids cannot use except with the aid of magical spells. All have THAC0 20, except where noted below.

**Beavers** quickly chew trees and construct homes in ponds. Adult pelts are worth two gp.

**House cats** are small, domesticated breeds.

**Chipmunks** have excellent hearing and eyesight.

**Ermines** are related to weasels. The white, spotted pelt is worth four gp.

**Ferrets** are related to weasels. If captured as cubs or raised domestically, ferrets may be trained to perform simple tricks, retrieve objects, or hunt small burrowing game.

**Foxes** have superb vision, hearing, and noses. Their pelts are worth three to five gp.

**Gophers** live in large colonies burrowed into the soil of the plains. They have acute senses of hearing and smell. For each gopher encountered, another 1d10 are hiding in the burrows nearby.

**Hedgehogs** are covered with sharp but harmless quills.

**Moles** have an excellent ability to detect tastes and vibrations, but very poor vision.

**Monkey** refers to a variety of small, non-hostile species (rhesus, spider, tamarind, lemurs, and others). THAC0 19.

**Mice** infest virtually any human structure.

**Minks** are related to weasels. The pelt is worth three gp.

**Muskrats** have a moderately valuable pelt worth five sp.

**Opossum** are woodland marsupials with good hearing.

**Otters** are fast runners (12) and swimmers (18). They are friendly and only attack if cornered or if their young are threatened. Pelts are worth two to three gp. Giant otters are identical except for their size (10'-15' long). Pelts are worth 1,000-4,000 gp. THAC0 19 (sea and giant otters).

**Pigs** may bite or attempt to stun, then crush a victim by butting. Domestic pigs are normally harmless unless angered or magically controlled. Wild pigs are domestic pigs that have escaped to the wild. They are smaller (2 feet long) and nonaggressive unless provoked. THAC0 19.

**Rabbits** are difficult to surprise or catch due to their sensitive eyesight, hearing, nose, and natural paranoia.

**Raccoons** only attack if cornered or rabid (10% chance). The pelts are worth one gp.

**Squirrels** have good vision and hearing.

**Flying squirrels** have furry membranes that enable them to glide five feet for each one foot they drop.

**Giant black squirrels** are 2-foot-long residents of evil-dominated forests. They steal loose, small valuables (rings, gems, vials) to decorate their nests. THAC0 19.

**Woodchucks** are capable of quickly gnawing through trees or wood. The pelts are worth 1 gp.

| | |
|---|---|
| 9 HD squad leader: 5,000 | 11 HD noble: 7,000 |
| 9 HD squad spellcaster: 6,000 | 11 HD sorcerer: 9,000 |
| 10 HD swarm leader: 6,000 | 12 HD king or queen: 8,000 |
| 10 HD swarm spellcaster: 8,000 | 12 HD high cleric: 10,000 |

These horrors, sometimes called *tlincallis,* are part human and part scorpion. A manscorpion has a dark-skinned human torso, its abdomen is protected by bony plates, and its ribs and backbone protrude from the body. Their hands have two thick fingers and a long thumb; the hands are often mistaken for scorpion-like claws. The creatures are hairless, and their faces are handsome and noble, except for the red, glowing eyes which have no pupils.
The creature's torso sits atop a 4-foot-long, bony-plated, arachnoid body which is supported by six legs. Bony plate completely covers the strong legs. The protruding spine continues along the abdomen and forms a tail 10 feet long. The lower body, legs, and tail are usually sand-colored, and blend easily with the desert. Observers rarely see anything but the muscular human torso until the manscorpions are close. The origins of these creatures is thought to lie in an ancient curse placed on evil humans. They speak their own language, and 20% also speak some locally spoken tongue.

**Combat:** Most manscorpions have low to average intelligence; they patrol their territory in squads of six warriors. A squad leader and a spellcaster, each with 9 HD and greater intelligence, are also present. The spellcaster has the abilities of a 4th-level cleric or mage. Fully 50% of them carry obsidian-studded clubs (treat as a battle axe) and bolas or javelins. The rest use only their natural weapons.
When directed by the squad leader, manscorpions attack in an organized manner. They use long-range attacks before closing for melee. In close combat, they attack with weapon, claw, and tail, or with tail and two claws. The tail can strike anywhere nearby, including in front of the creature. When not being used for attack, the tail sweeps the area behind the manscorpion, checking for obstacles and assailants. Anyone struck by the tail's spur must make a successful saving throw vs. poison or die in 2d4 rounds. Victims suffer weakness for one round (-2 attack penalty), start to shake in the next round (-3 attack penalty and no Dexterity bonus to AC), then convulse (AC 10 and no attacks possible) until they die. Common manscorpions lose organization and their morale is reduced without a leader. When morale is reduced to 1 or 2 hit points, common manscorpions go into a stinging frenzy, making two tail attacks per round, but no other attacks.
Patrols are more common near the manscorpion lair, which is guarded by a swarm consisting of three squads. A swarm leader and a spellcaster, each with 10 Hit Dice, accompany a swarm. The spellcaster is the equivalent of a 7th-level priest or wizard. These leaders stay out of combat, directing the action and casting spells. Swarms are sent on patrol in times of trouble.
For every two swarms, there is a noble and a sorcerer. They stay near the lair unless an army of manscorpions is marching, then they will lead two swarms. These leaders have 11 HD, and sorcerers cast spells at 9th-level ability.
Finally, every lair has a king or queen, or both, with 12 Hit Dice. A high cleric, also with 12 HD, aids these rulers with the abilities of an 11th-level priest. They always remain in the lair and will only fight if directly threatened.

**Habitat/Society:** Manscorpions live under the desert sands in burrows connected by tunnels, all situated above underground cities of 40-400 individuals. These often mirror great human cities, with pits instead of buildings, and great chasms like inverted pyramids.
Manscorpions often hold humans and dwarves as slaves, using them to mine and create weaponry. A manscorpion's fingers are not very dexterous, but they are fine sculptors with hammer and chisel, and many sculptures decorate their cities.

**Ecology:** Manscorpions eat practically any meat, including carrion. No normal creatures prey on them.

# Manticore

| | |
|---|---|
| **Climate/Terrain:** | Any |
| **Frequency:** | Uncommon |
| **Organization:** | Solitary |
| **Activity Cycle:** | Any |
| **Diet:** | Carnivore |
| **Intelligence:** | Low (5-7) |
| **Treasure:** | E |
| **Alignment:** | Lawful evil |
| **No. Appearing:** | 1-4 |
| **Armor Class:** | 4 |
| **Movement:** | 12, Fl 18 (E) |
| **Hit Dice:** | 6+3 |
| **THAC0:** | 13 |
| **No. of Attacks:** | 3 |
| **Damage/Attack:** | 1-3/1-3/1-8 |
| **Special Attacks:** | Tail spikes |
| **Special Defenses:** | Nil |
| **Magic Resistance:** | Nil |
| **Size:** | H (15') |
| **Morale:** | Elite (13-14) |
| **XP Value:** | 975 |

The manticore is a true monster, with a leonine torso and legs, batlike wings, a man's head, a tail tipped with iron spikes, and an appetite for human flesh.
The manticore stands 6 feet tall at the shoulder and measures 15 feet in length. It has a 25-foot wingspan. Each section of the manticore closely resembles the creature it imitates. The leonine torso has a tawny hide, the mane is a lion's brown-black color, and the batlike wings are a dark brown with sparse hair. All manticores have heads that resemble human males; the mane resembles a heavy beard and long hair.

**Combat:** The manticore first fires a volley of 1-6 tail spikes (180 yard range as a light crossbow). Each spike causes 1-6 points of damage. The manticore can fire four such volleys each day (the spikes regrow quickly). Next, the manticore closes with its prey and attacks with its front claws and sharp teeth. In an

outdoor setting, the manticore tries to stay in the air to minimize its chance of being attacked. It is a clumsy flier, however, and cannot use its teeth in the air.

**Habitat/Society:** Manticores are found in any climate but prefer warm lands to cool ones. This reflects the wide climate range of their favorite food, humans. A manticore's territory may cover 20 or more square miles and includes at least one human settlement. Such territories usually overlap with those of other manticores and other man-eating predators like dragons.

Manticores mate for life. The male remains with the female during gestation and hunts for her.

Manticores bear one or two cubs which grow rapidly to adulthood in five years. Cubs are born with 1 Hit Die and gain an additional one each year. In their first year, cubs lack flying ability, but they are still small enough for an adult to grasp in its forelegs. There is a 20% chance a she-manticore's lair holds cubs under one year old. Cubs up to two years inflict one point of damage per front paw and 1-2 points with their bite. Cubs 3-4 years old inflict 1-2, 1-2, and 1-6 points of damage.

Manticore cubs can be caught and trained to assist evil humans. Such training is difficult and dangerous, especially since domesticated adults have an 80% chance of reverting to a wild state. Manticores will not allow themselves to be used as mounts. Wild adults may voluntarily ally themselves with evil humans, provided such allies can provide them with a steady, ample food supply.

Manticores normally eat their prey where they kill it. Males sometimes haul slain prey back to their mates or drag still-living prey to their lairs for the cubs to practice killing.

Manticores collect their victims' valuables for a variety of reasons, including curiosity, emulation of other monsters who collect treasure, the man-scent on the things, or because they know humans value the things and therefore might come looking for them. Their lack of real hands prevents most manticores from using what magical items fall into their possession. However, manticores that have allied with evil humans may possess magical items designed specifically for their use. Examples include magical collars or bracelets that are, in effect, oversized magical rings.

**Ecology:** Manticores are wide-ranging carnivores that have successfully survived in every region inhabited by humans, whether in the wilderness or underground. They are nightmarish opponents but invaluable allies if conditions are right. A manticore's pelt is a mark of the most powerful hunters and warriors. An intact, cured manticore hide complete with wings is worth 10,000 gp.

Medusae are female humanoids with hair of swarming snakes. They are hateful creatures that can petrify any creature that meets their gaze.
The typical medusa has a pale-skinned, very shapely woman's form. It stands 5 to 6 feet tall with the snakes adding up to another foot. At distances farther than 30 feet, the medusa is easily confused with a normal woman. Its red-glowing eyes are visible up to 30 feet. At distances of 20 feet or closer, the medusa's true nature is revealed. Its face is horrible -- the snakes writhe constantly, especially if the medusa is excited.
Medusae wear human clothing such as loose dresses or robes. They seldom wear armor and cannot easily wear helmets. Medusae may carry a knife, dagger, or short bow. Medusae speak their own tongue and the common one.

**Combat:** The medusa tries to get close to a victim before it reveals its true nature. It will use its attractive body to lure males nearer while staying in the shadows. Once the medusa is within 30 feet, it strikes, trying to get its victim to look into its eyes. Any creature within 30 feet must make a saving throw versus petrification or turn instantly to lifeless stone. If an opponent averts his eyes, the medusa rushes up so that its serpentine growths can attack. The range of such attacks is only 1 foot, but the victim must save versus poison or die.
The medusa is able to see creatures in the Ethereal and Astral planes, and its petrifying gaze is equally as effective against creatures there. It retains its petrifying gaze after death. Creatures looking at a freshly-dead medusa's head make a saving throw at +1. The saving throw increases +1 each day the head decays.
If the medusa cannot easily use its normal tactics, it may resort to normal weapons such as knives and shortbows.

**Habitat/Society:** Medusae dwell in dark caves or the lower regions of large abandoned buildings. They arrange the lighting such that their homes are filled with flickering shadows.
The presence of petrified victims is a sure indicator of the occupant's true nature. For this, aesthetic, and other reasons, the medusa usually removes most of its victims. Those that resemble interesting statues may be retained; the rest are often broken into unrecognizable (and unrevivable) chunks.
The one form of treasure never found in a medusa's lair is a mirror. If a medusa sees its own reflection in a mirror, it turns to stone itself. Reflection in nonmetallic reflectors such as water or polished stone have no such effect. Medusae are immune to the petrifying effect of another medusa.

Medusae are infrequently driven to mate with humanoid males. The act always ends in the male's death, usually by petrification when the medusa reveals its previously hidden visage. Two to six eggs are laid one month later and hatch eight months after that. The female hatchlings appear as baby girls with stubby green tendrils. The hatchlings are revolting to look at but cannot petrify. Medusae grow at the same rate as humans. At about age two the serpentine hair becomes alive and gains its poisonous bite. The medusa can petrify with the onset of adolescence.

**Greater Medusa (Serpentine)**
Rare medusae (10%) have serpentine bodies in place of the lower torso and legs. The entire body is covered with fine scales and measures 10 to 20 feet. The poison of these medusae is so deadly that saving throws are made at -1, and they are known to use bows and poisoned arrows. Their blood is so poisonous, in fact, that even after one has been killed, touching its body still requires a saving throw versus poison. They seldom venture far from their lairs, since they are immediately recognizable. Greater medusae have a morale bonus of +1.

| **XP Value:** | 975 | 65 |

**Maedar**
Maedar are male counterparts to medusae, though they lack the petrifying gaze of the females. The typical maedar is a muscular, hairless humanoid male, usually dressed in a kilt or tunic.

**Combat:** Maedar attack with powerful fists that each cause 2d4 points of damage. One every three turns, the maedar can turn stone to flesh by touch. Maedar can pass through stone at their normal movement

rate. They require one round of concentration before this; no other activity can be undertaken that round.
Maedar struck by a *phase door* spell while passing through stone are killed instantly.
Maedar are immune to petrifaction and paralyzation (including related spells, such as *hold* and *slow*). They are immune to the poisonous bite of a medusa's serpentine hair. In addition, maedar can see into and extend their stone into flesh power into the Astral and Ethereal planes.

**Habitat/Society:** Maedar are the little-known male version of the medusae. They are extremely rare, however (far more rare than the frequency would indicate), and few medusae ever find a maedar spouse. Most medusae typically mate with human males. This cross produces two to six eggs that hatch into fledgling, human-like females, who mature into medusae. The cross insures the continuation of the medusae species.
When a medusa finds and mates with the extremely rare maedar, the eggs hatch into human infants, 25% male and 75% female. Only 1% of the males born of these matings are actually maedar; the remaining males and all the females are normal human infants who die at the sight of their mother.
The typical maedar is a monogamist who mates for life; he is fiercely devoted to his mate and will go to any length to assist or avenge her. A widowed maedar will pursue his mate's killer for years.
Because of the Maedar's rarity and natural reclusiveness, even most sages are unaware of their existence. Maedar are rarely seen; generally they remain in the lair they share with a medusa mate. A maedar's magical power provides food for him and his mate. He smashes her petrified victims, then transforms them into meat.

**Ecology:** Maedar may cooperate with lawful evil creatures, such as kobolds and orcs, in exchange for security or reward. If forced to aid another creature, maedar seek revenge at the first opportunity.

## Glyptar

Glyptars are rock crystals animated by the spirits of maedar. When a maedar has foreknowledge of his death, he can transfer his life force into the rocks. An extremely evil maedar retains his consciousness as it drifts through the ground. When such a life force encounters gemstones, such as feldspar or amethyst, it is trapped within and cannot leave voluntarily. Eventually the maedar goes mad. (Note that once a maedar is trapped within a glyptar crystal, his life force cannot be trapped in a second crystal.)
If this glyptar is removed intact from the ground, the maedar's spirit is now able to animate the crystal and anything inorganic attached to it. Thus if the glyptar is set in the eye of a stone statue, the maedar's life force animates it as a golem. This can affect a maximum of 1,000 pounds.
Similarly, if the glyptar is set in the pommel of a sword, the sword can be animated to strike as though it were wielded by the living maedar. The weapon gains a +1 bonus to its attack roll, strikes as if it were wielded by a 6th-level fighter, and gains a +2 bonus to its damage roll. Note that the glyptar's *stone to flesh* power enables the weapon to sink harmlessly into stone as the glyptar uses its power.
The glyptar retains its other powers as well. The glyptar and its attachments may pass through stone at will at the normal movement rate. It is immune to *phase door* spells. Once every three turns the glyptar can perform a *stone to flesh* attack against a target touched by the glyptar or its setting. Glyptars remain immune to paralyzation and petrification attacks of all sorts.

| | Shaman: 420 |

Mermen are marine-dwelling, amphibious humanoids with the upper torso of a human and the lower torso of a fish.
Mermen were once human but were transformed by unknown powers into their current forms. They live

by herding fish, but during times of need they attack other sea-peoples or ocean-going vessels. They live underwater but surface to sun themselves on large rocks.
Adult mermen are 5 to 6 feet long (tall) and weigh between 150 and 225 pounds. Their skin tone is fair to tan, hair color is usually dark brown (occasionally fair), while their scale color ranges from green to silver. Females, also known as mermaids, are 6 inches shorter than the males and weigh between 100 to 150 pounds. Mermen adorn themselves with coral and shell decorations. Mermen speak their own language (with different dialects spoken by communities that are separated over wide distances), and 50% of all communities also speak locathah.

**Combat:** Mermen communities are well-armed. The arms used by mermen are as follows:

Trident, dagger (50%) *
Crossbow, dagger (30%)
Javelin, dagger (20%)

* 20% of all trident wielders are also armed with a hook and grappling line (50 feet long).
Mermen crossbows have a range of 30 yards underwater. They use grapples to attack ships; the grapples can be thrown up to 50 feet. Each grapple held by 10 mermen slows a ship by 1. Once stopped, the ship is attacked and a hole is knocked in its hull in 4d4 rounds, after which the ship slowly sinks, to be looted by the mermen.
Merman suffer double damage from fire attacks.

**Habitat/Society:** For every 20 mermen encountered, there is a patrol leader (2-3 HD) and 1-3 barracuda (AC 6; Move 30; HD 3; #AT 1; Dmg 2d4). For every 40 mermen, there is a leader (4 HD). For every 120 mermen encountered, there is one chief (6 HD) and two guards (4 HD). For every ten mermen, there is a 10% chance of a shaman (3 HD, with the spells of a 3rd-level priest).
Mermen have regular undersea communities, usually a reef or cliff honeycombed with passages. Rarely (10% of the time) they construct a village from sea shells and coral. An average community has between 100 and 600 males. Females and sub-adults each equal 100% of the males in a village. The communities are usually guarded by 3d6 trained barracudas.
Mermen society is heavily patriarchal. They prefer to be left to themselves and usually reject proposals of friendship or trade. They have strong territorial instincts and, while closely related to humans, they have no love for them. Males hunt and herd fish and protect their territory. Females raise children and tend to domestic affairs. Mermaids are also known for their creativity, and they produce works of art for the community (shell carvings, seaweed tapestries, and songs).

**Ecology:** Mermen are omnivorous, but they prefer a diet of fish, lobster, crab, and shellfish. They do not cook these creatures, but must fillet them before eating. They can survive out of water for one hour before they begin to dehydrate. When dehydrated, they lose 2 hit points per hour and will die when they reach zero; immersion in fresh or salt water immediately restores these lost hit points.
Mermen have an average life expectancy of 150 years. Mermen have many natural enemies but particularly hate the sahuagin and ixitxachitl. They often clash with tritons over territory.
